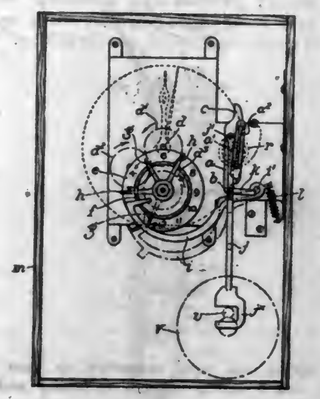
1. A lock comprising a casing including assembled relatively fixed sections, a shackle carried by the casing and movable to locking and released positions, a plurality of slotted disks arranged in the casing and rotatable to relative positions with their slots in registry at a predetermined point and to other relative position with their slots out of registry, manually operable means for adjusting said tumbler disks, and a member operatively pivotally connected to an angular extension of the shackle and extending substantially diametrically of the disks and restrained from movement by the tumbler disks when the latter are relatively positioned with their slots out of registry for restraining the shackle in locked position, said member being movable into the slots of the tumbler disks when the latter are positioned with their slots in registry for permitting movement of the shackle to released position, said casing having circumferential slots in its periphery, and said manually operable means embodying arms rigid with the tumbler disks and projecting outwardly through and movable in said slots.

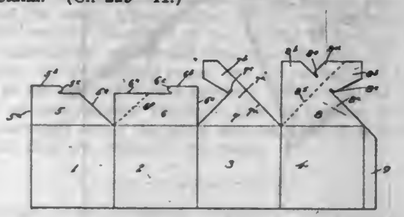
1,662,695. FUSE. FREDERICK W. BOLD, Chelsea, Mass., assignor to Charles H. Pearson, Brookline, Mass. Original application filed Jan. 2, 1925, Serial No. 285. Divided and this application filed Dec. 4, 1925. Serial No. 73,276. 3 Claims. (Cl. 102—36.)

1. In a time fuse, the combination of a timing train, a sleeve associated therewith and movable relatively thereto, a staff, means thereon for transmitting power to the timing mechanism, and means associated with said staff and said sleeve for permitting locking of the sleeve and the staff together on the shock of firing.



1,662,696. CLOTHES-PRESSING MACHINE. HARRY H. CALLAN, Lexington, Ky. Filed May 15, 1926. Serial No. 109,441. 1 Claim. (Cl. 68—9.)

In combination with the handle and valve stem of a garment pressing machine, a rock shaft arranged in the handle, a stud projecting laterally from the shaft, a link connected with the stud, a lever pivoted to a part of the machine and connected with the link, said lever engaging the valve stem, the handle having a slot therein, a member passing through the slot and fastened to the rock shaft and a knob on said member.

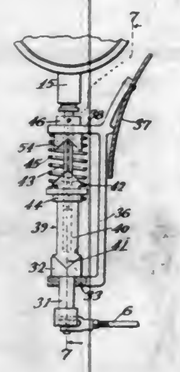


1,662,697. TIME SWITCH. JAMES CLIFTON, JAMES ROBINSON, and JOHN SPENCER, London, England. Filed May 5, 1922, Serial No. 558,619, and in Great Britain Feb. 13, 1922. 8 Claims. (Cl. 200—38.)

3. A device of the character described, comprising a switch and means for controlling the opening and closing thereof, said means consisting of a clock mechanism, a tappet carrier driven by said clock mechanism and carrying a ring of teeth, spring controlled tappets mounted on the carrier, said tappets being adapted to be moved freely over said teeth and to take up a definite and positive time position when the movement ceases; a spring-controlled pivotally mounted trip-lever having an abutment face at its axis end, and a tappet abutment face at its free end disposed in the path of said tappets and adapted to be in turn deflected downwardly by each of said tappets; a partially rotatable escapement member having two contact faces in the path of which the abutment face is normally held, one of the abutment faces being at a greater distance from the axis than the other abutment face; permanently fixed means for winding the said escapement member, an electric switch, a switch-rod having a controlled vertical movement pivoted at one end to the escapement member and at the other end detachably engaging the electric switch, said mechanism being arranged in a casing

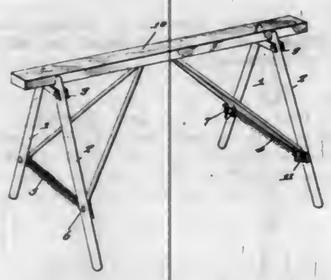
comprising hinged parts, the switch and controlling mechanism therefor being secured respectively on one of the hinged parts, the other on the other hinged part of the casing, substantially as herein described.

1,662,698. CARTON. ARTHUR C. CRAMER, Cincinnati, Ohio. Filed Mar. 7, 1924. Serial No. 697,670. 1 Claim. (Cl. 229—41.)



A carton having side walls adapted to be extended into tubular shape, and flaps having overlapping portions articulated to the walls for forming an end closure for the carton with the extension of the walls of the carton into tubular shape, one pair of said flaps being so cut and shaped that when overlapping parts of said flaps are secured together a triangular aperture will be formed, and another pair of flaps being so cut and shaped that when overlapping parts of said flaps are secured together an interlocking member will be formed which, with the extension of the walls into tubular shape, will interlock in the triangular shaped aperture formed by the other pair of flaps.

1,662,699. DIRIGIBLE REFLECTOR IN HEADLIGHTS. JOHN V. CUNNIFF, Los Angeles, Calif., assignor to Safeway Headlights, Incorporated, a Corporation of Delaware. Filed Aug. 31, 1926. Serial No. 132,695. 5 Claims. (Cl. 240—44.)

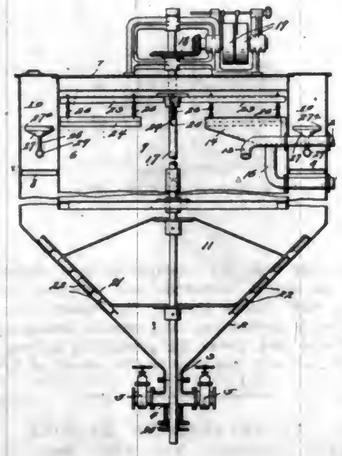


1. A headlight comprising in combination a fixed headlight housing having a pivoted reflector therein, a telescopic shaft having a lower sleeve and an upper splined shaft connected thereto, said upper shaft being connected to the reflector, a crank shaft having a clutch

element, means connecting said crank shaft to a moving part of a steering mechanism, a clutch element on the crank shaft, a cooperating clutch element on the

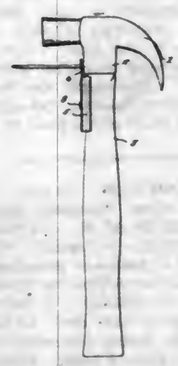
sleeve, a spring, an arm connected to part of the automobile, and a spring between said arm and a connection to the sleeve.

1,662,700. TRESTLE. FRANK P. DYER, St. Louis, Mo. Filed Feb. 7, 1927. Serial No. 166,561. 1 Claim. (Cl. 304—5.)



A trestle of the character described comprising a pair of upwardly converging legs spaced at their upper ends, a pair of of spaced oppositely disposed cross members pivotally connected to said legs adjacent their upper ends, a cross beam received between said upper ends and supported by said cross members, a longitudinally slotted cross member and bolts and wing nuts for adjustably connecting said slotted cross member to said legs at intermediate points of said legs, said bolts being slidably extended through said slot, brace members pivotally connected to said legs by said bolts and converging upwardly toward the center of said cross beam, said brace members having penetrating points formed thereon and arranged at angles thereto and embedded in said cross beam substantially as described.

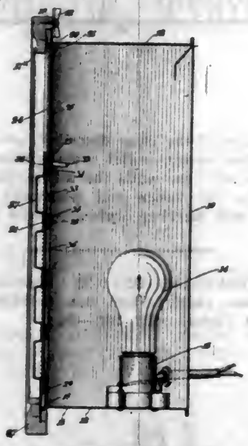
1,662,701. RECLAIMING PROCESS FOR USED CRANKCASE OIL. WILLIAM H. ELLERINGTON, Naples, N. Y. Filed Jan. 23, 1926. Serial No. 83,400. 1 Claim. (Cl. 196—16.)



The process of removing carbon, dust, grit, sand, metal particles and like impurities from used lubricating oil which comprises intimately mixing lubricating oil containing such impurities with a mixture including soap, sodium silicate and talc.

1,662,702. DECANTER. JOHN C. HEBDEN, New York, N. Y., assignor to Hebden Sugar Process Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1923. Serial No. 682,488. 10 Claims. (Cl. 210—55.)

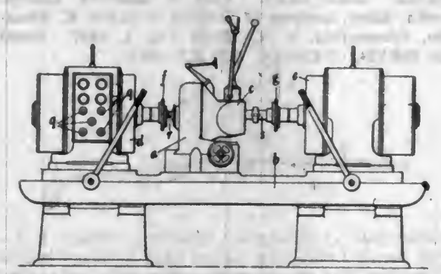
1. A decanter comprising an impurity-separating chamber adapted to receive the liquid to be treated and a decanting chamber arranged to receive liquid from the separating chamber, and a plurality of decanting cups having upstanding surrounding edges all of which lie in the same horizontal plane and form weirs arranged in the decanting chamber to cause the liquid to flow uniformly upwardly throughout the horizontal area of the decanting chamber and to be decanted over said weirs.



1,662,703. AUTOMATIC NAIL-CLAMP ATTACHMENT FOR HAMMERS. ANTON HELFRICH, Milwaukee, Wis. Filed Feb. 19, 1927. Serial No. 169,590. 1 Claim. (Cl. 145—30.)

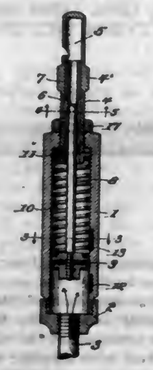
The combination with a hammer head having a wooden handle and said handle having a pocket therein arranged in a plane with the poll of the hammer head, of a metal plate which is arched in cross section to loosely embrace the handle of the hammer and which plate has one of its ends centrally formed with a claw extension, said plate having a central opening therethrough, a screw passing through the opening and threaded into the handle and a helical spring in the pocket exerting a pressure against the plate at one end thereof to swing said plate on its fulcrum to bring the claw against the eye

portion of the hammer head and whereby a nail engaged by the claw will have its head portion forced against the eye of the hammer and sustained at a right angle with respect to the said eye portion of the hammer.



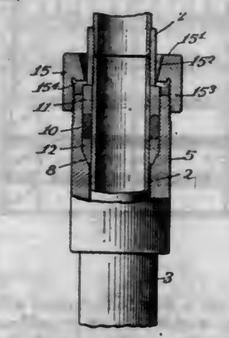
1,662,704. DISPLAY SIGN. WILLIAM HERRSCHAFT, New York, N. Y. Filed Nov. 5, 1926. Serial No. 146,400. 21 Claims. (Cl. 40—140.)

1. An illuminated display sign comprising a casing having a front cover plate provided with tiers of rectangular apertures therein, translucent rectangular character carrying devices protruding forward through the apertures to form words or sentences, and each provided with a rim extending in back of the front plate, and a backing plate, means releasably securing said backing plate in position against said front plate to secure the rims of said character carrying devices in position.



9. A character unit for a luminous display sign comprising a generally rectangular tray-shaped body of translucent material having the symbol thereon in opaque pigment, said tray having fastening means unitary therewith and protruding outward therefrom for attachment of the unit in position.

1,662,705. ELECTRICAL APPARATUS FOR TESTING MOTOR VEHICLE AND OTHER MECHANICAL POWER-TRANSMISSION MECHANISMS. FRANK WILLIAM HIGHFIELD, Coventry, England. Filed May 23, 1927, Serial No. 193,687, and in Great Britain July 21, 1926. 4 Claims. (Cl. 73—51.)



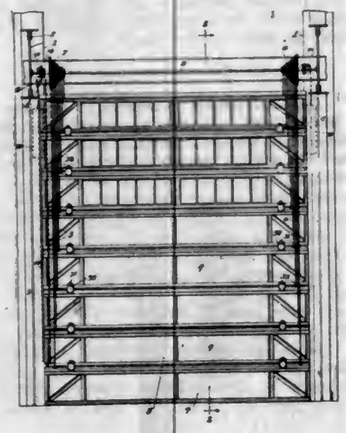
1. In apparatus for testing motor vehicle and other mechanical power transmission mechanisms, the combination comprising an electric motor, an electric generator, means whereby the mechanism to be tested can be mounted detachably between the motor and generator, interconnected shunt field windings in the motor and generator, and a regulator which is common to the said windings, substantially as described.

1,662,706. WHISTLE AND SAFETY VALVE. CHARLES WESLEY HILL, Oakdale, Tenn. Filed Sept. 29, 1926. Serial No. 138,461. 1 Claim. (Cl. 116—70.)

A device of the class described comprising a cylinder, a piston therein, a threaded tubular member passing through the top of the cylinder, a sleeve fitting snugly in the tubular member and having one side flattened to form a passage between itself and the member, said sleeve receiving the top portion of the piston rod, the upper part of the tubular member having a whistle formed therewith so that compressed fluid entering the cylinder will pass through the passage to the whistle part and sound the same, a coil spring on the rod between the piston and the inner end of the tubular member so that the adjustment of the tubular member will affect the tension of the spring, means for connecting the lower end of the cylinder with a pressure system and the inner wall of the cylinder having a pair of notches therein, one arranged above the other, with each notch of greater length than the width of the piston.

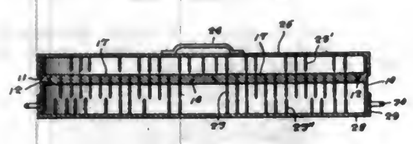
1,662,707. CASING HEAD. CHESTER C. HOSMER, Huntington Beach, Calif. Original application filed Sept. 15, 1922, Serial No. 588,391. Divided and this application filed Nov. 6, 1924. Serial No. 748,105. 8 Claims. (Cl. 166—14.)

1. A casing head comprising a sleeve applied to an exterior casing, said sleeve having an interior seat, a packer positioned in said sleeve and resting on said seat to embrace an interior casing, a clamping spider connected to said sleeve and adapted on its downward movement



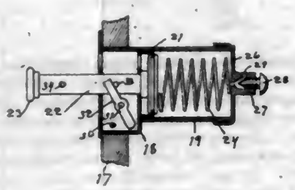
to compress said packer, to seal the joint between the casing head and the interior casing, said clamping spider having an aperture of sufficient size for a coupling of the interior casing to rest directly upon said packer without touching said clamping spider, whereby the packer may be compressed by either the clamping spider, the weight of the interior casing, or both, as desired.

1,662,708. SECTIONAL FURNACE GRATE. ORVILLE J. JONES, Emmett, Idaho. Filed June 22, 1926. Serial No. 117,788. 1 Claim. (Cl. 126—167.)



A grate bar comprising terminal sections having sides provided at the inner ends of the sections with vertical edges and with circular ears located below said edges and extending longitudinally beyond the same, intermediate sections having sides provided at the ends of the sections with vertical edges and with circular ears located below said edges and extending longitudinally beyond the same, ears of one terminal section and the ears at one end of each intermediate section being laterally offset to permit them to be arranged in overlapped relation with respect to the remaining ears and to provide arcuate shoulders contacting with the upper sides of the remaining ears, and pivot pins passing through the ears.

1,662,709. PIER-SHED DOOR. MAXIMILIAN H. KORN, Teaneck, N. J. Filed Aug. 18, 1925. Serial No. 50,964. 3 Claims. (Cl. 20—19.)



1. In a shed door, a door body formed with a plurality of sections, each section having a stiffened frame, a covering body therefor, a pin at each end acting as guides, a rotatable member mounted on each pin, locking rollers intermediate the ends, and wind locks on the opposite side to said rollers but in line therewith, the wind locks of one section co-acting with the rollers of the next adjacent section.

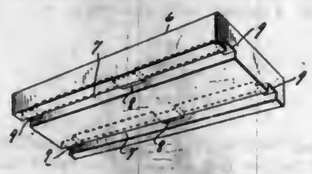
1,662,710. CONFECTIONER'S PATTERN-MAKING DEVICE. CARL MARCH, Chicago, Ill. Filed Mar. 23, 1927. Serial No. 177,697. 4 Claims. (Cl. 107—47.)

1. In a device of the class described, an outer element having an inner flange, radial arms within said element and connected with the walls thereof, segmental plates to be carried by the flange and positioned between the radial arms, and marking devices carried by the plates.

1,662,711. SIGNALING DEVICE. MILTON ALLEN MAYNARD, Suisun, Calif. Filed Oct. 4, 1926. Serial No. 139,496. 1 Claim. (Cl. 200—34.)

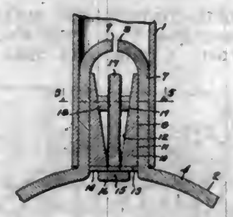
In a switch mechanism, a housing, a pair of binding posts positioned on said housing, a lever connected to one of said binding posts, a contact connected to other of said binding posts, a tubular projection secured to said switch housing, a piston movable in said tubular projection, a plunger secured to said piston, pins secured to said plunger and adapted to actuate said lever so as to move said lever into and out of engagement with said contact, and means for retarding the movement of said piston in one direction.

1,662,712. GOLF CLUB. CARL F. MENSING, Leavenworth, Kans., assignor of one-half to James K. Thomson, Schenectady, N. Y. Filed Aug. 1, 1927. Serial No. 209,824. 2 Claims. (Cl. 273—80.)



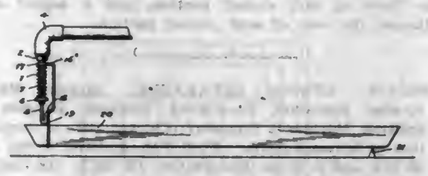
1. A golf club of which the shaft is so limber for the greater part of its length that, in the making of a stroke, it bends in a substantially continuous arc from the grip to the head, to such a material degree that the bending action is clearly perceptible to observers of the swing or stroke.

1,662,713. ATTACHMENT FOR HOISTING SLINGS. LEE ROBERT MILLER, New York, N. Y. Filed May 27, 1927. Serial No. 194,773. 5 Claims. (Cl. 294—74.)



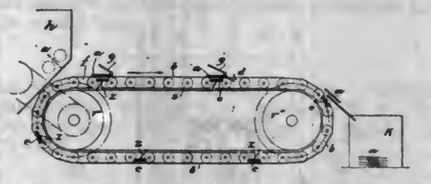
1. An attachment for hoisting slings, including a pair of members adapted to be clamped to the runs of the loop of the sling intermediate the ends of the sling and engage a beam or other article to be hoisted.

1,662,714. ROAD CULVERT. JAMES M. MORGAN, Bristow, Okla. Filed Feb. 21, 1927. Serial No. 169,931. 1 Claim. (Cl. 72—52.)



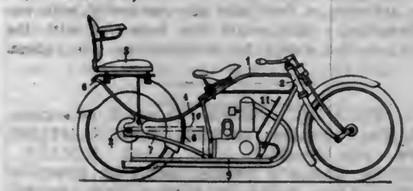
A culvert structure comprising a bottom wall, side wall panels resting upon the bottom wall and provided at their upper edges with recesses, top wall sections provided at their under faces with longitudinally disposed grooves which are spaced from the side edges thereof, said grooves adapted to receive the upper portions of the side panels and top panels being provided with block portions lying in the grooves and which are adapted to enter the recesses of the side panels.

1,662,715. HANDLE. RICHARD H. MORROW, Los Angeles, Calif. Filed Mar. 10, 1926. Serial No. 93,606. 3 Claims. (Cl. 306—45.)



1. A handle attachment comprising in combination a tubular handle, a yoke having split ends inserted in the handle, the ends having curved outer surfaces and flat inner surfaces, a plurality of wedging blocks having wedging surfaces tapering from the inside towards the open end of the handle, a screw threaded bolt and a wedging nut on the bolt in contact with the wedging surfaces of the wedging blocks.

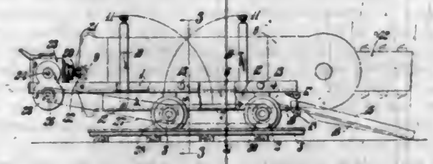
1,662,716. REGULATING VALVE FOR WATER TROUGHS. JOHN B. PETERSON, Blaine, Wash. Filed May 21, 1927. Serial No. 193,139. 2 Claims. (Cl. 119—81.)



1. A regulating cut-off valve for automatically preserving a predetermined supply of water in a drinking receptacle, a tube threaded at the top for screwing into a water supply pipe and at the lower end for carrying an adjusting nut, a valve stem extending from the bottom to near the top of the tube, a ball valve and valve seat located near the top of the tube, the ball placed in a chamber over the seat in position to automatically roll on to the seat except as prevented by the top of the valve stem, a guard to hold the ball in the chamber, a screen over the chamber to prevent obstructive matter from clogging the valve seat, the stem bent around from the bottom of the tube outward and upward along and parallel with the tube to a point near the valve seat and there bent inward and around the tube to form a slidable eye around the tube, a spring mounted around the tube between the eye and the nut for normally holding the top of the stem above the valve seat, supporting means near the lower bend of the stem for holding up a water receptacle of a predetermined water supply.

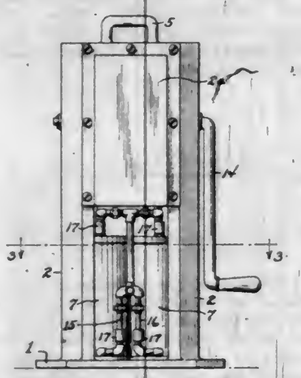
1,662,717. METHOD OF RENDERING PAPER SHEETS LOCALLY TRANSPARENT. OTTO POEPPEL, Esslingen-on-the-Neckar, Germany. Filed Apr. 19, 1926, Serial No. 103,141, and in Germany May 20, 1925. 1 Claim. (Cl. 91—70.)

In the treatment of paper sheets to render the same locally transparent, transferring the sheets, precoated at the desired locality with medium to render the paper transparent, to the field of influence of travelling heating elements each of the form and dimensions corresponding to those of the "windows" to be formed, and maintaining the sheets subject to such influence until the paper is transparent and the coating medium completely dried.



1,662,718. MOTOR CYCLE. GEORGES LOUIS REGARD, Geneva, Switzerland. Filed Mar. 18, 1926, Serial No. 95,733, and in Switzerland July 6, 1925. 5 Claims. (Cl. 208—24.)

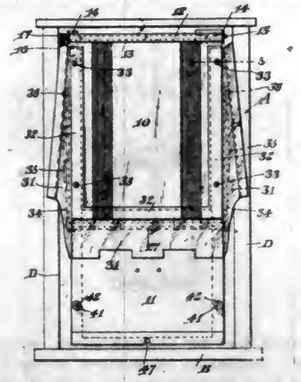
1. A motorcycle frame comprising upper tubes, lower tubes, a bridge connecting said tubes, said upper tubes



being arched downwardly adjacent the rear end thereof, said lower tubes extending from the rear end of said frame to a point intermediate the rear and front ends of the frame and being arched upwardly, a seat adjacent the front of said arched portion, and a second seat adjacent the rear of said arched portion.

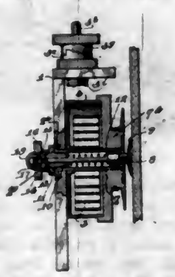
1,662,719. MINING APPARATUS. EDWARD BUCKMASTER ROBINSON, Brentwood, England, assignor to Sullivan Machinery Company, Chicago, Ill., a Corporation of Massachusetts. Filed Feb. 4, 1926, Serial No. 85,913, and in Great Britain Oct. 13, 1925. 18 Claims. (Cl. 262—28.)

1. In a mining machine truck the combination with horizontal supports which support the machine in a working position in which it lies on its bottom or top lengthwise on the truck, of another horizontal support which is at a lower level than that of the other supports and is between them and can support the machine when it is horizontal but on its side.



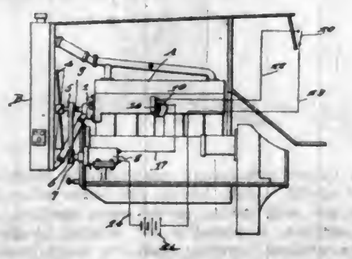
1,662,720. PUMP. MAXIMILIANO SANCHEZ, New York, N. Y. Filed Apr. 13, 1927. Serial No. 183,578. 2 Claims. (Cl. 103—177.)

1. In a double acting portable pump, a base having spaced upstanding sides and a top plate connecting the sides, a pair of cylinders arranged on the base, contacting with the sides and with each other, a piston in each cylinder, a bypass in the respective sides of the cylinders and establishing communications between the top and adjacent to the bottom of the respective cylinders, check valves in the bypass adjacent the connections thereof with the cylinders, a fluid inlet pipe connected with one of the bypasses, a fluid outlet pipe connected with the second bypass and means for reciprocating the pistons.



1,662,721. METALLIC AWNING. GEORGE R. SCHNEIDER, Miami, Fla. Filed Mar. 22, 1927. Serial No. 177,362. 1 Claim. (Cl. 189—55.)

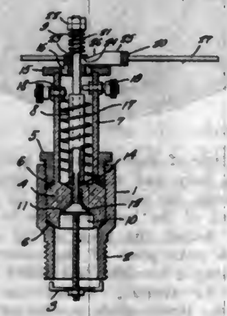
A combined blind and awning comprising a pair of superposed sections, means for hinging them together, said lower section foldable to abut against said upper section, said sections having coacting means for maintaining them in abutting engagement, means for swingingly suspending said upper section, shiftable means engaging with said swinging means for angularly adjusting said



sections when in abutting engagement, and means connected with the upper section for maintaining the section in angular position.

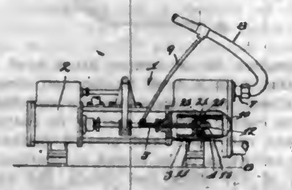
1,662,722. MEANS FOR OPENING OR CLOSING SLIDING WINDOWS AND THE LIKE. HENRY SMITH, London, England. Filed May 11, 1926. Serial No. 108,375. 4 Claims. (Cl. 16—198.)

1. An arrangement of the character described, the combination of a frame and a window slidable therein, of a bracket fastened to the frame, a shaft carried with the bracket, a window actuating device mounted exteriorly of the shaft and flexibly connected with the window, adjustable control means for the actuating device, and secondary holding means mounted interiorly of the shaft for engagement with the window to prevent movement of the window.



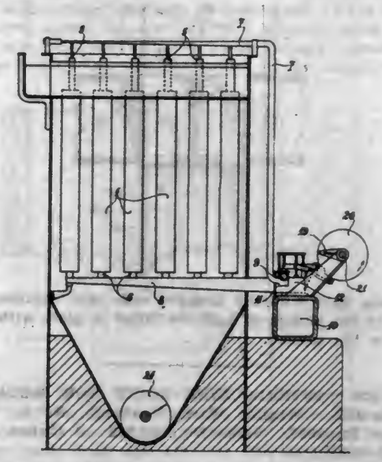
1,662,723. FLUID-CONTROLLING MEANS. CHESTER L. SNOW, Washington, D. C. Filed Mar. 7, 1927. Serial No. 173,541. 1 Claim. (Cl. 123—178.)

The combination with an internal combustion engine and its cooling system, together with the radiator of the latter, of a fluid pump in communication with the fluid



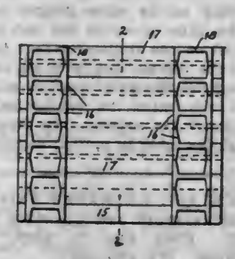
jacket of the engine and radiator respectively, an electric motor supported by the engine, means between said electric motor and pump for operating the latter, a housing arranged in the fluid jacket, a thermostat disposed in said housing so as to be acted upon by the temperature of the fluid in the jacket, a closure for said housing, a rod passing through the closure and secured to a portion of the thermostat for movement thereby, a rheostat disposed in close proximity to the housing, a shaft included in said rheostat, an arm normally depending from said shaft and having connection with said rod, a contact member secured to said shaft for movement on the resistance unit of the rheostat, a source of energy, and conductors between the source of energy, motor and rheostat respectively.

1,662,724. SPARK PLUG. CHARLES M. TANSILL, Woodlawn, Md., assignor of one-third to Charles E. Nolte and one-third to Walter E. Windsor, Baltimore, Md. Filed July 23, 1926. Serial No. 124,482. 5 Claims. (Cl. 123—169.)



1. A spark plug of the character described comprising a shell, a core including a housing and secured therein, a sleeve included in said core and rising therefrom, an electrode mounted for movement in said sleeve, core and shell, a cap for said housing and being provided with openings for admitting air within said housing, means carried by said electrode for controlling the air passing through said core, compression means for said last mentioned means and including a coil spring surrounding said electrode, adjusting means for said spring and receiving one of the end convolutions thereof, a washer receiving the opposite end convolution thereof, cam means movable on said electrode and engageable with said washer for changing the compression of said spring for regulating movement of said electrode, whereby the air controlling means is regulated accordingly.

1,662,725. PISTON. CHARLES BARFIELD TONEY, Jr., Los Angeles, Calif. Filed Jan. 27, 1927. Serial No. 163,910. 7 Claims. (Cl. 74—109.)

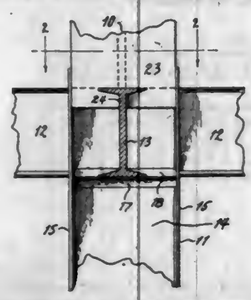


1. In the art described, the combination of a cylinder, a piston having a resilient packing thereon, a hollow piston rod, there being a chamber between the packing and the rod, ports through the rod to said chamber, a discharge pipe operatively connected to the cylinder, and means to by-pass some of the fluid pumped from such discharge pipe to the hollow piston rod, such fluid expanding the packing against the cylinder.

1,662,726. FILTERING APPARATUS. JEAN BAPTISTE VERNAY, Villeurbanne, France. Filed Feb. 16, 1927, Serial No. 168,736, and in France Feb. 24, 1926. 7 Claims. (Cl. 210—184.)

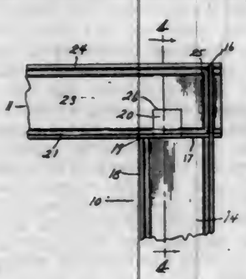
1. A filtering apparatus, comprising in combination a set of filtering cells of substantially cylindrical shape, each having an inner perforated tube extending therethrough from end to end; a tank wherein said cells are disposed, adapted to contain a diluted mixture of liquid and solid matter to be filtered; the upper ends of said tubes being connected to a source of fluid under pressure and their lower ends to a low-pressure line; valves in both connections; and means for automatically operating said valves in order to connect said cells alternately with the low-pressure line through the lower ends of their tubes and with the fluid under pressure through the upper ends of said tubes.

1,662,727. METALLIC BONDING FOR CONCRETE SUPPORTS. WESLEY WAIT, Newburgh, N. Y. Filed Feb. 9, 1927. Serial No. 167,006. 7 Claims. (Cl. 72—77.)



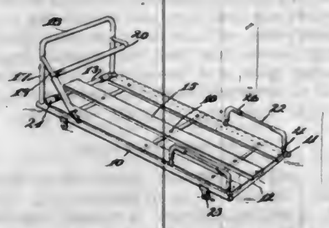
1. A metallic bonding structure including walls in angularly disposed relation, each wall comprising a series of superimposed channel irons arranged with their flanges in abutting relation and with the channel irons of one wall breaking joint with the channel irons of the other wall, and an interlock connection between the channel irons of both walls that mutually break joint.

1,662,728. INTERLOCKING JOINT FOR METALLIC FRAMES. WESLEY WAIT, Newburgh, N. Y. Filed Feb. 9, 1927. Serial No. 167,009. 5 Claims. (Cl. 189—36.)



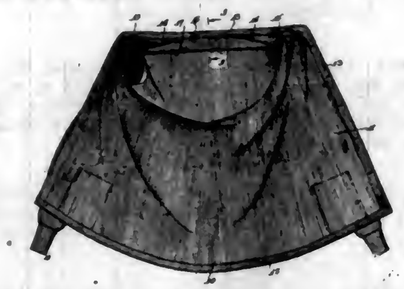
1. In an interlocking joint for metallic frames, the combination with a column formed of upper and lower H-shaped sections having mutually engaged ends with

their webs normal to each other and spaced apart, and girders having ends seated between the mutually engaged ends of the column sections and between the webs of said



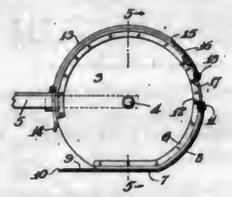
sections, said mutually engaged ends also engaging the ends of the girders to hold the latter in place with relation to the column.

1,662,729. INTERLOCKING JOINT FOR METALLIC FRAMES. WESLEY WAIT, Newburgh, N. Y. Filed Mar. 31, 1927. Serial No. 180,012. 3 Claims. (Cl. 189—36.)



1. The combination of a column with a girder in transverse interlocking relation, each being formed with a web and flanges on both sides at each edge of the web, said column at the interlock having one flanged side and the web cut away to form a transverse seat coextensive at its outer part with the cross-area of said side and said column also having in its other flanged side a longitudinal slot in the same plane as the web thereof; said girder being seated on the transverse seat formed in the cut-away side of the column and with an intact part of the girder imposed on the outer part of said seat, said girder having its web fitting the longitudinal slot in the other flanged side of the column, the flanged sides of the column and girder being in mutual engagement.

1,662,730. TRUCK FOR BATHTUBS AND THE LIKE. EDWIN G. WERTENBERGER and CLARENCE KLEIST, Los Angeles, Calif. Filed Aug. 9, 1926. Serial No. 128,134. 3 Claims. (Cl. 280—49.)



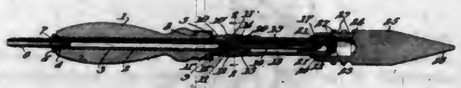
1. A truck of the class described comprising a truck floor mounted upon caster wheels, means providing an end wall on one end of the floor, an inclined bar secured to a side of the end wall and extending downwardly therefrom to the side of the floor, and a horizontal bar having one end secured to the other side of the end wall and the other end secured to the inclined bar, said horizontal bar being disposed inwardly from the end wall so as to keep articles placed on the truck from contacting with the end wall.

1,662,731. SWEATER. JACOB ZIMMERMAN, Philadelphia, Pa., assignor to Paramount Knitting Mills, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 29, 1927. Serial No. 187,620. 1 Claim. (Cl. 2—90.)

As a new article of manufacture a knitted coat sweater including a body and sleeves, a marginal band attached to the body, the ends of which lie along the adjacent front edges of the body and the intermediate portion of which defines the neck of the garment, a removable narrow yoke piece of sag resisting reinforcing material including a straight free lower edge extending from armhole to armhole within the garment, the upper edge of the intermediate portion of the yoke lying substantially parallel with its lower edge and being attached to that portion of the band lying between the ends of the shoulder line of the sweater, the ends of said upper edge being inclined downwardly relatively to the lower edge and coincident with and attached to the shoulder lines of the garment, the relatively narrow ends of the yoke itself being connected to the sleeves at the armholes.

1,662,732. EXTENSION FOR SCRAPER BOWLS. JOHN ADAMS and WILLIAM H. ADAMS, Burlington, N. J. Filed Mar. 26, 1927. Serial No. 178,696. 5 Claims. (Cl. 37—140.)

1. An extension for a scraper hitch bowl comprising in combination with a bowl having end discs provided with a rear wall and flanges on the end discs, an extension plate curved in cross-section to conform to the flanges of the end discs, and pivoted fasteners on the ends of the extension to be moved in position to overlie the flanges of the discs and retain the extension in position.

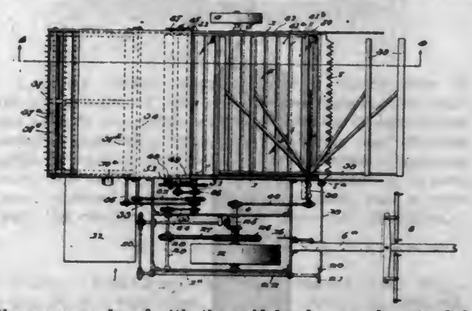


1,662,733. WIRE STRETCHER. CHARLES A. ALDERSON, Virden, Ill. Filed Dec. 31, 1926. Serial No. 158,284. 3 Claims. (Cl. 254—77.)

1. A fence wire stretcher comprising a standard having an offset plate adjacent the lower end thereof, an elongated and apertured plate provided with offset end portions carried upon one side of the standard at right angles to that of the offset plate, an operating lever pivotally mounted off center at an appropriate point in the length of the standard and elongated plate and within the space defined therebetween, a cross arm carried

upon one end of the operating lever adapted to engage the upper portion of the wire and to stretch the latter from the offset plate, and a pawl detachably mounted upon the standard adapted to follow and lock the operating lever in a desired position during the stretching of the wire.

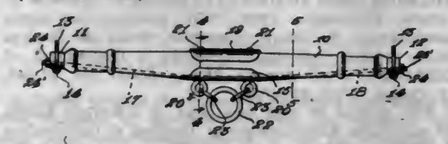
1,662,734. SOLDERING IRON. HARRY J. BAKER, Indianapolis, Ind., assignor to The Prest-O-Lite Company, Inc., a Corporation of New York. Filed Aug. 11, 1925. Serial No. 49,610. 5 Claims. (Cl. 158—26.)



1. A soldering iron comprising a gas passage terminating in a nozzle, said passage also having a throat intermediate its ends and air inlet means between said throat and said nozzle; a mixing chamber into which said nozzle discharges; a soldering bit having a combustion chamber provided with exhaust means; and a burner tip communicating with said mixing chamber and projecting into said combustion chamber.

1,662,735. PROCESS OF MAKING ALKALI-METAL SULPHYDRATES. HARRY P. BASSETT, Cynthiana, Ky. Filed Dec. 15, 1925. Serial No. 75,643. 9 Claims. (Cl. 23—134.)

7. In the production of sodium sulphydrate, the steps comprising crystallizing out a portion of the sodium sulphide contained in a solution of sodium sulphide, treating the mother liquor with sodium acid sulphate to produce hydrogen sulphide and sodium sulphate and reacting upon a solution of the sodium sulphide crystals with the hydrogen sulphide to produce sodium sulphydrate.



1,662,736. HARVESTER THRASHER. ROBERT D. BROWNING, Orange, Va., assignor of one-third to C. M. Crafton, Orange, Va., and one-third to Edward V. Breeden, Gordonsville, Va. Filed Apr. 19, 1926. Serial No. 103,127. 15 Claims. (Cl. 56—128.)

1. In a combined harvesting and thrashing machine, the combination of a wheel supported main frame, a reel journalled transversely on said main frame at the front end thereof, cutting mechanism across the front end of the frame, an elevator conveyor extending from a point adjacent to said cutting mechanism to the upper rear portion of the frame, a pressure drum with means adapted to maintain the same pressed downward the rearwardly moving end of the elevator, means to drive said elevator and said pressure drum at the same peripheral speed, to move together, whereby grain laid thereon by the reel with the heads or pods rearwardly will be held by the combined motion of the elevator and

the pressure drum with the said heads or pods extended while the stems thereof are held tightly when the end of the elevator is reached, and a thrasher journalled beyond said pressure drum and elevator and adapted to beat the grain out of the extended heads or pods while thus held into an open space beneath the thrasher whereby the grain and straw after beating may fall continuously away from the beater.

1,662,737. NECK YOKE. CARROLL C. CARTER, Cairo, Ill. Filed Mar. 5, 1927. Serial No. 173,118. 1 Claim. (Cl. 278—119.)

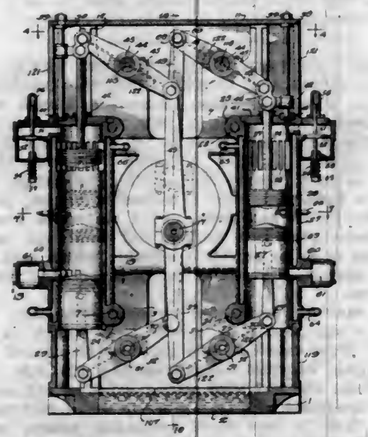
A device of the class described, comprising an elongated member having longitudinal channels therein, a truss including a central plate member and laterally extending arms, the arms resting in the channels, means connecting the plate member with the elongated element, the central portion of the plate and the adjacent portions of the arms merging in approximately the same plane at the points where the arms enter the channels and means connecting the arms, at their ends, with the end portions of the elongated member.

1,662,738. SANITARY DEVICE FOR REPELLING MOSQUITOES AND OTHER INSECTS. CHARLES P. COOGLE, Greenwood, Miss., assignor to United States of America. Filed Sept. 6, 1927. Serial No. 217,818. (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.) 5 Claims. (Cl. 299—24.)

1. A sanitary device for repelling mosquitoes comprising a perforated body, a perforated bottom, an imperforate top for said body, and a perforated ventilating column positioned within said body and spaced therefrom so as to provide a chamber within said body for the purpose of receiving chemicals or other odorous substances.

5. A sanitary device for repelling mosquitoes comprising a wire mesh body, a wire mesh bottom for said body of larger diameter than the diameter of said body and having upturned edges engaging the side walls of the body, said body and bottom including end strands of wire interlaced with each other to secure said bottom to said body, a wire mesh ventilating column within said body and spaced therefrom to form an annular chamber for the reception of chemicals or other odorous substance, said ventilating column having vertical wire

strands at the bottom thereof passed through and clinched upon the underside of the bottom to affix said ventilating column to said bottom and to hold said ventilating column in substantially vertical position within said body, an imperforate conical top the base of

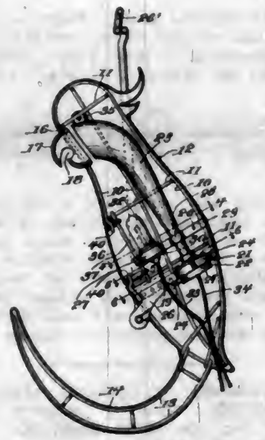


which is of substantially the same diameter as the said body and fitted therein, the upper end of said body being crimped and folded upon said conical top, and means for suspending the device, substantially as described.

1,662,739. METHOD OF HEAT TREATMENT OF ALUMINA AND OTHER MATERIALS. THOMAS S. CURTIS, Huntington Park, Calif., assignor, by mesne assignments, to Pacific-Southwest Trust & Savings Bank, trustee, Los Angeles, Calif., a Corporation of California. Filed Apr. 7, 1925. Serial No. 21,349. 11 Claims. (Cl. 23—142.)

8. The method of heat treatment of difficultly fusible solid materials which comprises forming a fragmentary body of material to be treated and burning an explosive mixture of gas and air in direct contact with such fragmentary body to heat the same and cause a change in the properties thereof.

1,662,740. INTERNAL-COMBUSTION ENGINE. ROBERT L. DENNISON, New York, N. Y. Filed Dec. 22, 1924. Serial No. 757,547. 4 Claims. (Cl. 123—51.)



3. In an internal combustion engine, a cylinder having an inlet opening adjacent one end and an exhaust opening adjacent the other end, the central portion of said cylinder forming the explosion chamber, a pair of pistons mounted in said cylinder, a vertically reciprocating piston rod connected to one of said pistons, a cross head secured to said piston rod, a guide rod arranged adjacent said piston, a portion of said cross head being adapted to receive said guide rod, a link pivotally secured to said cross head adjacent said piston rod, a short connecting rod connected to the other piston, rocker arms pivotally mounted adjacent the ends of said cylinder and connected to said link and said short connecting rod, connecting rods connected to said rocker arm, a crank shaft arranged adjacent said cylinder, and crank pins mounted on said shaft diametrically opposite each other and connected to said connecting rods.

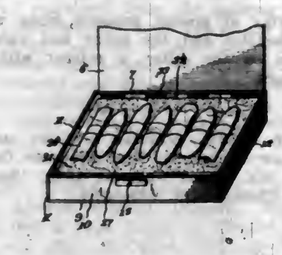
1,662,741. PAINTS, ENAMELS, JAPANS, AND THE LIKE. DANIEL GARDNER, Weybridge, England. Filed Aug. 6, 1922, Serial No. 656,119, and in Great Britain Aug. 21, 1922. 7 Claims. (Cl. 134—39.)

1. A non-aqueous colloidal lead-free paint, enamel, japan or the like, including a pigment and a vehicle, the pigment comprising a base constituent and at least one filler constituent, the oxide of said base constituent being positively charged relatively to the charge carried by the oxide or oxides forming the filler, and all the constituents introduced into the vehicle being compounds of the same metal as that in the base.

1,662,742. LOUD SPEAKER. JACK A. GLASSMAN, Chicago, Ill. Filed Feb. 23, 1927. Serial No. 170,391. 4 Claims. (Cl. 181—27.)

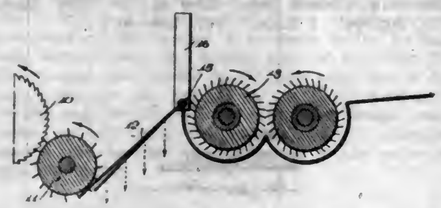
1. In a loud speaker, a hollow member shaped to conform to the shape of a bird provided with feet and having an open mouth to provide a sound outlet, said member comprising a frame and a translucent cover for the frame, spaced spiders secured to and positioned transversely within the frame, a reproducer unit and horn supported by the spiders with the outlet end of the horn located adjacent the sound outlet, and the feet of the bird secured to one of the spiders and extending through the cover, and a support engaged by the feet of the bird.

1,662,743. KALEIDOSCOPE. OSSIAN B. N. HANSON, Warren, Ohio. Filed Feb. 23, 1927. Serial No. 170,325. 2 Claims. (Cl. 88—15.)



1. A kaleidoscope comprising a tubular body, an eye piece at one end thereof, a cap removably attached to the other end, a triangular shaped casing, a transparent

plate on each side thereof, said casing and plates being held in the body by the cap, a triangular shaped member formed of three mirrors placed in the body between

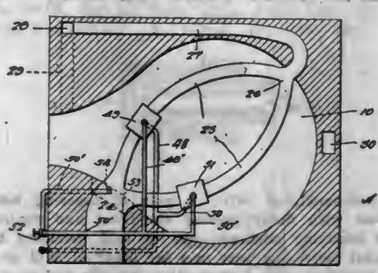


the casing and the eye piece and transparent disks of different colors pivotally connected with the cap and arranged to be moved over the cap end of the device.

1,662,744. DISPLAY CONTAINER. GEORGE W. HARDEN, Jacksonville, Fla. Filed Oct. 27, 1926. Serial No. 144,539. 2 Claims. (Cl. 206—44.)

1. A display construction comprising a box body, headed pins mounted therein in a relative conformation approximating the shape of, but greater in dimension than the article to be displayed, said pins having their heads disposed upwardly spaced from the bottom of the box body, and a wadding material compacted in the box body and in and about said headed pins and being caught under the heads of said pins, said wadding having embedded therein within the confines of the pins spaces of an outline to snugly receive the articles to be displayed.

1,662,745. SCREEN FOR COTTON CLEANERS. WILLIAM B. HOUSE, Ada, Okla. Filed Mar. 18, 1927. Serial No. 176,464. 9 Claims. (Cl. 19—67.)



1. In a cotton cleaning apparatus, an apron for receiving the cotton, the cotton moving by gravity on said apron from the receiving end to the discharging end, said apron consisting of means forming a plurality of unobstructed slots paralleling the line of movement of the cotton, and said slots being open at the discharge end of the surface.

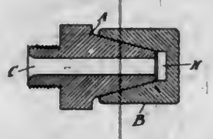
1,662,746. ELECTRIC SUPERHEATER. EMIL HOWE, San Gabriel, Calif. Filed Feb. 17, 1927. Serial No. 169,100. 4 Claims. (Cl. 219—38.)

1. In an electric heating device, a casing open at the top, a series of pairs of electrodes supported at opposite sides of the casing, heating resistances of comminuted material contacting with said electrodes and forming paths for current flow between the electrodes of separate pairs, said heating resistances being respectively of powdered charcoal, coffee grounds and sand, and a wire mesh top covering the spaces between said electrodes.

1,662,747. BAKER'S OVEN. BONAVENTURO IZZO, Paterson, N. J. Filed Sept. 10, 1921. Serial No. 499,683. 1 Claim. (Cl. 107—55.)

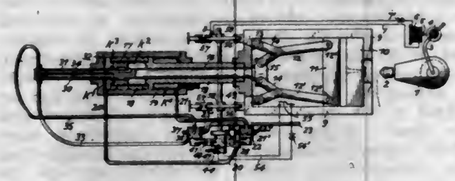
A baking oven of the character described comprising an oven chamber, a partition dividing the chamber into upper and lower compartments, a fire box arranged at one side of said oven chamber and formed with an upwardly curved portion, said upper compartment forming the oven proper and the lower compartment being a flue compartment, a conduit having one end opening into the curved portion and being formed with oppositely curved branches connected adjacent the walls of the upper compartment in a manner to arrange said branches in a substantially oval shaped formation, an additional conduit establishing communication between the adjacent ends of the curved branches and the lower compartment, said branches merging into the last mentioned conduit, a passage-way in the back wall of the oven and arranged in communication with the atmosphere and with the upper and lower compartments respectively, oppositely disposed independently operable valves controlling the communication between the passage-way and the lower compartment, a similar controlled valve for controlling the communication between the passage-way and the upper compartment and being disposed in the upper rear portion thereof, a water jacket surrounding each of the curved branches of the conduit, means for supplying water to the jackets, means leading from said jackets and communicating with a perforated receptacle having communication with the oven compartment, and means for illuminating said last mentioned compartment.

1,662,748. ARTICLE-SUPPORTING ATTACHMENT FOR IRONING BOARDS. FLORENCE M. JOHNSON, Nampa, Idaho. Filed Mar. 27, 1924, Serial No. 702,360. Renewed Aug. 16, 1927. 6 Claims. (Cl. 68—10.)



1. The combination with an ironing board, of means for supporting large articles when being ironed comprising two supporting members mounted upon the under

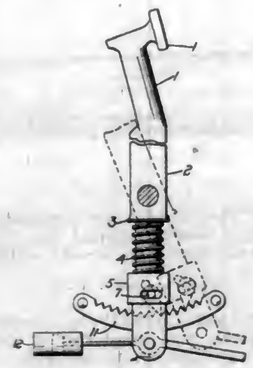
face of the board for sliding movement laterally of said board into a projected position or into a retracted position and entirely beneath the board, said supporting members each being right angular in form to provide a laterally extending arm at the outer end and a horizontally



extending element connected at its ends to the upper ends of the arms and projectable or retractable therewith, said supporting members being oscillatable to carry said arms into a plane parallel to the plane of the ironing board or into an upwardly projected position, and means to hold said arms in said last named position.

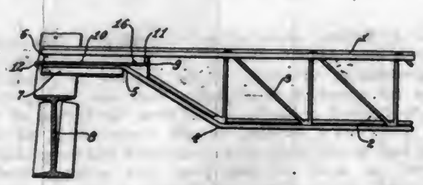
1,662,749. HOMOGENIZING VALVE. CHRISTIAN JØRGENSEN, Copenhagen, Denmark. Filed Aug. 3, 1926. Serial No. 126,920. 1 Claim. (Cl. 99—2.)

In homogenizing valve, a pair of coacting members provided with finely ground elongated and conical coacting engaging surfaces, one of said members having a central delivering bore and the other of said members being provided with a spreading chamber and connecting with the bore and the engaging surfaces, substantially as and for the purposes set forth.



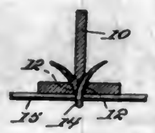
1,662,750. DIE-CASTING MACHINE. ALBERT KAUFMANN, Berlin, Germany. Filed July 17, 1926, Serial No. 123,157, and in Germany Aug. 3, 1925. 7 Claims. (Cl. 22—69.)

1. Die-casting machine comprising an injection nozzle, a frame, a die on said frame, a cylinder adapted to displace said frame with respect to said nozzle, a cylinder inserted in said first cylinder and adapted to control the opening and closing of said die, means for supplying fluid under pressure to said two cylinders, and means for regulating the operation of said supplying means.



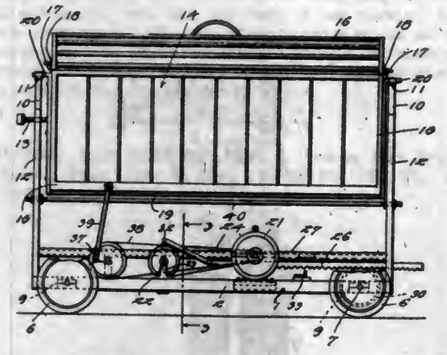
1,662,751. AUTOMATIC LOCK HAND LEVER. ARTHUR LA ROCHELLE, Chicago, Ill. Filed July 23, 1926, Serial No. 124,461. Renewed Feb. 3, 1928. 1 Claim. (Cl. 74—39.)

The combination of a hand lever pivoted between its ends, and provided with a slot, a collar on said lever having a slot therein, a shaft passing through the lever slot and the collar slot, a catch pivotally mounted on said shaft, a spring for normally holding the catch in alinement with the lever, a shoulder on the lever, a spring of greater pressure than said first mentioned



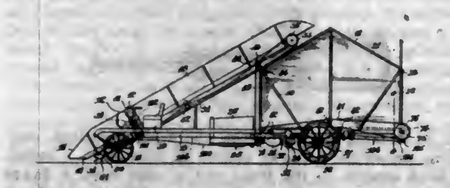
spring, the spring of greater pressure being mounted between the shoulder and the collar and exerting a downward force on the collar, a ratchet with which the catch engages.

1,662,752. BAR JOIST. THOMAS A. LUCY, Asheville, N. C., assignor to Ingalls Steel Products Company, Birmingham, Ala. Filed Aug. 30, 1926. Serial No. 132,400. 16 Claims. (Cl. 189—37.)



1. A bar joist having upper and lower chords consisting of pairs of bars and joined by a web, and having its ends formed by a gusset plate secured to said chords, said gusset plate having means thereon to engage an anchor.

1,662,753. FENCE-WIRE FASTENING. VICTOR S. MCDONOUGH, Camden, Ohio. Filed Apr. 30, 1926. Serial No. 105,826. 1 Claim. (Cl. 256—54.)



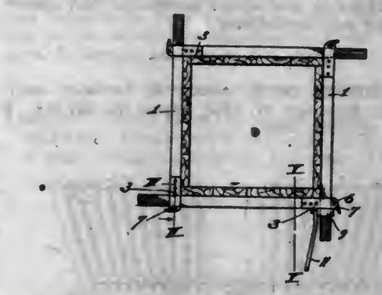
As a new article of manufacture, a metallic fence post having pairs of oppositely and horizontally disposed openings entering the post in alignment and formed obliquely therethrough at spaced intervals along the length thereof, and staples having their respective arms fitted and driven within the openings which cause the arms to diverge outwardly in opposed directions for retaining lengths of wire upon the post.

1,662,754. AUTOMATIC REVERSING SELF-ROCKING CRADLE CARRIAGE. HERMAN H. MILLARD, Corry, Pa. Filed Feb. 10, 1927. Serial No. 167,292. 4 Claims. (Cl. 180—1.)

1. An apparatus of the character set forth, comprising wheels, axles supported by the wheels, a frame mounted on the axles, uprights secured to the frame, a guiding and supporting bar secured to the uprights, a rack bar suspended from the guiding and supporting bar, a pinion mounted upon one of the axles and meshing with the rack bar, a shaft journaled in the frame and provded with a crank connected to the rack bar, a cradle rockably supported by the uprights, a shaft journaled in the frame and provided with a crank connected to the cradle, and shaft operating means.

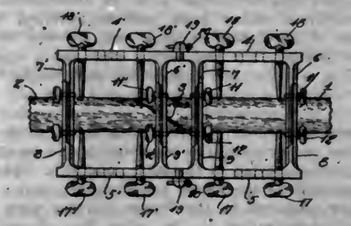
1,662,755. STOCK LOADER AND CONVEYER. WILLIAM ARTHUR MCQUAY, Dauphin, Manitoba, Canada. Filed Dec. 9, 1924, Serial No. 754,796, and in Canada Sept. 17, 1924. 5 Claims. (Cl. 56—27.)

1. In a machine of the character described comprising a vehicle including a chassis, a body mounted on the rear end of the chassis, said body having an open upper end and an open rear end closure means for the rear end, an inclined elevator means extending upwardly from the forward end of the chassis to a point above the open upper end of the body, means at the forward end of the elevator for picking up and discharging the material in the path of movement of the vehicle onto the lower end of the elevator, a conveyer having its upper lead movable over the bottom floor of the body from the forward end thereof to the rear open end, a common motor on the chassis for relatively driving the vehicle and the loading and unloading means and a clutch operable from the driver's seat to operatively connect the loading and unloading means selectively with the motor.



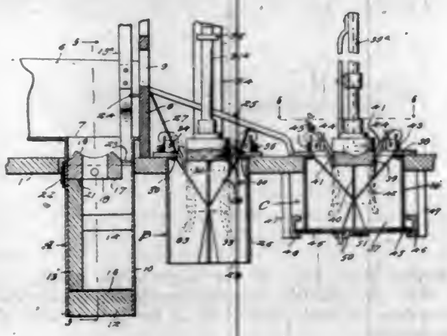
1,662,756. SUPPLEMENTAL OUTSOLE FOR SHOES. BONIFACIO MONTANTE, San Luis Potosi, Mexico. Filed Oct. 31, 1923. Serial No. 671,913. 1 Claim. (Cl. 36—32.)

As a new article of manufacture, a pair of supplemental out-soles adapted to be applied to a pair of shoes for maintaining the shape of the shoe and preventing the entrance of dampness through the sole, said pair of supplemental out-soles each consisting of an inner layer of rubberized canvas and an outer tread layer of vulcanized rubber secured to the inner layer to form an integral part thereof, the said pair of soles having



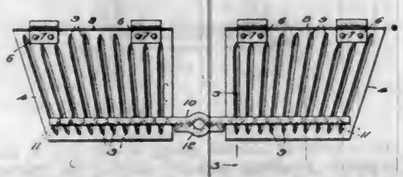
adhesive inner faces on the inner layers thereof, and a strip of separator material interposed therebetween permitting of ready separation of the pair of soles for application.

1,662,757. CAM COLUMN CLAMP. GEORGE F. NEWTON, Kansas City, Mo., assignor of one-half to Sebastian Patti, Kansas City, Mo. Filed Oct. 18, 1926. Serial No. 142,418. 2 Claims. (Cl. 144—291.)



1. In a concrete column clamp, a flat bar, a pair of flat bars fitting against opposite sides of the first-named bar and projecting beyond one end of the same to provide a fork therefor, a lug secured in the fork and against the extremity of the first-named bar so as to be incapable of turning or accidental dislodgment, and provided on its outer edge with a series of vertical teeth facing toward the open end of the fork, and a pivoted cam clamp spaced from the lug and mounted in the fork, to clamp an object extending crosswise through the fork, inwardly against the outwardly-facing teeth of said lug.

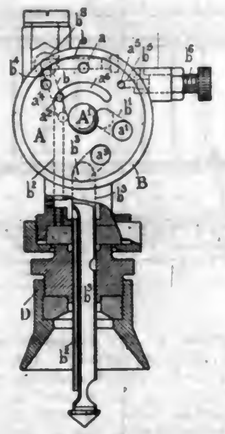
1,662,758. FEMUR SPLINT. JAMES H. NICHOLSON and WILLIAM D. CAVIN, Madison, Ga. Filed May 31, 1927. Serial No. 195,470. 4 Claims. (Cl. 128—92.)



1. A femur splint comprising side bars connected by cradle arms, the side bars on opposite sides of the femur being hinged at their meeting ends, and means passing through the side bars and adapted to penetrate the femur.

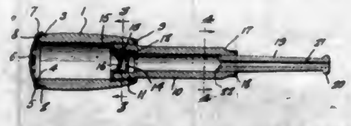
1,662,759. SEED-POTATO-CUTTING MACHINE. JOHN R. POLLAN, Fort Smith, Ark. Filed Oct. 8, 1925. Serial No. 61,247. 6 Claims. (Cl. 146—169.)

5. A potato cutting machine comprising a cutting mechanism, a hopper discharging directly into said mechanism, a second cutting mechanism, sorting means forming part of said first cutting mechanism and adapted to permit potatoes of certain sizes only to pass thereto from the hopper and adapted to discharge potatoes of other sizes from the hopper to said second mechanism, and operating means for said mechanisms.



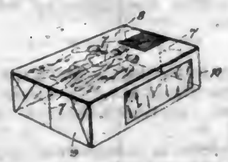
1,662,760. HOPPER DOOR. AUGUST G. SANDMAN, Baltimore, Md. Filed Oct. 27, 1922. Serial No. 597,378. 9 Claims. (Cl. 105—280.)

9. A hopper door for railway dump cars provided with surface configurations over substantially the full area thereof and forming passageways, and a stiffening member connected to said door, said stiffening member being arranged to extend across said surface configurations and being located above the lowermost ends of said passageways to permit self cleaning thereof.



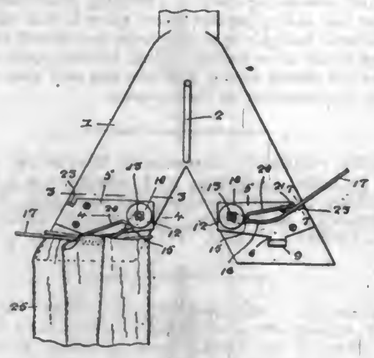
1,662,761. FILLING HEAD OF BOTTLE-FILLING MACHINES. ALBERT WOODALL SMITH, Manchester, England. Filed Aug. 6, 1924, Serial No. 730,481, and in Great Britain Aug. 18, 1923. 1 Claim. (Cl. 225—122.)

In a bottle-filling machine embodying a head having a snift conduit communicating with the atmosphere, a gas inlet conduit, a liquor inlet conduit provided with a valve, and a gas return conduit, and wherein the head carries a gas delivery and escape pipe and a liquor delivery pipe, a valve for controlling said conduits, said valve comprising a disk carried by said head and having a gas inlet port connected to the gas inlet conduit, a gas escape port connected to the gas return conduit, a gas outlet port connected to the gas delivery and escape pipe, a snift port connected to the snift conduit, a liquor inlet port connected to the liquor inlet conduit, and a liquor outlet por conneced to the liquor delivery pipe, all of said ports terminating in the outer face of said disk, said disk also having an arcuate groove formed in its outer face and connected with said gas outlet port; a second disk contacting with and adapted to oscillate relatively to said first-named disk, said second disk having in its contacting face a radial groove always opposite to and in communication with the arcuate groove of said first-named disk and adapted by oscillating movements of said second-named disk to be brought opposite to said gas inlet port, said gas escape port, or said snift port;



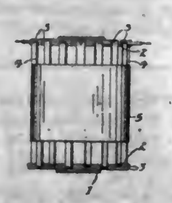
said second-named disk also having a second groove formed in its contacting face and adapted, when said radial groove is opposite said gas escape port, to register with and establish communication between the liquor inlet port and liquor outlet port of said first-named disk.

1,662,762. SMOKING DEVICE. ORA E. TATE, Sr., Elberton, Ga. Filed Feb. 18, 1927. Serial No. 169,289. 4 Claims. (Cl. 131—22.)



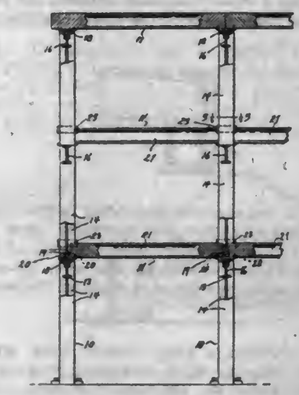
4. A smoking device of the character described comprising an elongated bowl opened at both ends, a metallic band secured to the front end of said bowl, a flange included in said band and disposed within the bowl, an apertured closure pivotally secured to said band, means formed with said apertured closure for securing the same in operative position to close the front end, a stem and mouth piece telescopically associated with the bowl, and means for retaining said stem and mouth piece in their inoperative positions and including a shell adapted to be disposed between the bowl and mouth piece when the device is folded, a ring formed on the shell and a thimble frictionally held on said shell and being engageable with said ring.

1,662,763. PACKAGE. VOLNEY WAYNE THOMSON, El Paso, Tex. Filed June 2, 1924. Serial No. 717,396. 4 Claims. (Cl. 229—51.)



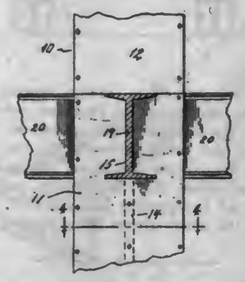
1. A merchandise package comprising, in combination, an inner tubular wrapper having its longitudinal edge portions overlapping each other on one face of the package and its end portions interfolded to form a closed container in such a manner as to facilitate the separation of the folds on the three sides, and an outer wrapper completely enveloping said inner wrapper, said outer wrapper being provided with a line of weakening extending across said face and the ends of the package, in close proximity to said overlapping portions of the inner wrapper, whereby the folded portions and the overlapping portions of the inner wrapper are readily separated when the outer wrapper is broken.

1,662,764. BAG HOLDER. OTTO E. TOMAN, Pine City, Minn. Filed Apr. 8, 1927. Serial No. 182,127. 2 Claims. (Cl. 83—26.)



1. A bag holder for a spout or hopper including angle plates fixed on one of the sides of the spout or hopper, adjacent to the mouth thereof, and the lateral portions of said plates being arranged in a line with the edges of said spout or hopper and a flat plate fixed on the opposite face of the spout or hopper, said flat plate having a reduced depending portion on its lower edge which is flanged outwardly and from thence upwardly to provide a hook, the outer lip of the hook having its corners rounded, a pivotally supported spring influenced lever on the plate movable into the hook but of a width not to contact with the outer element of the hook, an angle finger on the plate disposed adjacent to one of the corners thereof, and a lug on the lever engageable with said finger for holding the lever raised away from the hook.

1,662,765. ADJUSTABLE COIL MOUNTING. RICHARD VARLEY, Englewood, N. J., assignor to Varley Duplex Magnet Co., a Corporation of New Jersey. Filed Nov. 23, 1926. Serial No. 150,366. 6 Claims. (Cl. 175—359.)

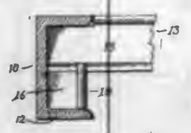


1. A coil mounting, comprising a core adapted to have a coil mounted thereon, and spaced end plates adjustably mounted upon said core, means for securing said plates in any desired position lengthwise of the core against a coil, and means for locking the plates in their secured position to the coil so as to prevent relative movement thereto.

1,662,766. INTERLOCKING JOINT FOR METALLIC FRAMES. WESLEY WAIT, Newburgh, N. Y. Filed Feb. 9, 1927. Serial No. 167,007. 3 Claims. (Cl. 189—36.)

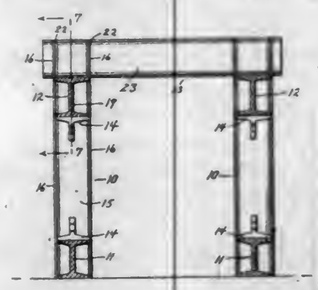
1. In an interlocking joint for metallic frames, the combination with a column of I-section, a transverse support between the flanges on one side of the column, a girder having an end positioned on the transverse support between the flanges of the column, and a yoke carried on the column and engaging the girder to hold the latter in upright position on the support.

1,662,767. INTERLOCKING JOINT FOR METALLIC FRAMES. WESLEY WAIT, Newburgh, N. Y. Filed Feb. 9, 1927. Serial No. 167,008. 3 Claims. (Cl. 189—36.)



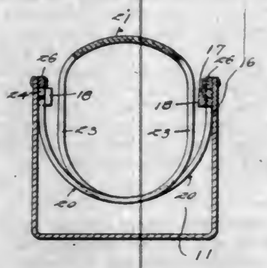
1. In an interlocking joint for metallic frames, the combination with a column formed of upper and lower sections of H-shape, each section having an end with the web removed between the flange sides and said sides having slots therein in the same plane as the web of the section, said sections being interfitted with the ends of the flange sides of one section seated between similar ends of the other section and with the webs of the two sections normal to each other, and flanged girders seated in the slots in the ends of the column sections, the flanges of said girders being notched for the insertion of the flange sides of the column sections.

1,662,768. INTERLOCKING JOINT FOR METALLIC FRAMES. WESLEY WAIT, Newburgh, N. Y. Filed Mar. 31, 1927. Serial No. 180,011. 1 Claim. (Cl. 189—36.)



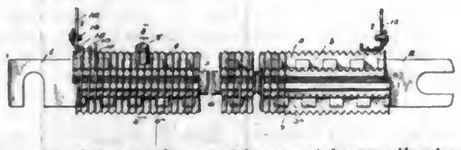
The combination with a horizontal channeled girder having a mortise notched in its upper flange and also having a socket in its lower flange opposite to the mortise, of a horizontal beam entering at one end the channeled side of the girder to abut the web thereof, said beam having upper and lower flanges on both sides with the upper flanges flush with the upper flange of the girder,

said upper flanges of the beam being oppositely notched to form a tenon engaging the mortise, the lower flanges of the beam being transversely slotted adjacent the end of the beam, and a chair interposed between the end of the beam and the lower flange of the girder comprising a body



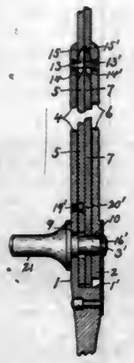
part having a lug engaging the socket in the lower flange of the girder and a face part extending above the body part, said face part being vertically bifurcated to extend through the transverse slots in the lower flanges of the beam and on opposite sides of the web of the beam.

1,662,769. INTERLOCKING JOINT FOR METALLIC FRAMES. WESLEY WAIT, Newburgh, N. Y. Filed Mar. 31, 1927. Serial No. 180,013. 4 Claims. (Cl. 189—36.)



1. The combination of a column having a web and flanged sides at each edge of the web, with girders interlocked with the column, said column at the interlock having its web cut away between the flanged sides to form an upper transverse abutment, the web also having a median longitudinal slot to form a lower transverse abutment, one of the girders being seated on the lower abutment and the other girder being seated on the upper abutment.

1,662,770. CUSHION TIRE FOR WHEELS. HOMER A. WELLS, Rico, Colo. Filed Apr. 12, 1927. Serial No. 183,112. 4 Claims. (Cl. 152—8.)

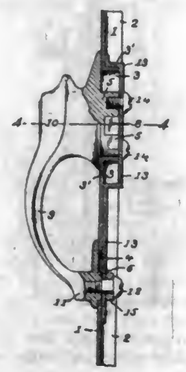


1. In a cushion tire for wheels, an annulus embodying spaced opposed walls, a plurality of plates combining to produce a ciphered annulus, each of said plates having a curved extension forming a spring whereby the plate is supported, the terminal portions of said springs being secured to one of confronting faces of the walls of the annulus.

1,662,771. RESISTANCE UNIT. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed May 8, 1926. Serial No. 107,613. 6 Claims. (Cl. 201—63.)

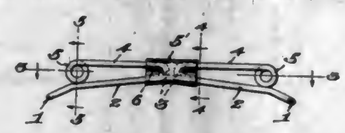
5. A resistance unit comprising a metal supporting bar, an insulating covering thereon composed of refractory material, said covering having a plurality of toothed ribs and intervening channels extending longitudinally of the bar and having pockets spaced apart in said channels, a connector having a base resting on one of said ribs and having forked arms projecting into adjacent pockets, and a wire coil wound around said ribs and said base and securing the connector to the covering.

1,662,772. SHEARS. CLARENCE H. WILKES and GEORGE E. CALHOUN, Amsterdam, N. Y., assignors to A-Kee-Na Products Company, Incorporated, Amsterdam, N. Y., a Corporation of Delaware. Filed Nov. 8, 1926. Serial No. 147,082. 1 Claim. (Cl. 30—13.)



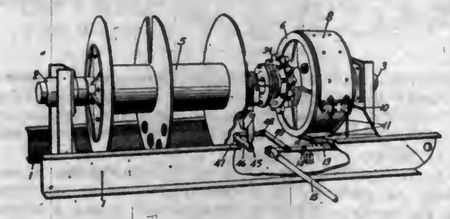
In a shears, a pair of levers crossing each other, separate shearing blades detachably applied to the inner faces of the front arms of the levers to overlap at the crossing, a pivotal stud secured to one lever and projecting through registering apertures in the other lever and blades, the blade attached to the stud-carrying lever having an elongated aperture to allow limited lengthwise movement thereof relatively to its supporting lever, means for locking said blade and preventing such lengthwise movement, and a latch on the stud-carrying lever movable into and out of engagement with the other lever for holding the latter against axial displacement from the pivotal stud.

1,662,773. LOCKING MECHANISM FOR LOCKERS. FRANK ALBACH, St. Louis, Mo., assignor to Fred Medart Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 16, 1927. Serial No. 184,266. 8 Claims. (Cl. 70—91.)



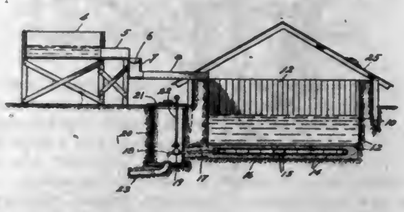
1. In a locking and latch operating mechanism for locker doors, the combination of a locker door provided with an elongated guide orifice having holding notches at its respective sides, a slidingly mounted operating handle provided with an inwardly extending guide extension adapted for movement in the guide orifice of the locker door, said guide extension having a transversely arranged guide slot at its rear end, a transverse bolt having movement in said guide slot and adapted for

locking engagement in a side notch of the locker door orifice aforesaid, said transverse bolt forming a member of a block mechanism arranged in the guide extension



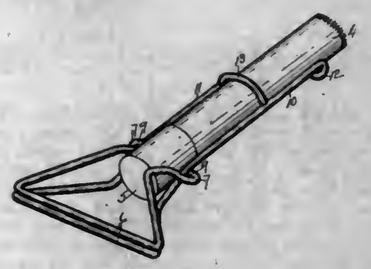
of the handle, and means for holding said operating handle in position on the locker door, said handle being adapted for operative engagement with the latching means of the locker door.

1,662,774. SOFT-COLLAR HOLDER. LAWRENCE E. BARR, Attleboro, Mass., assignor to The Baer & Wilde Company, Attleboro, Mass. Filed July 8, 1927. Serial No. 204,331. 5 Claims. (Cl. 24—81.)



1. In a soft collar holder, a sheet metal clamp having open ends and a pair of collar engaging members each composed of wire doubled upon itself intermediate the end of the wire to form a rear jaw, one end portion of the wire being curved to overlie the rear jaw and forming a front jaw and having the terminal of said end portion curled to form a grip which engages the rear jaw, the curved parts of the members being received in the respective open ends of the clamp and the latter being pinched to frictionally hold the members to the clamp.

1,662,775. SAND-REEL STRUCTURE. RICHARD R. BLOSS, ROY C. PFEIL, and ELMER B. MAURER, Columbus, Ohio, assignors to The International Derrick & Equipment Company, Columbus, Ohio, a Corporation of Ohio. Filed May 21, 1927. Serial No. 193,332. 26 Claims. (Cl. 192—17.)

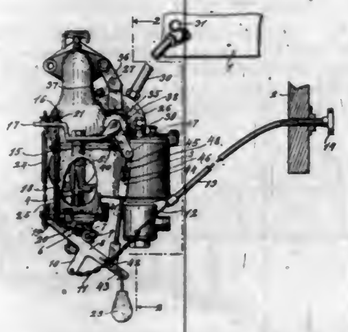


11. Sand reel structure comprising a sand reel shaft, a drum, clutching mechanism insertible into said drum and operable against the interior thereof, said mechanism embodying an expansible band structure and operating cam therefor, said band structure and operating cam being removable as a unit.

1,662,776. APPARATUS FOR SLAKING LIME INTO LIME PUTTY. DAVID A. EVANS, Kansas City, Mo., assignor to The Evans Lime Putty Company, Kansas City, Kans., a Corporation of Kansas. Filed Dec. 14, 1925. Serial No. 75,285. 3 Claims. (Cl. 23—287.)

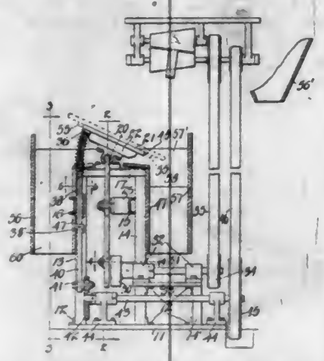
1. Apparatus for the curing of lime putty comprising a floor of lumber for supporting the putty mass, a layer of filter material in position for draining off the excess water from the putty mass, drainage means for conducting off said excess water from the filter material, and a wall structure superposed above and surrounding said floor to a height for maintaining the top level of the putty mass above the receiving points of said drainage means.

1,662,777. MOP HOLDER. FREDERICK C. HOFFMAN, West Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 26, 1926. Serial No. 97,709. 3 Claims. (Cl. 15—160.)



1. A mop holder comprising a handle provided with pivot bearings near one end thereof, a pair of frames carried by said handle, each frame comprising a member having a pintle pivoted in one of said bearings, a jaw extending transversely of the handle end, and a bowed portion abutting the jaw and pintle, a free shank connected with the free end of the jaw, the shank of one frame passing through the bowed portion of the other frame and normally extending along the handle when the jaws are in clamped position, and means on each of the shanks for locking the same to the handle with the jaws in clamping position.

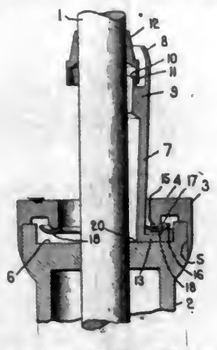
1,662,778. THERMOSTATIC CARBURETOR CONTROL. HAVARD FARMER HUDSON, Wichita, Kans. Filed Mar. 30, 1925. Serial No. 19,326. 2 Claims. (Cl. 261—39.)



1. In a carburetor, having a movable member for varying the richness of the fuel mixture, means for exerting a continuous force tending to move the member to lean mixture position, manually operable means for moving the member to rich mixture position, thermo-responsive means for holding the member against return to lean mixture position while the thermo-responsive

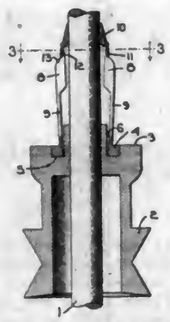
device is cold, but permitting it to return to lean mixture position when the thermo-responsive device becomes heated above a predetermined temperature and

means permitting the manually operable means to return to normal position independent of the position of said holding means.



1,662,779. MECHANICAL SHAKER FOR CERAMIC TILE. LOUIS S. JONES, CARL G. HENRIKSON, and GARFIELD W. FISHER, Anderson, Ind., assignors, by mesne assignments, to The National Tile Company, Anderson, Ind., a Corporation of Ohio. Filed Apr. 4, 1925. Serial No. 20,823. 12 Claims. (Cl. 154—1.)

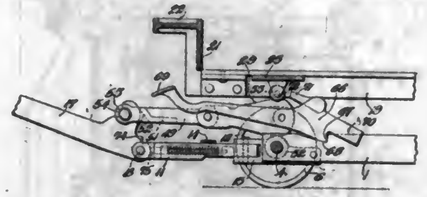
1. The combination of means for supporting a mounting board for tiles, means for rocking the board, means for varying the speed of the rocking motion including a lever connected to the supporting means, a crankshaft, a crank adjustably mounted thereon, and connections between the crank and the lever, substantially as set forth.



1,662,780. BOBBIN-CLUTCHING MEANS FOR ROTATABLE SPINDLES. JOSEPH A. MILLER, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 17, 1926. Serial No. 136,044. 2 Claims. (Cl. 242—46.4.)

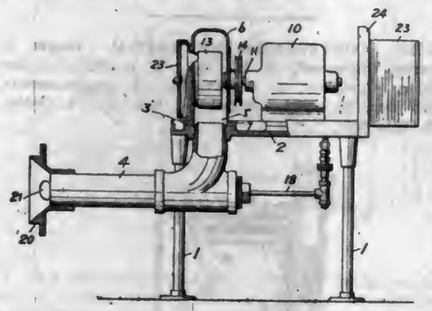
1. A rotatable spindle comprising a blade, a whirl secured to the blade, and presenting an annular surface transversely of, and surrounding, the blade, a plurality of bobbin clutching members each having an arm extending up alongside the blade and a sector-shaped foot projecting outwardly from, and at an acute angle to, the arm and seated on said annular surface, and an annular whirl cap surrounding and spaced from said arms secured to the whirl, and having an annular depending flange located above, and spaced from, the feet between the arms and the periphery of the feet, and a resilient washer engaging on concentric lines the bottom of said flange and the outer portions of said feet, the resiliency of the washer reacting against the flange

and the outer portions of said feet to force the upper ends of the bobbin clutching arms radially outward from the blade.



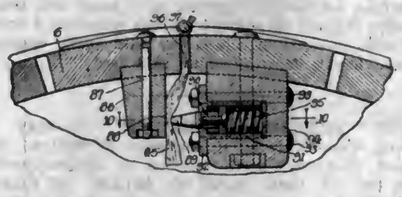
1,662,781. BOBBIN-CLUTCHING MEANS FOR ROTATABLE SPINDLES. JOSEPH A. MILLER, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 5, 1926. Serial No. 146,398. 3 Claims. (Cl. 242—46.6.)

1. A rotatable spindle comprising a blade, a bobbin rest secured thereto, an integral one-piece bobbin clutching sleeve concentric with the blade having a cylindrical lower end rigidly secured in the bobbin rest and spaced from the blade, the said sleeve presenting a plurality of similar upwardly extending arms symmetrically arranged around the blade, said arms being much heavier at their upper free ends than at their intermediate portions and the intermediate portions being resilient, a collar on the blade cooperatively related to the arms to limit the outward, while permiting the inward, movement of the upper free ends of the arms, the said arms first acting yieldingly to engage the bore of the bobbin placed on the blade and seated on the bobbin rest and then, upon rotation of the spindle, acting by centrifugal force firmly to clutch the bobbin.



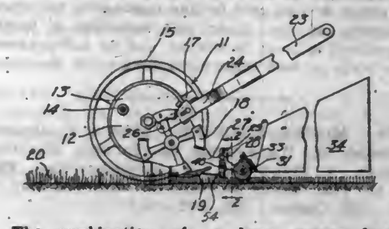
1,662,782. ELEVATING TRUCK. BERNARD E. SCRIVEN, Sound Beach, Conn., assignor to The Excelsior Plimtruck Co., Stamford, Conn., a Corporation of Connecticut. Filed Mar. 15, 1923. Serial No. 625,891. 9 Claims. (Cl. 254—5.)

1. An elevating truck having, in combination, a carriage, an elevating table, means for raising the table on the carriage, a link pivoted on said means, a handle mounted to turn upon a horizontal axis, the handle and the free end of the link being provided with complemental surfaces for connecting the handle and link when the handle is lowered and for initiating a disconnecting movement of the link when the handle is raised, a tension spring secured at one end to the elevating mechanism and at the other to the link, the line of action of the spring passing substantially through the pivotal axis of the link whereby the spring is inoper-



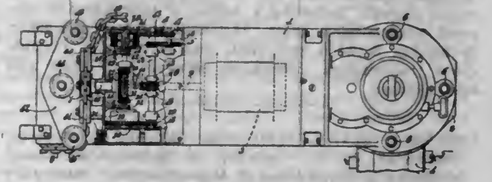
ative when the handle is first raised to impart a positive disconnecting movement to the link and until the line of action of the spring is carried a sufficient distrance from the pivotal axis of the link to render the spring operative to complete the disconnecting of the link.

1,662,783. OIL-BURNER EQUIPMENT. LEROY TABOR, Riverton, and JOHN TAIT, Palmyra, N. J., assignors to The Tabor Engineering Company, Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 5, 1927. Serial No. 237,656. 3 Claims. (Cl. 158—28.)



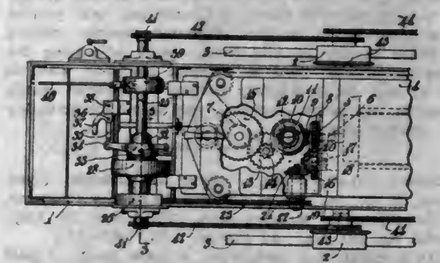
1. Oil burner equipment including a table top having therethrough a burner air pipe opening, a motor mounted on the table top and having a motor shaft, an extension on the motor shaft, a blower mounted on the extension and having its casing turnable into connection with said opening and away therefrom to provide space, a driving pulley on the extension and arranged between the motor and blower, an oil pump mounted on the table top and having a pulley aligned with said driving pulley and arranged above the table top, a belt for said pulleys introducable and removable through said space, and a burner air pipe extending from under the table top and mounted in said opening.

1,662,784. LAUNDRY WASHING MACHINE. WILLIAM P. LABOR, Chicago, Ill. Filed May 14, 1924. Serial No. 718,177. 5 Claims. (Cl. 68—18.)



1. In a device of the class described, the combination with a rotary washing drum, of a bag clamp attached to an inner surface of said drum.

1,662,785. LAWN-MOWER COMB ATTACHMENT. JOHN ROBERTSON, Pasadena, Calif. Filed Sept. 13, 1926. Serial No. 135,016. 6 Claims. (Cl. 56—249.)



1. The combination of: a lawn mower having a wheeled carriage, a mowing mechanism provided thereon between the wheels thereof, a transverse roller disposed behind said mowing mechanism, and brackets carrying said roller and mounted on said carriage for vertical adjustment thereon; a toothed comb extending transversely between said mowing mechanism and said roller; and adjustable means for mounting said comb on said brackets, so that said comb is vertically movable with said brackets relative to said carriage, said adjustable means being operable to vertically adjust said comb relative to said roller.

1,662,786. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 5, 1919, Serial No. 301,917. Renewed May 11, 1927. 111 Claims. (Cl. 262—30.)

1. The combination with a mining machine frame having a cutter bar projecting from one end thereof, of feeding means including a flexible feeding portion adapted during feeding to cooperate with a fixed point outside the machine frame, and means on said frame cooperating with said flexible feeding portion including a motor and a feed operating member driven thereby and operatively engaging said flexible portion and rotatable on an axis extending longitudinally of the machine frame on the opposite end of said frame from said cutter bar to effect movement of said machine to extend its cut in the direction of said fixed point.

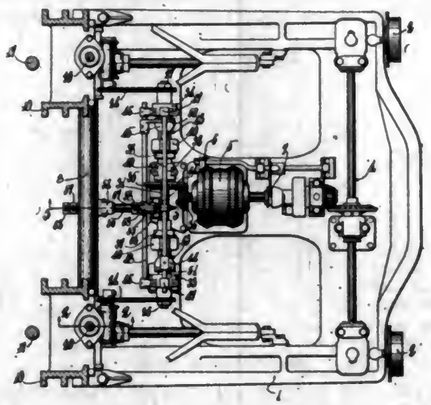
1,662,787. MINING APPARATUS. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 1, 1920, Serial No. 385,651. Renewed May 21, 1927. 10 Claims. (Cl. 105—161.)

2. In combination, a mining machine slidable on its bottom on a mine bottom during cutting and including

a motor and feeding mechanism driven thereby through a friction clutch, a truck carrying said machine, truck driving mechanism positively driven by the same end of said motor driving said feeding mechanism but wholly independently of the latter and including a friction clutch controlling truck movement, and an independently operable brake on said truck controlling truck movement.

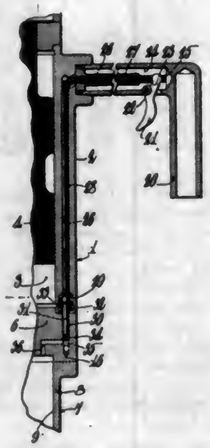
1,662,788. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 18, 1921, Serial No. 478,473. Renewed May 11, 1927. 133 Claims. (Cl. 262—30.)

1. In a mining machine, the combination with a feed operating member adapted to cooperate directly with flexible feeding means and rotatable upon an axis disposed longitudinally of the machine, of actuating means therefor including a motor, a longitudinally disposed transmission shaft, variable speed transmission mechanism between said shaft and motor, and variable speed transmission mechanism between said shaft and said member.



1,662,789. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 18, 1921, Serial No. 485,690. Renewed June 16, 1927. 165 Claims. (Cl. 262—30.)

1. In a mining machine, a frame having a forwardly extending mine bottom engaging portion, a head detachably secured to said frame and overlying said portion and adapted to be in part supported thereon, cutting mechanism carried by said head, means permitting the disposition of said head in different positions with respect to said frame whereby cutting in different planes is possible, and means carried by said frame for actuating said cutting mechanism.

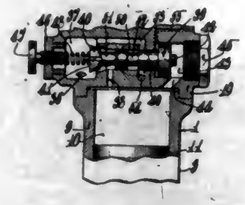


1,662,790. CHANNELER. HENRY H. MERCER, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 25, 1922. Serial No. 546,921. 10 Claims. (Cl. 262—18.)

1. In a channeling mechanism, a main frame, a pair of standards thereon, normally independently or simultaneously operable channeling devices adjustably mounted on said standards and each having usual channeling steels, and means for adjusting said channeling devices

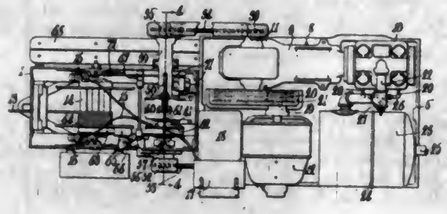
in a direction longitudinally of said steels including control levers separately or simultaneously operable by a single hand of the operator.

1,662,791. CONTROLLING MECHANISM. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 26, 1922. Serial No. 609,131. 3 Claims. (Cl. 121—9.)



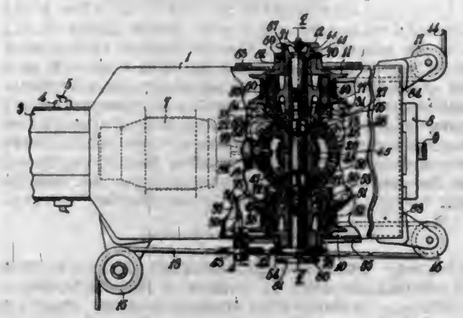
1. In a drilling mechanism, a drilling motor and feeding means therefor adapted to support and advance said motor during drilling, a handle for manually supporting said drilling mechanism arranged at a point well above the center of mass thereof, and means including a valve and flexible controlling means for said valve operable from said handle for controlling said feed.

1,662,792. DRILLING MECHANISM. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 19, 1923. Serial No. 681,598. 28 Claims. (Cl. 121—5.)



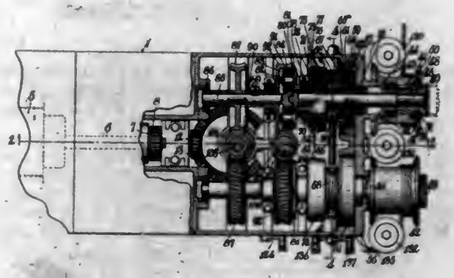
1. In a drilling apparatus, work performing means comprising a plurality of motors, feeding means for said

work performing means comprising a plurality of relatively movable feeding elements, and means effective when an abnormal rate of relative longitudinal move-



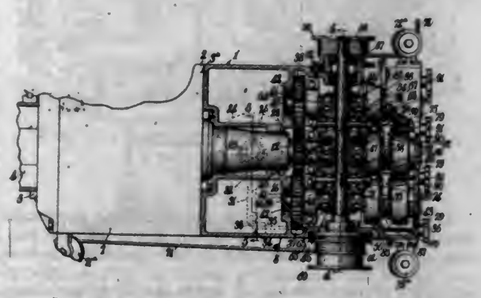
ment between said feeding elements occurs during feeding for automatically varying the power of said feeding means and one of said motors.

1,662,793. COMPRESSOR MECHANISM. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Sept. 12, 1924. Serial No. 737,228. 12 Claims. (Cl. 105—27.)



1. In a compressor mechanism, a truck having running gear, a driving motor, reduction gearing, a compressor on said truck including an element driven by said reduction gearing, and driving connections between said element and said running gear.

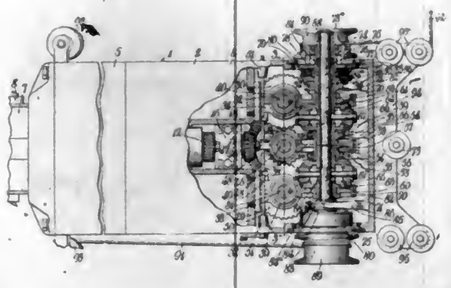
1,662,794. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Corporation, a Corporation of Massachusetts. Original application filed July 21, 1919, Serial No. 312,846. Divided and this application filed Dec. 11, 1924. Serial No. 755,259. 51 Claims. (Cl. 262—30.)



1. In a mining machine, feeding mechanism including a shaft, a feed member and a controlling member each disposed coaxially with said shaft, said feed and controlling members being relatively rotatable and each adapted to cooperate directly with flexible feeding means during machine feeding and to cooperate in effecting guided movements of the machine, and friction means operable to effect simultaneous independent control of said members.

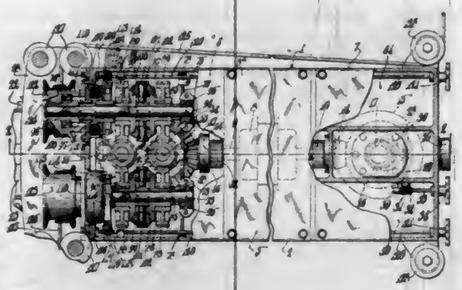
1,662,795. MINING MACHINE. LOUIS A. MAXSON, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Aug. 31, 1925. Serial No. 53,554. 55 Claims. (Cl. 262—30.)

1. In a mining machine, a motor, cutting mechanism driven thereby, and feeding means including a feed operating member adapted to cooperate directly with flexible feeding means, and means for actuating and controlling rotation of said member including a plurality of coaxial members, two of which support coaxial gear members and another of which supports planet means meshing with said gear members, means for operatively connecting one of said coaxial members to said feed operating member, and means cooperating with said other coaxial members to cause said member operatively connected with said feed operating member to rotate the latter at a predetermined cutting, a predetermined higher sumping, and a predetermined still higher machine moving speed.



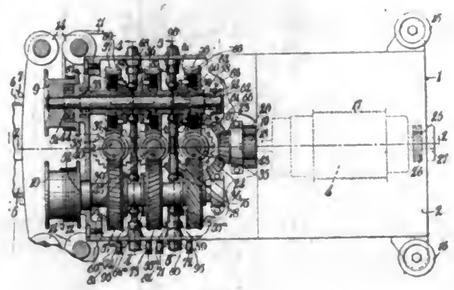
1,662,796. MINING MACHINE. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Aug. 31, 1925. Serial No. 53,723. 202 Claims. (Cl. 262—30.)

1. In a mining machine, a motor, and feeding mechanism operated by said motor including a flexible feeding portion, a rotatable feed operating and controlling mem-



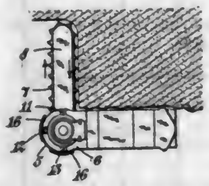
ber cooperating directly therewith, and operating and controlling means for said member including coaxial elements rotating on transversely extending horizontal axes, planet means cooperating with said elements and rotatable thereby, worms operatively connected to said coaxial elements, and means for effecting rotation of said member on orbital movement of said planet means.

1,662,797. MINING MACHINE. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Aug. 31, 1925. Serial No. 53,726. 90 Claims. (Cl. 262—30.)



1. In a mining machine, a motor, and feeding mechanism driven by said motor including coaxial elements rotating on transversely extending horizontal axes, planet means cooperating with said elements, and vertical worms operatively connected to said coaxial elements respectively.

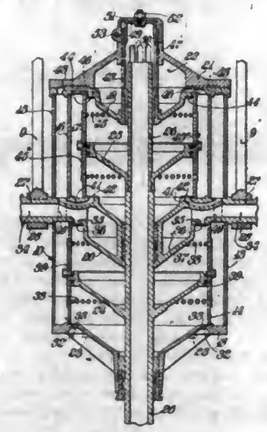
1,662,798. MINING MACHINE. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Aug. 31, 1925. Serial No. 53,725. 234 Claims. (Cl. 262—30.)



1. In a mining machine, a motor, cutting mechanism driven thereby, and feeding means driven by the front end of said motor comprising a feed operating member, and means for transmitting power to said member including a plurality of coaxial members, two of which support coaxial gear members and another of which supports planet means meshing with said gear members, means for effecting rotation of two of said members by power from said motor, and means connecting the other of said members in driving relation to said feed operating member.

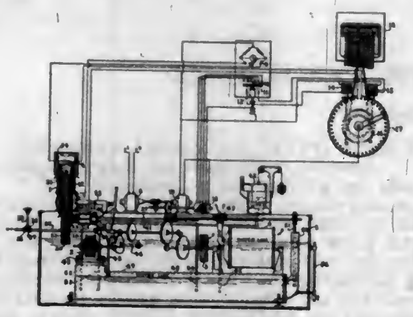
1,662,799. MINING MACHINE. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Aug. 31, 1925. Serial No. 53,724. 49 Claims. (Cl. 262—30.)

1. In a mining machine, a driving motor and feeding means driven thereby including a feed operating member adapted to cooperate directly with flexible feeding means and rotatable upon a longitudinally extending axis, and more than two worm gears disposed coaxially therewith and through which said feed operating member is driven at different speeds.



1,662,800. MINING MACHINE. GILBERT RIMMER, London, England, assignor to Sullivan Machinery Company, Chicago, Ill., a Corporation of Massachusetts. Filed Dec. 9, 1926, Serial No. 153,676, and in Great Britain Aug. 6, 1926. 7 Claims. (Cl. 262—30.)

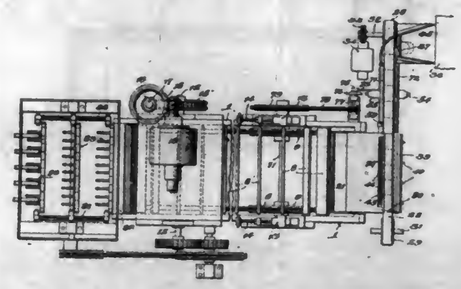
1. In a mining machine of the type whose frame is slidable upon its bottom upon a mine bottom during cutting, a bottom engaging frame, a motor thereon, cutting mechanism actuated by said motor including a cutting member of the jib and chain type adapted to cut a horizontal kerf in the mine wall, and a guide wall supported on said frame and extending around the heel of the jib and forming a compartment arranged at one end to receive the cuttings removed at the leading face of the jib and at the other end to direct said cuttings back into the kerf in rear of the following face of the jib.



1,662,801. DRILLING APPARATUS. HENRY H. MERCER, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 26, 1927. Serial No. 208,599. 9 Claims. (Cl. 255—37.)

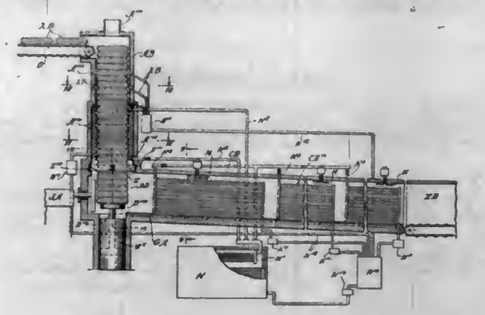
1. A rock drilling apparatus comprising a power reciprocated member, a drill steel actuated thereby, means for providing a pneumatic connection between said member and said steel comprising a plurality of cylinders and

pistons cooperating therewith, and fluid conducting and valve means associated with said cylinders and pistons whereby they act as a compound fluid compressor pump.



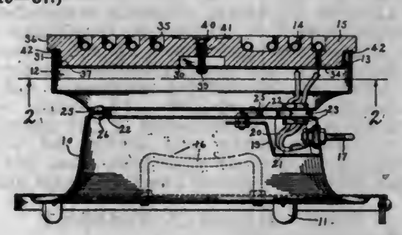
1,662,802. APPARATUS PARTICULARLY APPLICABLE TO MEASUREMENTS OF THE CALORIFIC VALUE OF COMBUSTIBLE FLUIDS. HORACE N. PACKARD, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 28, 1921. Serial No. 440,616. 18 Claims. (Cl. 73—184.)

1. The method of carrying on combustion of fluids, which comprises maintaining a supply of definitely proportioned quantities of such fluids under like conditions of temperature, pressure and saturation, mixing certain of said fluids prior to combustion with less than the total quantity of other of such fluids, and utilizing the remainder of such other of said fluids to support and assist in the combustion.



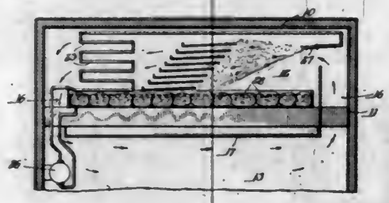
1,662,803. CAN-COOLING APPARATUS. GEORGE G. FRELINGHUYSEN, Newark, N. J. Filed July 9, 1925. Serial No. 42,614. 8 Claims. (Cl. 198—31.)

1. A can handling apparatus including a can feeding mechanism comprising a feeding belt arranged at or adjacent a feeding position, a can guiding device positioned at an angle to said belt and having means for directing cans while in an upright position in a direction toward the belt, means for overturning the individual cans from



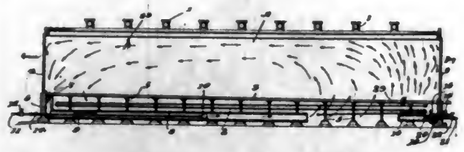
the upright to a horizontal position, and means for turning the upset cans onto the feeding belt longitudinally thereof.

1,662,804. METHOD OF AND APPARATUS FOR VULCANIZING. CONRAD DRESSLER, New York, N. Y., assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 24, 1919. Serial No. 340,308. 34 Claims. (Cl. 18—6.)



1. The method of vulcanizing rubber articles which consists in moving the articles through a chamber, supplying heat to the chamber as required to vulcanize the articles during their passage through said chamber, and injecting a cooling medium into the chamber when necessary to protect the articles against overheating.

1,662,805. ELECTRICAL STOVE. HUGO FRANK, Hartford, Conn., assignor to The Frank E. Wolcott Manufacturing Co., a Corporation of Connecticut. Filed July 23, 1926. Serial No. 124,513. 36 Claims. (Cl. 219—37.)



1. An electrical stove comprising an upright cup-shaped member, a heating unit support, said support having an upwardly projecting flange about the periphery thereof, radially located means securing said support to said upright member in laterally spaced relation thereto, and a heating unit seated within said flange and supported by said support.

1,662,806. REFRIGERATION SYSTEM. GEORGE HILGER, Chicago, Ill. Filed Apr. 30, 1926. Serial No. 105,619. 8 Claims. (Cl. 62—104.)

1. A cold storage room having, in combination, a partition wall dividing the room into upper and lower chambers, said wall being shorter than said room whereby to provide connecting passageways between opposite ends of said chambers, means for containing a supply of cooling liquid, refrigerating means to cool said liquid, means operable to mix said liquid with the air in said upper chamber, said mixing means being located near the inlet end of said upper chamber, a coiled pipe positioned near the outlet end of said upper chamber, and means operable to supply said liquid to said coil and then to deliver the liquid to said mixing means.

1,662,807. DRY KILN. FRANK M. CREIGHTON, Americus, Ga., and WILLIAM E. GRAY, Memphis, Tenn., assignors to Moore Dry Kiln Company, Jacksonville, Fla., a Corporation of Florida. Filed Apr. 13, 1926. Serial No. 101,761. 5 Claims. (Cl. 34—46.)

1. A kiln of the character described including a drying chamber, a heating system, humidizers, air intakes at opposite ends, a return conduit leading from one air intake and discharging well into the interior of the kiln, a plurality of air conduits extending inwardly from the intake at the opposite end of the kiln and discharging upwardly into the kiln, and means located within the several conduits for creating a suction of air from the kiln into the air intakes, and for causing its discharge therefrom, into the kiln, and valve mechanism for regulating and controlling the passage of air through these conduits.

Patents Nos. 1,662,808 to 1,663,535.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 368—No. 3. TUESDAY, MARCH 20, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents.

(C. C. A. Mass.) The Bruckman patent, No. 1,071,027, for automatic pastry-making machine, *Held* infringed. *Denaro v. McLaren Consolidated Cone Corporation*, 23 F. (2d) 384.

(D. C. Ill.) The Anthony patent, No. 1,827,936, for a card index, claims 2, 3, 12, 19, and 23 *Held* valid and infringed. *Acme Card System Co. v. Globe-Wernicke Co.*, 23 F. (2d) 523.

(D. C. Ill.) The Mayer patent, No. 1,486,779, for girdle brassières, *Held* valid and infringed. *Nature's Rival Co. v. Venus Brassiere Co.*, 23 F. (2d) 407.

AMENDMENT TO RULES OF PRACTICE.

(Order No. 2,984.)

Effective January 1, 1927, Rule 73 is amended by inserting after paragraph 1 a paragraph to read as follows:

"The original numbering of the claims must be preserved throughout the prosecution. When the application is ready for allowance the Examiner will renumber the claims consecutively in such order as requested by the applicant or as indicated when the claims were first presented. Where claims are added by amendment or substituted for canceled claims they must be numbered by the applicant consecutively, beginning with the number next following the highest numbered claim previously in the case. Provided, however, that where a substitute claim either rewritten to include amendments already made, or to take the place of another claim, is presented and the applicant desires it to finally appear in the relative position occupied by the canceled claim, the substitute claim will be given the number it would have if it were an added claim, and the number will be followed by a directing clause as, for example: Claim 16 (to take the place of claim 3), or claim 24 (to follow claim 2). When, by subsequent amendment, still another claim is substituted for a substitute claim already presented, such last presented claim should be given the number following the highest numbered claim previously in the case and this should be followed by such a directing clause as will indicate the desired final position of the claim with respect to the other claims."

November 1, 1926.

THOMAS E. ROBERTSON,
Commissioner.

This amended rule will apply to all amendments filed after January 1, 1927, whether the applications were filed before or after that date.

Applicants and attorneys are requested to assist in carrying out the simplified system contemplated by the rule with the least possible confusion by carefully observing its provisions in amending their cases.

Condition of Applications Under Examination at Close of Business March 9, 1928.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 94,452; Trade-Mark Division. 2,161. Oldest new case, June 7, 1927; oldest amended, June 18, 1927. The dates given are 1927 except where † indicates 1928.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

FISCHER *v.* PATER.

Decided February 28, 1928.

1. SECTION 4915, REVISED STATUTES—CONSTRUED.
   A final refusal of a patent by the Office, other than the decision of the Board of Appeals in the interference, is not necessary in order to give the losing party a right to bring a suit under section 4915, Revised Statutes, where he elects not to appeal to the Court of Appeals of the District of Columbia.
2. SAME—SUIT THEREUNDER—WITHHOLDING PATENT OF OTHER PARTY.
   The Commissioner of Patents has no authority to withhold the issuance of a patent to the successful party before the Board of Appeals pending the determination of a suit under section 4915, Revised Statutes, brought by the other party unless such other party had elected to appeal to the court of appeals and his opponent had had that appeal dismissed.

ON PETITION.

EXPANSION JOINT.

Messrs. Wilkinson, Huxley, Byron & Knight for Fischer.

Messrs. Kenyon & Kenyon for Pater.

KINNAN, *Acting Commissioner:*

This is a petition by Fischer giving notice of his intention to seek a remedy by a bill in equity, under 4915, Revised Statutes, from the action of the Commissioner of Patents awarding priority of invention to the party Pater (the decision of the Board of Appeals was rendered on January 18, 1928) and praying (1) that the final refusal of the Commissioner of Patents in the application of Fischer "be issued forthwith" and (2) that the issuance of a patent to the party Pater be withheld pending the final determination of the suit under section 4915.

[1] A final refusal by the Office, other than the decision in the interference, is not necessary in order to give the petitioner the right to bring his suit in equity (see *McKnight* v. *Metal Volatilization Co.*, 128 F. R. 51).

[2] The Commissioner of Patents has no authority to withhold the issuance of the patent to the winning party in the interference pending the determination of the suit under section 4915 (see *Wells* v. *Boyle*, 43 O. G. 753, 1888 C. D. 36, and *McIntyre* v. *Perry*, 169 O. G. 943, 1911 C. D. 92, and cases therein cited; also *Whipple* v. *Miner*, 15 F. R. 117).

Section 4911 as amended provides that where, after appeal is taken to the court of appeals from a decision of the Board of Appeals, the other party files notice that he elects to have proceedings in accordance with 4915, Revised Statutes, and such suit is brought, the issue of the patent to the other party shall be withheld pending the determination of the suit. No such action, however, was taken in this case, and that portion of the section is not applicable thereto.

It is noted that petitioner requests an oral hearing. It is not customary to set petitions of this kind for hearing and no reason is seen for making an exception in this case.

The petition is denied.

Supreme Court of the United States.

RICHMOND SCREW ANCHOR COMPANY, INC., *v.* THE UNITED STATES.

Decided January 3, 1928.

1. PATENTABILITY—DEVELOPMENT OF NEW IDEA.
   A cargo beam employing a single I-beam *Held* not a natural and normal modification of existing ideas, but the development of a new idea, and the patent therefor *Held* valid, it appearing that the weight of the beam had been reduced two-thirds and that the new beam had almost universally superseded the old one.
2. COURTS—DECISION—OBITER DICTUM.
   One of two reasons given by the court for same conclusion is not obiter dictum and should not be denied consideration as authority merely because the other reason was more dwelt on and more fully argued and considered.
3. ASSIGNMENT OF CLAIMS AGAINST THE UNITED STATES—CONSTRUCTION OF STATUTE.
   Section 3477 Revised Statutes, providing that assignment of claim against United States shall be void unless stipulated conditions are complied with, *Held* applicable to assignment of claim for infringement of patent as against contention that such claim grows out of rights created by statutes covering patents and provisions for assignment and for suits by assignee.
4. SAME—SAME—NOT APPLICABLE TO ASSIGNMENT OF CLAIMS UNDER ACT OF JULY 1, 1918.
   Section 3477, Revised Statutes, providing that assignment of claim on United States shall be void unless stipulated conditions are complied with, *Held* not applicable to assignment of claim created by act June 25, 1910, as amended by act July 1, 1918, in so far as such act deprives owner of patent of remedy against infringing private contractor for infringements thereof and makes Government indemnitor for its manufacturer or contractor in his infringements.
5. SAME—SAME.
   Supreme Court must presume that Congress, in passing act July 1, 1918, under which owner of patent was deprived of remedy against infringing private contractor for infringements, and Government was made indemnitor for its manufacturer or contractor in his infringements, intended to secure to owner of patent exact equivalent of what it was taking away.
6. CONSTITUTIONAL LAW—CONSTRUCTION OF STATUTE.
   It is duty of Supreme Court in interpretation of Federal statutes to reach conclusion which will avoid serious doubt of their constitutionality.

Mr. Charles E. Hughes and *Mr. Joseph W. Cox* for Richmond Screw Anchor Co., Inc.

The Attorney General and *Mr. Herman J. Galloway, Assistant Attorney General*, for the United States.

ON WRIT of certiorari to the Court of Claims.

Mr. Chief Justice TAFT delivered the opinion of the Court.

This is a suit by the Anchor Company brought under the act of June 25, 1910 (c. 423, 36 Stat.

851), as amended July 1, 1918 (c. 114, 40 Stat. 704, 705), to recover for the infringement of Letters Patent No. 1,228,120 for a cargo beam, granted May 29, 1917, to Melchior Lenke, and assigned by Lenke to Thomas E. Chappell, and, by Chappell, to the Anchor Company.

The Court of Claims first decided that the plaintiff was entitled to recover from the United States. Thereafter the court made a second decision on December 7, 1925, in which it found as an additional fact that through the contractors who manufactured for the United States, the United States had installed, on or before January 1, 1919, 810 cargo beams covered by the Lenke patent, and that it did not thereafter install any more; that the use of the Lenke cargo beams by the United States resulted in a saving in the expense of installation of cargo beams used by it amounting in the case of each beam to 2,000 pounds of metal, with a value of 6½ cents per pound; that the single advantage which the United States gained by the use of the beams was the saving in cost of the same and the convenience resulting from their novelty.

Upon the additional findings of fact, the Government contended that the former judgment should be set aside, and a new one entered dismissing the plaintiff's petition, for the reason that the assignment of the claims for infringement to the plaintiff was void and of no effect under section 3477 of the Revised Statutes. The Court of Claims on the second hearing yielded to this contention and dismissed the petition.

A cargo beam is a beam employed in combination with other elements to carry the weight of cargo to be removed from the hold of vessels alongside a pier or wharf and deposited on the pier or in the warehouses fronting on the same. Such beams are old and have been used for years. The method existing prior to this invention was the use of two channel beams, spaced several inches apart, firmly riveted together at the top and bottom by means of angle irons or plates, and rigidly affixed at either end to two uprights extending upward through the roof of the warehouse in brackets designed for the purpose. The record showed that a beam adaptable for the purpose weighed 3,300 pounds and must possess the full strength of withstanding the pull of cargo weights from both a vertical and diagonal angle.

Lenke conceived the idea of substituting for the fixed beam a single I beam of about 1,300 pounds in weight. At each end of the I beam he attached laterally a strong bar by means of rivets and angle irons providing holes near its upper end, through which holes he introduced pivots, thereby enabling the cargo beam to swing into any angle from which the load was applied. Lenke fastened U bolts into the center or neutral zone of the beam to receive the hoisting tackle. The real worth of the invention lay in the lightness of the cargo beam he used because the operator could present it so as to make the strain on the beam to be vertical even when force was applied from an angle.

The patent was a combination patent, and in view of the prior art was limited to the exact terms of the claims which made it quite narrow as its course through the Patent Office clearly demonstrated.

[1] It is argued, on behalf of the United States, that Lenke's invention was unpatentable because it embodied nothing more than a natural and normal modification of existing ideas. Such modifications and their advantage were all very clear after the fact; but the old beams had been in use for a number of years and a heavy weight of metal had been used when, by Lenke's device, it was cut down two-thirds. Lenke's cargo beam almost universally superseded the old one. The United States used it and it was installed in nearly every pier in the country. No one else had foreseen its advantage. Lenke offered it as a solution of the problem at a minimum cost with a maximum efficiency. The United States conceded in the Court of Claims that Lenke's patent was novel in the sense that there was nothing in the prior art exactly like it, and that it was useful. While thus, in a way, he improved an existing idea, he developed a new idea. The question of its patentability was worked out in the Court of Claims and all the judges concurred in upholding its validity and did not change their conclusion in the second judgment. We see no reason for differing from that conclusion.

The Court of Claims based its second judgment against the plaintiff on the strength of section 3477 of the United States Revised Statutes, as construed by this Court in *Brothers* v. *United States*, 250 U. S. 88, 89. The section reads as follows:

> All transfers and assignments made of any claim upon the United States, or of any part or share thereof, or interest therein, whether absolute or conditional, and whatever may be the consideration therefor, and all powers of attorney, orders, or other authorities for receiving payment of any such claim, or of any part or share thereof, shall be absolutely null and void, unless they are freely made and executed in the presence of at least two attesting witnesses, after the allowance of such a claim, the ascertainment of the amount due, and the issuing of a warrant for the payment thereof. Such transfers, assignments, and powers of attorney, must recite the warrant for payment, and must be acknowledged by the person making them, before an officer having authority to take acknowledgements of deed, and shall be certified by the officer; and it must appear by the certificate that the officer, at the time of the acknowledgment, read and fully explained the transfer, assignment, or warrant of attorney to the person acknowledging the same.

In the Brothers case, Mr. Justice Pitney said the claim of Brothers for compensation for a patent he had secured by assignment could not apply to an—

> unliquidated claim against the Government arising prior to the time he became the owner of the patent. Rev. Stats., sec. 3477.

[2] Counsel for the petitioner here insist that this statement was not necessary to the decision because the conclusion in that case was clearly made to depend on the noninfringement of the patent and that the reference to section 3477 could only be regarded as obiter dictum. It does not make a reason given for a conclusion in a case obiter dictum because it is only one of two reasons for the same conclusion. It is true that in this case the other reason was more dwelt upon and perhaps it was more fully argued and considered than section 3477, but we can not hold that the use of the section in the opinion is not to be regarded as authority except by directly reversing the decision in that case on that point, which we do not wish to do.

[3] An elaborate argument has been made to show that the section should not apply to the assignment of claims for infringements of a patent, for the reason that a claim for infringements is not a common-law chose in action but grows out of rights created by the statutes covering patents, the provisions for their assignment and for suits by the assignee are to be found in sections 4898, 4919, 4921 and other related sections. *Crown Die & Tool Co.* v. *Nye Tool & Machine Works*, 261 U. S. 24, 42, 43. But there is no conflict between the patent sections and section 3477. The latter section was passed to protect the Government and prevent frauds upon the Treasury. *Western Pacific R. R. Co.* v. *United States*, 268 U. S. 271, 275; *Seaboard Air Line Ry.* v. *United States*, 256 U. S. 655, 657; *Goodman* v. *Niblack*, 102 U. S. 556, 559, 560. And it would seem that the danger of exploiting and harrassing the Government with the use of assignments of claims for patent infringement was within the general purpose of that section.

[4] We come then to the question whether section 3477 and the Brothers case apply to the case before us, and that requires an interpretation of the amending act of 1918 and its operation upon the rights of the assignee and owner of the patent and its claims for infringement. Exceptions to the general language of section 3477 have been recognized by this Court because not within the evil at which the statute aimed. *Seaboard Air Line Ry.* v. *United States*, *supra*; *Western Pacific R. R. Co.* v. *United States*, *supra*; *Goodman* v. *Niblack*, *supra*; *Price* v. *Forrest*, 173 U. S. 410, 421–423; *Parrington* v. *Davis*, 285 Fed. 741, 742. We think that the situation created by the provisions of the amending act of 1918 is such that section 3477 does not apply to all of the assigned claims of the petitioners for infringement under that act. The act of June 25, 1910 (c. 423, 36 Stat. 851), provided that whenever an invention described in and covered by a patent of the United States should hereafter be used by the United States without license of the owner thereof or lawful right to use the same, such owner might recover reasonable compensation for such use by suit in the Court of Claims. The act contained a number of provisos, only one of which is important here, namely, that in any such suit the United States might avail itself of any and all defenses, general or special, which might be pleaded by a defendant in an action for an infringement, as set forth in title 60 of the Revised Statutes or otherwise.

This Court held March 4, 1918, in *Cramp & Sons* v. *International Curtis Marine Turbine Company*, 246 U. S. 28, 42, 45, that the act of 1910 did not effect a license to the United States or the contractor, making the patented device, to make or use the invention, and that the contractor could be sued for an injunction and for infringement in spite of the operation of that act.

On April 20, 1918, the Acting Secretary of the Navy wrote a letter to the Chairman of the Committee on Naval Affairs of the Senate, in which he said, referring to the Cramp case, that the Department was—

> confronted with a difficult situation as the result of a recent decision by the Supreme Court affecting the Government's rights as to the manufacture and use of patented inventions, and it seems necessary that amendment be made of the act of June 25, 1910 * * * the decision is, in effect, so far as it is of importance here, that a contractor for the manufacture of a patented article for the Government is not exempt, unless he is only a contributory infringer, from injunction and other interference through litigation by the patentee.
>
> A prior decision of the Supreme Court, that in the case of *Crozier* v. *Krupp*, had been interpreted as having the opposite meaning, and the department was able up to the time of the later decision, on March 4th last, to proceed satisfactorily with the procuring of such patented articles as it needed, leaving the matter of compensation to patentees for adjustment by direct agreement, or, if necessary, by resort to the Court of Claims under the above mentioned act of 1910. Now, however, manufacturers are exposed to expensive litigation, involving the possibilities of prohibitive injunction payment of royalties, rendering of accounts, and payment of punitive damages, and they are reluctant to take contracts that may bring such severe consequences. The situation promised serious disadvantage to the public interests, and in order that vital activities of this department may not be restricted unduly at this time, and also with a view of enabling dissatisfied patentees to obtain just and adequate compensation in all cases conformably to the declared purpose of said act, I have the honor to request that the act be amended by the insertion of a proper provision therefor in the pending naval appropriation bill.

In response to this communication, the act of 1918 amending the act of 1910 was adopted. (See *Wood* v. *Atlantic Gulf & Pacific Co.*, 296 Fed. 718, 720, 721, and Congressional Record, 65th Congress, second session, proceedings of June 18, 1918, p. 7961). The amendment (c. 114, 40 Stat. 704, 705) reads as follows:

> That whenever an invention described in and covered by a patent of the United States shall hereafter be used or manufactured by or for the United States without license of the owner thereof or lawful right to use or manufacture the same, such owner's remedy shall be by suit against the United States in the Court of Claims for the recovery of his reasonable and entire compensation for such use and manufacture.

This is followed by the same provisos as in the act of 1910 which need not be repeated here.

The purpose of the amendment was to relieve the contractor entirely from liability of every kind for the infringement of patents in manufacturing anything for the Government and to limit the owner of the patent and his assigns and all claiming through or under him to suit against the United States in the Court of Claims for the recovery of his reasonable and entire compensation for such use and manufacture. The word "entire" emphasizes the exclusive and comprehensive character of the remedy provided. As the Solicitor General says in his brief with respect to the act, it is more than a waiver of immunity and effects an assumption of liability by the Government.

Under the act of 1910, the remedy of the owner of a patent where the United States had used the invention without his license or lawful right to use it, was to sue for reasonable compensation in the Court of Claims, and that remedy was open to Lenke for the cargo beams covered by his patent installed and used by the United States before July 1, 1918.

The evidence does not show at what time during the year 1918 the beams were installed. The first

finding is that Lenke wrote to an officer in the Quartermaster's Department on duty at the Army supply base at Brooklyn, on December 31, 1918, complaining that the Lenke cargo beam was being used by the Government at that supply base without permission from the patentee, but nothing happened but a fruitless correspondence.

The findings of the Court of Claims show that, on January 1, 1919, 810 of the beams had been installed at the instance of the Government, but how many were installed after July 1, 1918, when the law in question was passed, has not been found by the Court of Claims.

On September 29, 1920, the Lenke patent was assigned by Lenke to one Thomas E. Chappell, who in turn on March 7, 1921, assigned it to the plaintiff company, in accordance with the statute, and the assignment in each case covered all rights of action for past infringements of the patent and all rights to recoveries by suit for damages, profits and royalties for infringements of every kind whatsoever.

[5] It is settled that, but for the act of 1918, the two assignments vesting title in the Anchor Company would enable it to recover from the contractor for all his infringements (*Crown Die & Tool Co.* v. *Nye Tool & Machine Works, supra; Gordon* v. *Anthony*, 16 Blatchf. 234, Fed. Cas. No. 5,605; *Waterman* v. *Mackenzie*, 138 U. S. 252, 256, 261; *Gaylor* v. *Wilder*, 10 How. 477, 494; Robinson on Patents, vol. 3, sec. 937, p. 122). If now section 3477 applies and these assignments are rendered void, the effect of the act of 1918 is to take away from the assignee and present owner not only the cause of action against the Government, but also to deprive it of the cause of action which had existed in its favor, at the passage of the act, against the infringing contractor for injury by his infringement. The intention and purpose of Congress in the act of 1918 was to stimulate contractors to furnish what was needed for the war, without fear of becoming liable themselves for infringements to inventors or the owners or assignees of patents. The letter of the Assistant Secretary of the Navy, upon which the act of 1918 was passed, leaves no doubt that this was the occasion for it. To accomplish this governmental purpose, Congress exercised the power to take away the right of the owner of the patent to recover from the contractor for infringements. This is not a case of a mere declared immunity of the Government from liability for its own torts. It is an attempt to take away from a private citizen his lawful claim for damage to his property by another private person which but for this act he would have against the private wrongdoer. This result, if 3477 Revised Statutes applies and avoids the assignment, would seem to raise a serious question as to the constitutionality of the act of 1918 under the Fifth Amendment to the Federal Constitution. We must presume that Congress in the passage of the act of 1918 intended to secure to the owner of the patent the exact equivalent of what it was taking away from him. It was taking away his assignable claims against the contractor for the latter's infringement of his patent. The assignability of such claims was an important element in their value and a matter to be taken into account in providing for their just equivalent. If section 3477 applied, such equivalence was impossible.

[6] It is our duty in the interpretation of Federal statutes to reach a conclusion which will avoid serious doubt of their constitutionality. *Phelps* v. *United States*, 274 U. S. 341. Moreover, we should seek to carry out in our dealing with the act of 1918 and Revised Statutes 3477 the very important congressional purpose of the former, as already explained, in the promotion of the war as a special legislative intent. It is our duty to give effect to that special intent although it be not in harmony with a broad purpose manifested in a general statute avoiding assignment of claims against the Government enacted some 80 years ago. *In re Rouse, Hazard & Co.*, 91 Fed. 96, 100, 101; *Townsend* v. *Little*, 109 U. S. 504, 512; *Washington* v. *Miller*, 235 U. S. 422, 428. This is in accord with general rules of interpretation, as shown in these authorities, and reconciles the section 3477 Revised Statutes and the act of 1918, if we hold, as we do, that section 3477 does not apply to the assignment of a claim against the United States which is created by the act of 1918 in so far as the act deprives the owner of the patent of a remedy against the infringing private contractor for infringements thereof and makes the Government indemnitor for its manufacturer or contractor in his infringements.

Such a conclusion requires us to reverse the case and remand it to the Court of Claims for additional findings to show how many of the patented beams were made by contractors and furnished to the United States after the passage of the act of July 1, 1918, and what would have been a reasonable royalty therefor.

The question of the amount of or the rule for measuring the recovery we do not decide, but leave that for further argument and consideration by the Court of Claims, because of the novel and only partial application of section 3477 Revised Statutes.

Reversed and remanded.

Court of Appeals of the District of Columbia.

ENZ *v.* ROGERS.

No. 1,992. Decided December 5, 1927.

INTERFERENCE—PRIORITY—RIGHT TO MAKE THE CLAIMS. Counts construed and R. *Held* entitled to make them and to award of priority on the record.

Mr. Edward W. Vaill for Enz.

Mr. Frank A. Bower for Rogers.

APPEAL from Patent Office. Affirmed.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from concurrent decisions of the Patent Office tribunals in an interference proceeding awarding priority of invention to the senior party, Rogers.

The interference originally involved four counts. Count 1 is illustrative of the two counts now involved and reads as follows:

1. In a water turbine having a runner and a plurality of gates for controlling the flow of water to the runner, a gate operating mechanism comprising a movable shifting member, and adjustable connecting means between said shifting member and the different gates, said means comprising for each gate a pair of movement transmitting members and an adjustable breakable connecting member.

The novelty of the device resides in the means for connecting the shifting members and the different gates. The means, it will be observed, are defined as "adjustable" and as comprising for each gate "a pair of movement transmitting members and an adjustable breakable connecting member."

When it was discovered that appellant's date of conception and disclosure was subsequent to appellee's filing date, notice was given appellant to show cause why judgment on the record should not go against him. He answered this notice with a motion to dissolve, on the ground that Rogers had no right to make the claims.

The Law Examiner sustained appellant's contentions as to count 3 but rejected them as to other three counts. Priority was awarded Rogers as matter of course by the Examiner of Interferences. The Examiners in Chief agreed with the Law Examiner as to counts 1 and 4 but reversed him and dissolved the interference as to count 2. On appeal, the Commissioner affirmed the decision of the Board as to counts 1 and 4, no appeal having been taken as to count 2.

The claims originated with Enz and are to be interpreted in the light of his disclosure, but they must be construed broadly. *Humiston* v. *Voorhees*, patent appeal No. 1959, present term. When so construed, we are convinced, as was the Patent Office, that Rogers has disclosed a breakable connecting member, even though the severance is induced by shearing. For the reasons fully stated by the Patent Office, the decision is affirmed.

Affirmed.

Patent Suits.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

738,635, 958,330, C. W. Sievert, Oil burner, D. C. Kans., 2d Div., Doc. E 391–N, *P. F. Gilbreath* v. *H. M. Dobbin et al.* Dismissed Jan. 18, 1928.

T. M. 146,380. (See Des. 48,213.)

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,838,182, K. Honda, Magnet steel, decided February 6, 1928, claims 10, 11, and 15.

Pat. 1,338,133, K. Honda, Magnet steel, decided February 6, 1928, claim 2.

Pat. 1,338,134, K. Honda, Magnet steel, decided February 6, 1928, claim 3.

Pat. 1,410,421, Steele, Martin, and McCarthy, Electric welding, decided February 6, 1928, claims 4, 5, and 9.

Pat. 1,447,118, J. C. Black, Process and apparatus for refining petroleum oil, decided June 7, 1926, claim 11.

Pat. 1,533,653, W. A. MacDonald, Modulation, decided February 7, 1928, claims 1, 2, 3, and 4.

Pat. 1,549,464, R. W. Dinzl, Steam platen, decided February 11, 1928, claim 1.

Pat. 1,600,223, B. C. Goss, Cartridge containing gas-generating chemical, decided February 27, 1928, claims 1 and 2.

Pat. 1,633,891, V. A. Fynn, Nonsynchronous motor, decided January 31, 1928, claim 3.

Pat. 1,635,887, A. H. Haag, Combination phonograph and radiocabinet, decided February 11, 1928, claim 1.

Final decisions in interference have been rendered against the following trade-marks:

T. M. 79,089, Clocks, The Western Clock Mfg. Co., Peru, Ill. Registered August 2, 1910. Decided March 1, 1928.

T. M. 218,921, Coffee, Wilson Coffee Company, Fort Smith, Ark. Registered June 8, 1926. Decided February 1, 1928.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Feb. 23, 1928.*

Weeber & Don, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Farmer Seed & Nursery Co., 918 Fourth Street west, Faribault, Minn., for registration of a trade-mark and trade-mark registered December 30, 1913, No. 94,778, to Weeber & Don, 114 Chambers Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Weeber & Don at the said address having been returned by the post-office as undeliverable, notice is hereby given that unless said Weeber & Don, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 20, 1928.

[VOL. 368. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 251,558. JEDDO-HIGHLAND COAL COMPANY, Jeddo, Pa. Filed July 6, 1927. Under 10-year proviso.

HIGHLAND

Particular description of goods.—Coal.
Claims use since 1892.

Ser. No. 257,525. CELITE PRODUCTS COMPANY, Los Angeles, Calif. Filed Nov. 14, 1927.

SNOW FLOSS

Particular description of goods.—Hydrated Amorphous Silica in Powdered Form.
Claims use since about Feb. 26, 1927.

Ser. No. 257,751. ALPINA A. G., Gumligen, near Bern, Switzerland. Filed Nov. 18, 1927.

ALPINA S A

Particular description of goods.—Leathers.
Claims use since Aug. 1, 1927.

Ser. No. 258,194. RUDY-PATRICK SEED COMPANY, Kansas City, Mo. Filed Nov. 29, 1927.

ROYAL

Particular description of goods.—Flower, Garden, Farm, and Field Seeds.
Claims use since Jan. 1, 1900.

Ser. No. 258,339. JULIUS F. MARLOWE, doing business as J. F. Marlowe and Company, Memphis, Tenn. Filed Dec. 2, 1927.

A Superior Coal
Black Ace
RED ASH LUMP and EGG

The words appearing on the trade-mark drawing—namely, "A Superior Coal," "Red Ash," and "Lump and Egg"—are hereby disclaimed.
Particular description of goods.—Coal.
Claims use since June 1, 1926.

Ser. No. 259,867. OLD BEN COAL CORPORATION, Chicago, Ill. Filed Jan. 9, 1928.

F. F. V.

Particular description of goods.—Coal.
Claims use since Dec. 14, 1927.

Ser. No. 259,997. COAL HILL MINING COMPANY, INC., Dubois, Pa. Filed Jan. 12, 1928.

BEAR CREEK

Particular description of goods.—Coal.
Claims use since Dec. 7, 1927.

Ser. No. 260,046. CELANESE CORPORATION OF AMERICA, New York, N. Y. Filed Jan. 13, 1928.

ISOPHANE

Particular description of goods.—Sheets and Foils Containing Organic Derivatives of Cellulose, Colored or Uncolored, Transparent or Opaque, Plain, Ornamented, Embossed, or Metallized.
Claims use since about Dec. 20, 1927.

Ser. No. 260,047. CELANESE CORPORATION OF AMERICA, New York, N. Y. Filed Jan. 13, 1928.

NEOPHANE

Particular description of goods.—Sheets and Foils Containing Organic Derivatives of Cellulose, Colored or Uncolored, Transparent, or Opaque, Plain, Ornamented, Embossed, or Metallized.
Claims use since about Dec. 20, 1927.

Ser. No. 260,203. WEST VIRGINIA SOUTHERN COAL COMPANY, Huntington, W. Va. Filed Jan. 16, 1928.

BLUE STAR

The drawing is lined to indicate the color blue.
Particular description of goods.—Coal.
Claims use since Jan. 1, 1912.

CLASS 3.

Baggage, Animal Equipments, Portfolios, and Pocketbooks.

Ser. No. 256,565. GEORGE H. CRAWFORD, Washington, D. C. Filed Oct. 25, 1927.

MADBAG

Particular description of goods.—Pocketbooks and Garter Bags in the Nature of Purses.
Claims use since Oct. 14, 1927.

CLASS 4.

Abrasive, Detergent, and Polishing Materials.

Ser. No. 243,492. B. HELLER & COMPANY, Chicago, Ill. Filed Jan. 28, 1927.

B HELLER & CO
THE PLANT BEHIND THIS PRODUCT

CHICAGO U.S.A.

The word "Chicago," and the phrase "U. S. A." are hereby disclaimed apart from the mark as shown in the drawing.
Particular description of goods.—Metal Polishes—Namely, Silver Polishes, Gold Polishes, and Brass Polishes.
Claims use since June 15, 1926.

Ser. No. 258,402. COSBO PRODUCTS COMPANY, New York, N. Y. Filed Dec. 3, 1927.

OSOCLEAN

The drawing is lined to indicate the color orange.
Particular description of goods.—Cleaning Fluids for Clothing, Upholstery, Leather, and Fabrics.
Claims use since on or about Oct. 29, 1927.

Ser. No. 258,876. LAVO COMPANY OF AMERICA, Milwaukee, Wis. Filed Dec. 13, 1927.

LAVALINE
Twill Clean

The descriptive expression "'Twill Clean" is disclaimed apart from the mark shown.
Particular description of goods.—Cleaning Powder for Dishwashing, Washing Clothes, Silverware, and Other Articles.
Claims use since May, 1901.

Ser. No. 260,442. MAURICE H. GLASSMAN, Boston, Mass. Filed Jan. 21, 1928.

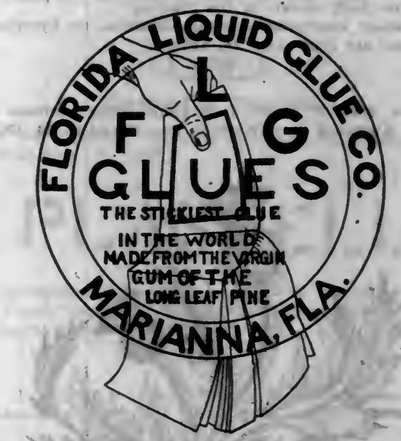
KLEENOLINE

Particular description of goods.—Liquid Dry Cleaner.
Claims use since Oct. 27, 1927.

Ser. No. 260,495. J. EAVENSON & SONS, INCORPORATED, Philadelphia, Pa. Filed Jan. 28, 1928.

The representation of a cake of soap as disclosed in the drawing is hereby disclaimed apart from the mark as shown.
Particular description of goods.—Soap.
Claims use since Jan. 10, 1928.

Ser. No. 261,093. AMERICAN WRITING MACHINE COMPANY, Ilion, N. Y., and Newark, N. J. Filed Feb. 3, 1928.



INVINCIBLE

The drawing shows the conventional lining for yellow or golden, this being the color in which the trade-mark is usually printed on the boxes or containers. However, color in itself is not of the essence of the trade-mark.
Particular description of goods.—Plastic Type Cleaner.
Claims use since about Oct. 17, 1927.

CLASS 5.

Adhesives.

Ser. No. 260,210. FRANK F. BRADSHAW, doing business as Florida Liquid Glue Company, Marianna, Fla. Filed Jan. 17, 1928.

Applicant disclaims all wording appearing on the drawing with the exception of "Florida Liquid Glue Co." and "F. L. G." except in connection with the other features of the mark.
Particular description of goods.—Liquid Glue.
Claims use since Dec. 27, 1927.

Ser. No 260,708. ASTORIA PHOTO-ENGRAVERS SUPPLY CO., Long Island City, N. Y. Filed Jan. 27, 1928.

Particular description of goods.—Rubber Cement.
Claims use since on or about April, 1918.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 237,065. PINK CHADWICK, Altus, Okla. Filed Sept. 10, 1926.

PINK CHADWICK'S

PC

No claim is made to the words "Pink Chadwick's" apart from the mark shown in the drawing.

Particular description of goods.—Medicine for Pyorrhea.

Claims use since Aug. 16, 1926.

Ser. No. 256,525. JOHN J. KLEMAN, doing business as J. J. Kleman & Sons, Windber, Pa. Filed Oct. 24, 1927.

Particular description of goods.—Preparation Used in the Treatment of Coughs, Colds, Hoarseness, Sore Throat, Lung Trouble, and Asthma.

Claims use since July 1, 1926.

69,142. PERFUMERY AND FACE TINTS. Registered May 19, 1908. E. WERTHEIMER & CIE., Paris, France. Renewed May 19, 1928, to Bourjois, Inc., New York, N. Y., a Corporation of New York, assignee.

69,144. TOILET POWDER. Registered May 19, 1908. E. WERTHEIMER & CIE., Paris, France. Renewed May 19, 1928, to Bourjois, Inc., New York, N. Y., a Corporation of New York, assignee.

69,175. SOAP. Registered May 26, 1908. BARCLAY & BARCLAY. Renewed May 26, 1928, to Barclay & Co., New York, N. Y., a Corporation of Delaware, assignee.

69,196. ROD AND PISTON PACKING. Registered May 26, 1908. CHARLESTON METALLIC PACKING CO., Charleston, S. C. Renewed May 26, 1928, to General Asbestos & Rubber Company, North Charleston, S. C., a Corporation of South Carolina, assignee.

69,240. LUNCH BISCUITS AND CRACKERS. Registered May 26, 1908. NEW ENGLAND BISCUIT CO., Worcester, Mass. Renewed May 26, 1928, to Dawley & Shepard, Westminster, Mass., a Partnership, assignee.

69,246. FERTILIZERS. Registered May 26, 1908. VIRGINIA-CAROLINA CHEMICAL COMPANY, Jersey City, N. J.; Richmond and Norfolk, Va.; Charleston, S. C.; Savannah and Atlanta, Ga.; Montgomery, Ala.; Durham, N. C.; and Memphis, Tenn. Renewed May 26, 1928, to Virginia-Carolina Chemical Corporation, Richmond, Va., a Corporation of Virginia, assignee.

69,298. FERTILIZERS. Registered June 2, 1908. VIRGINIA-CAROLINA CHEMICAL COMPANY, Jersey City, N. J.; Richmond and Norfolk, Va.; Charleston, S. C.; Savannah and Atlanta, Ga.; Montgomery, Ala.; Durham, N. C.; and Memphis, Tenn. Renewed June 2, 1928, to Virginia-Carolina Chemical Corporation, Richmond, Va., a Corporation of Virginia, assignee.

69,328. ANTISEPTICS. Registered June 9, 1908. BARNES & HILLE. Renewed June 9, 1928, to A. C. Barnes Company, Philadelphia, Pa., a Corporation of Pennsylvania, assignee.

69,358. WHEAT FLOUR. Registered June 9, 1908. DULUTH-SUPERIOR MILLING COMPANY, Duluth, Minn., and New York, N. Y., a Corporation of Minnesota. Renewed June 9, 1928.

69,377. TONICS. Registered June 9, 1908. BARNES & HILLE. Renewed June 9, 1928, to A. C. Barnes Company, Philadelphia, Pa., a Corporation of Pennsylvania, assignee.

69,389. A MEDICATED PREPARATION FOR THE HAIR, SCALP, AND SKIN. Registered June 9, 1908. BARCLAY & BARCLAY. Renewed June 9, 1928, to Barclay & Co., New York, N. Y., a Corporation of Delaware, assignee.

69,404. HAIRPINS. Registered June 9, 1908. THE DE LONG HOOK AND EYE COMPANY, Philadelphia, Pa., a Corporation of Pennsylvania. Renewed June 9, 1928.

69,436. A CERTAIN ENAMEL. Registered June 16, 1908. GEO. H. BAKER, New Haven, Conn. Renewed June 16, 1928, to Yarnall Paint Company, Philadelphia, Pa., a Corporation of Pennsylvania, assignee.

69,464. A VEGETABLE FAT OR OIL COMPOUND. Registered June 16, 1908. INDIA REFINING COMPANY, Philadelphia, Pa. Renewed June 16, 1928, to The Palmolive-Peet Company, Chicago, Ill., a Corporation of Delaware, assignee by mesne assignments.

69,465. A CERTAIN VEGETABLE FAT OR OIL COMPOUND. Registered June 16, 1908. INDIA REFINING COMPANY, Philadelphia, Pa. Renewed June 16, 1928, to The Palmolive-Peet Company, Chicago, Ill., a Corporation of Delaware, assignee by mesne assignments.

69,466. A CERTAIN VEGETABLE FAT OR OIL. Registered June 16, 1908. INDIA REFINING COMPANY, Philadelphia, Pa. Renewed June 16, 1928, to The Palmolive-Peet Company, Chicago, Ill., a Corporation of Delaware, assignee by mesne assignments.

69,488. PILLS. Registered June 16, 1908. BARCLAY & BARCLAY. Renewed June 16, 1928, to Barclay & Co., New York, N. Y., a Corporation of Delaware, assignee.

69,689. COFFEE. Registered June 30, 1908. MEYER BROTHERS COFFEE & SPICE COMPANY, St. Louis, Mo., a Corporation of Missouri. Renewed June 30, 1928.

69,774. STEAM-BOILER INJECTORS AND BOILER FEEDERS. Registered July 7, 1908. NATHAN MANUFACTURING CO., New York, N. Y., a Corporation of New York. Renewed July 7, 1928.

69,795. HAMS. Registered July 7, 1908. ROBERT B. WILDMAN, Leesburg, Va. Renewed July 7, 1928.

69,796. CHEMICAL FIRE-EXTINGUISHING APPARATUS. Registered July 7, 1908. AMERICAN-LA FRANCE FIRE ENGINE CO. Renewed July 7, 1928, to American-La France & Foamite Corporation, Elmira, N. Y., a Corporation of New York, assignee by mesne assignments.

69,798. CERTAIN TOILET PREPARATIONS AND MEDICINES. Registered July 7, 1908. BARCLAY & BARCLAY. Renewed July 7, 1928, to Barclay & Co., New York, N. Y., a Corporation of Delaware, assignee.

69,838. LAMP BURNERS. Registered July 7, 1908. WHEELING STAMPING CO., Wheeling, W. Va., a Corporation of West Virginia. Renewed July 7, 1928.

69,883. LUBRICATING OIL. Registered July 14, 1908. FISKE BROTHERS REFINING CO., New York, N. Y., a Corporation of New York. Renewed July 14, 1928.

69,888. WRITING PAPER AND ENVELOPS. Registered July 14, 1908. GEORGE B. HURD & CO. Renewed July 14, 1928, to George B. Hurd & Co. Inc., New York, N. Y., a Corporation of New York, assignee.

69,889. WRITING PAPER AND ENVELOPS. Registered July 14, 1908. GEORGE B. HURD & CO. Renewed July 14, 1928, to George B. Hurd & Co. Inc., New York, N. Y., a Corporation of New York, assignee.

69,975. CERTAIN JEWELRY. Registered July 21, 1908. WOLCOTT MFG. CO., Providence, R. I., a Corporation of Rhode Island. Renewed July 21, 1928.

70,002. CERTAIN TOOLS AND CUTLERY. Registered July 21, 1908. SEATTLE HARDWARE COMPANY, Seattle, Wash., a Corporation of Washington. Renewed July 21, 1928.

70,012. ELECTRICAL INSULATING COMPOUND. Registered July 21, 1908. MICA INSULATOR COMPANY, New York, N. Y., a Corporation of New Jersey. Renewed July 21, 1928.

70,013. PRINTING MACHINES. Registered July 21, 1908. ADDRESSOGRAPH COMPANY, Chicago, Ill., a Corporation of Delaware. Renewed July 21, 1928.

70,021. MOUTH WASHES, POWDERS, AND PASTE USED AS DENTIFRICES. Registered July 21, 1908. KARL AUGUST LINGNER, Dresden, Germany. Renewed July 21, 1928, to The Odol Corporation, New York, N. Y., a Corporation of Delaware, assignee.

70,041. CERTAIN JEWELRY. Registered July 28, 1908. WOLCOTT Mfg. Co., Providence, R. I., a Corporation of Rhode Island. Renewed July 28, 1928.

70,045. COAL. Registered July 28, 1908. THE CAMPBELL'S CREEK COAL Co., Cincinnati, Ohio, a Corporation of Ohio. Renewed July 28, 1928.

70,046. COAL. Registered July 28, 1908. CABIN CREEK CONSOLIDATED COAL COMPANY, Charleston, W. Va. Renewed July 28, 1928, to Cabin Creek Consolidated Coal Company, Cincinnati, Ohio, a Corporation of West Virginia.

70,090. OILED CLOTHING. Registered July 28, 1908. A. J. TOWER COMPANY, Portland, Me., and Boston, Mass. Renewed July 28, 1928, to A. J. Tower Company, Boston, Mass., a Corporation of Massachusetts, assignee by mesne assignments.

70,109. ADHESIVE PLASTERS. Registered July 28, 1908. MAGIC FOOT DRAFT Co. Renewed July 28, 1928, to Frederick Dyer Company, Jackson, Mich., successor.

70,215. PAINT. Registered August 11, 1908. CHAS. R. LONG, JR. Co., Louisville, Ky., a Corporation of Kentucky. Renewed August 11, 1928.

LABELS

REGISTERED MARCH 20, 1928.

33,665.—*Title:* BAR-KLAY MUD PIES. For Colored Dry Powder. EDNA CAMPBELL BARKER, San Diego, Calif. Published December 3, 1927.

33,666.—*Title:* K-MO-CROSS A NOVELTY CARD GAME. For a Novelty Card Game. GEORGE BRIDGE, South Plainfield, N. J. Published December 15, 1927.

33,667.—*Title:* ASSORTED NUTS IN CHOCOLATE. For Candy. BUNTE BROTHERS, doing business as Bunte, Chicago, Ill. Published August 30, 1927.

33,668.—*Title:* PYRAMID BOTTLE CAPS. For Bottle Caps. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md. Published October 15, 1927.

33,669.—*Title:* HOME USE BOTTLE CAPS. For Bottle CAPS. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md. Published October 15, 1927.

33,670.—*Title:* NON-FOULING 22 CAL. LONG RIFLE. For Loaded Metallic Cartridges. FEDERAL CARTRIDGE CORPORATION, Minneapolis, Minn. Published Nov. 23, 1927.

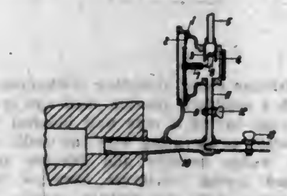
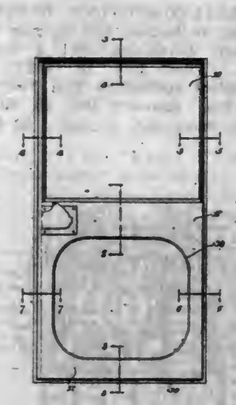
REISSUES



MARCH 20, 1928.

16,905. **DEVICE FOR ELIMINATING THE PRINTING OF IMPRESSIONS ON IMPRESSION-CYLINDER PACKINGS.** FRANK J. ALBERT, Guttenberg, N. J., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a Corporation of Delaware. Filed Jan. 28, 1928. Serial No. 250,304. Original No. 1,645,469, dated Oct. 11, 1927, Serial No. 162,136, filed Jan. 19, 1927. 22 Claims. (Cl. 101—409.)

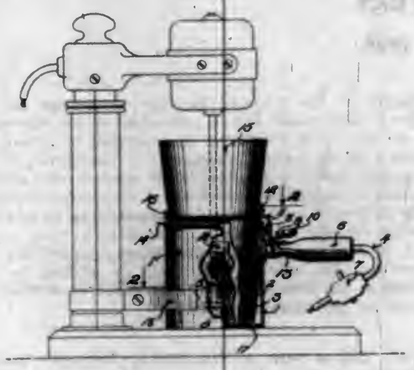


11. In a printing press of the character specified which is equipped with a sheet feeder, an automatic throw-off mechanism controlled by said feeder and an impression cylinder rotating on a fixed axis, means operated by the throw-off mechanism to cause the impression cylinder to retain the sheet beyond its delivery point, for protecting the cylinder packing from receiving an impression thereon.

16,906. **APPARATUS FOR DELIVERING A MIXTURE OF GAS AND AIR.** GEORGE KEITH, London, England, assignor, by direct and mesne assignments, to James Keith & Blackman Company, London, England, a British Company. Filed Oct. 10, 1927. Serial No. 225,363. Original application filed Sept. 19, 1916, Serial No. 121,080. Divided and application filed May 24, 1917, Serial No. 170,789. Original No. 1,250,310, dated Dec. 18, 1917. 3 Claims. (Cl. 48—184.)

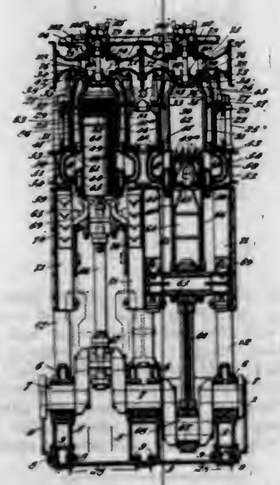
1. An apparatus for delivering a mixture of gas and a comburent medium for combustion, comprising, in combination, an injector device for injecting one of the constituents of the mixture, an inlet connection for the induced constituent, and a governing device interposed in the said inlet connection and adapted to govern the pressure of the induced constituent in dependence on the resistance offered to the flow of the mixture, said governing device comprising a valve and a diaphragm connected with said valve, and means for transmitting to said diaphragm the virtual pressure obtained at a point in the path of the mixture, for automatically controlling the amount of the induced constituent or medium in proportion to the amount of the constituent or medium delivered by said injector device.

16,907. **DOOR FOR AUTOMOBILE BODIES.** JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1927. Serial No. 231,399. Original No. 1,644,680, dated Oct. 11, 1927, Serial No. 738,345, filed Sept. 18, 1924. 15 Claims. (Cl. 296—44.)



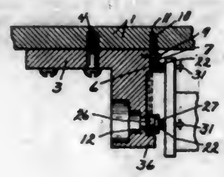
15. A metal rail structure for vehicle doors extending from the top to the bottom of the door and having a main transversely extending body portion of web cross section and a lateral flange at the outer edge of said transversely extending body portion, the inner edge portion of said body portion being disposed substantially perpendicularly to the plane of the door above the bottom of the window opening and extended substantially parallel to the plane of the door below said window opening.

16,908. **DRINK HEATER.** JOHN W. RITTMAN, JOHN ROOD, and WILLIAM DRIVER, Racine, Wis., assignors to Belle City Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed June 25, 1927. Serial No. 201,546. Original No. 1,567,679, dated Dec. 29, 1925, Serial No. 654,371, filed July 28, 1923. 6 Claims. (Cl. 219—43.)



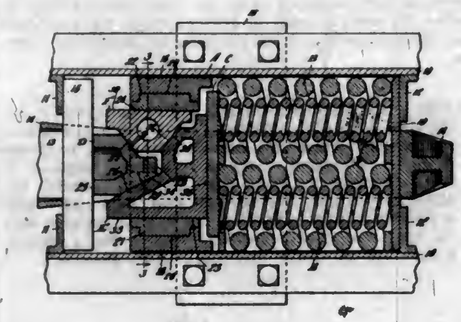
1. A portable drink heater comprising an inner vertically extending wall conoidal throughout substantially its entire height and adapted to receive from above and closely fit and contact with a removable conformably

conoidal cup, an electric heating element around the inner wall for heating the cup and its contents, an outer cylindrical wall fixedly connected at its upper end to the



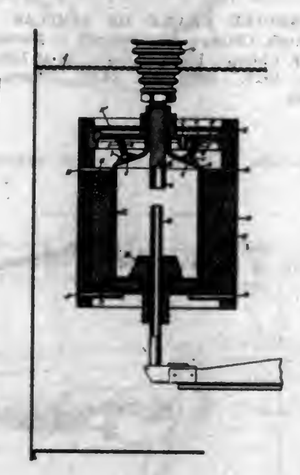
upper end of the inner wall, and a removable ring closing the space between the lower ends of the inner and outer walls.

16,909. INTERNAL-COMBUSTION ENGINE. ARTHUR JACKSON WEST, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed July 13, 1927. Serial No. 205,471. Original application filed Nov. 9, 1920, Serial No. 422,753. Renewed Dec. 29, 1925. Original No. 1,602,089, dated Oct. 5, 1926. 62 Claims. (Cl. 123—195.)



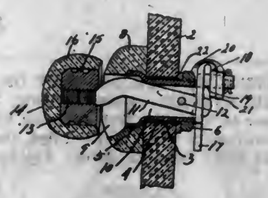
1. In an internal combustion engine, the combination of a cylinder structure having a piston bore portion and a laterally imperforate contracted portion extending to one end of the structure and stingle supporting means for the cylinder connected only to to the contracted portion beyond the combustion space for supporting the engine cylinder and for resisting axial working forces, whereby the piston bore portion and the part of the contracted portion between the supporting means and the piston bore portion are free to expand and to contract relatively to the supporting means and whereby said portion and part are relieved of tension stresses due to axial working forces.

16,910. TALKING-PICTURE MACHINE. THEODORE WILLARD CASE, Auburn, N. Y., assignor to Case Research Laboratory Incorporated, Auburn, N. Y., a Corporation of New York. Filed Oct. 4, 1927. Serial No. 223,984. Original No. 1,638,393, dated Aug. 9, 1927, Serial No. 124,723, filed July 24, 1926. 6 Claims. (Cl. 179—100.)



5. In an apparatus for producing or reproducing sound pictures, a base having a pair of spaced tracks over which the record element is adapted to move, means for holding the sound record portion of said element in contact with one of said tracks comprising a pair of spaced shoes overlying the said track and contacting wtih the element on opposite sides of the sound record portion of the same, and means permitting the passage of a line of light to the element.

16,911. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Nov. 8, 1926. Serial No. 147,161. Original No. 1,571,898, dated Feb. 2, 1926, Serial No. 617,678, filed Feb. 8, 1923. 14 Claims. (Cl. 213—32.)



10. In a friction shock absorbing mechanism, the combination with a combined friction shell and spring cage; said spring cage having a rear wall integral therewith; of friction means co-operating with the shell, said means including a wedge member and friction shoes; and twin arranged spring resistance elements within the cage co-operating with the friction means, said shell and wedge having co-operating abutment means thereon for limiting the outward movement of the wedge, the abutment means of the wedge being formed integral therewith.

16,912. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, Schenectady, N. Y., a Corporation of New York. Filed Aug. 12, 1926. Serial No. 128,883. Original application filed Feb. 8, 1921, Serial No. 443,440. Divided and application filed Nov. 23, 1922, Serial No. 602,703. Original No. 1,551,514, dated Aug. 25, 1925. 13 Claims. (Cl. 200—150.)

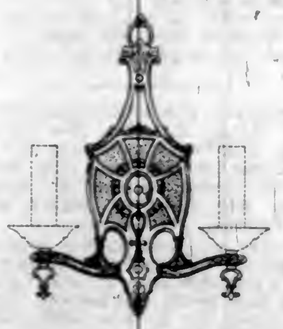
6. In a fluid switch, a tank adapted to contain an insulating fluid, a receptacle within said tank, said receptacle being open at its bottom, a second receptacle within said first named receptacle, said second receptacle being adapted to be submerged in and filled with an insulating fluid, said second receptacle being provided with an opening at its top, a valve seated in said opening and adapted to open at a predetermined pressure, a stationary electrode located in said second receptacle, an electrode adapted to cooperate with said stationary electrodes and movable through an opening in the lower part of said second receptacle and granular cooling material between said receptacles.

16,913. LAVATORY FIXTURE. HARRY MACMILLAN, Philadelphia, Pa., assignor to National Metal Products Company, Philadelphia, Pa., a Common-Law Trust. Filed July 26, 1927. Serial No. 208,613. Original No. 1,591,429, dated July 6, 1926, Serial No. 594,368, filed Oct. 13, 1922. 14 Claims. (Cl. 4—67.)

7. In a flush tank operating mechanism a lever passing through a tank wall and pivoted upon a pin; a second lever within the tank and at right angles with the first mentioned lever and means to fulcrum the second lever for coaction with the first lever.

16,914. PROCESS FOR PREVENTING MINE EXPLOSIONS. WALTER E. TRENT, New York, N. Y., assignor to Trent Process Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 14, 1927. Serial No. 240,069. Original No. 1,642,912, dated Sept. 20, 1927, Serial No. 744,847, filed Oct. 20, 1924. 4 Claims. (Cl. 169—2.)

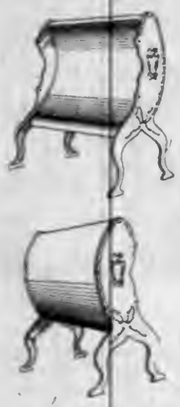
1. A process for preventing mine explosions consisting in applying a hydrocarbon oil having a high boiling point and a high flash point to a mine surface to entrap and retain finely divided coal particles contacting therewith to render said particles substantially incapable of an exothermic reaction.



16,915. EDIBLE FAT. HARRY YUDOWITCH, now by change of name Harry Amos Newton, Brooklyn, N. Y. Filed Feb. 7, 1928. Serial No. 252,666. Original No. 1,601,229, dated Sept. 28, 1926, Serial No. 619,516, filed Feb. 16, 1923. 4 Claims. (Cl. 99—18.)

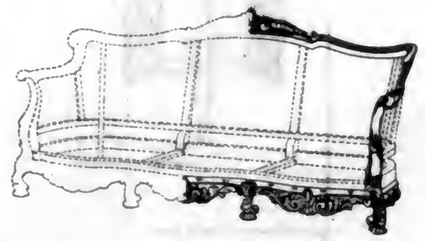
2. The process of making an edible vegetable fat having substantially the physical characteristics of chicken fat rendered in onions (such as flavor, odor, etc.) which consists in heating a vegetable fat with onions till there is brought about a partial destructive distillation of the onions, and then removing the onions.

DESIGNS



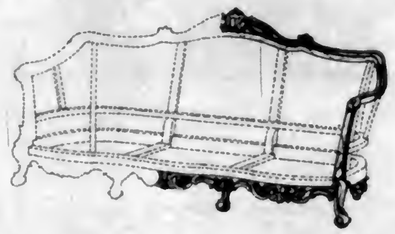
MARCH 20, 1928.

74,708. LIGHTING-FIXTURE BRACKET OR ARTICLE OF SIMILAR NATURE. HARRY AGLOW, New York, N. Y., assignor to The New York Lighting Fixture Mfg. Co., a Corporation of New York. Filed Jan. 7, 1928. Serial No. 24,771. Term of patent 3½ years.



The ornamental design for a lighting fixture bracket or article of similar nature substantially as shown.

74,709. ELECTRIC HEATER. ELBERT C. BANNER, Buffalo, N. Y. Filed Jan. 11, 1928. Serial No. 24,815. Term of patent 7 years.



The ornamental design for an electric heater, as shown.

74,710. SETTEE FRAME OR SIMILAR ARTICLE. CARL BAUER, Chicago, Ill., assignor to Doetsch & Bauer Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 24, 1927. Serial No. 24,631. Term of patent 3½ years.

The ornamental design for a settee frame or similar article as shown.

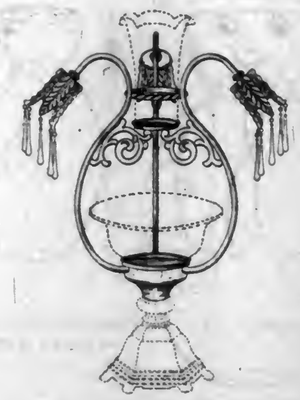
74,711. SETTEE FRAME OR SIMILAR ARTICLE. CARL BAUER, Chicago, Ill., assignor to Doetsch & Bauer Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 24, 1927. Serial No. 24,632. Term of patent 3½ years.

The ornamental design for a settee frame or similar article as shown.

74,712. BOWL OR SIMILAR ARTICLE. CHARLES C. BEAM, Cumberland, Md. Filed Jan. 12, 1928. Serial No. 24,835. Term of patent 14 years.

The ornamental design for a bowl or similar article as shown.

74,713. PITCHER OR SIMILAR ARTICLE. CHARLES C. BEAM, Cumberland, Md. Filed Jan. 18, 1928. Serial No. 24,912. Term of patent 14 years.

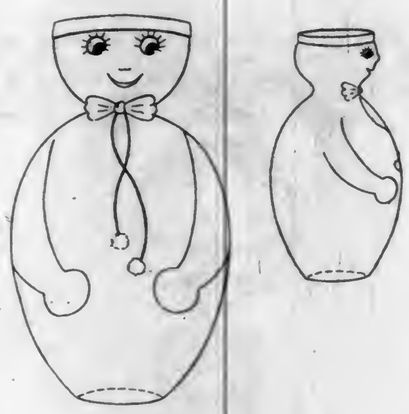


The ornamental design for a pitcher or similar article as shown.

74,714. SIGN. STANLEY GEORGE BELSCH, Detroit, Mich. Filed Mar. 25, 1927. Serial No. 21,320. Term of patent 3½ years.

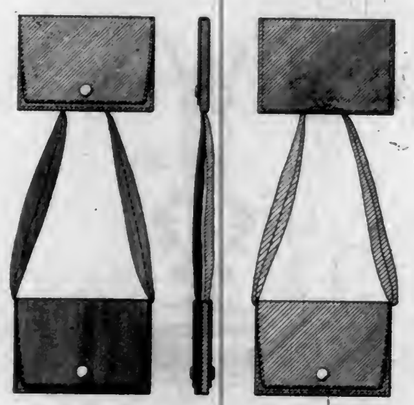
The ornamental design for a sign, as shown.

74,715. LIGHTING FIXTURE. MAURICE BLOCK, Chicago, Ill., assignor to Block Portelier Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 13, 1927. Serial No. 23,745. Term of patent 3½ years.



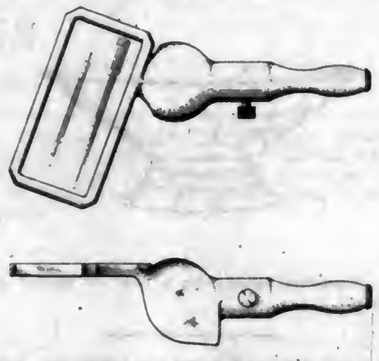
The ornamental design for a lighting fixture substantially as shown.

74,716. LIGHTING FIXTURE. MAURICE BLOCK, Chicago, Ill., assignor to Block Portelier Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1927. Serial No. 23,848. Term of patent 3½ years.



The ornamental design for a lighting fixture substantially as shown.

74,717. JAR OR SIMILAR CONTAINER. LENORE BOATRIGHT, Sausalito, Calif. Filed Dec. 19, 1927. Serial No. 24,543. Term of patent 3½ years.



The ornamental design for a jar or similar container as shown.

74,718. VANITY PURSE. PAULINE B. BOWEN, Minneapolis, Minn. Filed Feb. 28, 1927. Serial No. 20,924. Term of patent 3½ years.

The ornamental design for a vanity purse as shown.

74,719. ILLUMINATED HAND MAGNIFYING GLASS. CHARLES T. BRADY, Detroit, Mich. Filed May 31, 1927. Serial No. 22,254. Term of patent 14 years.

The ornamental design for an illuminated hand magnifying glass, as shown.

74,720. DOLL. GRETCHEN CORMANY, San Francisco, Calif. Filed Dec. 14, 1927. Serial No. 24,479. Term of patent 7 years.

The ornamental design for a doll, as shown.

74,721. CURTAIN-POLE RING. JAMES O. CRAWFORD, Oakland, Calif., assignor to John Kroder and Henry Reubel Company, New York, N. Y., a Corporation of New York. Filed Jan. 11, 1928. Serial No. 24,819. Term of patent 3½ years.

The ornamental design for a curtain pole ring, substantially as shown.

74,722. CURTAIN-POLE BRACKET. JAMES O. CRAWFORD, Oakland, Calif., assignor to The John Kroder and Henry Reubel Company, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1927. Serial No. 24,800. Term of patent 3½ years.

The ornamental design for a curtain pole bracket, substantially as shown.

74,723. LAMP STANDARD. ANDREW DE VRIES, South Bend, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 14, 1927. Serial No. 20,878. Term of patent 7 years.

The ornamental design for a lamp standard, as shown.

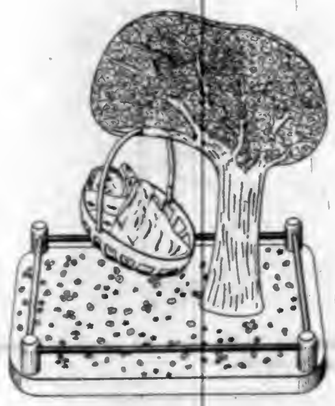
74,724. JAR OR SIMILAR CONTAINER. CLYDE L. EATON, Portland, Oreg., assignor to Cosmetique Laboratories of America, Portland, Oreg., a Corporation of Oregon. Filed June 16, 1927. Serial No. 22,445. Term of patent 3½ years.

The ornamental design for a jar or similar container, substantially as shown.

74,725. JAR OR SIMILAR CONTAINER. CLYDE L. EATON, Portland, Oreg., assignor to Cosmetique Laboratories of America, Portland, Oreg., a Corporation of Oregon. Filed June 16, 1927. Serial No. 22,446. Term of patent 3½ years.

The ornamental design for a jar or similar container, substantially as shown.

74,726. JAR OR SIMILAR CONTAINER. CLYDE L. EATON, Portland, Oreg., assignor to Cosmetique Laboratories of America, Portland, Oreg., a Corporation of Oregon. Filed June 16, 1927. Serial No. 22,447. Term of patent 3½ years.



The ornamental design for a jar or similar container, substantially as shown.

74,727. JAR OR SIMILAR CONTAINER. CLYDE L. EATON, Portland, Oreg., assignor to Cosmetique Laboratories of America, Portland, Oreg., a Corporation of Oregon. Filed June 16, 1927. Serial No. 22,448. Term of patent 3½ years.

The ornamental design for a jar or similar container, substantially as shown.

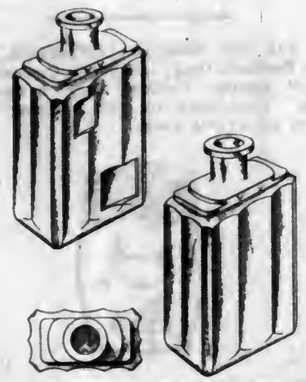
74,728. TOY. JOSEPH EKSTEIN, New York, N. Y. Filed Dec. 22, 1927. Serial No. 24,596. Term of patent 7 years.

The ornamental design for a toy as shown.

74,729. LIGHTING UNIT. RALPH W. ERSKINE, South Bend, Ind., assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 16, 1926. Serial No. 19,748. Term of patent 14 years.

The ornamental design for a lighting unit as shown.

74,730. LIGHTING STANDARD. RALPH W. ERSKINE, Mishawaka, Ind., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1927. Serial No. 24,721. Term of patent 14 years.

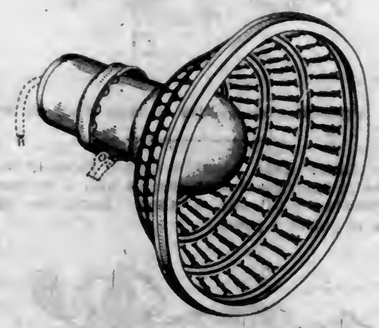


The ornamental design for a lighting standard substantially as shown.

74,731. HOLDER FOR GLASSES. SIMON W. FARBER, Brooklyn, N. Y. Filed Sept. 21, 1927. Serial No. 23,496. Term of patent 14 years.

The ornamental design for a holder for glasses substantially as shown.

74,732. BOTTLE. PIERRE L. FRAILEY, Cleveland, Ohio. Filed Dec. 30, 1927. Serial No. 24,700. Term of patent 14 years.

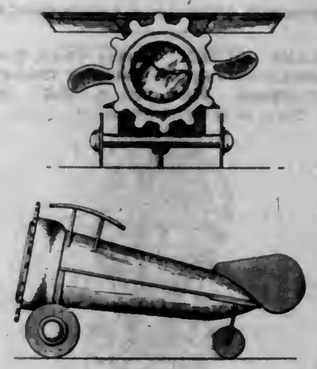


The ornamental design for a bottle substantially as shown and described.

74,733. BOW-TIE RACK. MAX GOLDMAN, Los Angeles, Calif. Filed Feb. 24, 1927. Serial No. 20,887. Term of patent 3½ years.

The ornamental design for a bow tie rack as shown.

74,734. COMBINED LAMP AND REFLECTOR. DAVID GAREY and WILLIAM B. TISHLER, Providence, R. I. Filed Oct. 27, 1927. Serial No. 28,913. Term of patent 7 years.



The ornamental design for a combined lamp and reflector substantially as shown and described.

74,735. RADIATOR CAP. GEORGE E. GRAVENSTINE, Dayton, Ohio, assignor to The S. H. Thomson Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 19, 1927. Serial No. 24,553. Term of patent 7 years.

The ornamental design for a radiator cap, as shown.

74,736. CLOCK CASE. ISEDORE GREENGUS, Providence, R. I. Filed Oct. 12, 1927. Serial No. 28,737. Term of patent 7 years.

The ornamental design for a clock case substantially as shown.

74,737. LAMP COLUMN. JOSEPH GRIEN, Chicago, Ill., assignor to Hamilton-Ross Factories, Inc., a Corporation of Illinois. Filed Oct. 8, 1927. Serial No. 23,688. Term of patent 7 years.

The ornamental design for a lamp column, as shown.

74,738. LAMP COLUMN. JOSEPH GRIEN, Chicago, Ill., assignor to Hamilton-Ross Factories Inc., a Corporation of Illinois. Filed Oct. 8, 1927. Serial No. 23,689. Term of patent 7 years.

The ornamental design for a lamp column, as shown.

74,739. LAMP COLUMN. JOSEPH GRIEN, Chicago, Ill., assignor to Hamilton-Ross Factories Inc., a Corporation of Illinois. Filed Oct. 8, 1927. Serial No. 23,690. Term of patent 7 years.

The ornamental design for a lamp column, as shown.

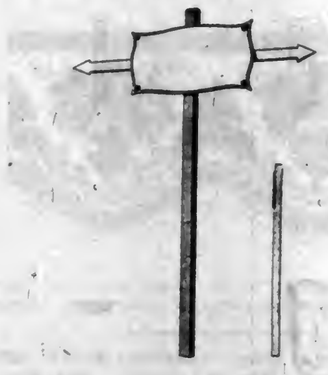
74,740. LAMP ARM. JOSEPH GRIEN, Chicago, Ill., assignor to Hamilton-Ross Factories Inc., a Corporation of Illinois. Filed Oct. 8, 1927. Serial No. 23,691. Term of patent 7 years.

The ornamental design for a lamp arm, as shown.

74,741. LAMP ARM. JOSEPH GRIEN, Chicago, Ill., assignor to Hamilton-Ross Factories Inc., a Corporation of Illinois. Filed Oct. 8, 1927. Serial No. 23,692. Term of patent 7 years.

The ornamental design for a lamp arm, as shown.

74,742. LAMP ARM. JOSEPH GRIEN, Chicago, Ill., assignor to Hamilton-Ross Factories Inc., a Corporation of Illinois. Filed Oct. 8, 1927. Serial No. 23,693. Term of patent 7 years.

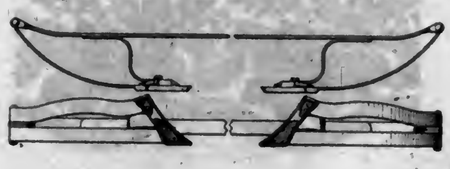


The ornamental design for a lamp arm, as shown.

74,743. LAMP ARM. JOSEPH GRIEN, Chicago, Ill., assignor to Hamilton-Ross Factories Inc., a Corporation of Illinois. Filed Oct. 8, 1927. Serial No. 23,694. Term of patent 7 years.

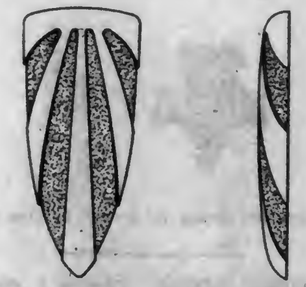
The ornamental design for a lamp arm, as shown.

74,744. SIGNPOST. BENJAMIN F. GRIMSHAW, Stockton, Calif. Filed May 18, 1927. Serial No. 22,035. Term of patent 3½ years.



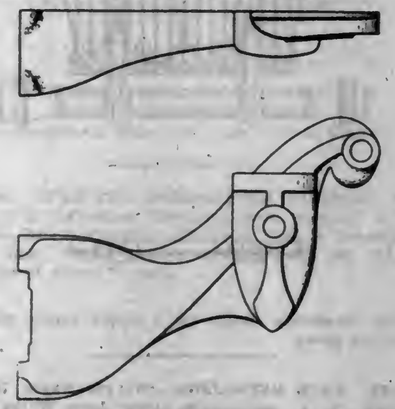
The ornamental design for a signpost as shown.

74,745. DISPENSING-PUMP CASING. OKLA H. HERSHMAN, Indianapolis, Ind. Filed Nov. 16, 1927. Serial No. 24,148. Term of patent 14 years.



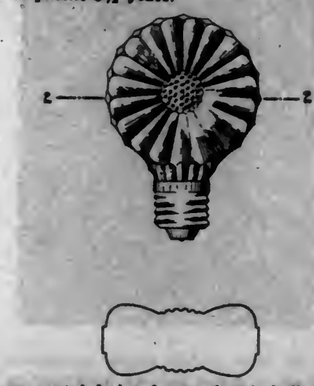
The ornamental design for a dispensing pump casing, as shown.

74,746. VEHICLE BUMPER. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 21, 1927. Serial No. 24,578. Term of patent 14 years.



The ornamental design for a vehicle bumper substantially as shown.

74,747. CLAMP PLATE. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 23, 1927. Serial No. 24,615. Term of patent 14 years.

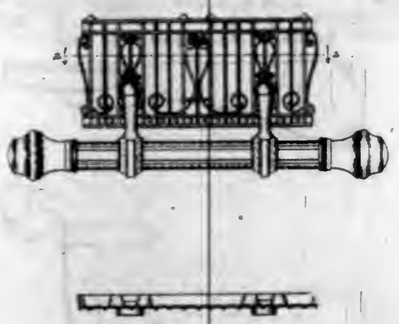


The ornamental design for a clamp plate substantially as shown.

74,748. SUPPORT ARM. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 23, 1927. Serial No. 24,618. Term of patent 14 years.

The ornamental design for a support arm substantially as shown.

74,749. ELECTRIC BULB. HENRY D. KADEL, Brooklyn, N. Y. Filed Nov. 8, 1927. Serial No. 24,037. Term of patent 3½ years.



The ornamental design for an electric bulb, as shown.

74,750. WALL LIGHTING FIXTURE. ARTHUR KRAUSE, Woodhaven, N. Y., assignor to Lion Electric Manufacturing Company, Inc., a Corporation of New York. Filed Oct. 4, 1927. Serial No. 23,623. Term of patent 7 years.

The ornamental design for a wall lighting fixture as shown.

74,751. CASKET HANDLE. CHARLES I. MCCLELLAND, Richmond, Ind., assignor to McClelland Casket Hardware Company, Richmond, Ind., a Corporation of Indiana. Filed Jan. 5, 1928. Serial No. 24,759. Term of patent 3½ years.

The ornamental design for a casket handle substantially as shown.

74,752. LACE MEDALLION. WALTER MEADS, Hightstown, N. J., assignor to Acme Lace Works, Inc., Hightstown, N. J., a Corporation of New Jersey. Filed Dec. 13, 1927. Serial No. 24,472. Term of patent 3½ years.

The ornamental design for lace medallion, as shown.

74,753. BELT SLIDE. WILLIAM J. MORSE, Attleboro, Mass. Filed Apr. 8, 1926. Serial No. 17,216. Term of patent 7 years.

The ornamental design for a belt slide, substantially as shown.

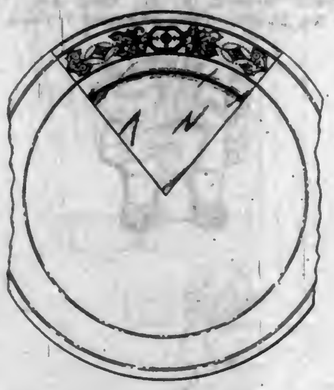
74,754. VALANCE FOR WINDOW DRAPERIES. ROBERT J. MURRAY, Philadelphia, Pa., assignor to Francis A. Bruner, Inc., Philadelphia, Pa., a Corporation of New Jersey. Filed Oct. 11, 1927. Serial No. 23,720. Term of patent 7 years.

The ornamental design for a valance for window draperies, substantially as shown and described.

74,755. VALANCE FOR WINDOW DRAPERIES. ROBERT J. MURRAY, Philadelphia, Pa., assignor to Francis A. Bruner, Inc., Philadelphia, Pa., a Corporation of New Jersey. Filed Oct. 11, 1927. Serial No. 23,721. Term of patent 7 years.

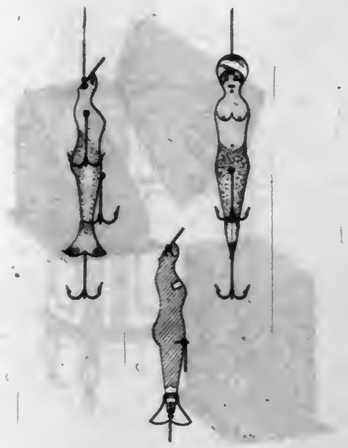
The ornamental design for a valance for window draperies, substantially as shown and described.

74,756. VALANCE FOR WINDOW DRAPERIES. ROBERT J. MURRAY, Philadelphia, Pa., assignor to Francis A. Bruner, Inc., Philadelphia, Pa., a Corporation of New Jersey. Filed Nov. 2, 1927. Serial No. 23,979. Term of patent 7 years.



The ornamental design for a valance for window draperies, substantially as shown and described.

74,757. CIGAR LIGHTER. GEORGE M. NORTON, Minneapolis, Minn. Filed Dec. 24, 1927. Serial No. 24,629. Term of patent 7 years.

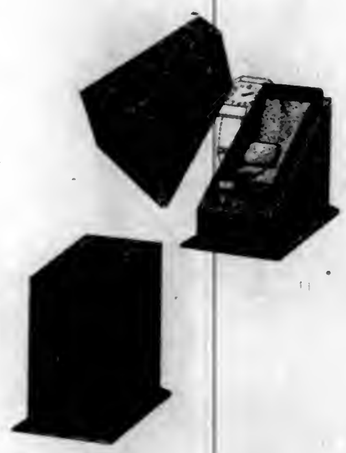


The ornamental design for a cigar lighter, as shown.

74,758. PLATE OR SIMILAR ARTICLE. JOHN E. PHILLIPS, Chicago, Ill., assignor to Mitchell-Woodbury Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 13, 1927. Serial No. 23,083. Term of patent 7 years.

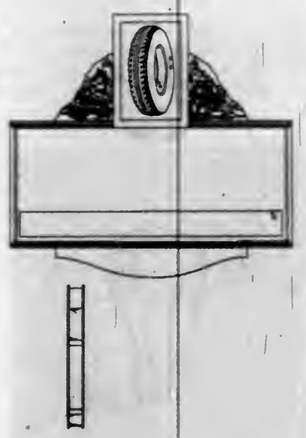
The ornamental design for a plate or similar article substantially as shown and described.

74,759. FISH LURE. ERNEST PRIEUR, Flint, Mich. Filed Nov. 19, 1927. Serial No. 24,209. Term of patent 7 years.



The ornamental design for a fish lure, as shown.

74,760. BULB FOR HYDROMETER SYRINGE. WILLIAM A. REYNOLDS, Cleveland, Ohio, assignor to The Ohio Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 8, 1927. Serial No. 23,669. Term of patent 7 years.

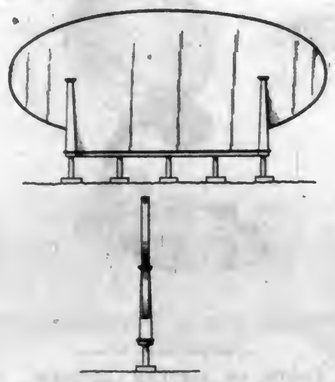


The ornamental design for a bulb for hydrometer syringe substantially as shown.

74,761. DISPLAY CASE. SAUL RITTER, New York, N. Y., assignor to Simon Bruner, Far Rockaway, N. Y. Filed Aug. 26, 1927. Serial No. 23,209. Term of patent 3½ years.

The ornamental design for a display case as shown.

74,762. SIGN. HARRY G. RUSSELL, Battle Creek, Mich., assignor to Consolidated Electric Sign Corporation, Chicago, Ill. Filed May 12, 1927. Serial No. 21,947. Term of patent 3½ years.

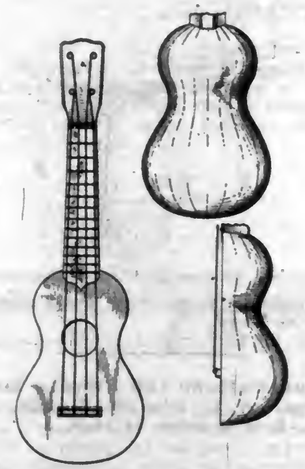


The ornamental design for a sign, as shown.

74,763. BRIDGE LAMP OR THE LIKE. FREDERICK SCHWARTZ, Brooklyn, N. Y. Filed Jan. 9, 1928. Serial No. 24,786. Term of patent 7 years.

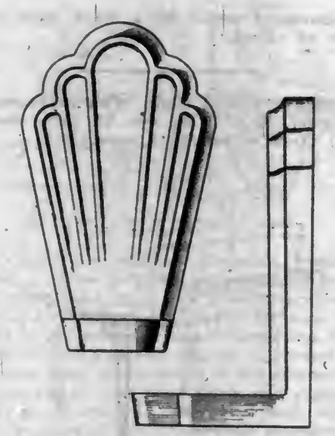
The ornamental design for a bridge lamp or the like, as shown.

74,764. SIGNBOARD. HERBERT LOUIS SELLE, Waco, Tex. Filed June 28, 1927. Serial No. 22,587. Term of patent 3½ years.



The ornamental design for a signboard as shown.

74,765. ADVERTISING DISPLAY FORM. FRED A. THOMPSON, Newark, N. J. Filed Aug. 11, 1927. Serial No. 23,059. Term of patent 7 years.

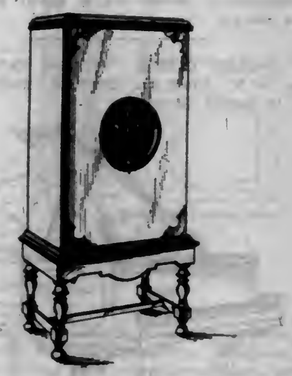


The ornamental design for an advertising display form as shown.

74,766. GUITAR OR SIMILAR ARTICLE. NICOLA TURTURRO, New York, N. Y. Filed June 8, 1922. Serial No. 2,513. Term of patent 14 years.

The ornamental design for a guitar or similar article, as shown and described.

74,767. LIGHTING-FIXTURE WALL BRACKET. WALTER VON NESSEN, New York, N. Y., assignor to Efcolite Corporation, a Corporation of New York. Filed Jan. 12, 1928. Serial No. 24,838. Term of patent 3½ years.



The ornamental design for a lighting fixture wall bracket substantially as shown and described.

74,768. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Nov. 25, 1927. Serial No. 24,278. Term of patent 7 years.

The ornamental design for a radiocabinet, substantially as shown.

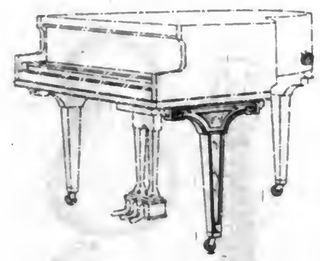
74,769. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Nov. 25, 1927. Serial No. 24,282. Term of patent 7 years.

The ornamental design for a radiocabinet, substantially as shown.

74,770. GRAND PIANO. WILLIAM ZAISER, Rockville Center, N. Y. Filed Dec. 23, 1926. Serial No. 20,130. Term of patent 14 years.

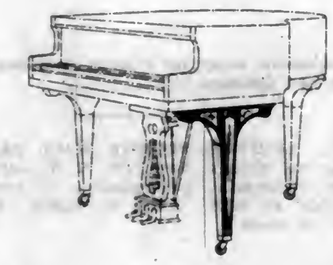
The ornamental design for a grand piano substantially as shown.

74,771. GRAND PIANO. WILLIAM ZAISER, Rockville Center, N. Y. Filed Dec. 23, 1926. Serial No. 20,131. Term of patent 14 years.



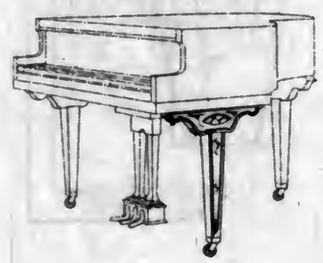
The ornamental design for a grand piano substantially as shown.

74,772. GRAND PIANO. WILLIAM ZAISER, Rockville Center, N. Y. Filed Dec. 23, 1926. Serial No. 20,132. Term of patent 14 years.



The ornamental design for a grand piano substantially as shown.

74,773. GRAND-PIANO LEG. WILLIAM ZAISER, Rockville Center, N. Y. Filed Dec. 23, 1926. Serial No. 20,133. Term of patent 14 years.

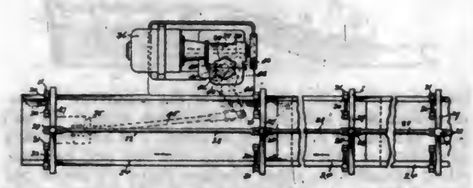


The ornamental design for a grand piano leg substantially as shown.

74,774. GRAND-PIANO LEG. WILLIAM ZAISER, Rockville Center, N. Y. Filed Dec. 23, 1926. Serial No. 20,134. Term of patent 14 years.

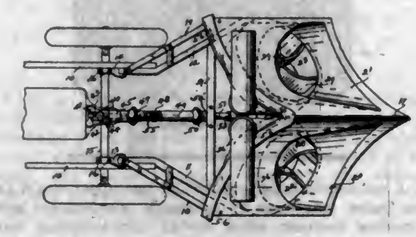
The ornamental design for a grand piano leg substantially as shown.

74,775. GRAND-PIANO LEG. WILLIAM ZAISER, Rockville Center, N. Y. Filed Dec. 23, 1926. Serial No. 20,135. Term of patent 14 years.



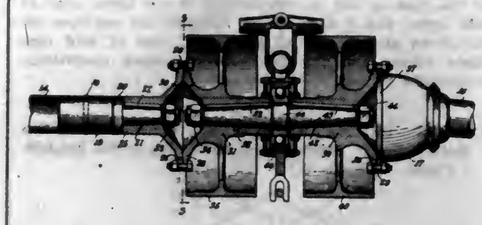
The ornamental design for a grand piano leg substantially as shown.

PATENTS



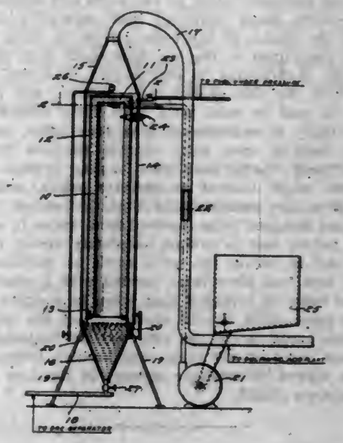
GRANTED MARCH 20, 1928.

1,662,808. CONVEYER. EDWIN H. ALLFREE and ALBERT R. WILLIAMS, Ironton, Ohio, assignors to The Ironton Engine Company, Ironton, Ohio, a Corporation of Ohio. Filed Feb. 18, 1926. Serial No. 89,128. 8 Claims. (Cl. 198—220.)



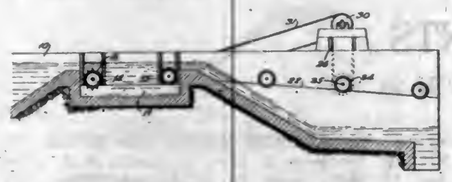
1. A conveyer of the character described comprising a plurality of connected and reciprocating conveyer sections, means for raising and lowering conveyer sections during their reciprocation, means for imparting reciprocating motion to said conveyer sections consisting of a motor operating a reduction gear, a crank operated by said reduction gear, a bell crank, a link connecting said crank with one end of the bell crank, and a link connecting the other end of the bell crank with the reciprocating conveyer sections for imparting a reciprocatory motion to said conveyer sections with a quick movement of said sections during their raising and a slow movement during the lowering of said conveyer sections.

1,662,809. STREET OR ROAD SNOWPLOW. LEO HERMAN ALTGILBERS, Fort Dodge, Iowa. Filed Jan. 18, 1927. Serial No. 161,777. 2 Claims. (Cl. 37—43.)



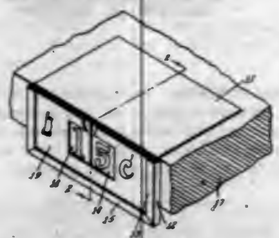
1. In combination with an automobile, a snow plow comprising a frame pivotally secured to the front axle of the automobile, a snow plow mounted on said frame and having a centrifugal fan, wheels for supporting the front end of said plow a certain distance from the roadway, a sleeve having a notch designed to embrace the end of the crank shaft of the motor of the automobile originally intended for the hand crank and engaging the catch pin in the crank shaft, a drive shaft secured at one end to said sleeve, a second shaft connected to the opposite end of said first mentioned drive shaft and having its free end squared, a third drive shaft having a square opening designed to embrace the free end of the second mentioned drive shaft and capable of sliding movement thereon, and a fourth drive shaft operatively connected to said third drive shaft and said centrifugal fan.

1,662,810. BRAKE-DRUM MOUNT FOR MOTOR VEHICLES. RAYMOND L. AUMACK, Roselle, N. J. Filed Aug. 13, 1927. Serial No. 212,624. 5 Claims. (Cl. 188—218.)



1. In a motor vehicle, a longitudinal sectional propeller shaft, flanged elements on the proximate ends of the outer sections, two brake drums rigidly fixed on the intermediate section, and flanges on the hubs of said drums bolted to the flanges of said elements.

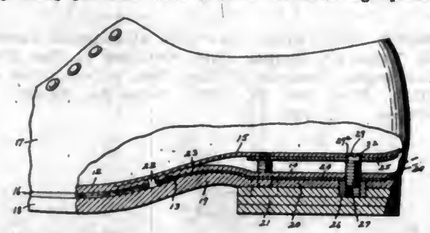
1,662,811. ORE-ROASTING APPARATUS. DANA W. BOWERS, Wilderness, Va. Filed Aug. 6, 1927. Serial No. 211,230. 6 Claims. (Cl. 266—20.)



4. In apparatus for roasting ores and in combination, an open-bottomed vertically extending cylindrical retort, means for introducing air under pressure with which the ore to be roasted is finely intermingled to said retort at the upper end thereof and at such an angle as to produce rotation of the incoming air and ore, means for introducing fuel to the retort in the path of and at right angles to the incoming air and ore and a washing condenser surrounding the retort and combining therewith to provied a conduit for gases passing from the lower end of the retort.

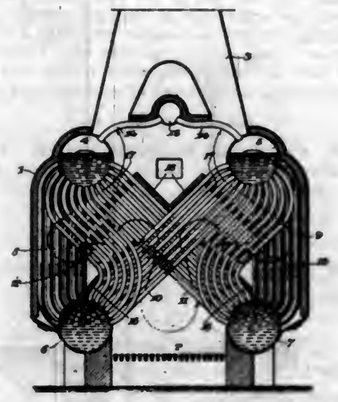
1,662,812. TIMBER CONVEYER. FRANK BURNS, Gulfport, Miss. Filed Feb. 17, 1927. Serial No. 169,031. 3 Claims. (Cl. 61—30.)

1. The combination with a dam having a crest, of a plurality of conveyer rollers extending across a portion of the dam on the up stream side of the lower edge of said crest, and a downwardly inclined tail conveyer on the down stream side of said crest, one of said conveyer rollers and the tail conveyer being operatively connected.



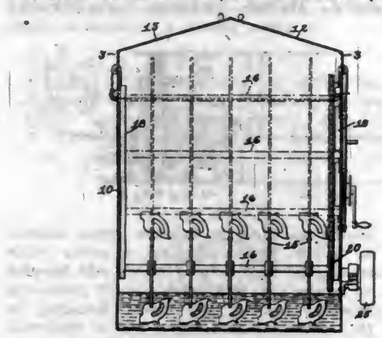
1,662,813. PRICE-CARD DEVICE. ALVIN E. COBB, Des Moines, Iowa. Filed July 5, 1927. Serial No. 203,509. 1 Claim. (Cl. 40—5.)

In a device of the class described, the combination of a holder formed of sheet metal and comprising upright body portion, means for detachably connecting it to a shelf, the marginal edges of the sides and bottom of the body portion being projected first outwardly and then toward the center of the body portion to form card receiving slots open at the top, four cards each being substantially rectangular in outline and of a size substantially half the size of the body portion, and being designed to rest in said slots with their adjacent edges substantially in engagement with each other, said cards having marked upon their central portions the words "Right" and "Left," and also having symbols thereon near the edges thereof to indicate prices, and a face plate of a size substantially that of two of the price cards and designed to be inserted from above in said slots of the holder and to extend completely across two price cards and to retain the price cards in position in the holder, said face plate being formed with a central opening and being so arranged that when in position in front of two price cards, it will conceal all of the symbols on the price cards except the two that are adjacent to the marginal edges of the price cards, which latter symbols may be viewed through the opening in the face card, for the purposes stated.



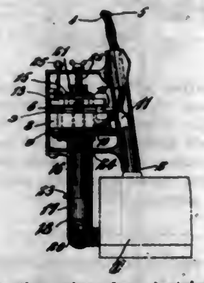
1,662,814. SHOE. JAMES ALFRED, Brockton, Mass. Filed Apr. 14, 1927. Serial No. 183,849. 2 Claims. (Cl. 36—37.)

1. A shoe comprising, in combination, a bottom including an outsole and a full length insole fixed to the outsole, the heel portion of the insole being depressed below the shank portion thereof, to form a recess below the foot-containing space in the shoe, a shank stiffener fixed in the bottom below the insole, the stiffener being curved to conform to the shank portion of the insole and having an extension conforming to the heel portion thereof, a plurality of nuts fixed to the shank extension and embedded in the heel portion of the bottom, a heel plate formed to enter said recess, a plurality of screw-threaded standards inseparably engaged at their outer ends with the heel plate, to rotate therein, and extending through the heel portion of the insole into the nuts, the outer ends of the standards being formed to engage a screw-driver, and a flap connected with the shank portion of the insole, and formed to cover the heel plate, said flap being provided with screw-driver-receiving openings



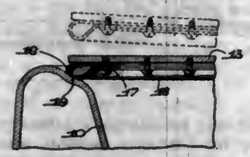
coinciding with the outer ends of the standards, the arrangement being such that the standards support the heel plate and flap at a plurality of points, and are vertically adjustable, so that the heel plate and flap may be maintained horizontally, either elevated above the shank portion of the insole, and spaced above the bottom of the recess, or depressed into the recess, the flap bridging the space between the forward end of the heel plate and the shank portion of the insole.

1,662,815. WATER-TUBE BOILER. HENRY CHARLES BADY, Hoboken, N. J. Filed Dec. 8, 1923. Serial No. 679,303. 4 Claims. (Cl. 122—326.)



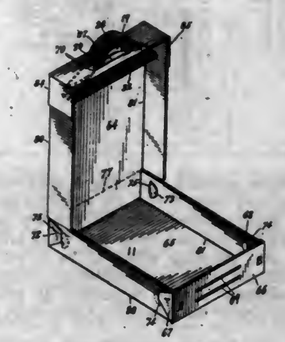
1. A water-tube boiler comprising two upper steam-and-water drums, two lower water drums, two diagonal banks of crossing upcomer tubes having corresponding water capacity and whereof each bank connects a lower water drum with the remote upper steam-and-water drums, and the tubes of one bank are interspersed with those of the other bank, a bank of up-comer tubes connecting each lower drum with the adjacent upper drum and being equal in capacity to each bank of diagonal up-comer tubes, and a bank of down-comer tubes connecting each upper drum with the adjacent lower drum and being equal in capacity to two adjacent banks of up-comer tubes, baffle walls located adjacent the upper portions of the respective diagonal banks in the spaces between the respective water drums and the crossing portions of the tubes of said diagonal banks, and a baffle structure comprising inclined members spaced laterally of and above said walls and extending across the planes of the respective up-comer banks, and also an arch member covering the outer tubes of the said diagonal banks adjacent their angle of intersection.

1,662,816. METHOD OF SURFACE COATING ARTICLES. CARLE M. BIGELOW, Newton, Mass. Filed Dec. 8, 1924. Serial No. 754,667. 2 Claims. (Cl. 91—68.)



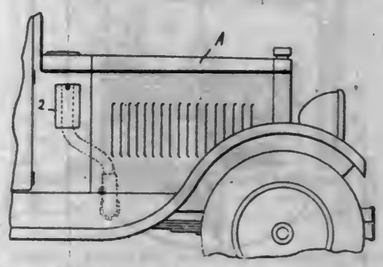
1. The process of surface-coating articles with a liquid coating material containing a volatile solvent which consists in dipping the article into a bath of the liquid coating material contained in the bottom of a chamber, closed during the coating operation, lifting the article from the bath and slowly rotating it at a plurality of stations spaced succeeding distances from the bath whereby the slowly rotating article is permitted to dry while being rotated in contact with atmosphere containing progressively decreasing proportions of the solvent, and thereafter opening the receptacle to remove the article.

1,662,817. PLUG FOR ELECTRIC CONFECTIONS. AUGUST C. BOLLMANN, St. Louis, Mo., and WILLIAM DAVIES, Granite City, Ill. Filed Sept. 28, 1922. Serial No. 591,175. 14 Claims. (Cl. 200—140.)



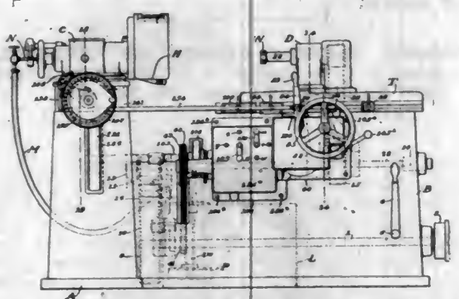
1. In a connection plug for electrical apparatus, a switch including spaced contacts, and a movable rigid bar connecting them, an extension on said plug adapted to contact with a portion of the apparatus subject to being heated, and thermo-responsive means in said extension connected to said bar so as to positively move the latter if said material is heated to a predetermined degree.

1,662,818. COVER FOR DISHWASHERS AND THE LIKE. FRANK G. BROTZ, Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed July 6, 1926. Serial No. 120,786. 2 Claims. (Cl. 220—46.)



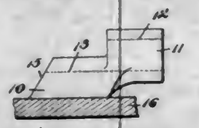
1. A dishwashing machine or the like comprising a receptacle having a surrounding rim, a cover hinged to seat on the rim, an air cushion secured to the edge of the cover and engaging the rim of the receptacle and comprising a sheet of rubber with its edges in superposed relation and clamped to the cover to form an air chamber therein between the edge of the cover and the rim and a clamping frame for the air cushion surrounded by the air chamber.

1,662,819. GARMENT HANGER AND CONTAINER. ISABEL N. CAVE, Brooklyn, N. Y. Filed June 3, 1925. Serial No. 34,519. 6 Claims. (Cl. 223—61.)



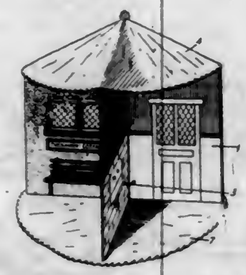
2. A combined garment hanger and container comprising a substantially box-like single-piece container adapted to be opened or closed by the movement of opposite sections thereof and having similarly disposed registering slots in one end of each of said sections, a single-piece garment hanger having a garment supporting portion and handles, said garment supporting portion being enclosed within said container and said handles extending outwardly through said slots and having interlocking means adapted to detachably hold said hanger in said position relatively to said container, said supporting portion being adapted to support and hold a garment within said container and said handles being adapted to detachably retain said container in closed position and provide means whereby said hanger and container may be suspended and transported.

1,662,820. OIL FILLER FOR AUTOMOBILES. MICHAEL CONDUPA, Greensburg, Pa. Filed June 17, 1927. Serial No. 199,567. 4 Claims. (Cl. 220—86.)



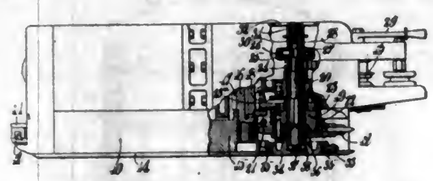
1. In an oil filler closure for automobile crank cases, wherein the automobile body is formed with an opening therein, a door pivotally associated with the body and adapted to close said opening, a flexible pipe adapted to communicate at one end with the crank case, and the opposite end of said pipe in movable relation with the door.

1,662,821. INTERNAL GRINDER. SOL EINSTEIN, Cincinnati, Ohio, assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 16, 1924. Serial No. 738,020. 33 Claims. (Cl. 51—50.)



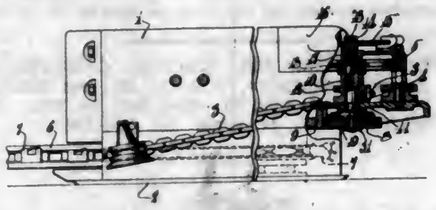
1. A grinding machine combining a work-holder; means for rotating said work-holder; a grinding-wheel; means for giving said grinding-wheel movements of predetermined length toward and from said work-holder; means permitting said grinding wheel to be moved to an abnormal position; and automatically actuated means rendered operative at the beginning of said abnormal movement to arrest the rotation of said work-holder.

1,662,822. TERMINAL. MAURICE J. DUNNE, West Orange, N. J. Filed May 2, 1922. Serial No. 557,856. 3 Claims. (Cl. 173—278.)



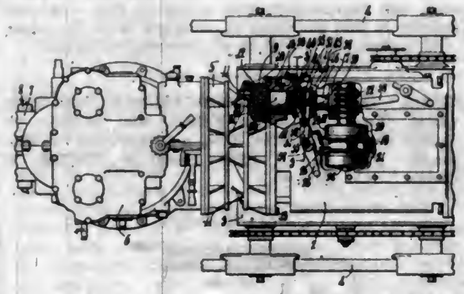
1. A terminal for use in welded electrical connections comprising a base adapted to be placed with its bottom against a rail, and being relatively thick and having a rigid sleeve projecting at one end of the top with its axis substantially parallel with the bottom; the base having a groove in extension of the bore of the sleeve.

1,662,823. PLAYHOUSE. AGNES A. FOLEY, Youngstown, Ohio. Filed May 13, 1927. Serial No. 191,001. 4 Claims. (Cl. 46—87.)



1. A playhouse, comprising a plurality of walls, a flexible connection for connecting the walls together along one edge whereby the house may be set up by moving the walls outwardly in angular relation to each other and whereby the house may be collapsed by folding the walls together, and a flexible covering which is extended when the house is set up and which is folded when the house is collapsed, said flexible covering being permanently secured to the playhouse.

1,662,824. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 11, 1921. Serial No. 476,904. 23 Claims. (Cl. 262—30.)

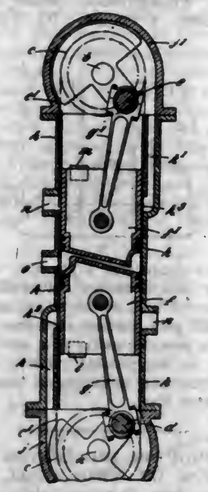


1. In a mining machine, a machine frame slidable bodily on its bottom during cutting, a cutter chain sprocket thereon, a driving shaft on which said sprocket is mounted, a bearing for said driving shaft preventing lateral displacement thereof, and means including an opening in the bottom of said frame and a removable closure therefor releasably secured to said bearing for enabling removal of said bearing and shaft through the bottom of said frame.

1,662,825. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 1, 1922. Serial No. 557,659. 13 Claims. (Cl. 262—30.)

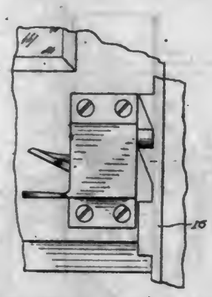
1. The combination with a mining machine presenting a cuttings passage and a truck driving gear disposed adjacent the same, of an axially bored member disposed coaxially with said gear, a member on said member having a passage communicating with said bore and disposed coaxially therewith inside said gear, and a member holding said gear in position.

1,662,826. CONTROLLING MECHANISM. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 28, 1924. Serial No. 716,474. 17 Claims. (Cl. 262—28.)



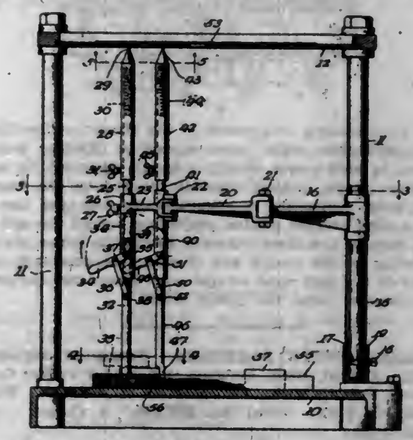
1. In a controlling mechanism, a plurality of separate clutches having independently movable clutch elements one of said clutches being a locking clutch while the other is a drive control clutch, and a common operating member for actuating said clutch elements, said operating member when moved in one direction first actuating said locking clutch element and thereafter actuating said drive control clutch element and when moved in the opposite direction effecting actuation of said clutch elements in a reverse order.

1,662,827. PHOTOGRAPHIC SHUTTER. RUDOLPH KLEIN, Rochester, N. Y., assignor, by mesne assignments, to Ansco Photoproducts, Inc., Binghamton, N. Y., a Corporation of New York. Filed Apr. 18, 1924. Serial No. 707,521. 11 Claims. (Cl. 95—59.)



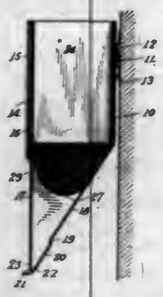
1. A photographic shutter comprising a setting controlling element, a lens cap provided with a relatively large aperture, a pivoted diaphragm provided with a relatively small aperture, and means whereby operation of the setting controlling element results in swinging said diaphragm into or out of operative position.

1,662,828. TWO-STROKE-CYCLE INTERNAL-COMBUSTION ENGINE. CECIL LAW, Golders Green, England. Filed Sept. 22, 1927, Serial No. 221,203, and in Great Britain July 19, 1926. 7 Claims. (Cl. 123—51.)



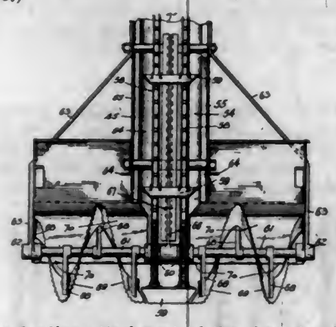
7. A two-stroke-cycle internal combustion engine comprising a cylinder having an inlet and an exhaust port in each half thereof, a pair of axially aligned pistons disposed in said cylinder, one in each half thereof, said pistons being each adapted to control the ports in their respective half of the cylinder, a crank case arranged at each end of said cylinder and provided with a transfer conduit communicating with said inlet ports, a crank shaft disposed in each crank case, the crank of one shaft being set at an angle of substantially 90° to the crank of the other shaft, mechanism connecting said shafts, and connections between said shafts and said pistons adapted to correlate the movement of said pistons and cause the opening and closing of the ports in one half of said cylinder at a different time during the operating cycle than the ports in the other half of said cylinder.

1,662,829. SASH LATCH. THOMAS A. LEDGE, Chicago, Ill., assignor to The Adams & Westlake Company, a Corporation of Illinois. Filed Sept. 6, 1921. Serial No. 498,635. 1 Claim. (Cl. 292—173.)



In a sash latch, a casing, a housing formed by said casing and provided with a bore having its inner end closed and its outer end opened, said housing provided with a notch in the wall of said bore intermediate the ends thereof, said casing having an opening in its rear wall, a lip member extending rearwardly adjacent said opening, a bolt slidably mounted in said bore and forming a close fit therein, said bolt extending across said notch and forming with the inner end of said bore a closed chamber in all positions of said bolt during its operation, for retaining a lubricant therein, a light spring in said chamber in engagement with said bolt, and means having one end extending through said notch for operating said bolt and its other end extending through said opening adjacent to, but in spaced relation to, said lip member.

1,662,830. PRINTER'S REGISTER APPARATUS. GEORGE H. LUND, Chicago, Ill., assignor to Made-Ready Plate Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 14, 1925, Serial No. 75,290. Renewed Feb. 4, 1928. 11 Claims. (Cl. 33—184.5.)



1. A register apparatus including a support for the work, a transparent member supported thereabove and upon which member a sheet having matter delineated thereon is placed, and means disposed between the said support and member for indicating upon the said support predetermined points in the matter delineated on the said sheet, the said means including a pointer operating against the lower face of the transparent member and an additional pointer operable in close proximity to the face of the said support.

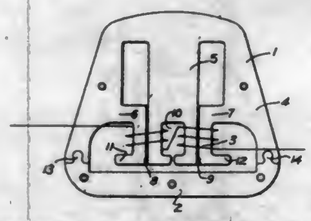
1,662,831. TOOTHPICK DISPENSER. MICHAEL MOSS and THOMAS F. MCCARTHY, New York, N. Y.. Filed Mar. 16, 1927. Serial No. 175,761. 2 Claims. (Cl. 206—31.)

1. In combination with a toothpick dispenser, of a filling means consisting of a carton, a flexible strap loosely disposed over the open top of said carton, and means in said dispenser to facilitate severing said strap when the carton is disposed in an inverted position within the dispenser.

1,662,832. WAGON-LOADING DEVICE FOR TRACTORS. NELS P. NELSON and FREDERIC W. JAMES, Passaic, N. J., assignors to N. P. Nelson Iron Works Inc., Passaic, N. J., a Corporation of New York. Filed Sept. 12, 1925. Serial No. 55,992. 18 Claims. (Cl. 198—9.)

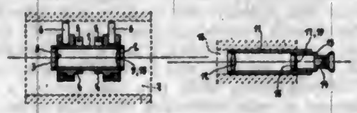
1. In a loading attachment of the character described, the combination with power means, of traction means driven by said power means, a frame supported on said traction means, a boom pivotally carried by the frame, said boom comprising a longitudinally arranged trough and a rigid scraper portion projecting beyond the end of said trough, a scraper conveyor having its lower strand operating in the trough and scraping the ground in advance of the said rigid scraper, and means for operating the conveyor from the power means.

1,662,833. TRUCK PLATFORM. FREDERICK MALCOLM REID, Detroit, Mich., assignor to Fruehauf Trailer Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 5, 1927. Serial No. 166,096. 8 Claims. (Cl. 280—150.)



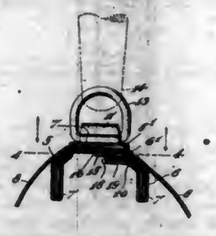
1. In a truck, a truck platform comprising in combination, a main platform permanently in place, brackets pivoted to the side of the truck and arranged to be folded out of the way, a removable platform extension adapted to be carried by said brackets said brackets when folded out of the way lying substantially against the side of the truck, and means for holding them in this position.

1,662,834. FASTENING DEVICE. DANIEL I. REITER, New York, N. Y. Filed Apr. 9, 1927. Serial No. 182,447. 8 Claims. (Cl. 24—150.)



1. As a new article of manufacture, a female fastener element of the class described including an apertured plate and a pin for attaching the plate to a fabric, a single length of wire connected to the plate and bent to provide a fabric-engaging spur and a pair of stud receiving spring arms underlying the opening.

1,662,835. ELECTRICAL MEASURING INSTRUMENT. ARGYLE R. RUTTER, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 12, 1926. Serial No. 94,189. 5 Claims. (Cl. 171—264.)

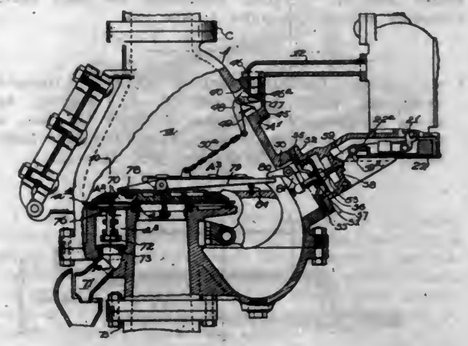


1. A lamination comprising a plurality of magnetizable members, one of said members comprising pole portion structure, another of said members comprising a section forming with said pole portion structure a flux gap for the reception of a movable meter disc, said members being secured together in interlocking relation and being non-detachable in a direction extending at right angles to the plane of said meter disc.

1,662,836. METHOD OF AND DEVICE FOR TESTING THE POSITION OF TWO AXIAL DIRECTIONS. ADOLF STEINLE, Jena, Germany, assignor to the Firm: Carl Zeiss, Jena, Germany. Filed Nov. 27, 1926, Serial No. 151,222, and in Germany Nov. 24, 1925. 3 Claims. (Cl. 88—2.2.)

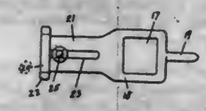
1. Method of testing the relative position of two axes destined to be parallel to each other, which method consists in so arranging a telescope containing at least one sighting mark adapted to fix the optical axis of the telescope that this optical axis coincides with one of the said two axes, so arranging a collimator comprising a lens and two marks lying on the axis of this lens, one of these marks coinciding with one of the focal points of this lens, that the axis of this lens coincides with the other of the two axes to be tested, and ascertaining within the telescope the position of the images formed within the telescope of the said two marks.

1,662,837. MEANS FOR INTERENGAGING AND ALIGNING THE MEMBERS OF HINGED BAG FRAMES. FRANK T. STUART, Maplewood, N. J., assignor to The R. Neumann Hardware Co., a Corporation of New Jersey. Filed Oct. 22, 1926. Serial No. 143,347. 1 Claim. (Cl. 190—49.)



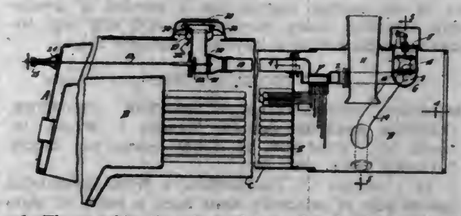
In combination with the outer and inner frame-members of a bag-frame, longitudinally spaced handle-loop bearings on said outer frame-member, said handle-loop bearings having depending clinching lugs to pass through the body of said outer frame-member, combined supporting and aligning brackets having perforate base portions disposed against the underside of said outer frame-member and through which said clinching lugs of said handle-loop bearings also extend, said clinching lugs being clinched over said base portions to thereby rigidly and mutually secure said handle-loop bearings and combined supporting and aligning brackets in aligned relation respectively above and below said outer frame-member, said base-portions having stop-flanges depending from their outer marginal edges against which the free edge of the inner frame-member abuts when the frame is closed, and outwardly projecting horizontal supporting flanges extending from the lower free edges of said stop-flanges over and upon which the free marginal portion of said inner frame-member is engaged when the frame is closed.

1,662,838. INTRA-ORAL CASSETTE. FREDERICK L. STANTON, New York, N. Y. Filed Mar. 19, 1926. Serial No. 95,857. 1 Claim. (Cl. 250—84.)



In a device of the class described, a cassette composed of two flanged plates, one of which forms the top and the other the bottom, the two being shaped so as to fit snug one within the other and to be of a size suitable to be received in the mouth of a patient and between his teeth, intensifying screens composed of a plate with a composition thereon and each plate being made to fit in place, that is one being made to fit the cover and one being made to fit the bottom.

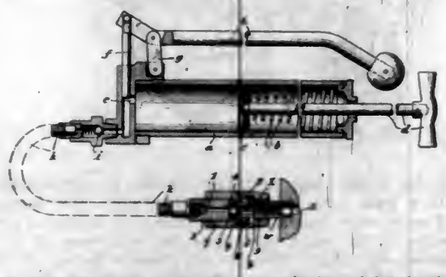
1,662,839. DRY-PIPE-VALVE ACCELERATOR. EMIL TYDEN, Evanston, Ill. Filed Feb. 4, 1925, Serial No. 6,675. Renewed July 31, 1926. 4 Claims. (Cl. 169—22.)



1. In a dry pipe sprinkler system in combination with a main valve casing, a water supply pipe thereto and main valve therein, an accelerator for hastening the opening of the main valve upon the occurrence of substantial air leakage from the air pressure region of the system, said accelerator comprising chambers communicating with the air pressure region of the system for being affected by the diminution of pressure due to such leakage, and means associated with the accelerator for freely venting the air pressure from said pressure region; a passage communicating leakage from the air pressure region to the accelerator, and an auxiliary valve controlling the entrance to said passage seating in the direction of the pressure from the region, and means by which the auxiliary valve is seated in the initial opening movement of the main valve.

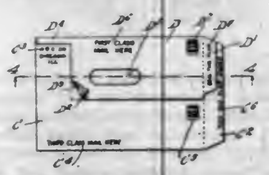
1,662,840. BUCKLE. CLAIR C. WOLVERTON, Indianapolis, Ind. Filed Nov. 20, 1926. Serial No. 149,749. 6 Claims. (Cl. 24—163.)

4. A multiple buckle including a pair of rectangular sockets positioned transversely of each other, an elongated longitudinally extending connecting portion uniting the same in rigid relation and a fixed distance apart, and means slidably mounted on the connecting portion independent of the longitudinal socket and cooperating with the transverse socket.



1,662,841. LOCOMOTIVE. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed Oct. 20, 1922. Serial No. 595,757. 4 Claims. (Cl. 122—4.)

1. The combination in a locomotive having a smoke box and an inside steam supply line including a superheater, of a main normal control throttle in the smoke

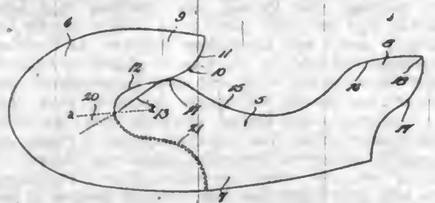


box on the chest side of the superheater through which all steam to the chests must pass, an outside operating connection therefor leading to the cab, an emergency valve in the steam line on the dome side of the superheater, and an operating connection for such valve extending within the boiler to the cab.

1,662,842. LUBRICATING APPARATUS. HERMAN ALBERTINE, East Rutherford, N. J., assignor, by mesne assignments, to Rogers Products Co. Inc., a Corporation of New Jersey. Filed Apr. 26, 1926. Serial No. 104,558. 10 Claims. (Cl. 285—123.)

1. A high pressure coupling for nipples of lubricating ducts, including a nozzle member formed for engagement with the end of the nipple and associated with radially movable chuck jaws for engaging the sides of the nipple, in combination with a sleeve having swivel coupling with said nozzle and extending beyond said jaws and there provided with means for detachably locking the sleeve and nipple to hold the nozzle in engagement therewith and means whereby longitudinal withdrawal stress on the swivel coupling forces said chuck jaws into gripping engagement with the sides of said nipple.

1,663,843. DOUBLE ENVELOPE. CHRISTOPHER F. BACKMYER, Chicago, Ill., assignor to Magill-Weinsheimer Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 3, 1925. Serial No. 47,721. 3 Claims. (Cl. 229—72.)

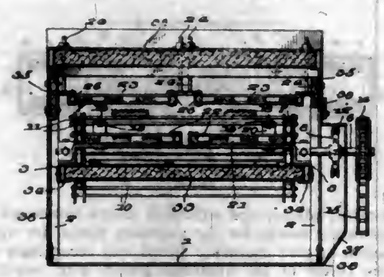


1. A blank for double compartment envelope consisting of a rectangular central portion, a member lying along one side of said central portion and shaped, when folded over said central portion, to provide an overlapping flap at each end thereof, a member along the opposite side of the central portion including a relatively narrow flap extending along a portion of the side of the central portion and a portion of greater width extending along the rest of said side and terminating at its end in a laterally extending flap.

1,662,844. AUTOMOBILE RADIATOR SHUTTER. CLARENCE ROSS BRYANT and ALBERT F. WEISS, St. Louis, Mo. Filed Feb. 15, 1926. Serial No. 88,299. 7 Claims. (Cl. 189—62.)

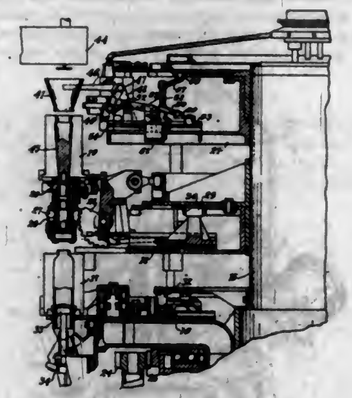
1. In a shutter, in combination, a frame comprising a spaced pair of relatively fixed bars, a series of slats disposed in the frame and having engagement with said bars for pivoted actuation, a lengthwise shiftable link having pivoted connection with said slats, a lengthwise shiftable actuator-bar provided upon an edge thereof with spaced opposed shoulders, and a stud on the link disposed intermediate the shoulders, the actuator-bar being adapted at said shoulders for engagement with said stud for shifting the link to effect opening and closing actuations of the slats.

1,662,845. SHOE. ERMINIO CASSANO, Framingham, Mass. Filed July 18, 1922, Serial No. 575,805. Renewed Dec. 3, 1926. 4 Claims. (Cl. 36—45.)



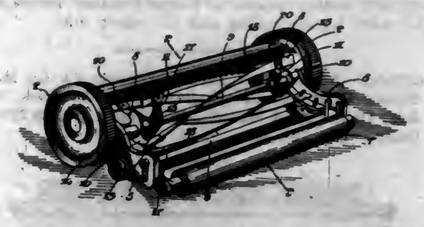
2. A blank for a one piece upper of a low shoe comprising a toe portion with a reversely curved edge, said blank having a portion with an edge forming one side of the front opening of said shoe and intersecting said reversely curved edge at substantially the median line of said toe portion, said blank having a portion with an edge forming the other side of the front opening of said shoe, the last mentioned edge being above the median line of said toe portion and being unsymmetrical with and at a different angle to the length of the blank than the edge forming the first mentioned side of the front opening, said blank having a portion with a concave edge forming the top opening of said shoe and joined to said edges forming said front opening, said blank at its end opposite said toe portion having a reversely curved edge joined to said edge forming the last mentioned side of said front opening, and said blank having a convex edge opposite said concave edge.

1,662,846. ANTENNA. JOHN M. CLARK, New York, N. Y. Filed June 22, 1923. Serial No. 647,057. 4 Claims. (Cl. 250—33.)



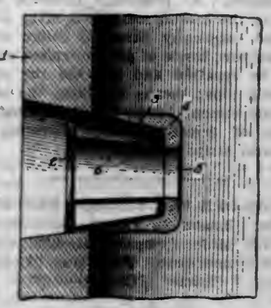
1. An antenna comprising a glass tube, a metallic tube therein and restrictions in said glass tube to retain said metallic tube centrally disposed within said glass tube and means for preventing longitudinal movement of said metallic tube.

1,662,847. ELECTRICAL COOKING APPARATUS. FRANK J. COOK, Cleveland, Ohio. Filed Sept. 11, 1925. Serial No. 55,759. 2 Claims. (Cl. 126—41.)



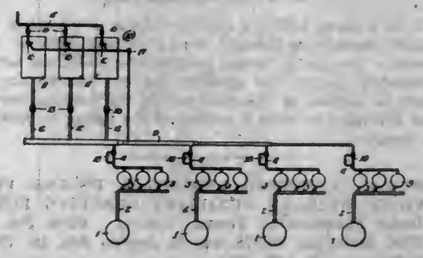
1. Electrical cooking apparatus of the character set forth comprising an endless conveyor arranged to traverse a predetermined path during its upper flight, a plurality of electric heating elements, said elements being secured above and below the central portion of the conveyor, heat insulating means disposed beneath the lower of said heating elements and along each side of said conveyor, a casing enclosing the heating elements and upper flight of the conveyor, the end portions of the upper flight of the conveyor being exposed to the air, an open loading platform arranged at the end of the conveyor in horizontal alignment with the upper flight, an open receiving platform arranged at the opposite end of the conveyor and having an inclined apron extending into close proximity to the path of the conveyor, and means for directing cooling air upon the conveyor during its lower flight.

1,662,848. GLASS-FORMING MACHINE. ALBERT N. CRAMER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Toledo. Filed May 21, 1923. Serial No. 640,386. 10 Claims. (Cl. 49—5.)



1. In a glass forming machine, the combination of a mold open at its upper end to receive a charge of glass, a guide normally arranged to direct the charge into the mold, a mold closing head adjacent one side of the mold, means to move said head into and out of position to close the upper end of said mold, and connections between said head and guide actuated by a movement of the head for moving the guide relatively to the head in a direction transverse to that of the head, into position to prevent interference with movement of the head.

1,662,849. LAWN MOWER. WILLIAM H. DAILEY, Brooklyn, N. Y. Filed Mar. 16, 1926. Serial No. 95,012. 9 Claims. (Cl. 56—249.)



1. In a lawn mower, the combination of a stationary cutting blade, a rotating reel provided with grass cutting blades and a gathering-in blade located between and substantially equally spaced from a pair of cutting blades and having a series of teeth having substantially parallel edges and all inclined at the same angle in the same direction from the inner ends thereof.

1,662,850. TUYÈRE. ALFRED J. EBNER, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 15, 1926. Serial No. 88,199. 1 Claim. (Cl. 266—41.)

In combination, the wall of a furnace, a tuyère mounted in said wall and projecting inwardly of said furnace, said tuyère comprising a metallic portion and a coating of refractory material covering the entire outer wall and nose of said tuyère.

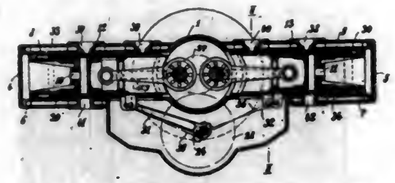
1,662,851. AIR-SUPPLY SYSTEM FOR BLAST FURNACES. ALFRED J. EBNER, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 14, 1927. Serial No. 167,944. 3 Claims. (Cl. 266—13.)

1. In a blast furnace system, a plurality of blast furnaces, conduit means for supplying air to each of said furnaces, each of said conduit means being provided with

a volume regulator for controlling the rate of air supply to its corresponding furnace, a common blast main for delivering air to said regulating means, an air supply unit, and means responsive to the pressure within said blast main for controlling said air supply unit.

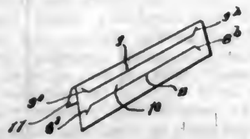
1,662,852. REPAIRING PIPE. THOMAS DE LA MARE, Tooele, Utah, assignor to Percy F. McKendrick, Garfield, Utah. Filed May 5, 1925. Serial No. 28,276. 1 Claim. (Cl. 137—99.)

An apparatus of the class described comprising a sheet metal strip to partially surround a pipe to be repaired having one of its edges bent back upon itself to form a flange; another sheet metal strip having one of its edges bent back upon itself to form a flange thereon and adapted to fit in said flange on said first mentioned metal strip; another metal strip to cover the overlapping edges of said first and second mentioned metal strips forming a cylindrical member; an internally threaded sleeve member secured on the second mentioned strip of metal; an internally and externally threaded collar screwed into said sleeve member; bands of plastic cement placed around the pipe to be repaired and between the ends of said strips and said pipe; means to clamp the ends of said strips and said cement bands tightly against said pipe; and a layer of cement concrete covering said pipe and sheet metal strips.



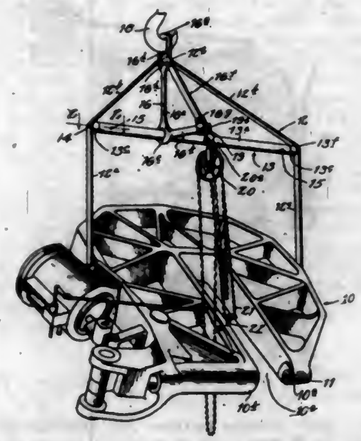
1,662,853. HOLDER FOR SHADES, REFLECTORS, OR THE LIKE. LEROY C. DOANE, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed May 21, 1925. Serial No. 31,770. 7 Claims. (Cl. 240—128.)

7. In a shade holder, a casting having an interiorly arranged shoulder, a circular spring carried adjacent the shoulder, the spring having peripheral undulations which alternately engage the shoulder of the casting and a shade, a portion of the material of the casting having been deformed to cover a portion of the spring to prevent its removal.



1,662,854. INTERNAL-COMBUSTION ENGINE PROVIDED WITH AN AUXILIARY CHARGING PUMP. JOSEF FREISLINGER, Vienna, Austria. Filed Feb. 9, 1926, Serial No. 86,978, and in Austria Feb. 16, 1925. 7 Claims. (Cl. 123—56.)

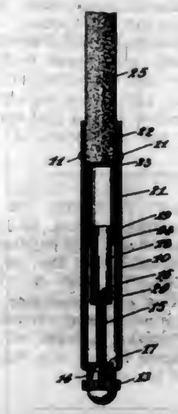
7. In an internal combustion engine, a combustion cylinder provided with intake and exhaust ports and an auxiliary intake port, a working piston operating in said cylinder, an auxiliary piston in said cylinder, a pair of sleeve valves surrounding said pistons and controlling said ports, means for operating said valves and said auxiliary piston in timed relation to each other and to



the working piston, and adjusting means associated with the operating means for the auxiliary piston for varying the action of said operating means and accordingly varying the throw of the auxiliary piston with relation to the throw of the working piston.

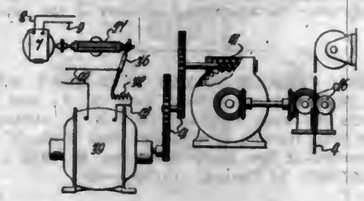
1,662,855. GARMENT HANGER. LOUIS ELMER GAUME, Akron, Ohio. Filed Oct. 12, 1925. Serial No. 61,915. 5 Claims. (Cl. 223—61.)

1. In combination, a garment hanger having a horizontal bar, a sheet of relatively thin material folded to provide a front portion and a back portion, said sheet positioned on said bar with the bar received in said fold, the front portion being provided with longitudinally directed parallel slots to provide a band substantially as and for the purpose set forth.



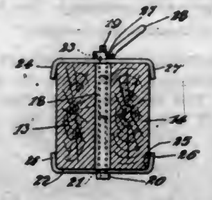
1,662,856. SUSPENSION MECHANISM. JOHN C. HANNA, Evanston, Ill., assignor to Hanna Engineering Works, Chicago, Ill., a Corporation of Illinois. Filed July 10, 1924. Serial No. 725,108. 10 Claims. (Cl. 78—19.)

10. The combination with a machine of the riveter type of a main horizontal pivotal support for said machine on an axis near but offset substantially horizontally from the center of gravity of said machine; a supplemental support engaging said machine remote from said main support and remote from and on the opposite side of the center of gravity with respect to said main support; and means connecting said main and supplemental supports



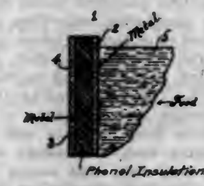
and including force transmitting mechanism, for tilting said machine about said main support preparatory to but independent of the operation of the machine itself, and for automatically holding said machine in adjusted position.

1,662,857. CONTAINER. HENRY L. HEITER, Brooklyn, N. Y. Filed Dec. 12, 1925. Serial No. 74,922. 3 Claims. (Cl. 206—56.)



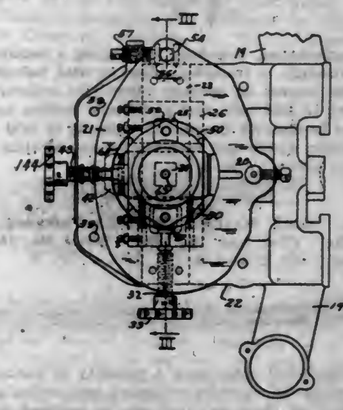
2. In a pencil container, in combination, a casing open at the top and closed at the bottom; a threaded revoluble vertically movable rod within the casing and extending through the bottom and having a flanged top; means carried by the rod and abutting upon each face of the casing bottom preventing longitudinal movement of the rod through said bottom; an inner revoluble externally threaded sleeve having a flanged top and an internally threaded bottom portion meshing with the rod threads and co-acting with the rod flange to prevent longitudinal disengagement of the revoluble sleeve and the rod; a non-revoluble vertically movable outer sleeve having an internally threaded bottom portion meshing with the external threads of the inner sleeve and co-acting with the inner sleeve flange to prevent longitudinal disengagement of the inner sleeve and the outer sleeve, a cup fixedly attached to the outer sleeve and a cover for the upper casing opening.

1,662,858. AUTOMATIC CONTROL DEVICE FOR ELECTRIC-ARC-WELDING APPARATUS. WALTER REGINALD HUME, Melbourne, Victoria, Australia. Filed Sept. 21, 1925, Serial No. 57,744, and in Australia Oct. 9, 1924. 3 Claims. (Cl. 219—8.)



1. In electric arc welding apparatus the combination of an electric motor connected into the welding circuit, a centrifugal governor operated by said motor, fluid operated electrode feeding mechanism, a fluid control valve adapted to control the operation of said electrode feeding mechanism, and means interposed between said governor, and said control valve for communicating to the latter the movements produced by the governor in accordance with fluctuations in the current passing through said motor.

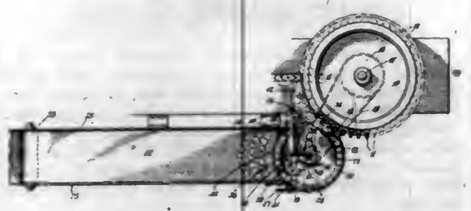
1,662,859. CLAMP. FRANK B. JOHNSTON, Roselle Park, N. J., assignor to American Safety Device Co., New York, N. Y., a Corporation of New York. Filed Oct. 18, 1926. Serial No. 141,277. 1 Claim. (Cl. 304—40.)



A clamp of the character described, comprising a threaded bolt, a sleeve thereon, adjustable plate assemblies having the outer ends thereof bent at obtuse angles to straddle the edges of spaced parallel planks engaging opposite sides of said sleeve, perforations in the said plate assemblies and the aforesaid bolt passing therethrough, and a nut on the said bolt to securely bind the plate assemblies together and to wedge the planks against the sleeve.

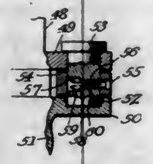
1,662,860. HEAT-INSULATED VESSEL FOR FOOD. JOHN L. LESLIE, New York, N. Y. Filed June 16, 1925. Serial No. 37,415. 1 Claim. (Cl. 220—10.)

A food containing vessel comprising an outer integral shell of metal, an inner integral shell of metal spaced throughout at substantially the same distance from said outer shell and a heat insulating compound of the phenol formaldehyde group disposed at all points between said shells for holding them together in spaced relation whereby an unbreakable insulated vessel is formed and the inner shell is entirely heat insulated from the outer shell.



1,662,861. GLASS-FORMING APPARATUS. JOHN E. MCLAUGHLIN, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 30, 1926. Serial No. 132,359. 27 Claims. (Cl. 49—5.)

1. The combination of a mold carrier shoe, a hinge pin plate spaced above said shoe, a hinge pin plate



holder interposed between the plate and shoe, means separably connecting the shoe, holder and plate, and means interconnecting the holder and plate including devices to effect individual or simultaneous adjustment of the holder and plate with respect to the shoe.

1,662,862. BOTTLE-CAP-ASSEMBLING MACHINE. CHARLES E. MCMANUS, New York, N. Y., assignor to Crown Cork & Seal Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 25, 1925. Serial No. 71,302. 15 Claims. (Cl. 198—31.)

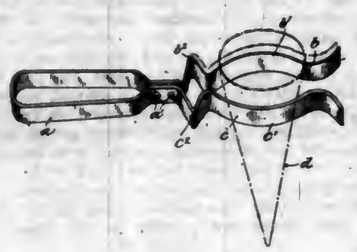
1. A bottle cap assembling machine embodying therein, in combination with a rotatable finishing head including therein a plurality of presser plungers, means for elevating said plungers adjacent the delivery point of said head, and means ejecting assembled bottle caps from said head, of a delivery mechanism embodying therein a rotatable disk positioned to receive assembled caps from said finishing head, means rotating said disk, non-rotatable means for positioning caps delivered to said disk in a row adjacent the edge thereof, a cooling and inspecting belt adapted to receive simultaneously a plurality of caps, means imparting slow travel to said belt, a movable member operative upon a plurality of caps upon said disk adjacent said belt, and means operative in synchronism with said disk whereby at predetermined intervals said member is actuated to thrust caps from said disk to upon said belt.

1,662,863. GAS-STOP SEAL. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Oct. 28, 1925. Serial No. 65,376. 3 Claims. (Cl. 292—327.)

1. In combination, a locking bolt having a radial opening therethrough, a frangible collar on said bolt having in one side thereof an opening adapted to register with the opening in said bolt, and a yieldable locking member adapted to be inserted through the opening in said collar and lie wholly within said openings for non-rotatably connecting the collar to the bolt.

1,662,864. GAME BOARD. CHRISTIAN PETERSEN, Portland, Me. Filed Apr. 15, 1927. Serial No. 184,000. 2 Claims. (Cl. 273—119.)

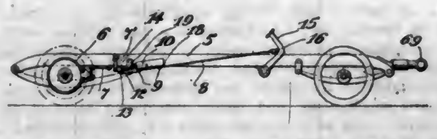
1. A game-board comprising a plurality of horizontally disposed members, hingedly connected and having a ball-way formed on their top surfaces, an inclined member having a similar ball-way on its top surface hingedly connected to one of said horizontally disposed members and having grooves cut in its sides, a block disposed in subjacent relation to said inclined member, a plate on each side of said block with a bent-over portion engaging one of said grooves and slidable therein, a cue-rest on one of said horizontally disposed members, and tallying means on said horizontally disposed members, adjacent said ball-way.



1,662,865. METHOD OF COATING METAL ARTICLES. JOHN W. POWELL, Martins Ferry, Ohio. Filed Dec. 31, 1926. Serial No. 158,415. 5 Claims. (Cl. 91—70.)

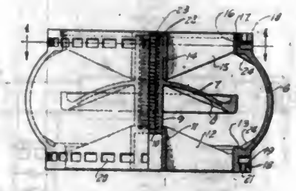
1. The method of providing a metal article with a permanent closely adherent gold-bronze finish, comprising applying to the article first a coating of a mixture of lacquer and gold-bronze, and then a plurality of coatings of a mixture of Chinawood oil and gold-bronze, and baking the article after the application of each of said coatings.

1,662,866. SECONDARY BATTERY OR ACCUMULATOR. EDMUNDO ALMEIDA SALAZAR, Madrid, Spain, assignor of one-half to Manuel Conte de Mieres, Mieres Del Camino, Asturias, Spain. Filed Dec. 14, 1925. Serial No. 75,432. 10 Claims. (Cl. 136—6.)



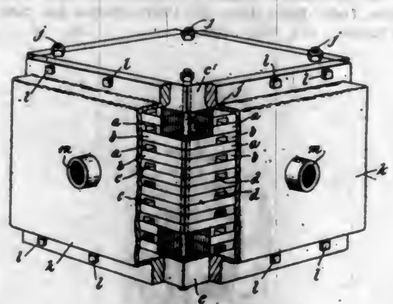
1. A secondary battery or accumulator in which the electrolyte consists of a solution of chloride of zinc copulatively mixed with another halogen salt of the same metal and of a character having less chemical heat of formation than that of the chloride.

1,662,867. ICE-CREAM-CONE TONGS OR LIFTER. ROLF SCHARPHUIS, Port Townsend, Wash. Filed Jan. 21, 1927. Serial No. 162,447. 1 Claim. (Cl. 294—33.)



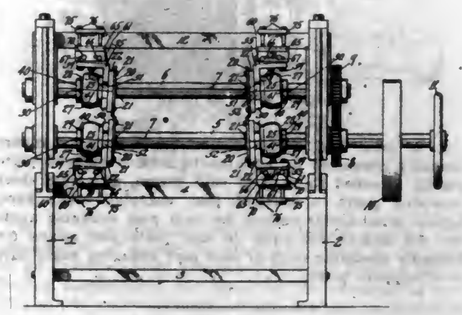
In a device for grasping an ice cream cone, a handle portion, a pair of spring fingers, outwardly diverging ends on the fingers, opposed concave portions on the fingers to receive the cone and crimped portions between the handle and the fingers to increase the flexibility thereof, whereby the pressure of the fingers will be distributed uniformly over the contacting portions of the cone and fingers.

1,662,868. VEHICLE BRAKE-OPERATING MEANS. BROR MAX SCHAUMAN, New York, N. Y., and JOHN FRANCIS MILLIGAN, Ridgefield Park, N. J., assignors to Thord-Gray Holding Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1926. Serial No. 157,907. 14 Claims. (Cl. 180—83.)



1. In combination with brake operating means including a manually operable lever, emergency means for applying the brake including relatively movable members each connected with a part of the brake operating means, a toggle connection between said members, spring means coacting with the toggle connection to expand the same and move said members relative to each other to thereby apply the brake, and a releasable latch device normally holding the spring means in an energized condition and locking said members against relative movement and for movement as a unit when the brake operating means is actuated by said lever.

1,662,869. CHECK-VALVE BODY. MICHAEL SMOLENSKY, Cleveland, Ohio. Filed Aug. 5, 1927. Serial No. 210,865. 3 Claims. (Cl. 251—144.)

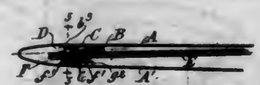


1. A check valve comprising a globular body provided at the ends with thickened portions which contain in themselves lateral recesses to receive bolt heads and holes opening into said recesses to receive the bolts, the thickened portion at one end having an internal valve seat and a spider integral therewith provided with a central guide, an opposite removable spider fitting and fixed in the thickened portion at the other end, and provided with a central guide, and a disk valve in the body, having stems working in said guides.

1,662,870. GROOVED-PLATE HEAT INTERCHANGER. CECIL W. STANCLIFFE, Stamford, Conn., assignor to Stancliffe Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1924. Serial No. 742,554. 8 Claims. (Cl. 257—245.)

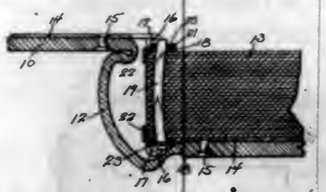
2. A heat interchanger unit comprising a series of plates assembled together in a block, said plates having grooves in one face running in substantially the same direction and being so arranged that the grooves of certain plates run crosswise of those in other plates and are closed at one side by the adjacent plates, and fluid conducting connections applied to said block.

1,662,871. ANGULARLY-ADJUSTABLE ROTARY CUTTER, SLITTER, CREASER, AND THE LIKE. GEORGE W. SWIFT, Jr., Bordentown, N. J., assignor to George W. Swift, Jr., Inc., Bordentown, N. J., a Corporation of New Jersey. Filed Nov. 13, 1926. Serial No. 148,239. 16 Claims. (Cl. 164—60.)



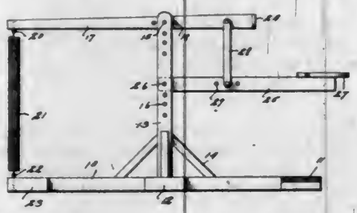
1. In a machine of the character described, the combination with a rotary shaft, of an operating head adapted to carry a machine tool, a flexible joint connection between said operating head and said shaft, and adjustable means engaging said operating head for holding the tool in the desired operative position.

1,662,872. ACYLAMINO FLAVANTHRONES AND PROCESS OF MAKING SAME. SIDNEY THORNLEY, Blackley, Manchester, England, assignor to British Dyestuffs Corporation Limited, Manchester, England. Filed Sept. 3, 1927, Serial No. 217,540, and in Great Britain Sept. 2, 1926. 4 Claims. (Cl. 260—42.)



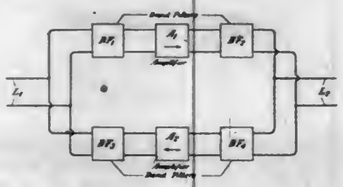
2. As a new material useful as a vat dyestuff, benzoyl-amino-flavanthrone, said material dyeing cotton a brown shade from the hydrosulphite vat, being soluble in sulphuric acid and in sulphuric acid in the presence of boric acid, with production of a reddish orange solution and on treatment with hydrolyzing agents splitting off benzoic acid and regenerating amino-flavanthrone.

1,662,873. FILE, BINDER, AND THE LIKE. THOMAS F. VALLEAU, Brooklyn, N. Y., assignor to The Cooke & Cobb Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 28, 1927. Serial No. 164,162. 5 Claims. (Cl. 129—25.)



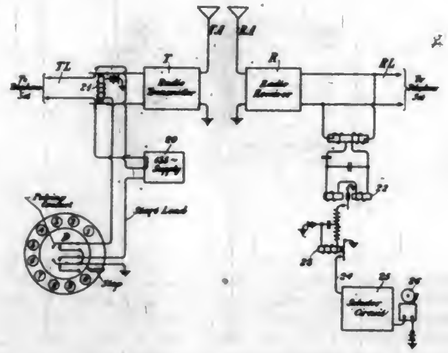
4. A retaining member for use with files or temporary binders of the type wherein the papers to be filed are received on flexible tongues, consisting of a member having a trough in its top face into which the flexible tongues can lie after being bent down over the retaining member and having incut slots in one of its longitudinal edges for laterally receiving the tongues and a latching member movable and retainable over the face of the retaining member.

1,662,874. BINDER. RICHARD M. VAN VALKENBURGH, Kansas City, Mo., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Oct. 12, 1925. Serial No. 61,976. 16 Claims. (Cl. 129—23.)



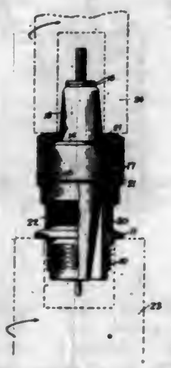
1. A loose leaf binder comprising a pair of covers hingedly connected by an arcuate back, a support plate rigidly attached to each of said covers, separable sheet receiving posts, a pair of post engaging angle bars, means permanently carried by each post engaging angle bar for locking the same to said posts and means for hingedly mounting each of said post engaging angle bars to a support plate.

1,662,875. SEESAW. HARLAN A. YOUNG and ARTHUR T. SHAKESHAFT, Topeka, Kans. Filed June 2, 1927. Serial No. 196,068. 3 Claims. (Cl. 272—55.)



1. A single see-saw of the character described including a base, an upright, an upper lever having means whereby it may be fulcrumed at a plurality of points upon the upper end of the upright, one end of the lever being connected to the base by a coiled contractile spring, a second named lever disposed below the first and pivoted at its inner end to said upright and extending away from the spring, the fulcrum for the second named lever being adjustable vertically upon the upright into a plurality of positions, and a link connecting the first and second named levers.

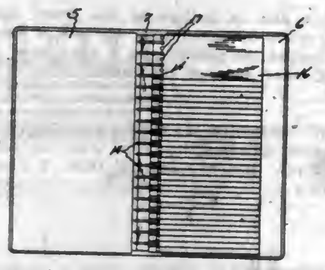
1,662,876. REPEATER SYSTEM. HERMAN A. AFFEL, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 24, 1925. Serial No. 77,606. 5 Claims. (Cl. 179—15.)



1. In a signaling system, the combination with a transmission circuit of telephone transmitters connected at different points thereon for the two-way transmission of speech thereover, a repeater circuit comprising two parallel branches connected with said transmission circuit between points of connection of the said telephone transmitters, each comprising an amplifier and a band filter, each of the said band filters being so designed and proportioned as to transmit a plurality of bands of frequencies, all of which bands lie within the limits of the speech band of frequencies, the bands transmitted by one of said filters lying between the bands transmitted by the other of said filters.

1,662,877. RADIO SIGNALING SYSTEM EMPLOYING MACHINE-SWITCHING DIAL. MILTON L. ALMQUIST, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 27, 1924. Serial No. 716,208. 12 Claims. (Cl. 250—6.)

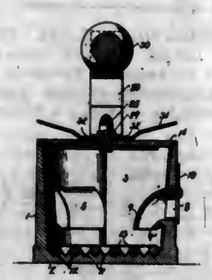
1. In a signaling system, means for selectively signaling a desired station comprising means for transmitting the code number of the station in the form of successive digits, means at a receiving station for receiving the code number, a selector switch at the receiving station controlled by said means, means to advance said selector switch off normal in response to each digit, means to bring said selector to normal between digits, a signaling circuit, and means actuated to complete said circuit by successively advancing the selector switch in response only to each digit of the code of that station.



1,662,878. SPARK PLUG. GEORGE N. BARCUS, Andrews, Ind. Filed June 20, 1927. Serial No. 200,150. 5 Claims. (Cl. 123—169.)

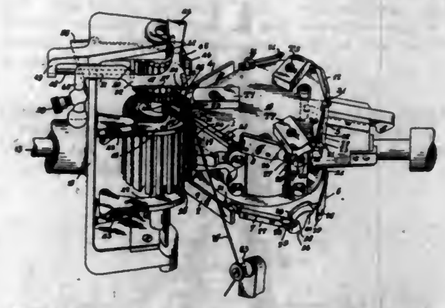
1. A spark plug comprising a body having an inclined upper extremity, an external annular channel below said extremity, a gasket resting on the extremity

of said body, an insulator having an enlarged portion resting on said gasket, a gasket disposed on the opposite side of the enlarged portion of the insulator, and a sleeve having an internal flange resting on said last mentioned gasket and having its opposite end spun into said annular channel on said body, substantially as set forth.



1,662,879. VISIBLE-SHEET BINDER. CLARENCE A. CEDERLEAF, Kansas City, Mo., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed May 21, 1927. Serial No. 193,245. 6 Claims. (Cl. 129—24.)

1. In a loose leaf binder, a spring base plate and a plurality of toggle plate units operatively supported in end to end relation by said spring plate, each unit having a set of coacting sheet-holding hooks operable independently of the hooks carried by the remaining units, said sheet-holding hooks being equally spaced apart throughout the length of the spring plate whereby a plurality of relatively narrow loose leaves may be retained by said hooks in overlapping relation, the hook sets engaging any leaf being operable independently of the remaining sets to release that leaf only.

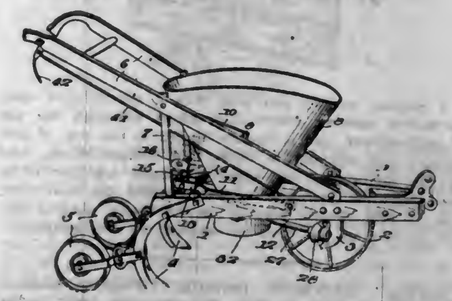


2. In a loose leaf binder, a spring base plate and a plurality of toggle plate units operatively supported in end-abutting relation by said spring plate, the abutting ends of said toggle plates having friction-reducing means whereby a single unit may be operated independently of the adjoining units.

1,662,880. IRON. HOWARD D. CHAPMAN, Baltimore, Md., assignor to Cary M. Strickler, Washington, D. C. Filed Apr. 4, 1925. Serial No. 20,794. 1 Claim. (Cl. 68—26.)

In a sad iron, in combination a base and a body having walls, said body being adapted to receive a solid fuel, a tubular air conducting duct leading from each side wall of the body and extending inwardly and downwardly toward the base thereof, the lower wall of the duct constituting an overhanging ledge for preventing the discharge of fuel through said duct, and valves for controlling said air openings.

1,662,881. ARMATURE-WINDING MACHINE. PENROSE E. CHAPMAN, St. Louis, Mo. Filed Mar. 22, 1924. Serial No. 701,082. 74 Claims. (Cl. 242—13.)



30. In a multipolar armature winding machine, the combination of means for placing the wire in the slots of an armature with fractional coil end forming fingers having substantially the shape of the overhanging portion of the coil and lands having surfaces so placed as to retain turns of the coil without additional support.

1,662,882. DRAFTING DEVICE. FREDERICK A. CLARK, Dayton, Ohio. Filed June 20, 1922. Serial No. 569,672. 1 Claim. (Cl. 33—174.)

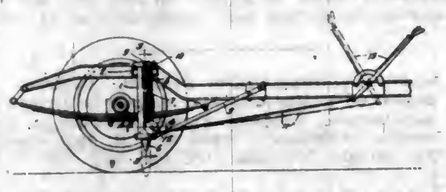
An article of manufacture comprising a normally flat strip of thin flexible transparent material having therein a series of spaced perforations arranged in rows and longitudinally disposed crimps formed intermediate the rows of perforations and extending substantially parallel therewith and forming integral ribs normally supporting the perforated portions of the strips in slightly elevated position, the strip being adapted to be slidingly inserted edgewise intermediate a straight edge and a drafting surface to such extent that the directing margin of the straight edge will intersect said perforation, the perforated portions of the strip intermediate the longitudinal crimps being depressible into contact with the drafting surface, whereby a line drawn along the straight edge will be produced intermittently upon the drafting surface.

1,662,883. FERTILIZER DISTRIBUTOR. EUGENE M. COLE, Charlotte, N. C. Filed May 5, 1926. Serial No. 106,907. 11 Claims. (Cl. 221—118.)

1. A fertilizer distributor comprising a hopper, having a lower open end, a circular plate somewhat larger than the said lower end and spaced slightly below the same to provide an annular discharge opening, and means for oscillating said plate about its center.

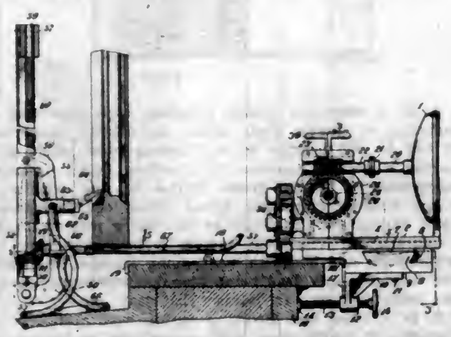
1,662,884. SECTIONAL POLE. ALEXANDER CRUICKSHANKS, St. Louis, Mo. Filed June 18, 1923. Serial No. 646,158. 1 Claim. (Cl. 189—26.)

A coupling for the hollow sections of a sectional pole the diameter of said sections increasing from top to bottom, comprising a bushing having oppositely-directed bores of different diameters to accommodate sections of different diameter, the bushing being composed of a plurality of externally-tapered parts divided along longitudinal lines and having internal shoulders separating said bores and supporting the upper section of the sections coupled thereby, and an internally tapered sleeve adapted to force said parts into clamping relation with the sections connected thereby.



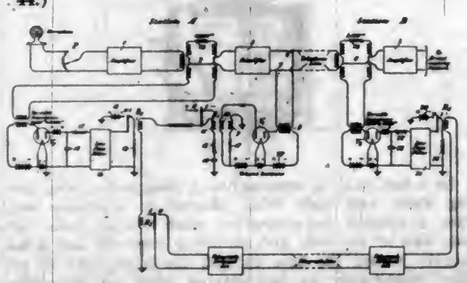
1,662,885. COMBINED DISPLAY CARD AND CABINET. SAMUEL M. DELL, Baltimore, Md., assignor to Samuel M. Dell & Co., Inc., Baltimore, Md. Filed Jan. 27, 1926. Serial No. 84,138. 1 Claim. (Cl. 312—189.)

A display cabinet provided with a plurality of compartments opening rearwardly, stops adjacent the top of said cabinet, and a closure hinged to the top of said cabinet and adapted to close said compartments, said closure comprising two sections hinged together along their adjacent horizontal edges, whereby the lower section of said closure may be swung under the top section to rest on the stops to support the top section.



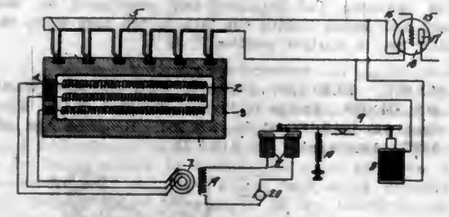
1,662,886. ANTISKID DEVICE. WILLIAM HERMAN FISCHER, Sharpsburg, Pa. Filed Dec. 29, 1926. Serial No. 157,781. 1 Claim. (Cl. 188—6.)

An anti-skid device for a motor vehicle comprising a frame attached to the chassis of the vehicle, a vertically arranged cylinder carried by the frame and having oppositely arranged slots therein, a pointed member slidably arranged in the cylinder, a pin passing through the member and through the slots, a pair of springs connected with the top of the cylinder and with the ends of the pin for holding the member in raised



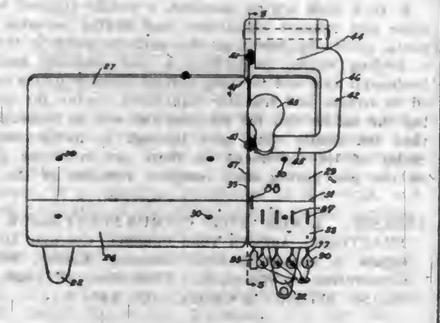
position, a pair of pulleys at the lower end of the cylinder, cables connected with the end of the pin and passing around the pulleys and a hand lever connected with the other ends of the cables.

1,662,887. WINDOW-WASHING MACHINE. HARRY A. HARRIS, Chicago, Ill. Filed Aug. 14, 1920, Serial No. 403,448. Renewed Jan. 15, 1926. 5 Claims. (Cl. 15—103.)



1. In a device of the character described, a fixed member, an elongated bed plate mounted on said fixed member and overhanging the same, means permitting sliding of said bed plate relative to said fixed member in longitudinal and transverse directions, a cleaning member mounted for vertical reciprocation on the end of said overhanging bed plate, means for actuating said cleaning member and manually controlled means interposed between said actuating means and said cleaning member for imparting different speeds to said cleaning member.

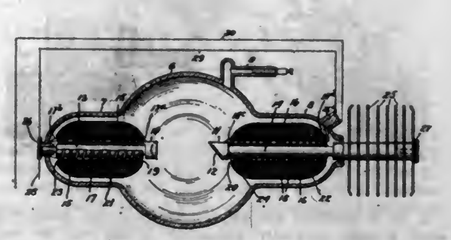
1,662,888. AUTOMATIC VOLUME CONTROL FOR TELEPHONE LINES. JOSEPH HERMAN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 31, 1925. Serial No. 78,658. 5 Claims. (Cl. 178—44.)



1. In a system for the transmission of telephone signals over wires, the method of limiting the current volume in the line, which consists in automatically converting at the sending station the peaks of the telephone currents, when said currents exceed a predetermined value and only at such times, into direct currents, and causing the direct current impulses automatically to effect a reduction of the volume at the sending station input to the line and a compensating increase of the volume at the receiving station output from the line.

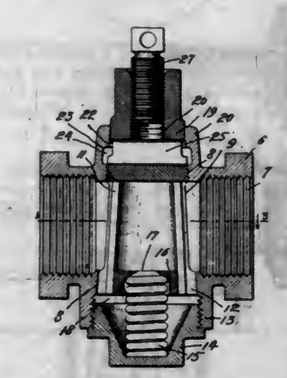
1,662,889. ELECTRIC CONVERTER. ALBERT S. HUBBARD, New York, N. Y. Filed Dec. 6, 1922. Serial No. 605,250. 1 Claim. (Cl. 136—4.)

As a source of direct current, a thermo-electric generator, with a heater energized by electric current, and a metallic body between the heater and the generator adapted to absorb the pulsating energy from the heater and pass it on to the generator without pulsations.



1,662,890. CUTTING MACHINE. ARTHUR W. MUELLER, Cincinnati, Ohio. Filed May 19, 1925. Serial No. 31,384. 11 Claims. (Cl. 31—25.)

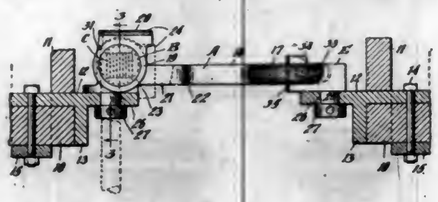
3. In a cutting machine of the character described, the combination of a frame, a trough therein arranged to contain the material to be cut, said trough comprising a slanting bottom wall, a knife-frame, a knife-blade thereon, and a pivot-block between said knife-frame and said first-named frame, said pivot-block pivoted to both said frames by a plurality of pivots located below the plane of said slanting bottom wall of said trough when said lever is in retracted position.



11. In a cutting machine of the character described, the combination of a trough comprising a slanting front wall and a slanting rear wall arranged at substantial right angles to each other, a frame, means for securing said trough to said frame with the angle of said trough presented downwardly, said trough provided with a knife-slot, said trough at one side of said knife-slot arranged for receiving the material to be cut, a knife-frame, a knife in said knife-frame cooperating with the wall of said knife-slot for cutting off pieces of the material, the said trough at the other side of said knife-slot provided with stop-slots, and stop-levers projected in opposite directions and having pivoting means at their proximate ends, said stop-levers provided with stops for the material fed past said knife-slot, and said stop-levers provided with manipulating means whereby to move the stops on said respective stop-levers through said stop-slots into the path of the material in said trough.

1,662,891. COMBINED VACUUM TUBE AND TRANSFORMER. ARTHUR MUTSCHELLER, New York, N. Y. Filed Jan. 14, 1921. Serial No. 437,195. 7 Claims. (Cl. 250—35.)

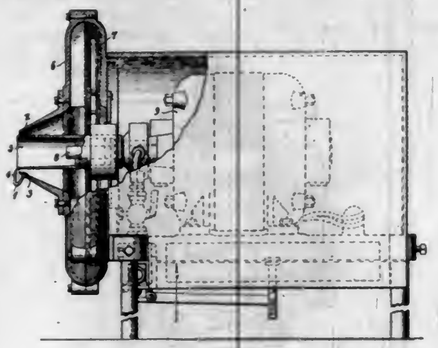
1. A device of the character described comprising a vacuum tube having a plurality of portions integral therewith, one of said portions being fashioned into a discharge compartment and the other of said portions being fashioned into an oil compartment, and a transformer and a volume of oil located within said oil compartment.



1,662,892. VALVE. SVEN JOHAN NORDSTROM, San Francisco, Calif., assignor to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed Apr. 29, 1926. Serial No. 105,363. 3 Claims. (Cl. 251—93.)

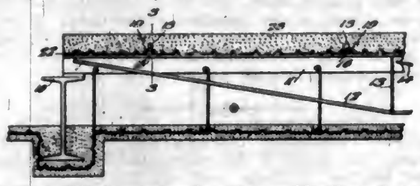
1. A valve comprising, a casing having a passageway therethrough and a tapered valve seat formed transversely of the passageway, a tapered plug seated in the valve seat and having a hole adapted to register with the passageway, a valve stem connected with the smaller end of the plug, means associated with the larger end of the plug for holding it resiliently against its seat, a circumferential groove at the smaller end of the plug, an annular recess in the adjacent part of the casing cooperating with the circumferential groove to form a lubricant chamber, a lubricant reservoir in the valve stem and having a communication with the lubricant chamber, means for putting the lubricant in the reser-

voir under pressure to force it into the chamber, the edges of the hole through the plug being chamfered to exert a wedging action on the lubricant to force it between the plug and the adjacent part of the valve seat and so cause it to travel longitudinally along and circumferentially about the surfaces of the plug.



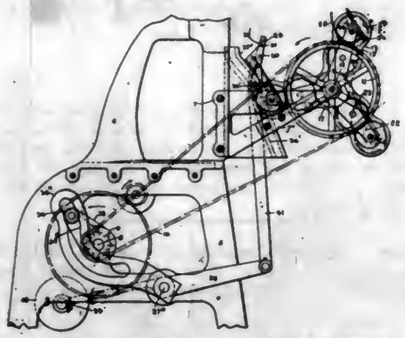
1,662,893. CONNECTER FOR MINE CARS AND THE LIKE. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 28, 1923. Serial No. 665,310. 9 Claims. (Cl. 213—14.)

1. In a resilient shackle for vehicles, the combination with a yoke pivotally connected to the car to swing in a vertical plane; a spring resistance incorporated in said pivotal connection and co-acting with said yoke; abutment means on the end of the car coacting with the spring resistance; and means adapted for detachably connecting the yoke to the end of another car.



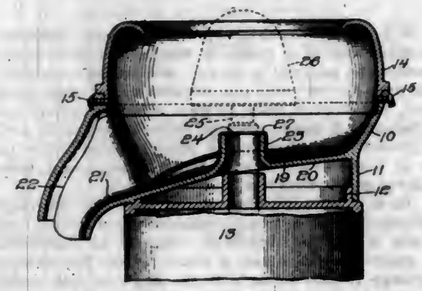
1,662,894. [WITHDRAWN.]

1,662,895. OIL BURNER. REGINALD H. PATTERSON, Washington D. C., assignor to Fuelo Corporation, Washington, D. C., a Corporation of Delaware. Filed May 17, 1927. Serial No. 192,117. 2 Claims. (Cl. 158—77.)



1. An oil burner comprising a fan housing, an air nozzle secured thereto and projecting outwardly therefrom, a rotatable fan within the housing, a rotatable oil discharging cup within the housing and projecting into the confines of the air nozzle, a motor for simultaneously rotating the oil cup and air fan, said air nozzle terminating short of the outer periphery of the oil discharging cup, a bent wire of substantially V-shaped formation having one end secured to the air nozzle and the other end projecting in a vertical plane in close proximity with the periphery of the oil discharging cup and adapted to convey oil dripping from the oil discharging cup downwardly away from the air nozzle, thereby to prevent the entrance of oil into the confines of the fan housing.

1,662,896. ATTACHING MEANS FOR STEEL LATHS. GEORGE F. PAWLING, Philadelphia, Pa. Filed Mar. 5, 1925. Serial No. 13,355. 9 Claims. (Cl. 72—70.)



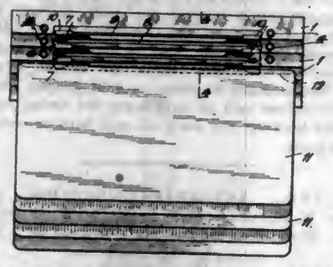
5. In building construction the combination of spaced supports, pegs projecting upwardly therefrom, metal lath spanning the supports and penetrated by said pegs, and means locking the lath to the pegs while the latter are in upright position.

1,662,897. FEEDING DEVICE FOR BOOK-SEWING MACHINES. EDWIN B. PIERCE, Brooklyn, N. Y. Filed Sept. 12, 1919, Serial No. 323,251. Renewed Apr. 30, 1927. 13 Claims. (Cl. 112—21.)

1. In a book sewing machine, a saddle adapted to receive and support signatures and having movable supports, guides to determine the path in which it travels, a feeding device comprising a reel rotating about a horizontal axis and carrying several arms or plates adapted to receive and transfer signatures, means for actuating the saddle and for rotating the reel so proportioned that the saddle shall pass through as many complete cycles of its movement as there are receiving plates on the reel during each complete rotation of the reel.

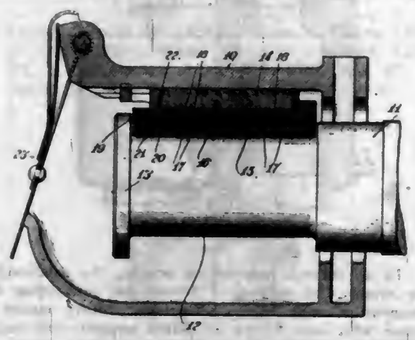
1,662,898. LINER FOR CITRUS-FRUIT-JUICE EXTRACTORS. ARTHUR TODD PURSELL, Chicago, Ill., assignor to Arnold Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Nov. 26, 1923. Serial No. 677,195. 2 Claims. (Cl. 146—3.)

1. In a citrus fruit juice extractor, the combination of a metal bowl having horizontally and laterally curved walls, a bottom inclined to the horizontal, a spout extending through said walls below said bottom, and a lining for said bowl conforming substantially to the shape



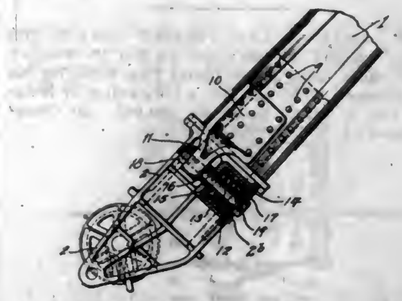
thereof, said lining being formed of paper treated to prevent passage of moisture and an open cover carried by said bowl retaining said lining in said bowl.

1,662,899. COMBINED CONTAINER AND TOY STAGE. ALFRED O. RIDGWAY and ALLAN FRALICK, Los Angeles, Calif. Filed May 10, 1926. Serial No. 107,859. 1 Claim. (Cl. 46—37.)



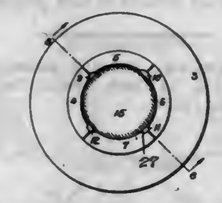
In a toy stage, a rectangular container for commodities formed from a flexible material having on one of its interior walls a photographic or engraved reproduction from the scene of a theatrical play, its oppositely disposed wall adapted to be cut away along indicated lines on its outer surface to disclose the scene and form a miniature stage, said last named wall being provided with printed figures adapted to be cut therefrom for mounting upon the wall forming the stage floor.

1,662,900. INDEX-ELEMENT CARRIER. WILLIAM A. RINGLER, Philadelphia, Pa., assignor to The Globe-Wernicke Co., a Corporation of Ohio. Filed June 14, 1924. Serial No. 719,039. 14 Claims. (Cl. 129—16.7.)



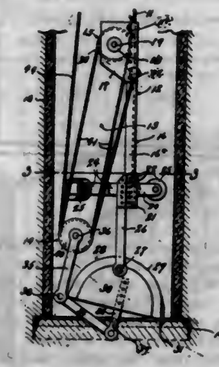
13. A card carrier for index devices comprising a strip of sheet material having portions folded over upon and secured to the body of the strip, and card-supporting means extending over a face of the strip between its side edges, in a direction lengthwise of the strip, and confined to a face of the strip by said folded portions.

1,662,901. JOURNAL BEARING. CHARLES T. RIPLEY, Chicago, Ill., assignor to S. & T. Metal Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 24, 1925. Serial No. 25,464. 5 Claims. (Cl. 308—53.)



2. A journal bearing containing an indicating fluid freed by wear of the bearing to a certain extent.

1,662,902. SHOVEL-CRANE BOOM. LESLIE A. RUSSELL, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed July 2, 1924. Serial No. 723,623. 14 Claims. (Cl. 212—144.)



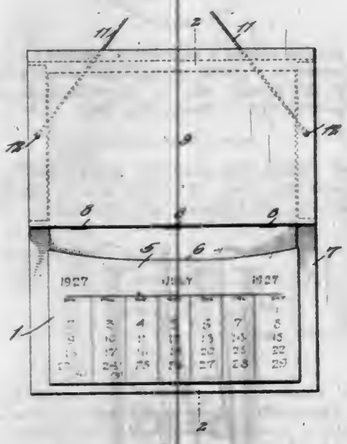
6. As a new article of manufacture, a power shovel boom comprising a foot member, a body member movably mounted upon the foot member, and resilient means intermediate the two for absorbing the shocks or stresses created by sweeping and stopping movements of the boom under actual conditions of service.

1,662,903. RADIAL BEARING. ALEXANDER E. SCHEIN, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,541. 4 Claims. (Cl. 308—121.)

3. A bearing having a plurality of portions of its inner circumference of a radius of curvature which exceeds the radius of the journal only by the uniform thickness of the supporting film of lubricating fluid.

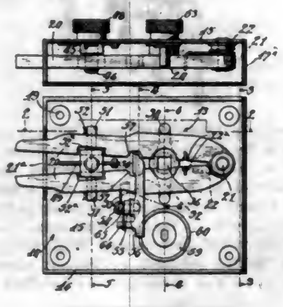
1,662,904. WELL-EXCAVATING APPARATUS. ADOLPH P. SCHNYDER, Posg, Ill. Filed Dec. 4, 1926. Serial No. 152,551. 15 Claims. (Cl. 262—5.)

1. An excavating apparatus comprising a supporting framework, flexible suspension means therefor, an excavating and material holding bucket pivotally mounted on



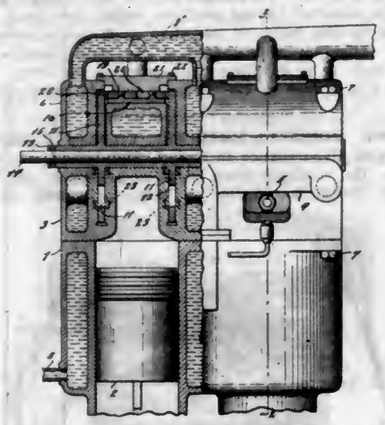
said framework, block and tackle mechanism on said framework and connected to said bucket for actuating the latter on its pivots, and cable connections for operating said block and tackle mechanism.

1,662,905. SHAPING AND TESTING DEVICE FOR AWLS. THOMAS H. SEELY and LE ROY W. ROLLINS, Malden, Mass., assignors to United Shoe Repairing Machine Company, Portland, Me., a Corporation of Maine. Filed Dec. 4, 1922. Serial No. 604,918. 20 Claims. (Cl. 76—82.)



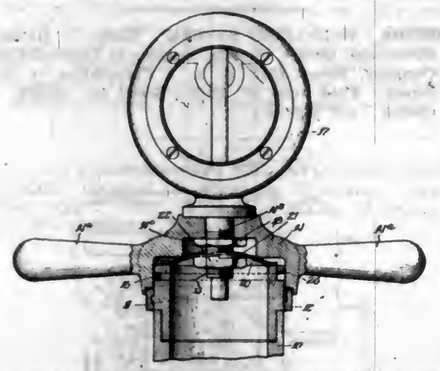
1. In a device of the class described, a guiding surface for guiding a shaping tool along the end of an awl, and coacting members for gripping the awl and moving it into a predetermined relation to said guiding surface.

1,662,906. CALENDAR. HUGH E. SHEDD, Minneapolis, Minn. Filed July 14, 1926. Serial No. 122,465. 1 Claim. (Cl. 40—119.)



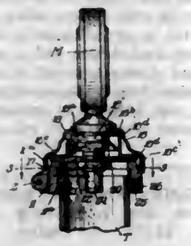
A calendar comprising a backing, a series of superimposed leaves connected along one edge of such leaves to the backing on a line substantially intermediate the upper and lower edges of the backing, each of the leaves having a section of the full width of the leaf and of less height thereof to provide a pocket on the face of the leaf accessible from the upper portion of the leaf, the face surfaces of the pocket sections being printed on the successive leaves to provide a calendar, the leaves being adapted to be turned upwardly onto the backing sheet to arrange the pocket inwardly of the leaf and wholly concealed thereby, and means for binding the upturned leaves against the backing sheet to prevent displacement of the contents of the pockets.

1,662,907. DOOR LATCH. CARL S. SHILLING and DUFFEY B. LOUZON, Chicago, Ill. Filed June 4, 1925. Serial No. 34,766. 11 Claims. (Cl. 292—49.)



1. A securing device comprising, in combination with a door and a door frame, a latch mechanism including a pair of bars pivotally mounted on the door and having ends projecting beyond one edge thereof, a keeper mounted on the door frame and having an opening to receive said ends as the door is closed, resilient means for separating said bars within the keeper, a lever fulcrumed intermediate its ends on said keeper, and means connected to one end of said lever for swinging the opposite end between the ends of said bars to secure them in the keeper.

1,662,908. INTERNAL-COMBUSTION ENGINE. HARRY P. STEVENS, New York, N. Y. Filed Apr. 8, 1927. Serial No. 182,044. 7 Claims. (Cl. 123—59.)

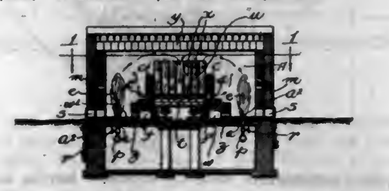


1. In an internal combustion engine, the combination with rotary disk valves, of devices for preventing displacement of said valves comprising, rotary means in contact with said valves at points opposite the intake and exhaust ports relative to the axes of rotation of said valves.

1,662,909. SEALING CAP FOR AUTOMOBILE RADIATORS. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1924. Serial No. 716,861. 17 Claims. (Cl. 220—24.)

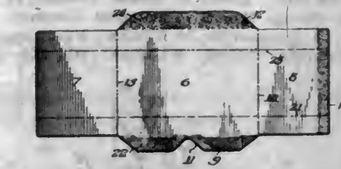
1. An automobile radiator closure comprising the combination of a bushing for connection to the filling tube, a hinged cover for closing the end of the bushing, a resilient sealing device carried by the cover for cooperation with the bushing, and means for varying tension in the sealing device.

1,662,910. AUTOMOBILE RADIATOR CAP. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 21, 1925. Serial No. 10,721. 5 Claims. (Cl. 220—24.)



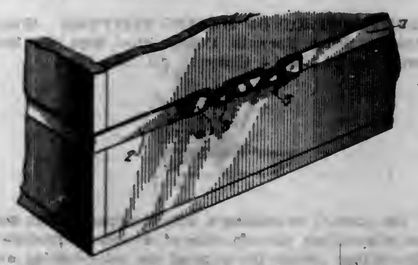
1. An automobile radiator cap comprising a connecting collar, a cap of sheet metal hinged thereto, a thimble member assembled in the cap member to form a gasket seat, and a detent member retained by the cap and thimble member for cooperation with the collar to hold the gasket compressed between the same and the gasket seat.

1,662,911. RADIATOR CAP. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 27, 1925. Serial No. 25,962. 5 Claims. (Cl. 220—24.)



1. An automobile radiator attachment comprising a connecting bushing, a swinging cap arranged to cover the end of the bushing, a hinge member connecting the cap to the bushing, said hinge member being revoluble circumferentially of the bushing and concealed by the cap when in closed position, and means for retaining the cap in closed position.

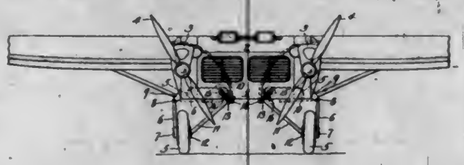
1,662,912. TUNNEL-KILN FIRE BOX. WILLIAM E. WILSON, Mason City, Iowa, and HENRY G. LYKKEN, Minneapolis, Minn. Filed Apr. 5, 1922. Serial No. 549,726. 9 Claims. (Cl. 25—142.)



1. A kiln comprising a passage for the movement of ware therethrough, flame chambers at the side of the passage and having floors provided at intervals with flame ports, fuel supply means located beneath said floors and having means for projecting burning fuel upwardly through said ports and into said chambers, whereby the hot products of combustion may pass upwardly to the top of the ware and downwardly therethrough.

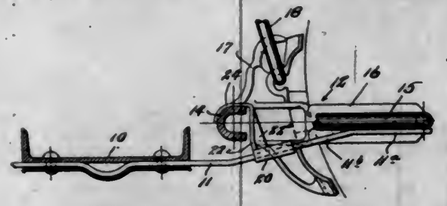
1,662,913. ENVELOPE. EUGENE F. AHLQUIST, Minneapolis, Minn., assignor to Gaw-O'Hara Envelope Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 18, 1926. Serial No. 95,524. 5 Claims. (Cl. 229—79.)

1. An envelope comprising a body portion, imperforate side wing portions folded over said body portion, the outer ends of the wing portions extending substantially together, and bottom and top flap portions folded over said body portion, said wing portions and one over the other, one of said flap portions having a recessed margin exposing the margin of the other flap and a portion of the surface of each of said wing portions adjacent margins thereof, whereby a single wax seal may secure the wing and flap portions together.



1,662,914. JOINT AND METHOD OF MAKING SAME. AUGUSTUS ANGEL, Brooklyn, N. Y., assignor to Signode System, Inc., Chicago, Ill., a Corporation of Delaware. Filed Nov. 28, 1921, Serial No. 518,251. Renewed Aug. 12, 1927. 15 Claims. (Cl. 24—20.)

1. The method of forming a reinforced joint in a flat tensional binder which consists in overlapping the ends

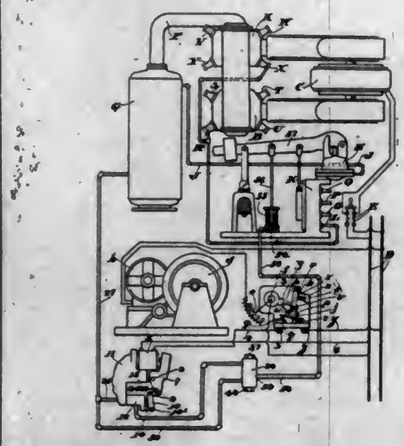


of the binder, bending back one end on the overlap to provide three thicknesses of material and then performing conjoint joint forming operations on said three thicknesses.

1,662,915. AIRPLANE. VINCENT J. BURNELLI, New York, N. Y. Filed May 7, 1927. Serial No. 189,527. 2 Claims. (Cl. 244—2.)

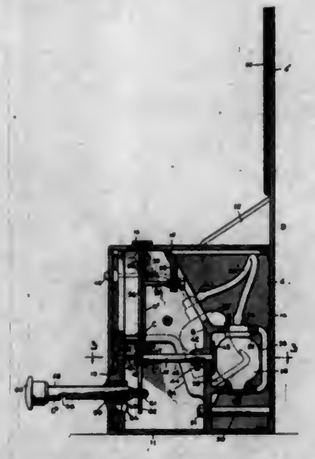
1. The combination with an airplane having a fuselage of a chassis therefor comprising wheels disposed at opposite sides beneath said fuselage, pendent hangers hinged one at each side of the fuselage and having rigid connection with said wheels, at their outer hubs, inclined arms having rigid connection with the inner hubs of the wheels respectively, said arms converging toward the fuselage bottom, gears carried by said arms at their free ends, arcuate racks engaging said gears and extended divergingly upward through said fuselage, and means for moving said gears along said racks to retract said chassis and thereby move said wheels into a horizontal plane at the bottom of said fuselage.

1,662,916. SAFETY GUARD AND SUPPORT FOR BRAKE BEAMS. EDWIN G. BUSSE, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 26, 1924. Serial No. 734,202. 9 Claims. (Cl. 188—213.)



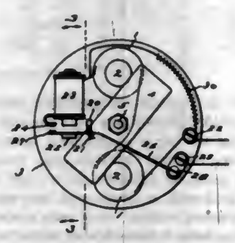
1. A device for guarding or supporting a trussed brake beam comprising a supporting bar for underlying a brake beam, a member slidably mounted thereon and having means in engagement with said bar for preventing relative movement of said member in a vertical plane, and an extension on said member for engaging the compression member of said brake beam, independently of the tension member of said brake beam, for maintaining said beam in proper angular position.

1,662,917. METHOD OF MAKING SLIPPERS. MORRIS CASPLER, South Norwalk, Conn. Filed Sept. 28, 1927. Serial No. 22,474. 4 Claims. (Cl. 12—142.)



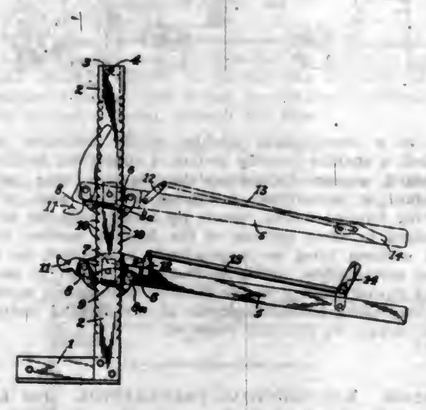
1. The method of making a turned slipper which comprises channelling the top side of a sole to produce a lip by cutting toward the edge of the sole, turning over the edge of the sole outside the lip onto the under side of the sole and hammering it down so that the lip lies substantially in the plane of the margin of the sole and extends outwardly therefrom, then sewing the upper or vamp to the under side of the outwardly extending lip, and then turning the slipper.

1,662,918. UNLOADING SYSTEM. HARRY V. HAIGHT, Sherbrooke, Quebec, Canada, assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 26, 1925. Serial No. 39,668. 3 Claims. (Cl. 230—4.)



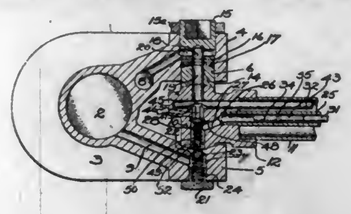
1. In an inter-control system, the combination of two power driven devices and means for decreasing the power consumption of one of said devices while the other said device is being started in operation including a pnuematic unloader for the first said device and a valve associated with the second said device adapted to supply pressure fluid to said unloader during the acceleration period of said second device and adapted to exhaust the pressure fluid from the unloader thereafter to reload the first said device.

1,662,919. PERFUME-VENDING MACHINE. JOHN FRANCIS HARWOOD, New York, N. Y. Filed Mar. 5, 1925. Serial No. 13,032. 13 Claims. (Cl. 194—77.)



1. A vending machine for dispensing liquid perfumes or the like, comprising a casing having a coin opening therein, a yieldable operating member, a pivoted coin chute located entirely within the casing and adapted to be moved into and out of alinement with the coin opening and normally unconnected to the operating member, mechanism connected to the lower portion of the chute for moving the same and means whereby a coin deposited in the chute forms a connection between the chute and the operating member, the chute and the said member being associated so that arcuate movement of the chute beyond a predetermined position will disconnect the chute from the member permitting the coin to drop and the member to return to its retracted normal position.

1,662,920. OPERATING MECHANISM FOR TIME PIECES. NEWTON D. HOLBROOK, Thomaston, Conn. Filed Sept. 2, 1926. Serial No. 133,126. 10 Claims. (Cl. 58—41.)

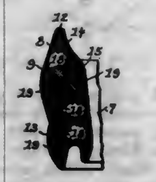


1. A time train driving mechanism comprising a main driving magnet, a supplemental switching magnet in series therewith, a driving armature for the main magnet, a switching armature for the supplemental magnet adapted to open and close the circuit through the magnets, a time train driving wheel, a pawl engaging said wheel, a spring arranged to cause the pawl to drive said wheel, and means actuated by the movements of the driving armature for tensioning the driving spring and retracting the pawl, said means also adapted to engage and move said switching armature of the supplemental magnet.

1,662,921. LIFTING JACK. ROBERT IRA HARRIS, Punta Gorda, Fla. Filed June 22, 1927. Serial No. 200,738. 4 Claims. (Cl. 254—109.)

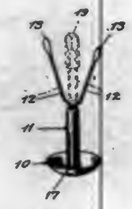
1. A lifting jack comprising a base, standards thereon, a handle carrying a load engaging element, and means also on the handle for raising the same up the standards in a step by step manner, and means to release the load engaging element into a load disengaging position.

1,662,922. HYDRAULIC JACK. MOSES J. HELMER, St. Paul, Minn. Filed Dec. 21, 1925. Serial No. 76,608. 4 Claims. (Cl. 138—9.)



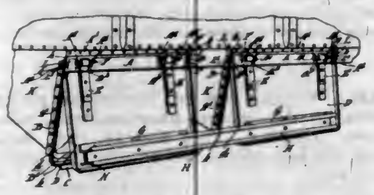
1. A jack of the class described comprising a cylinder, a piston therein, a lifting rod connected with the piston and passing through the top of the cylinder, a pump swiveled to the lower part of the cylinder and means for permitting liquid to pass from the pump when the same is actuated into the lower part of the cylinder to raise the piston therein and to permit liquid in the cylinder above the piston to return to the pump, valve means for normally preventing the liquid in the lower part of the cylinder from returning to the pump, a sliding member in the pump for moving such means to inoperative position and means for actuating the sliding member when the pump plunger is moved to its highest position.

1,662,923. VEHICLE FOR TRANSPORTING PIPES AND OTHER LOADS. WALTER REGINALD HUME, Melbourne, Victoria, Australia. Filed Nov. 18, 1925, Serial No. 69,900, and in Australia Dec. 3, 1924. 18 Claims. (Cl. 212—142.)



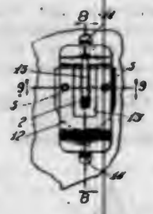
1. An improved vehicle especially for transporting pipes comprising in combination a wheeled forecarriage carrying an upstanding framework, an elevated load carrying beam supported at its forward end upon the top of said framework, a wheeled trailer having an upstanding framework disposed beneath and secured to the rear end of said beam, and hoisting devices associated with said beam whereby the load may be raised and lowered and suspended therefrom, said upstanding frameworks comprising side frames which are secured at their lower ends to the forecarriage and the trailer respectively and converge upwardly towards said elevated beam substantially as and for the purpose specified.

1,662,924. FALSE-TEETH TOOTH CROWN. FERNANDO OSCAR JAQUES, Jr., Providence, R. I. Filed June 24, 1927. Serial No. 201,136. 5 Claims. (Cl. 32—29.)



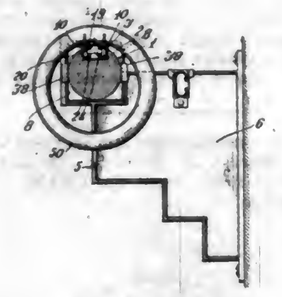
1. A false teeth metallic tooth crown having an inwardly bent ledge and an opening in the back of the crown, a series of apertures in the ledge and a series of apertures adjacent the edge of the opening in the crown, for the purpose as described.

1,662,925. PESSARY. DAYTON S. JOSLYN, Chicago, Ill., assignor to H. Carstens Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed May 18, 1927. Serial No. 192,200. 4 Claims. (Cl. 128—131.)



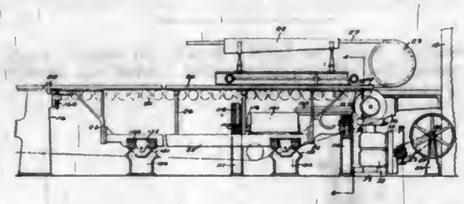
1. A pessary comprising a head, a solid-wall drain tube secured to said head, and resilient retaining fingers secured within and projecting from said drain tube.

1,662,926. HOPPER CAR. ADIN U. KERNS, Altoona, Pa. Filed Feb. 1, 1927. Serial No. 165,078. 3 Claims. (Cl. 105—249.)



3. A drop door frame for a hopper car comprising an upper member provided with hinge pin supports, a seat ledge for the upper edge of a door and a rivet flange for attachment to the cross ridge sheet of the delivery hopper of a car in combination with side and bottom members formed of a Z shaped rolled section of yoke shape firmly secured to the upper member at its ends.

1,662,927. FIXTURE MOUNTING FOR METAL WINDOW CASINGS. CHARLES W. KIRSCH, Sturgis, Mich., assignor to Kirsch Manufacturing Company, Sturgis, Mich., a Corporation of Michigan. Filed Sept. 28, 1925. Serial No. 59,014. 8 Claims. (Cl. 156—22.)

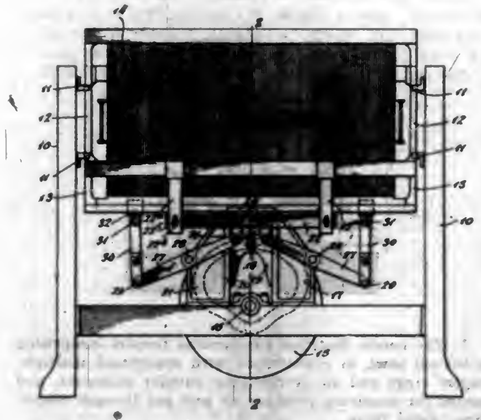


8. The method of securing fixtures of the type specified to metallic window-casings, which consists in perforating the window-casing, associating with the fixture clinchable projections for passage through perforations in the casing, interposing elastic means between said projections and the fixture, passing said projections through perforations in the casing, and then bending the same while maintaining the elastic means flexed to cause the said projections to engage the inner face of the perforated wall of the casing and maintain said elastic means permanently flexed.

1,662,928. COMPOSITE DRAPERY-SUSPENSION FIXTURE. CHARLES W. KIRSCH, Sturgis, Mich., assignor to Kirsch Manufacturing Company, Sturgis, Mich., a Corporation of Michigan. Filed Jan. 24, 1927. Serial No. 162,900. 17 Claims. (Cl. 156—20.)

1. A curtain or drapery supporting fixture including a pair of supporting brackets, a curtain pole supported by said brackets and having a continuous longitudinal groove therein, a hollow slotted curtain rod mounted in said groove, drapery carriers slidably associated with the walls of the slot of said rod, a draw-cord associated with said carriers and disposed within said rod, sleeves for engagement by said brackets telescopically mounted adjacent the ends of the pole and engaged with the groove therein for preventing rotation of said sleeves relatively to the pole, sheaves for said draw-cord carried by said sleeves, the latter and co-operating portions of said brackets shaped to prevent rotation of said sleeves relatively to said brackets.

1,662,929. PAPER-MAKING MACHINE. HERMAN L. KUTTER, Hamilton, Ohio, assignor to The Black-Clawson Company, Hamilton, Ohio, a Corporation of Ohio. Filed Dec. 26, 1923. Serial No. 682,684. 50 Claims. (Cl. 92—45.)

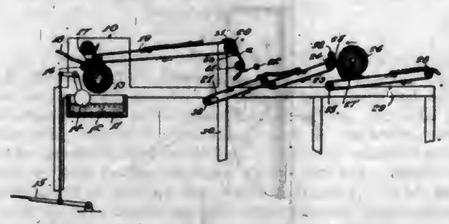


1. In a paper-making machine of the character described, a shaking forming section, a supporting shaking standard, a curved load-receiving surface upon said standard, a cooperating sustaining surface upon said shaking forming section, means for acting upon the said standard to effect shaking of the forming section, the said surfaces being so cooperatively constructed as to effect substantially rolling motion with respect to each other during shaking of the forming section, and means for controlling bodily movement of the forming section with respect to the said standard.

1,662,930. BACTERICIDAL PREPARATION. PER LALAND, Hovik, near Oslo, Norway, assignor to Nyegaard & Co., A/S, Oslo, Norway. Filed May 19, 1926, Serial No. 110,265, and in Norway Mar. 15, 1926. 6 Claims. (Cl. 167—9.)

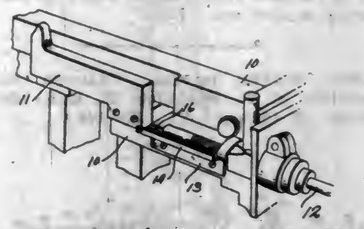
1. A colloid silver preparation comprising a boro-glucoside obtained from Rhizoma Rhei in complex combination with the silver.

1,662,931. HARNESS MECHANISM FOR LOOMS. JONATHAN LUCAS, Savannah, Ga., assignor to Lucas-Lamborn-Loom Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1926. Serial No. 136,256. 5 Claims. (Cl. 139—58.)



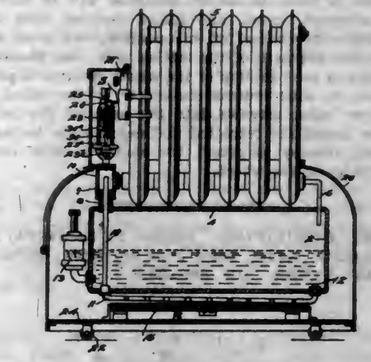
1. In a loom the combination of a pair of vertically movable harness frames, a vertically movable slide connected directly with one of said harness frames, a rocking lever pivotally connected with said slide and with the other harness frame, and a cam operatively connected with said slide for reciprocating the same to bring about a vertical reciprocation of said harness frames in inverse relation.

1,662,932. HYDRATING UNIT. HUGH MISCAMPBELL, Duluth, Minn. Filed Dec. 14, 1925. Serial No. 75,480. 3 Claims. (Cl. 23—287.)



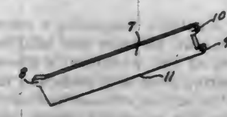
1. A lime hydrator including a final conveying and cooling chamber, a dam transverse the discharge end of said chamber whereby to prevent the discharge of the coarser material, and means for optionally discharging the coarser material through the dam.

1,662,933. CARROTING MACHINE. JOSEPH A. MORIN, Newark, N. J. Filed Mar. 2, 1927. Serial No. 171,981. 8 Claims. (Cl. 8—21.)



1. A carroting machine comprising a device for moistening and brushing the fur on a skin, a means for propelling the skin, both flexed and flat, and a second brushing means located so as to brush the fur when it is flexed and to brush it when it is flat.

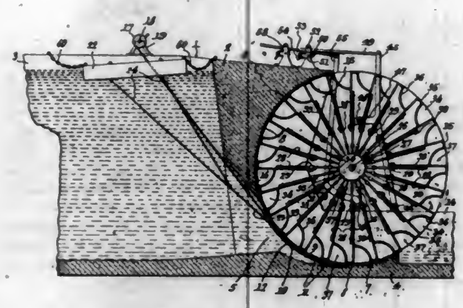
1,662,934. INDENTION DEVICE FOR TYPOGRAPHICAL MACHINES. BERNARD M. NEES, Hyattsville, and Z RUBOTTOM, Takoma Park, Md. Filed Sept. 17, 1925. Serial No. 56,989. 1 Claim. (Cl. 199—50.)



In a typographical machine, a device for forming indented type slugs by holding measuring means between the stop rod and movable vise jaw, the combination of a vise frame base, provided with a measure support, comprising a horizontal base, having a retaining flange at one edge, and a supporting flange at the other edge provided with screw openings, said support being devoid of obstructions at the ends so the stop rod of a typographical machine may move freely thereover, and securing means passing through said supporting flange opening, into the base frame screw openings.

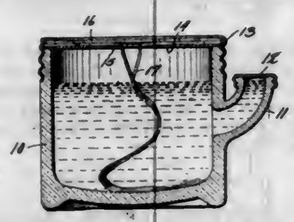
1,662,935. ELECTRIC STEAM RADIATOR. JOHN B. ODELL, Riverside, Calif. Filed June 6, 1927. Serial No. 196,840. 12 Claims. (Cl. 219—38.)

1. An electric, steam radiator having an electric heat generator, a water coil disposed thereover to be heated thereby, an automatic pressure opened switch for the generator, means for automatically closing the switch, a steam shell receiving steam from the coil and a water trap serving the coil.



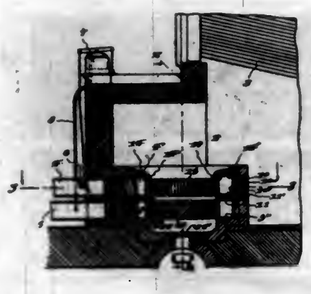
1,662,936. CHAMFERING DEVICE. ROBERT PHILIPP, Washington, D. C. Filed Apr. 7, 1926. Serial No. 100,289. 3 Claims. (Cl. 82—1.)

1. A chamfering tool for pipes or the like consisting of a hollow cone-shaped supporting member having a plurality of longitudinal slots therein and a threaded stud



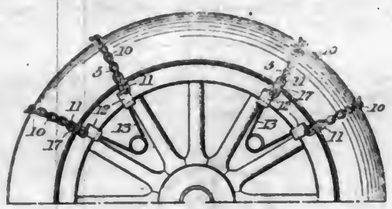
extending from the smaller end thereof, a plurality of blades, one mounted in each of said slots, said blades providing a plurality of cutting edges adjacent the interior surface of said supporting member, and a nut engaging and cooperating with said stud to removably secure said blades in the slots and to impart rotary motion to said supporting member and blades.

1,662,937. WATER POWER. CHAUNCEY RAMSDELL, Forestville, N. Y. Filed July 23, 1926. Serial No. 124,453. 2 Claims. (Cl. 170—144.)



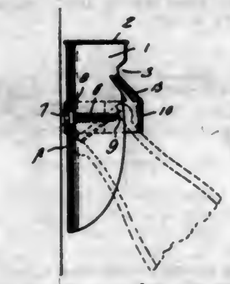
1. A water wheel comprising a frame, blades slidably mounted on the frame, latches connecting the blades with the frame to hold the blades advanced and to hold the blades retracted, levers, and fulcra therefor, each lever being under the control of an operator, one lever being movable into the path of the latches when the blades are advanced and near the top of the wheel, thereby to permit the blades to slide toward the center of the wheel, the other lever being movable into the path of the latches when the blades are retracted and near to the bottom of the wheel, thereby to permit the blades to slide toward the periphery of the wheel.

1,662,938. HUMIDIFIER. JOSEPH F. RICHMOND, Fort Leavenworth, Kans. Filed June 10, 1926. Serial No. 115,046. 1 Claim. (Cl. 299—20.)



A moistener for humidors comprising a container, a supporting plate having an aperture and adapted to be disposed upon the top of the container, a fibrous water absorbing element resting upon said plate and having a wick threaded through the fibrous element and extending downward into the container, a second fibrous element superimposed upon the first-named element and covering the exposed portions of the wick and means for clamping the fibrous element to the plate on the top of the container.

1,662,939. APPARATUS FOR SMELTING THE METALLIC DUST AND RECOVERING THE HEAT FROM BLAST-FURNACE GASES. JOSEPH MARTIN SCHUTZ, Chicago, Ill., assignor, by mesne assignments, to Charles Gilbert Hawley, Cleveland, Ohio. Filed Feb. 5, 1924. Serial No. 690,863. 2 Claims. (Cl. 266—1.)



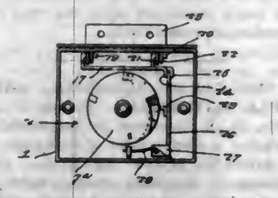
1. The herein described gas burning furnace comprising a bottom bowl, in combination with superposed multiple-tuyère rings and an overhanging annular abutment, and means for supplying pressure air and gas through respective tuyère rings.

1,662,940. CHAIN HOOK. FREDERICK SIEVERN, McKeesport, Pa. Filed Sept. 28, 1927. Serial No. 222,440. 4 Claims. (Cl. 24—232.)

1. Hook structure, comprising a body portion having an extremity bent to hook form, a disc-like member of yieldable material secured to the body portion and projecting beyond the said body portion to a point adjacent to said extremity, means permitting rotatable adjustment of said disk-like member, and means for compressing the disc axially and spreading the same radially.

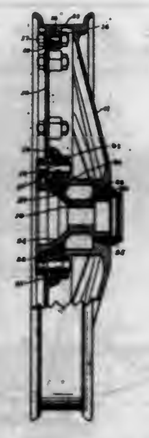
1,662,941. MILK-BOTTLE-CAP REMOVER. STONE WALL SIMON, Beaumont, Tex. Filed May 31, 1927. Serial No. 195,319. 6 Claims. (Cl. 65—46.)

1. A device of the class described comprising a casing adapted to be supported in a vertical position, the front side of the casing being open, to accommodate the neck



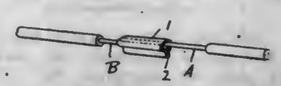
of a milk bottle, and a stopper removing pin projecting from the rear side of the intermediate portion of the casing adapted to pierce and remove the stopper from the bottle when the latter is tilted.

1,662,942. ATTACHMENT FOR PUMP PISTONS. CLAUDE S. SNODDY, HOMER A. HINES, and HAMILTON ALVI MEGONIGLE, Bartlesville, Okla. Filed June 14, 1927. Serial No. 198,774. 4 Claims. (Cl. 103—221.)



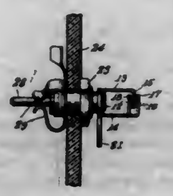
1. In a well pump, the combination with a valved piston, of a rod located in the piston below its valve and projecting below the piston, an apertured casing attached to the lower end of the piston through which said rod slidably projects, said rod being guided in said casing and being adapted to be thrust upward to open the piston valve when the normal stroke of the piston is changed, a tubular guide member slidably fitted in the casing and on the lower end of said rod, and a nut member secured on the lower ends of said guide member and said rod.

1,662,943. COMBINATION LOCK. IVAN TREPANIER, Waterbury, Conn. Filed Jan. 19, 1927. Serial No. 162,093. 1 Claim. (Cl. 70—55.)



In a structure of the class described, a hollow casing, a spindle mounted for rotation in said casing, tumbler disks carried by said spindle, said disks being provided with notches adapted to be brought into registry, and with cooperating means for operating them in succession and under predetermined conditions, a pivotally mounted actuator in said casing provided with a bracket adapted to be received in said notches when in registry, a latch disposed at right angles to said actuator, said latch having one end bifurcated, and the furcations being formed to engage the upper end of said actuator, said latch being also provided with a pair of retainers, and apertured brackets in said casing with which said retainers are adapted to slidably coact.

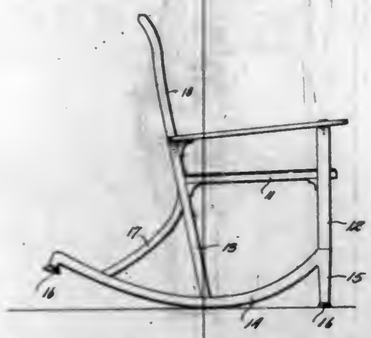
1,662,944. DISK WHEEL. CONRAD WERRA and JOHN T. WATRY, Waukesha, Wis. Filed July 14, 1922. Serial No. 574,942. 1 Claim. (Cl. 301—63.)



In a disk wheel adapted to receive a pneumatic tire, a hub, a pair of disks detachably mounted on said hub, a plurality of radially disposed lugs formed on one of said disks, a corresponding number of radially disposed bosses formed on the other of said disks, said lugs and bosses being formed with chamfered grooves and shoulders, bolts cooperating with aid lugs and bosses for coupling said disks together, said disks being journalled on said hub.

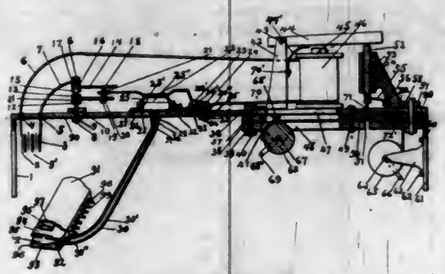
1,662,945. SOLDERING DEVICE. MARCUS FRANS WIELAGE, Miami, Fla. Filed Apr. 28, 1927. Serial No. 187,294. 1 Claim. (Cl. 113—112.)

In a soldering device of the class described, a tube open at its respective ends, a soldering paste filling for the tube, puncturable closures for the open ends of the tube, and a covering of inflammable material for the tube, said covering being spaced from the tube to provide an air passage.



1,662,946. WIRE TERMINAL. LOUIS E. BALTZLEY, Glen Ridge, N. J. Filed Feb. 1, 1926. Serial No. 85,101. 3 Claims. (Cl. 173—259.)

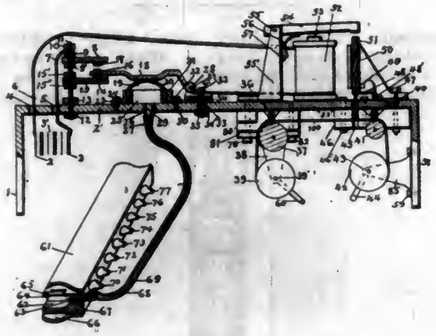
1. A wire terminal of the character disclosed, comprising spring arms standing in substantially parallel relation, one having an angularly turned apertured lug at the free end thereof and the other having an angularly turned end lug overstanding the first mentioned end lug and a second lug cut out of the body of the end lug and bent inwardly into position understanding the lug of the first spring arm, said cut out lug being perforated and



the taking of such lug from the body of the parent lug leaving said parent lug with a wire receiving end opening in substantial alinement with the aperture in the cut out lug.

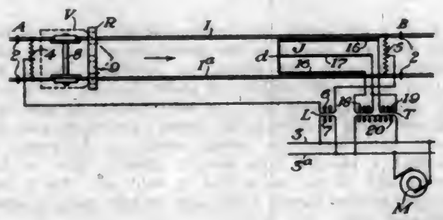
1,662,947. RADIO OPERATOR'S CHAIR. OLIN E. BANKER, Wilkes-Barre, Pa. Filed Feb. 8, 1927. Serial No. 166,787. 2 Claims. (Cl. 155—69.)

1. A chair having a back and a seat, front legs extending downward from the seat, rear legs extending downward from the back, and rockers extending beneath the rear legs and upward and forward to intersect the front legs above the lower ends of the front legs, said rockers extending rearward and upward from the intersection with the rear legs, the front legs having their lower ends disposed in the same plane as the lower face of the rocker at a point immediately beneath the legs, the front legs being of sufficient length to contact with the floor and limit the forward rocking movement of the rockers support the seat of the chair in an approximately horizontal position when the front legs are brought against the floor.



1,662,948. METHOD FOR MAKING RECORDS. JOSEPH LE ROY BANKS, Baltimore, Md., assignor to The Rolmonica Music Co., Baltimore, Md. Filed July 22, 1924. Serial No. 727,466. Renewed Nov. 15, 1927. 7 Claims. (Cl. 84—461.)

2. A method for making records, consisting of causing air currents to move in opposite directions to vary the air pressure in chambers and thereby operating diaphragms to manipulate electrical circuits to operate recording devices and moving a sheet to receive the record.



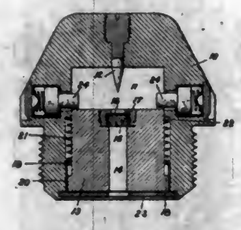
1,662,949. RECORDING MACHINE. JOSEPH LE ROY BANKS, Baltimore, Md., assignor to The Rolmonica Music Co., Baltimore, Md. Filed July 22, 1924, Serial No. 727,467. Renewed Nov. 15, 1927. 11 Claims. (Cl. 84—461.)

2. A recording machine comprising a plurality of air chambers provided with diaphragms and inlets to each chamber with means for varying the pressure in each chamber to operate said diaphragms, electrical contacts with means for supporting them over their respective diaphragms, electric circuits secured to said contacts and

to the helices of electro-magnets respectively, said electro-magnets provided with means for operating recording devices, recording devices operable by said electro-magnets respectively, and means for receiving the record.

1,662,950. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. GEORGE W. BAUGHMAN, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 26, 1927. Serial No. 178,617. 6 Claims. (Cl. 246—63.)

1. Railway traffic controlling apparatus comprising three parallel conductors located in the trackway and connected together at one end, and two sources of alternating current having a common terminal connected with the free end of one conductor, the remaining terminals of said sources being connected with the free ends of the remaining conductors respectively.



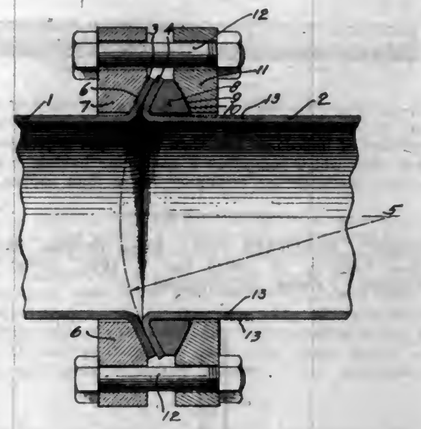
1,662,951. PROCESS OF BLEACHING ANIMAL AND VEGETABLE MATERIALS. ALFRED O. BRAGG, Niagara Falls, N. Y., assignor to International Bleaching Corporation, a Corporation of Delaware. Filed Sept. 5, 1925. Serial No. 54,818. 12 Claims. (Cl. 8—2.)

1. The process of bleaching ground wood pulp, which consists in circulating the pulp in water having mixed therewith a bisulphite, free sulphurous acid, and an acid other than the sulphurous acid, and finally washing the mixture with water until free of acid and other undesired materials.

1,662,952. LOCKING DEVICE FOR FUSES. HAROLD M. BRAYTON, Dover, N. J. Filed Aug. 5, 1924. Serial No. 730,295. 2 Claims. (Cl. 102—39.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A fuse including a body formed with a cavity, an element of a firing mechanism carried by the body, a cylindrical plunger slidably mounted within the cavity,

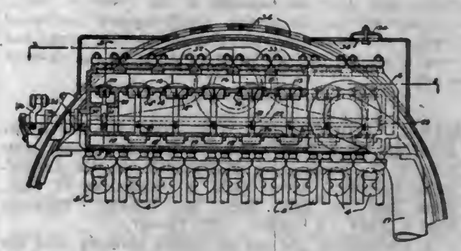
said plunger formed with an annular flange, an element of a firing mechanism carried by the plunger, a sleeve embracing the base of the plunger, said sleeve formed with a rim normally spaced from the flange, a coil spring en-



circling the plunger and confined between the body and the sleeve, and centrifugally released locking pins carried by the body and positioned adjacent the forward face of the plunger when said plunger is in unarmed position.

1,662,953. APPARATUS FOR DRAINING AND CLEANING SUPERHEATERS. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 20, 1921. Serial No. 493,900. 2 Claims. (Cl. 122—460.)

1. In a superheater comprising two horizontal tubular headers and tubular superheater elements whose two ends are secured each to one of the headers and open into the header above its bottom and portions of which are entirely below their ends; the combination of said headers and elements; a hollow blower head having a face adapted to seat against the openings of the element ends in one of the headers; resilient means forcing the head toward said openings and engaging the opposite inner wall of the header; and means to bring the head successively into seating engagement with said openings and to supply fluid under pressure to it.



1,662,954. PIPE JOINT. BENJAMIN BROIDO, New York, N. Y.; Anna G. Freedman Broido and The National City Bank of New York, administrators of said Benjamin Broido, deceased. Filed July 10, 1922. Serial No. 573,789. 2 Claims. (Cl. 285—140.)

1. In a pipe joint of the class described, the combination of a pipe having a frusto-conical flange, a second pipe having a flange in the form of a spherical segment engaging the flange of the first pipe, a backing ring engaging the second flange and having the form of a spherical segment opposite the flange, rings engaging the outer

surface of the first flange and the spherical surface of the backing ring, and means to draw said rings toward each other.

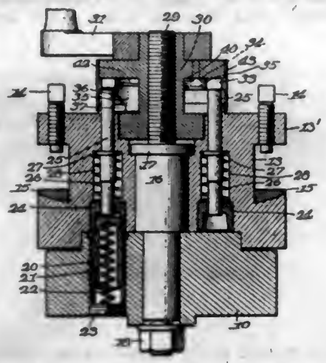
1,662,955. BALANCED MULTIPLE THROTTLE. RAY M. BROWN, Yonkers, N. Y., assignor, by mesne assignments, to American Throttle Company, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1925. Serial No. 24,802. 2 Claims. (Cl. 122—462.)

1. In apparatus of the class described, the combination of an elongated horizontal chamber for superheated steam; two horizontal partitions dividing the chamber into three spaces; means to deliver the steam into the top chamber and to take it off from the middle chamber; a passage from the top chamber to the bottom chamber; a valve controlling said passage and opening toward the top chamber; a stem on said valve; there being a row of ports in the upper partition and a corresponding and alined row of openings in the lower partition; valves opening toward the top space controlling the ports and having stems bearing portions closing and reciprocating in the corresponding openings in the lower partition; all of said valve stems being in line; a rotatable shaft adjacent and parallel to the row of valve stems; means to give the rod a rotary motion; means secured to the rod engaging each valve stem and adapted to actuate the valve; said means being arranged to open the first-named valve ahead of all the others.

1,662,956. TELEGRAPH CONDUCTOR. OLIVER E. BUCKLEY, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1921. Serial No. 525,994. 7 Claims. (Cl. 173—264.)

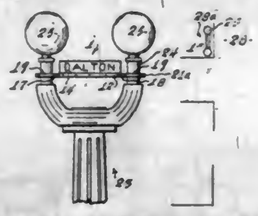
1. A submarine cable composed of a plurality of sections at least one of these sections having a temperature coefficient of impedance less than $2x10^{-3}$ per degree centigrade, and which comprises a conductor having a temperature coefficient of resistance lower than copper.

1,662,957. FOUNTAIN PEN. NORA THERESA BURKE, New York, N. Y. Filed Dec. 6, 1926. Serial No. 152,862. 1 Claim. (Cl. 120—46.)



A fountain pen comprising a body portion and a pen point, the body portion having a reservoir, the reservoir having a connection at each end, one connection communicating with the pen point, the other connection being a single very small opening, an air suction means connected to the very small opening and of effective capacity less than the capacity of the reservoir means for protecting the air suction means against accidental operation and means for operating the suction means and having a portion exposed at the outside of the shell of the pen.

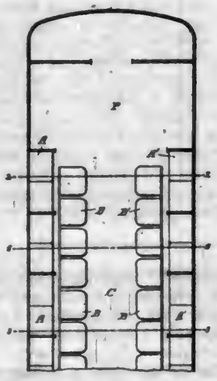
1,662,958. COMPOSITION FOR USE IN FORMING RUBBER AND THE LIKE. JAMES M. CRANZ, Buffalo, N. Y., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 28, 1926, Serial No. 138,836. Renewed Aug. 5, 1927. 5 Claims. (Cl. 18—47.)



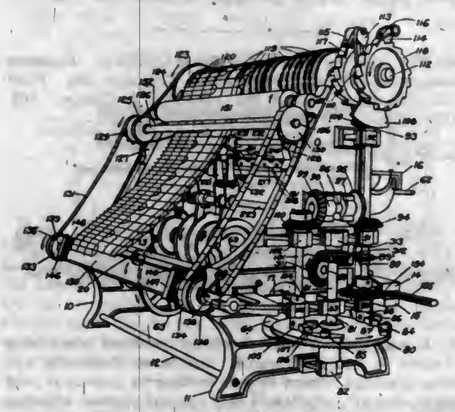
1. A composition for use on heated surfaces used for shaping rubber and other plastic materials, consisting of a hyposulfite of an alkali metal, and a sugar.

1,662,959. TOOL POST. KENNEDY H. CRUMRINE, Cleveland, Ohio, assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Illinois. Filed Aug. 20, 1926. Serial No. 130,402. 3 Claims. (Cl. 29—49.)

1. In a tool post, the combination of a base, an upwardly spring-pressed locking bolt in said base, a tool holder rotatable on said base having sockets in its under side to interlock with the upper end of said bolt, a fixed stud extending centrally through said base and tool holder and formed with a post on its upper end, upwardly spring-pressed plungers in said tool holder axially aligned with said sockets and adapted, when depressed, to force said bolt to unlocking position, said plungers extending above said tool holder, an operating lever having a hub rotatable on said post, and a pawl pivoted on said hub and formed with a cam operating, when the hub is turned, to depress a plunger, and with a shoulder operating, through side contact with the upper end of the depressed plunger, to index said tool holder to a new position.

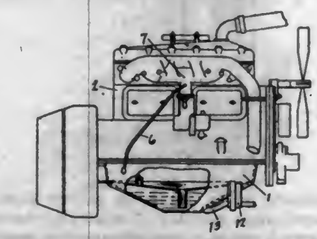


1,662,960. SYSTEM AND MEANS FOR MARKING STREETS. JOHN W. DE FORD, Los Angeles, Calif. Filed Apr. 12, 1927. Serial No. 183,218. 4 Claims. (Cl. 40—131.)



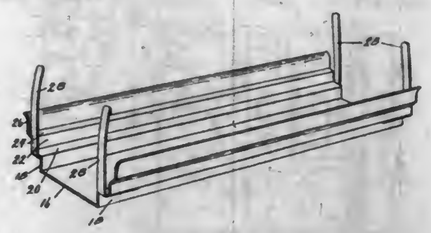
4. Street marking and illuminating means comprising in combination a post, a pair of spaced branching arms to said post; each provided with a light, a sign member horizontally disposed between and connecting said arms; said sign member disposed below said lights and presenting a pair of opposed upwardly converging surfaces meeting at an apex below said lights, and similar indicia on each such surface.

1,662,961. PASSENGER VEHICLE. José Luis DELPINI, Buenos Aires, Argentina. Filed Jan. 27, 1927, Serial No. 163,984, and in Argentina Aug. 12, 1926. 2 Claims. (Cl. 105—344.)



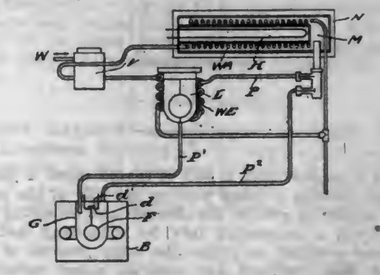
1. A vehicle having seats arranged in longitudinal rows, in which the seats in the row adjacent to one side wall of the vehicle and in the next adjacent row face in a direction normal to the longitudinal axis of the vehicle, which has at least one other row of seats adjacent to the other side wall of the vehicle, the row of seats adjacent to the first mentioned side wall being disposed on a lower level than the next adjacent row of seats.

1,662,962. WIRE-FENCE MACHINE. JOHN W. DWIGGINS, Knightstown, Ind., assignor to The Parrish-Alford Fence and Machine Company, Knightstown, Ind., a Corporation of Indiana. Filed Sept. 2, 1926. Serial No. 133,253. 18 Claims. (Cl. 140—4.)



1. In a loom for weaving wire fabrics, a warp shedding mechanism and weft supply mechanism, a plurality of benders spaced across the shed at varying distances from the weft supply to permit the rise of separate weft strands of excess length over the said varying distances, and said benders being capable of diverting the said excess lengths out of that portion of the shed on the far side of the bender from the weft supply, and being capable of reinserting the excess lengths into that portion of the shed between the bender and the weft supply and deflectors to keep the excess length of a weft out of the way while a succeeding weft is being inserted, substantially as set forth.

1,662,963. OIL CONCENTRATOR. IVAN L. EASTMAN, Toledo, Ohio, assignor of one-half to Le Roy E. Eastman, Toledo, Ohio. Filed June 18, 1926. Serial No. 116,912. 5 Claims. (Cl. 123—196.)

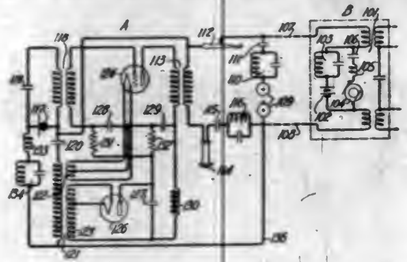


1. In an oil concentrator for internal combustion engines, a plate extending across the crank shaft casing for covering the oil in the casing, means for producing a vacuous condition below the plate, a tube extending from the plate to a point below the level of the oil for directing air through a portion of the oil.

1,662,964. STENCIL PRINTING SYSTEM AND APPARATUS. HARMON P. ELLIOTT, Watertown, Mass. Filed Jan. 25, 1927. Serial No. 163,525. 4 Claims. (Cl. 101—47.)

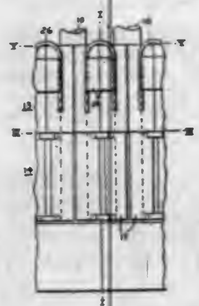
1. A transfer tray for a collection of stencils open at the ends and having a bottom wall and upstanding opposed side walls formed with a pair of opposed parallel stencil-supporting shelves spaced above said bottom wall, said side walls also having a second pair of opposed parallel shelves disposed above said stencil supporting shelves and below the tops of said walls, and stencil-retaining members upstanding above and in line with said stencil-supporting shelves at the ends thereof.

1,662,965. CONTROL SYSTEM FOR REFRIGERATING APPARATUS. EMORY S. ENSIGN, New Haven, Conn., assignor to National Refrigerating Company, New Haven, Conn., a Corporation of Massachusetts. Filed Mar. 31, 1926. Serial No. 98,732. 10 Claims. (Cl. 62—5.)



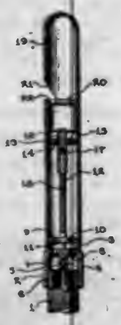
1. The combination, with absorption refrigeration apparatus of the character designated, of a chronometric control member, means arranged to be successively stimulated by the said control member to initiate and terminate in alternation the emission and absorption stages of the cycle of said refrigeration apparatus, means adapted to delay progress of said chronometric control member near the close of the absorption stage, and means responsive to exhaustion of the condensed refrigerant, whereby said chronometric control member is made free to progress normally.

1,662,966. SUBSTATION CIRCUIT. JOHN W. FOLEY, Bogota, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,660. 7 Claims. (Cl. 179—81.)



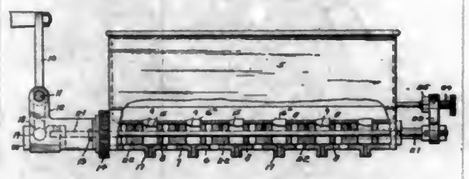
1. In a telephone exchange system, a central office, substation apparatus associated with said central office, an amplifier at said substation including an anode, a cathode and an impedance control element, a source of alternating current at said central office, a line connecting said substation with said central office to transmit current from said alternating current source to said substation, means for transmitting speech currents in two directions over said line, means for applying said

speech currents to said impedance control element, means at said substation to rectify said alternating current, means to supply said rectified current to said anode,



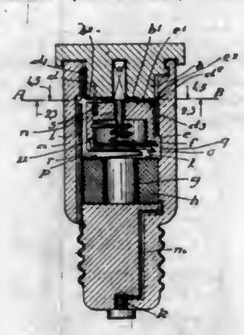
means to supply said alternating current to said cathode, and means to exclude said alternating current from said control element.

1,662,967. FURNACE WALL. ROBERT A. FORESMAN, Moore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 18, 1926. Serial No. 109,998. 7 Claims. (Cl. 122—6.)



1. In a furnace wall, a pair of spaced tubes, a pair of elements forming a closed wall on one side of the tubes, means carried by each of the elements and extending part way around a cooperating tube for supporting said element and arranged to permit the ready removal of said element from the wall and resilient means permitting relative expansion between the elements for connecting the elements together.

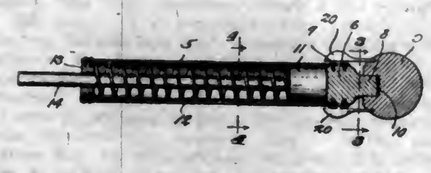
1,662,968. TIRE ALARM. LEE GARRETT, Borger, Tex. Filed Apr. 21, 1926. Serial No. 103,528. 1 Claim. (Cl. 116—34.)



An audible low-pressure indicator for vehicle tires comprising a casing provided with spaced disk walls of which one is disposed adjacent one end and provided with a central extension for engagement with and the unseating of the movable element of a tire inflation valve, said extension being provided with a bore opening on that side of the disk wall facing the opposite disk wall, a partition disk wall disposed adjacent the first disk wall and provided with a valve opening, a screw threadingly engaged with the second disk wall in axial alignment with the casing, said screw being provided with an axial bore, a valve engaging the valve seat of the partition disk wall and having a stem slidably engaged in the bores of the extension and the screw, a compression spring in surrounding relation to the stem and compressed between the valve and the extremity of the screw, said spaced disk walls having perforations, and a whistle carried by the casing at its outer end.

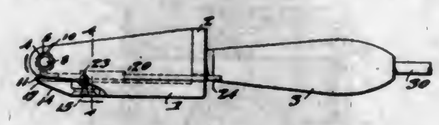
1,662,969. BATTER-MEASURING MACHINE. GIUSEPPE GERACE and JOSEPH W. WEAVER, Lebanon, Pa. Filed Oct. 13, 1926. Serial No. 141,314. 5 Claims. (Cl. 107—28.)

1. A mechanism of the character described comprising a hopper, a tubular element associated therewith and having openings formed therein leading to pockets in said tubular element, rotation of said tubular element bringing said openings first into communication with the hopper and then into communication with the discharge ports, plungers movable into said pockets, a rod by which said plungers are carried and an operating handle connected to the tubular element for rotating the same and pivoted for rocking movement and connected with said rod in such manner that rocking movement of the handle imparts endwise movement to the plungers and the rod.



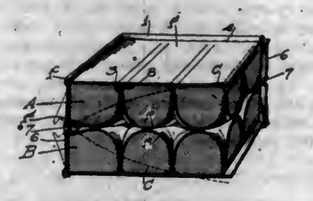
1,662,970. SAFETY DEVICE FOR ELECTRIC LINES. CARL GROSSE, Berlin-Hermsdorf, Germany. Filed June 12, 1925, Serial No. 36,746, and in Germany Aug. 18, 1924. 3 Claims. (Cl. 200—89.)

1. An automatic safety device for electric lines, comprising in combination a casing of insulating material, a socket on the said casing, a rotatable contact member in the said casing, a second rotatable contact member in the casing, a spring capable of acting on the second contact member and of turning the same when free to move, a semi-circular groove in the second contact member, a pin on the first contact member for engaging in the said groove for coupling the two contact members, contact arcs on the surfaces facing each other of the two contact



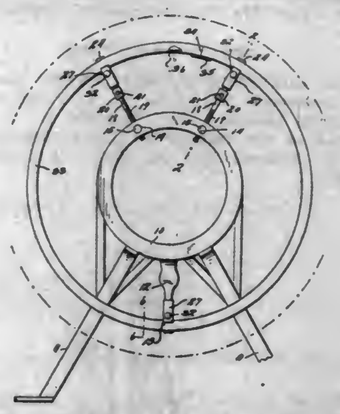
members, each arc forming a lateral contact on the contact member, on which it is mounted, a solenoid located in the casing, securing means for the second contact member, capable of being acted on by the said solenoid, a spring capable of acting on the securing means for securing the second contact member, a connecting lead from the solenoid to a contact member at the bottom of the safety device, a contact strip connected to the solenoid and extending laterally from the second contact member, a contact strip in the casing extending from the first contact member to the socket of the safety device and means for turning the first contact member.

1,662,971. CAP GUN. FRED M. HOWE, Wellsboro, Pa. Filed Sept. 13, 1926. Serial No. 135,239. 1 Claim. (Cl. 46—46.)



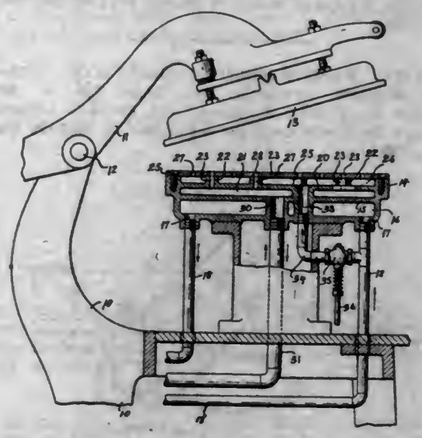
In a device of the character described, a barrel, a head closing one end of the barrel, an extension on the head, a projectile having an opening to accommodate the extension, said opening adapted to accommodate a cap to be engaged by the extension, a spring pressed plunger operating in the barrel and adapted to be forced against the head to explode the cap to force the projectile from the head.

1,662,972. DEVICE FOR PICKING POULTRY. HORACE G. HUEY and DONALD Y. PIERSON, Vineland, N. J. Filed Dec. 27, 1924. Serial No. 758,419. 2 Claims. (Cl. 17—11.)



1. A device for picking poultry comprising a support, a shoe carried by the support, a picking head revolubly mounted adjacent the shoe, and a handle associated with the support offset to one side of the line in which feathers are discharged by the picking head.

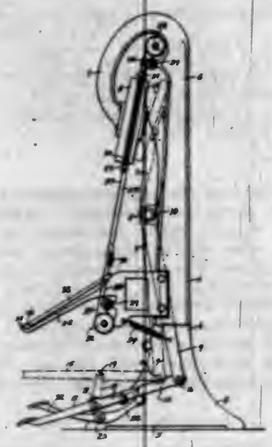
1,662,973. MATTRESS. LOUIS G. IHRIG, San Diego, Calif., assignor to Standard Mattress and Furniture Manufacturing Company, San Diego, Calif., a Corporation of California. Filed Mar. 16, 1925. Serial No. 15,871. 2 Claims. (Cl. 5—355.)



1. A mattress, comprising a pair of mattress sections, the one superposed upon the other, the outer sides of said sections forming the top and bottom of the mattress being relatively flat and smooth, and the inner sides of said sections lying adjacent each other being tufted forming oppositely disposed cushions and air pockets, and a box edge strip surrounding the side edges of said mattress sections forming in appearance a one section mattress.

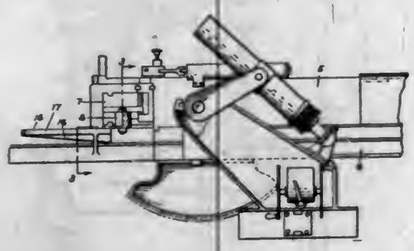
1,662,974. TIRE CARRIER AND REMOVER. WILLIAM W. JOHNSON, Vincennes, Ind., assignor of one-half to William Steincamp, Little Rock, Ark. Filed Dec. 10, 1926. Serial No. 153,858. 1 Claim. (Cl. 224—29.)

A tire carrier and rim remover comprising an annular support, pins mounted for oscillatory movement in the support, the support having cone-shaped slots disposed at opposite sides of the pins, screw jacks threaded through the pins and passing through the supports, said jacks being provided at their outer ends with hemispherical heads, clincher members having sockets which receive the hemispherical heads and plates applied to the clincher members and having edge portions disposed under the heads of the screw jacks, the adjacent edge surfaces of the plates being spaced from the sides of the screw jacks.



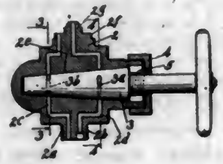
1,662,975. GARMENT STEAM AND AIR PRESS. JAMES C. LEDBETTER, Brooklyn, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 30, 1924. Serial No. 746,724. 9 Claims. (Cl. 68—9.)

1. A garment pressing machine comprising in combination, cooperating pressing members adapted to open and close on the work, one of the pressing members being provided with a pressing surface and a fluid heating chamber, pipe connections established therewith to convey heat to and from the heating chamber, said pressing member also being provided with two separated shallow cham-



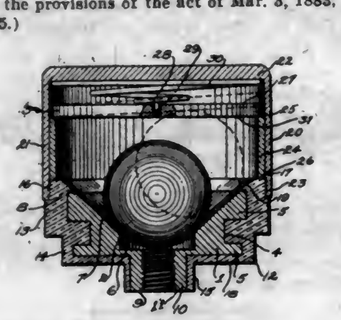
bers, an air pipe connected to one of the shallow chambers, and a steam pipe connected to the other hollow chamber, both of said shallow chambers being perforated through the pressing surface and out through which steam and air flows, and said perforations connecting with the respective shallow chambers so that the steam and air always flow through separated respective perforations.

1,662,976. CONVEYER GARMENT PRESS. JAMES CAMROD LEDBETTER, New York, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed May 4, 1925, Serial No. 27,706. Renewed Sept. 23, 1927. 24 Claims. (Cl. 68—9.)



16. A press comprising a tall frame, jaws at the upper end thereof above an operator's head, means to open and close the jaws, and means to convey work to and from the jaws.

1,662,977. BREECH-OPENING MECHANISM. GEORGE M. MCCANN, Newcastle, Del. Filed Nov. 6, 1925. Serial No. 67,420. 4 Claims. (Cl. 89—4.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)

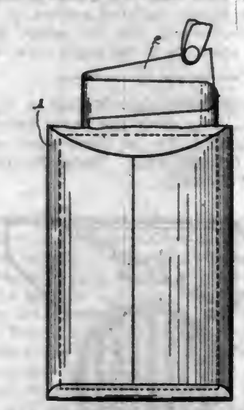


4. A cradle, a cam plate secured thereto, a gun mounted to reciprocate on the cradle, a laterally sliding breech block in the gun and a cam follower carried by the block and operable to open the block.

1,662,978. REGULATING-VALVE MECHANISM FOR GASOLINE LANTERNS. CHARLES MEISSNER, San Diego, Calif., assignor of one-third to Charles R. Robinson, San Diego, Calif. Filed Mar. 5, 1925. Serial No. 13,265. 3 Claims. (Cl. 67—41.)

1. In a gasoline lantern, the combination with a receptacle and a burner positioned above said receptacle, of a valve casing positioned in the upper side of said receptacle, a gasoline feed pipe secured centrally on the upper side of said valve casing and extending to the burner an initial burner member in spaced relation to said gasoline feed tube, concentric therewith, said casing provided with a port communicating with the upper portion of said receptacle and with the space between said burner and gasoline tube and with another port communicating with the lower portion of said vessel and with the interior of said gasoline tube, and a valve with ports therein spaced to communicate with said ports in said casing when turned to different positions in said casing.

1,662,979. CIRCUIT CLOSER. PAUL R. NELSON, The U. S. Army, Fort Totten, N. Y. Filed May 7, 1927. Serial No. 189,736. 3 Claims. (Cl. 200—52.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)



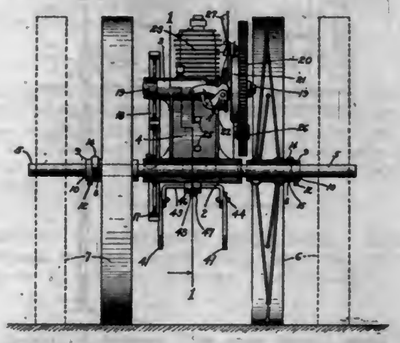
1. A device of the character described comprising in combination a pair of suitably insulated electrodes normally disposed in a perpendicular position, one of the electrodes being formed with a seat having upwardly and outwardly flared walls, a contact plate situated above and in vertically spaced relation to said seat, said plate being movable rectilinearly along and angularly about its vertical axis, a spherical member of conducting material positioned within said seat, said member when the electrodes are tilted from the perpendicular ascending the inclined walls of its seat into engagement with the plate to establish an electrical path between the electrodes.

1,662,980. METHOD OF PACKAGING WAXED-PAPER SHEETS. ERNEST E. PALMER, Toronto, Ontario, Canada, assignor to Appleford Counter Check Book Company, Limited, Hamilton, Ontario, Canada. Filed July 6 1926, Serial No. 120,717, and in Canada Aug. 13, 1925. 1 Claim. (Cl. 206—57.)

A package of waxed paper comprising an envelope open at one end and having its opposite sides meeting in lines and adapted to resiliently engage the contents

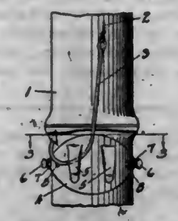
of the package and having a bank of sheets therein folded substantially S-form with feathered edges and with a folded end adjacent the open end of the envelope, the outside portions of the two outer sheets frictionally contacting with the envelope and the inside

portions of the two outer sheets lying loosely between folds of the bank of sheets, whereby a single sheet may be withdrawn by inserting the thumb and finger of the user down either side of the envelope and grasping the outer sheet by its upper corner and pulling upwardly.



1,662,981. BUTTONLESS DRAWERS. ANDREW P. PAZOWSKI, Edmonton, Alberta, Canada. Filed July 13, 1926, Serial No. 122,280, and in Canada Jan. 4, 1927. 1 Claim. (Cl. 2—234.)

A pair of drawers having a fly opening at the front extending upwardly from the crotch portion of the drawers, a flap at one side to the front of the drawers laterally offset beyond the corresponding side of the fly opening, said flap being disposable to completely span the said opening from top to bottom, a belt having a terminal fastener, said belt extending about the waist of the drawers and constituting means for supporting the drawers upon the wearer, a downturned tab upon the upper edge of the fly flap for engagement with the belt to prevent sagging of said flap, said tab being engaged at one side with the terminal fastener.

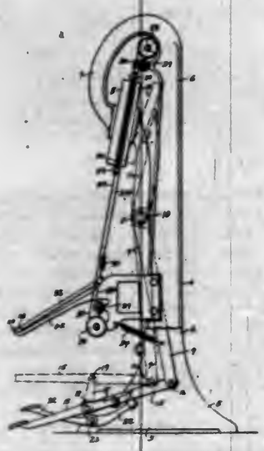


1,662,982. TRACTOR. CORNELIUS A. PETERS, Minneapolis, Minn., assignor, by mesne assignments, to New Beeman Tractor Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 15, 1923. Serial No. 612,681. 5 Claims. (Cl. 180—19.)

1. A two-wheel traction machine comprising a one-piece axle and traction wheels therefor, a bracket of comparatively light construction journaled on said axle between said wheels, a shaft mounted in said bracket parallel with said axle, a motor secured to said bracket between said shaft and axle, one end of said shaft having a driving connection with said axle and the other end of said shaft having a clutch controlled gear connection with said motor, thereby evenly distributing the strain upon said bracket.

5. A machine of the class described comprising a bracket frame having an axle and traction and supporting means, a motor mounted on said bracket frame, a steering device connected with said bracket frame for oscillating it and said traction and supporting means on a vertical axis to steer the machine, draft bars connected with said bracket frame beneath said steering device, means adjacent said bracket frame for transmitting to said draft bars the downward thrust on said steering device resulting from the torque of the motor, and relieving the steering device of such thrust, and means connecting said steering device with said draft bars in the rear of said thrust transmitting means for lifting said draft bars and controlling the lateral movement thereof, or transmitting thereto and to the implements connected therewith, the downward pressure of the operator upon said steering device.

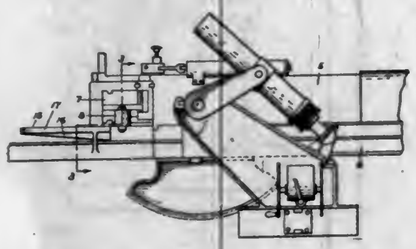
1,662,983. HOOK HOLDER FOR FISHING RODS. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 11, 1926. Serial No. 128,566. 3 Claims. (Cl. 43—33.)



1. A fish hook holder for application to a fishing rod, comprising an arched plate, a prong stamped from said plate and adapted to receive a hook, and a contractile element attached to the ends of the plate and surrounding the pole.

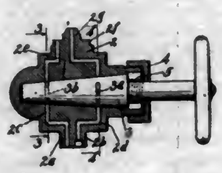
1,662,984. ROTARY CASING HEAD. BERNARD H. SCOTT, Glendale, and SAMUEL E. ROSS, Long Beach, Calif., assignors to Scott-Ross and Company, Los Angeles, Calif., a Corporation of Delaware. Filed Mar. 18, 1926. Serial No. 95,653. 16 Claims. (Cl. 255—14.)

1. In combination: an oil string; a pump tubing extending through said oil string; a casing head body



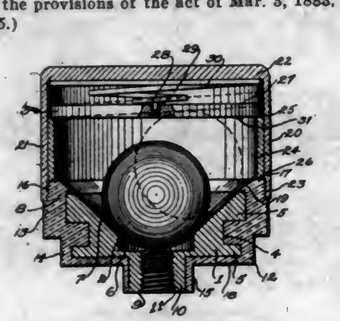
bers, an air pipe connected to one of the shallow chambers, and a steam pipe connected to the other hollow chamber, both of said shallow chambers being perforated through the pressing surface and out through which steam and air flows, and said perforations connecting with the respective shallow chambers so that the steam and air always flow through separated respective perforations.

1,662,976. CONVEYER GARMENT PRESS. JAMES CAMROD LEDBETTER, New York, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed May 4, 1925, Serial No. 27,706. Renewed Sept. 23, 1927. 24 Claims. (Cl. 68—9.)



16. A press comprising a tall frame, jaws at the upper end thereof above an operator's head, means to open and close the jaws, and means to convey work to and from the jaws.

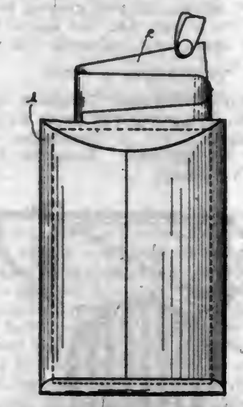
1,662,977. BREECH-OPENING MECHANISM. GEORGE M. McCANN, Newcastle, Del. Filed Nov. 6, 1925. Serial No. 67,420. 4 Claims. (Cl. 89—4.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)



4. A cradle, a cam plate secured thereto, a gun mounted to reciprocate on the cradle, a laterally sliding breech block in the gun and a cam follower carried by the block and operable to open the block.

1,662,978. REGULATING-VALVE MECHANISM FOR GASOLINE LANTERNS. CHARLES MEISSNER, San Diego, Calif., assignor of one-third to Charles R. Robinson, San Diego, Calif. Filed Mar. 5, 1925. Serial No. 13,265. 3 Claims. (Cl. 67—41.)

1. In a gasoline lantern, the combination with a receptacle and a burner positioned above said receptacle, of a valve casing positioned in the upper side of said receptacle, a gasoline feed pipe secured centrally on the upper side of said valve casing and extending to the burner an initial burner member in spaced relation to said gasoline feed tube, concentric therewith, said casing provided with a port communicating with the upper portion of said receptacle and with the space between said burner and gasoline tube and with another port communicating with the lower portion of said vessel and with the interior of said gasoline tube, and a valve with ports therein spaced to communicate with said ports in said casing when turned to different positions in said casing.



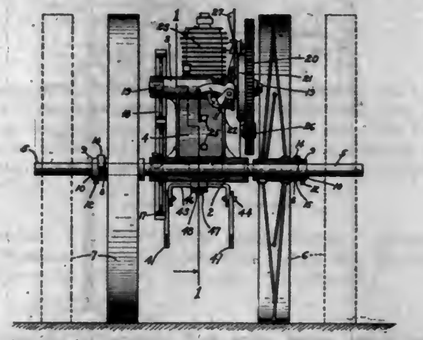
1,662,979. CIRCUIT CLOSER. PAUL R. NELSON, The U. S. Army, Fort Totten, N. Y. Filed May 7, 1927. Serial No. 189,736. 3 Claims. (Cl. 200—52.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A device of the character described comprising in combination a pair of suitably insulated electrodes normally disposed in a perpendicular position, one of the electrodes being formed with a seat having upwardly and outwardly flared walls, a contact plate situated above and in vertically spaced relation to said seat, said plate being movable rectilinearly along and angularly about its vertical axis, a spherical member of conducting material positioned within said seat, said member when the electrodes are tilted from the perpendicular ascending the inclined walls of its seat into engagement with the plate to establish an electrical path between the electrodes.

1,662,980. METHOD OF PACKAGING WAXED-PAPER SHEETS. ERNEST E. PALMER, Toronto, Ontario, Canada, assignor to Appleford Counter Check Book Company, Limited, Hamilton, Ontario, Canada. Filed July 6 1926, Serial No. 120,717, and in Canada Aug. 13, 1925. 1 Claim. (Cl. 206—57.)

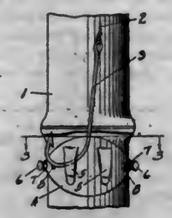
A package of waxed paper comprising an envelope open at one end and having its opposite sides meeting in lines and adapted to resiliently engage the contents of the package and having a bank of sheets therein folded substantially S-form with feathered edges and with a folded end adjacent the open end of the envelope, the outside portions of the two outer sheets frictionally contacting with the envelope and the inside

portions of the two outer sheets lying loosely between folds of the bank of sheets, whereby a single sheet may be withdrawn by inserting the thumb and finger of the user down either side of the envelope and grasping the outer sheet by its upper corner and pulling upwardly.



1,662,981. BUTTONLESS DRAWERS. ANDREW P. PAZOWSKI, Edmonton, Alberta, Canada. Filed July 13, 1926, Serial No. 122,280, and in Canada Jan. 4, 1927. 1 Claim. (Cl. 2—284.)

A pair of drawers having a fly opening at the front extending upwardly from the crotch portion of the drawers, a flap at one side to the front of the drawers laterally offset beyond the corresponding side of the fly opening, said flap being disposable to completely span the said opening from top to bottom, a belt having a terminal fastener, said belt extending about the waist of the drawers and constituting means for supporting the drawers upon the wearer, a downturned tab upon the upper edge of the fly flap for engagement with the belt to prevent sagging of said flap, said tab being engaged at one side with the terminal fastener.

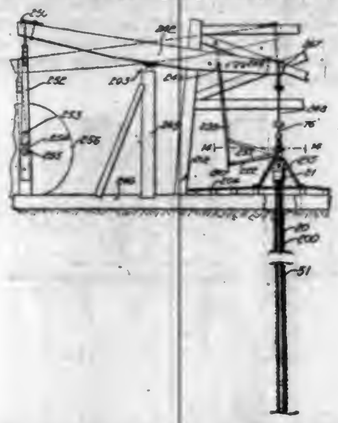


1,662,982. TRACTOR. CORNELIUS A. PETERS, Minneapolis, Minn., assignor, by mesne assignments, to New Beeman Tractor Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 15, 1923. Serial No. 612,681. 5 Claims. (Cl. 180—19.)

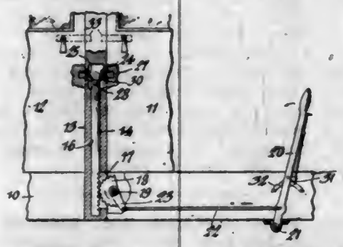
1. A two-wheel traction machine comprising a one-piece axle and traction wheels therefor, a bracket of comparatively light construction journaled on said axle between said wheels, a shaft mounted in said bracket parallel with said axle, a motor secured to said bracket between said shaft and axle, one end of said shaft having a driving connection with said axle and the other end of said shaft having a clutch controlled gear connection with said motor, thereby evenly distributing the strain upon said bracket.

5. A machine of the class described comprising a bracket frame having an axle and traction and supporting means, a motor mounted on said bracket frame, a steering device connected with said bracket frame for oscillating it and said traction and supporting means on a vertical axis to steer the machine, draft bars connected with said bracket frame beneath said steering device, means adjacent said bracket frame for transmitting to said draft bars the downward thrust on said steering device resulting from the torque of the motor, and relieving the steering device of such thrust, and means connecting said steering device with said draft bars in the rear of said thrust transmitting means for lifting said draft bars and controlling the lateral movement thereof, or transmitting thereto and to the implements connected therewith, the downward pressure of the operator upon said steering device.

1,662,983. HOOK HOLDER FOR FISHING RODS. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 11, 1926. Serial No. 128,566. 3 Claims. (Cl. 43—33.)



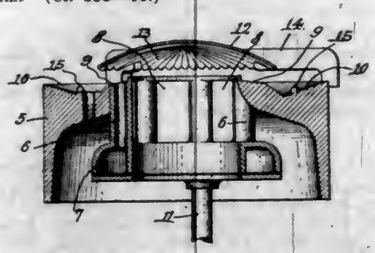
1. A fish hook holder for application to a fishing rod, comprising an arched plate, a prong stamped from said plate and adapted to receive a hook, and a contractile element attached to the ends of the plate and surrounding the pole.



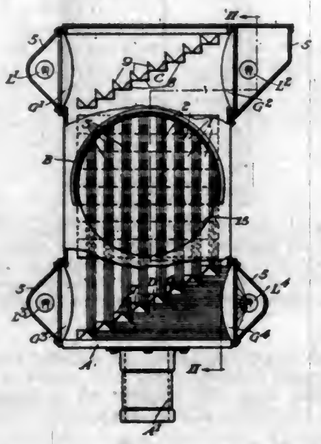
1,662,984. ROTARY CASING HEAD. BERNARD H. SCOTT, Glendale, and SAMUEL E. ROSS, Long Beach, Calif., assignors to Scott-Ross and Company, Los Angeles, Calif., a Corporation of Delaware. Filed Mar. 18, 1926. Serial No. 95,653. 16 Claims. (Cl. 255—14.)

1. In combination: an oil string; a pump tubing extending through said oil string; a casing head body

supported at the upper end of said oil string; a mandrel rotatably supported by said casing head body and rigidly connected to said pump tubing, said pump tubing being turned when said mandrel is rotated; and a sucker rod string extending through said pump tubing and said mandrel.

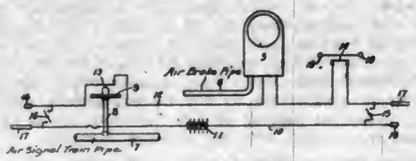


1,662,985. DOOR-LATCHING MECHANISM FOR AUTOMOBILES. JAMES W. SIGNORE, Ellicottville, N. Y. Filed June 11, 1926. Serial No. 115,234. 4 Claims. (Cl. 292—6.)



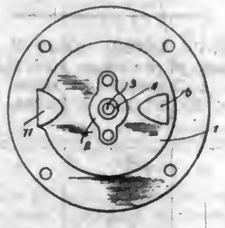
1. In a locking mechanism of the character described, the combination with a vehicle-body having a plurality of doors and a frame-member disposed between adjoining doors on one side of the body, of independent locking devices for adjoining doors, a lock-controlling bar guided for movement on said frame-member for simultaneously moving said locking devices to their locked and unlocked positions, and means for actuating said lock-controlling bar.

1,662,986. BURNER. HENRY SMOYER, WILLIAM H. CUMMING, and HERBERT W. THIELE, North Tonawanda, N. Y. Filed Sept. 15, 1925. Serial No. 56,493. 1 Claim. (Cl. 158—66.)



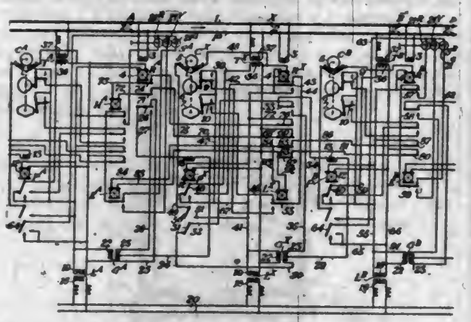
In a burner, a hollow body portion having a central opening and having a trough formed in the upper surface thereof, a reservoir disposed in the hollow body portion and having spaced pipes extending upwardly from the reservoir, the upper ends of the pipes being inclined and lying in a plane with the trough, a cap supported above the body portion in spaced relation therewith and directly above the pipes, the cap being provided with a corrugated under surface defining grooves to direct fuel downwardly to the trough, and the spaces between the pipes adapted to admit air to the upper ends of the pipes.

1,662,987. LIGHT SIGNAL. CLARENCE S. SNAVELY, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 20, 1923. Serial No. 652,717. 12 Claims. (Cl. 177—327.)



10. A signal comprising two oppositely disposed light sources arranged to project first and second beams in opposite directions along one and the same path, two sets of deflectors located in said path for projecting said two beams respectively in one and the same path and direction at right angles to the first path, two other oppositely disposed light sources arranged to project third and fourth beams in opposite directions along one and the same third path parallel to the first path, two additional sets of deflectors located in said third path for projecting said third and fourth beams in one and the same direction along said second path but in a direction opposite to that of said first and second beams, and two sets of deflectors located in said second path for projecting all four of said beams in the same direction along a fourth path at right angles to said second path.

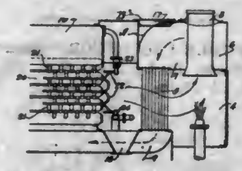
1,662,988. TRAIN-SIGNAL SYSTEM. EARL C. STAFFORD, Philadelphia, Pa., assignor to The United States Train Signal Company, Portland, Me., a Corporation of Maine. Filed Mar. 7, 1921. Serial No. 450,195. 7 Claims. (Cl. 177—352.)



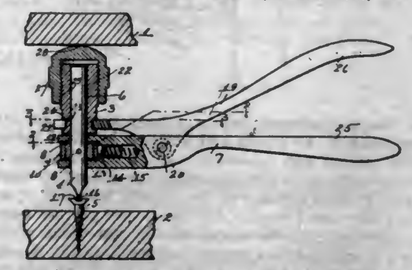
1. In a train signaling system, a plurality of signaling devices mounted on different units of the train comprising an audible signaling means connected to the train air brake pipe, means on each unit whereby a closed electric circuit may operate on such unit or between a plurality of units and means connected to the air signal train pipe for breaking said circuit to cause operation of the signaling device, substantially as set forth.

1,662,989. CYLINDER HEAD. FRANCIS H. STROUD, Seattle, Wash. Filed Dec. 15, 1926. Serial No. 155,085. 2 Claims. (Cl. 123—32.)

1. A cylinder head for internal combustion engines provided with a central combustion chamber opening through the bottom of the head and contracted toward the top thereof, there being a fuel-inlet opening in the top of the head and a port for a heating element in the side of the head immediately adjacent the fuel inlet, and a heat-retaining liner secured at its lower end in said combustion chamber and spaced from the wall of the same, said liner being open throughout its lower end and having an opening at its upper end registering with the fuel inlet opening, and a second opening registering with the port for the heating element.



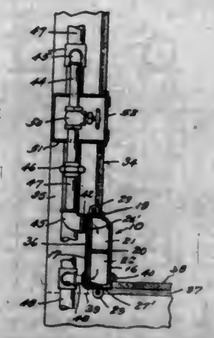
1,662,990. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HOWARD A. THOMPSON, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1927. Serial No. 171,737. 4 Claims. (Cl. 246—34.)



2. In combination, a section of railway track, a normally closed track relay for said section, a three-position repeater relay for said section, means controlled by said repeater relay for supplying uninterrupted alternating track circuit current to the rails of said section when the repeater relay is energized in normal direction and for supplying periodically interrupted alternating current to the rails of the section for automatic train control purposes when the repeater relay is energized in reverse direction, and means for energizing said repeater relay in normal or reverse direction according as said track relay is closed or open.

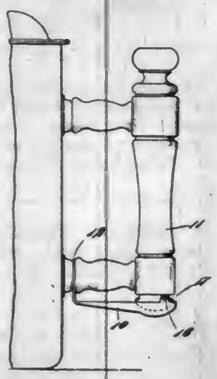
1,662,991. AIR PREHEATER. PETER THOMSEN, Cassel, Germany, assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 16, 1925, Serial No. 2,774, and in Germany Mar. 3, 1924. 2 Claims. (Cl. 110—57.)

1. In a locomotive boiler, the combination of a smokebox into which gases are discharged from the boiler flues, a stack extending through the forward upper part of the smokebox sheet, an intake for air at the upper part of the front wall of the smokebox, a passage extending rearwardly from the intake and surrounding the stack, an air preheater comprising two parallel tube sheets and tubes connecting them, a duct extending rearwardly from the lower part of the smokebox, the air preheater extending from the rear end of said passage to the front end of said duct, superheater elements extending into said flues, said preheater being hinged at its lower end so it can be rotated out of the direct line of said elements, and means to hold the preheater in its normal operative position.



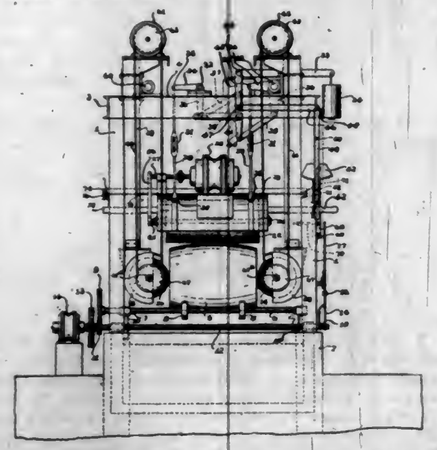
1,662,992. ROTARY-TOOL MECHANISM. MATTHEW WESTRATE, Grand Rapids, Mich. Filed Nov. 26, 1926. Serial No. 150,860. 6 Claims. (Cl. 145—71.)

1. In a mechanism of the character described: a base; a rotatable tool; an operating handle comprising a member rotatable about the axis of the tool and in axially-non-movable relation to the tool, and a lever member fulcrumed on the first-mentioned member and engaging the base for moving the same and the first-mentioned member relatively to each other in the tool's axial direction; means for rotating the tool by the rotation of the handle.



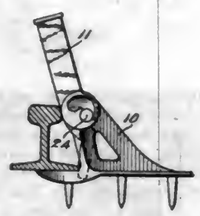
1,662,993. WALL RADIATOR. LOUIS WILLIAMS, Seattle, Wash. Filed Mar. 20, 1926. Serial No. 96,160. 7 Claims. (Cl. 257—133.)

2. In a heating system, a radiator adapted to be built into the wall of a room of a building, said radiator comprising a plurality of communicatively connected tubular open-ended members having partitions dividing the interiors of the respective members into upper and lower ducts, said partitions being provided with horizontally spaced apart apertures affording communication between the ducts of each member, means to close said apertures selectively, means to close the outermost ends of the members when



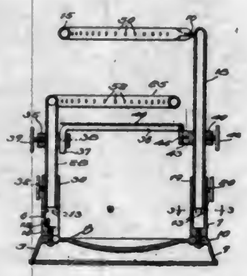
assembled as a radiator, and means for supplying and withdrawing a fluid heating medium to and from the respective ducts of the radiator through the back of the latter.

1,662,994. HANDLE PROTECTOR. HARRY J. WOLOOHOJIAN, Providence, R. I. Filed Nov. 21, 1927. Serial No. 234,682. 1 Claim. (Cl. 53—3.)



A handle protector having a body portion to extend along beneath the handle and having a resilient upturned portion at one end pierced to receive the fastening bolt, the opposite end of the body being cup-shaped to conform to and fit over the end of the handle to which it is attached, the upper edge of the cup-shaped portion towards the outer side of the center of the cup being provided with a pair of integral fingers inclined inwardly to engage a recess in the handle at a point on the outer side of its axial center, whereby the spring of the upturned opposite end of the protector serves to draw these fingers tightly against the stock of the handle to hold the guard tight to support the free end thereof, the outer end portion of the protector being of a length to lie substantially flush with the outer surface of the handle.

1,662,995. BRUSHING MACHINE FOR CIRCULAR OBJECTS. EDWIN H. ATWOOD, WALTER E. WANNER, and THOMAS L. REESE, Olean, N. Y., assignors to Vacuum Oil Company, New York, N. Y., a Corporation of New York. Filed Sept. 2, 1927. Serial No. 217,280. 15 Claims. (Cl. 15—58.)

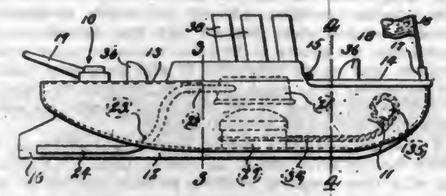


15. In a cleaning machine, the combination with means for supporting and rotating a circular object, of a rotary brush for cooperating with an object on said supporting means, said brush being mounted to swing about an axis extending longitudinally of the axis of rotation of the brush.

1,662,996. TRACK LINER. RALPH H. BLOXHAM, Chicago, Ill., assignor to Chicago Steel Foundry Company, Chicago, Ill., a Corporation of Maine. Filed June 15, 1925. Serial No. 37,155. 6 Claims. (Cl. 254—44.)

1. A track liner comprising a base having two spaced lips at one end of the bottom of the same and two spaced bosses above the lips, and a lever positioned between the lips and between the bosses and having a fulcruming portion for pivotal co-action with the bosses, said bosses partially overhanging said lips whereby to provide room for the reception of the base of a rail beneath the bosses.

1,662,997. DENTAL BURNER. HARRY J. BOSWORTH, Chicago, Ill., assignor to Harry J. Bosworth Company, a Corporation of Illinois. Filed Nov. 28, 1927. Serial No. 236,034. 9 Claims. (Cl. 158—111.)



8. In combination, a supporting base, a pair of hollow upright gas supply and burner mounting posts on said base, a burner ring having a tubular standard mounted in one of said posts, a second burner ring underlying said first ring and having a tubular standard mounted in the other post, a support for an article to be heated, a member adjustable up and down on said last standard for adjustably supporting said article support beneath both said burner rings and a member adjustable up and down on the other standard for supporting the article support beneath both burner rings adjacent the other standard, said last member being adjustable past the lower burner ring and adapted for supporting the article support between the burner rings.

1,662,998. TOY. SAMUEL J. BROWN, Maplewood, Mo. Filed Jan. 2, 1926. Serial No. 78,865. 9 Claims. (Cl. 46—37.)

1. A propelling device for floatable toys comprising a discoid boiler having rigid walls and having one of the horizontally disposed walls being so inwardly formed as

to almost touch the opposite wall, thereby forming an annular steam and water space tapering toward the

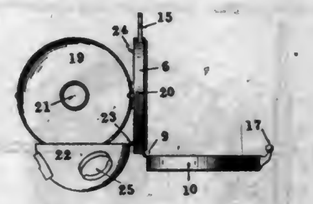
center, and a pair of pipes communicating tangentially with said space and extending rearwardly from said boiler.

1,662,999. METHOD OF COLLOIDALLY DISPERSING SOLIDS. SAMUEL CABOT, Jamaica Plain, Mass., assignor to Samuel Cabot, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Jan. 31, 1925, Serial No. 6,016. Renewed July 28, 1927. 11 Claims. (Cl. 134—39.)

1. The method of producing a colloidally dispersed material from solid matter consisting in producing a plastic colloid of such adhesiveness and cohesiveness that its resultant effective tenacity is superior to that of the inter-particle cohesion of the matter to be reduced, and in disintegrating said matter by masticating it with only sufficient of the colloid to coat the ultimate particles and render the whole plastic.

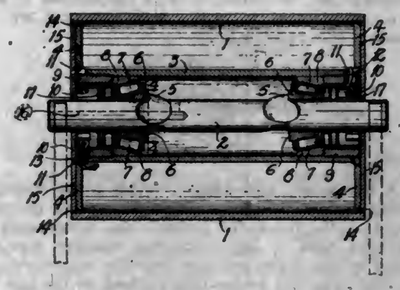
1,663,000. DECOLORIZING CARBON AND PROCESS OF MAKING SAME. CHARLES HALLSTEAM CHANDLER, Newport, R. I. Filed June 18, 1920. Serial No. 389,985. 4 Claims. (Cl. 252—3.)

1. The process of obtaining a decolorizing carbon from the pith of sugar cane which consists in separating the pith from the other parts of the cane, in softening the pith, in carbonizing the softened pith and in extracting the resultant pith char.



1,663,001. SPRING SEAT CONSTRUCTION. FRANK P. CHESLEY, Grand Rapids, Mich., assignor to J. L. MacInerney, Grand Rapids, Mich. Filed May 9, 1927. Serial No. 189,960. 5 Claims. (Cl. 155—180.)

1. In a spring seat construction, a base frame comprising a metallic member bent longitudinally between its margins to form a vertically disposed outwardly facing wall and bent to form walls substantially U-shaped in cross section to provide a downwardly opening channel adjacent the inner surface of said outwardly facing wall, said vertical outer wall extending above the top wall of the channel, and a tacking strip within the channel.



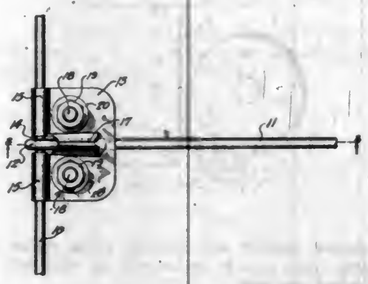
1,663,002. VANITY CASE. CLAUD L. COYLE, Clarence, Mo. Filed Apr. 4, 1927. Serial No. 180,644. 7 Claims. (Cl. 132—83.)

4. In a device of the class described, the combination with a main part comprising two members hinged together, one of said members carrying a mirror and the other forming a powder receptacle, of a dome-shaped member hinged to one side of said main part, and a second dome-shaped member having on its exterior surface article retaining means and hinged to said main part substantially at right angles to said first named

dome-shaped member and adapted to be folded against said main part and to be covered by said first named dome-shaped member.

1,663,003. CONVEYER ROLLER. GEORGE W. CURTIS, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 2, 1925. Serial No. 12,563. 9 Claims. (Cl. 308—209.)

1. A shaft, an elongated hollow roller rotatably mounted on said shaft, an elongated tubular member in said roller, and anti-friction bearings interposed between said tubular member and said shaft, said tubular member having radially extending spoke members at its ends made by bending the portions between slots in said tubular member that extend longitudinally from the ends thereof, and said spoke members being secured to said roller, at the end portions thereof.



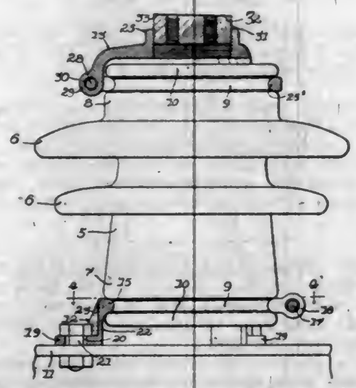
1,663,004. COATING FOR WELDING OR CUTTING RODS. J BIRCHARD GREEN, Chicago, Ill. Filed Jan. 22, 1927. Serial No. 162,933. 3 Claims. (Cl. 148—23.)

1. A coating composition for welding or cutting rods, including a flux material, an adhesive material for holding the flux material on the rods at normal temperatures, and another material for carrying the flux material up to the fusion zone under temperatures higher than that at which the adhesive material becomes ineffective.

1,663,005. SOLDERLESS CONNECTER. LEM E. HENDEE, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed June 16, 1924. Serial No. 720,356. 4 Claims. (Cl. 173—273.)

1. In a connecter for electric wires, the combination of a sheet metal clamping member folded on itself to provide a wire-receiving groove along its folded edge and having an aperture forming an intermediate notch in said folded edge to receive the hooked end of a laterally

extending wire adapted to engage about said line wire, said clamping member having registering grooves adapted to receive the end portion of said laterally extending

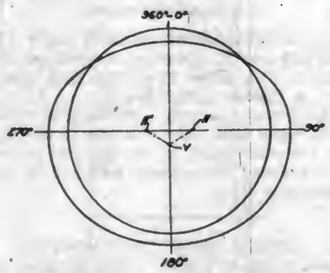


wire, and threaded members passing through the folded halves of said clamping member on each side of said registering grooves and adjacent said first-named groove for clamping said wires in said grooves.

1,663,006. BELT BUCKLE. GUY R. HOUGHTALING, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 5, 1927. Serial No. 181,187. 7 Claims. (Cl. 24—191.)

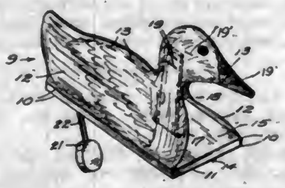
7. A belt buckle comprising a buckle frame having a clamping surface thereon, a clamping member pivotally mounted on the frame and movable also transversely of its pivotal axis, a belt anchoring member pivotally mounted on the frame and also movable transversely of its pivotal axis, and cooperating portions on the belt anchoring member and the clamping member for moving the latter about its axis and also transversely of its axis.

1,663,007. ELECTRIC CONDUCTOR SUPPORT. ERNEST H. JACOBS, Chicago, Ill., assignor to Electrical Engineers' Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 31, 1919. Serial No. 274,159. 7 Claims. (Cl. 173—313.)



1. In a means for gripping an insulator, a peripheral member comprising three segments, said segments being constructed of relatively heavy non-resilient metal and having inner contact faces adapted to fit into a groove in the insulator, screw threaded members connected to the ends of the segments for drawing adjacent ends of the segments together whereby the entire peripheral member is put under tension and the segments are forced into the groove to hold the insulator under compression, and means connected to said peripheral member comprising three arms, said arms being drawn radially toward the center of the peripheral member as said screw threaded members are tightened.

5. The improvements herein described, comprising a clamp for the upper end of an electric insulator consisting of a ring composed of three sections adapted to be bound around the upper end of the insulator, and a supporting member adapted to be arranged above the top of the insulator, the ends of said sections spaced apart to receive arms projecting down from said support, and bolts clamping said sections upon the insulator and supporting said upper support.

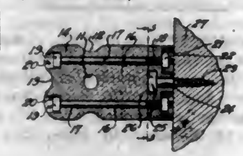


7. In a clamp for an insulator, a central member having a plurality of downwardly extending fingers for embracing the bead of the insulator and segmental tension means including bolts, said tension means being adapted to bend the extending fingers inwardly as the clamp is drawn tight upon the insulator.

1,663,008. HEADLIGHT REFLECTOR. ROY WALTER JOHNSON, Chicago, Ill., assignor to Lester-Johnson Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 9, 1924. Serial No. 691,716. 1 Claim. (Cl. 240—41.)

A reflector having a continuously curved reflecting surface non-circular in transverse section, all the elements of said surface being the same fixed curve of suitable character for the projection of light from a single interior central focus point, but adjacent elements having continually changing axes of rotation which pass through said focus point, the intersections of said axes with a plane which is perpendicular to the vertical and horizontal meridian planes of the reflector forming a locus with its ends in the horizontal meridian plane on each side of the vertical meridian plane, and with an intermediate point of said locus lying in said vertical meridian plane and below said horizontal meridian plane.

1,663,009. DECOY. WILLIAM R. JOHNSON, Seattle, Wash. Filed Mar. 8, 1926. Serial No. 91,953. 6 Claims. (Cl. 43—3.)



1. A decoy comprising a foldable frame having a bottom, and side walls extending upwardly therefrom, said side walls being secured together in proximity of their upper margins, a float detachably located within the lower portion of said frame, said float having a recess in its upper surface, and a post member having its upper end secured to said side walls, the lower end of said post being adapted to engage the float within said recess.

1,663,010. VARIABLE ELEMENT. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 30, 1924. Serial No. 689,434. 7 Claims. (Cl. 171—119.)

1. In a device of the character described including a pair of members comprising a stator element, a spherical member comprising a rotor element, shafts for supporting said rotor element, said pair of members having a pair of concave portions forming a spherical opening, said shafts supporting said rotor element in said spherical opening, means adapted to support the whole in a socket and other means adapted to support the whole on a panel.

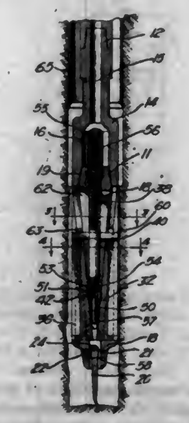
1,663,011. LINE-CONDUCTOR INSULATOR. WILLIAM D. KYLE, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 19, 1924. Serial No. 738,635. 6 Claims. (Cl. 173—28.)

1. An insulator comprising an insulator body having a wire-receiving portion, a base member, a threaded attaching member substantially centrally thereof extending loosely through said base member and having a non-circular head engageable therewith, and clamping means for securing said base member to said insulator body to retain the head of said attaching member between them, said attaching member being held within the insulator against relative rotation, whereby the attaching member may be screwed into a support by rotation of the insulator.

5. An insulator comprising an insulator body having a wire-receiving portion, a polygonal tool-receiving base member, a threaded attaching member extending loosely through said base member but held therein against relative rotation to permit driving by said base member, and means for securing said base member to said insulator body to retain said attaching member against removal.

1,663,012. CENTRIFUGAL BRAKE MECHANISM. LOUIS LANDRY, Berwick, Me. Filed May 2, 1927. Serial No. 188,090. 3 Claims. (Cl. 188—184.)

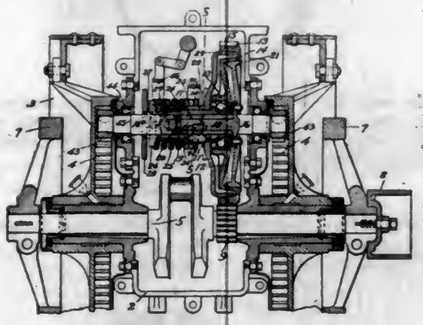
1. In a centrifugal brake mechanism, the combination comprising an exterior casing, a number of flexible brake strips each arranged to frictionally engage the interior of the casing when distorted by the application of pressure to its opposite ends, a rotary centerpiece within the casing having arms, means for rotating the centerpiece, levers pivoted to the arms of the centerpiece and connected respectively to said strips at one end thereof for applying pressure thereto as said levers are operated, each of said levers having a weighted arm displaceable outwardly by centrifugal force when said centerpiece is rotated and by the displacement of which weighted arm the lever is operated, other levers pivoted to said arms of the centerpiece and connected respectively to the



other ends of said strips for applying pressure thereto as said other levers are operated, and means whereby said other levers will be operated by the weighted arms of the levers first mentioned.

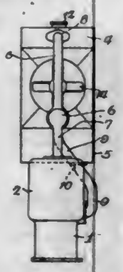
1,663,013. BATTERY TERMINAL. TOM P. LOGAN, Columbus, Ohio. Filed May 19, 1924. Serial No. 714,254. 1 Claim. (Cl. 173—259.1.)

A terminal attachment for storage batteries comprising an arm having a tapered bore adapted to be fixed upon a correspondingly tapered terminal of a storage battery, a tapered post arising from one end of said arm and disposed in offset relation with respect to said terminal, the diameter and taper of said post being the same as that of said bore, said post being adapted to detachably receive a lead connecter and to maintain said connecter spaced from said battery terminal.



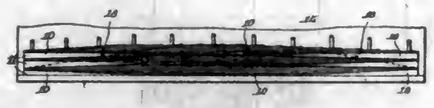
1,663,014. WELL-UNDERREAMING TOOL. MALDEN C. LOWMAN and GEORGE E. FENTRESS, Los Angeles, and ROBERT BANE, Fullerton, Calif. Filed Sept. 5, 1922. Serial No. 586,137. 4 Claims. (Cl. 255—75.)

1. In a well tool, the combination of: a body, having a fluid passage, adapted for securing to a drill pipe and comprising a member having longitudinal reamer chan-



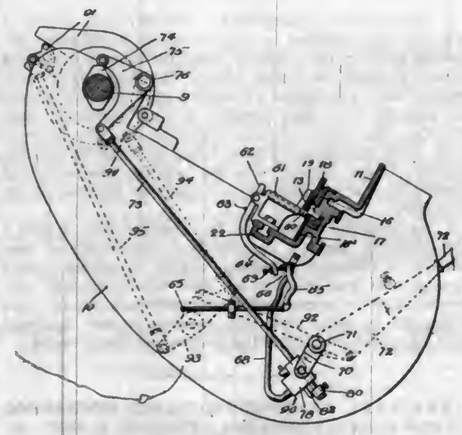
nels and a head therebelow: projectile cutting means carried by said body; means actuable by fluid pressure for projecting said cutting means; and means whereby obstruction of said fluid passage is effected when said projecting means is actuated.

1,663,015. CLUTCH. JOSEPH MADER, Minneapolis, Minn., assignor, by mesne assignments, to New Beeman Tractor Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 20, 1919. Serial No. 305,474. 10 Claims. (Cl. 180—17.)



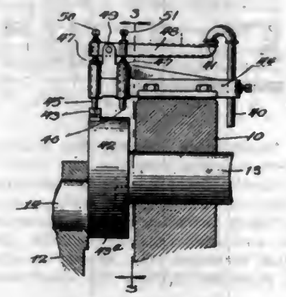
1. A traction machine comprising a frame, a source of motive power thereon, traction means for said frame, a crank shaft operated from said source of motive power, a gear having a driving connection with said crank shaft and provided with clutching surfaces, clutch members having independent driving connection with said traction means and mounted to engage said clutch surfaces respectively for driving said traction means from said gear, a steering device for said frame, a hand grip mounted on said steering device and mechanism connected with said hand grip for positively releasing one of said clutch members and subsequently positively releasing the other member.

1,663,016. INTERNAL-COMBUSTION-ENGINE COOLING SYSTEM. ELMER J. MANNING, Janesville, Wis., assignor of one-half to Alvaro S. Krotz, Janesville, Wis. Filed Dec. 29, 1922. Serial No. 609,598. 11 Claims. (Cl. 123—174.)



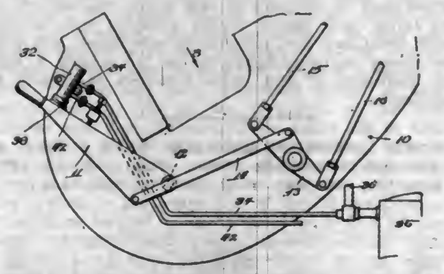
1. In an internal combustion engine, a cooling system the predetermined working temperature of which is the boiling point of the liquid employed therein, comprising a water jacket for cooling the engine, a condenser having a header forming a tank at the bottom thereof to serve as a reservoir for a varying quantity of water and to keep the condenser normally free of condensate, a steam separator having a steam and water connection to the top of said jacket, in which connection the normal water level is below the chamber of the separator, said separator having a drain connection to the bottom of the jacket and a steam connection to the top of said condenser, said tank having means to keep the water level therein below the condenser, and a water connection from the bottom of said reservoir to said drain connection, whereby to equalize the water level in said drain connection and in said tank.

1,663,017. PARTITION SHEET FOR LOOSE-LEAF DEVICES. ALFRED M. MARTIN, Chicago, Ill. Filed July 6, 1926. Serial No. 120,551. 3 Claims. (Cl. 129—1.)



1. A partition sheet for loose-leaf binders of the character described, said sheet being substantially rectangular and having side edges and top and bottom edges defining the substantially rectangular shape, the sheet having means at a side edge portion thereof for holding it in the binder, the upper and lower end portions of the sheet adjacent to the top and bottom edges respectively being formed with integral projections extending over the whole general surface of such end portions respectively between said holding means and the opposite side edge and providing such end portions with an effective thickness greater than that of the normal thickness of the sheet material from which made, the middle portions in the up and down directions of the sheet between said end portions and between said holding means at one side edge portion and the side edge opposite thereto being free of such projections.

1,663,018. AUTOMATIC DIE PRESS. CHARLES D. MCDONALD, Chicago, Ill., assignor to McDonald Machine Co., Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 20, 1926, Serial No. 82,395. Divided and this application filed Sept. 30, 1926. Serial No. 138,626. 11 Claims. (Cl. 192—128.)

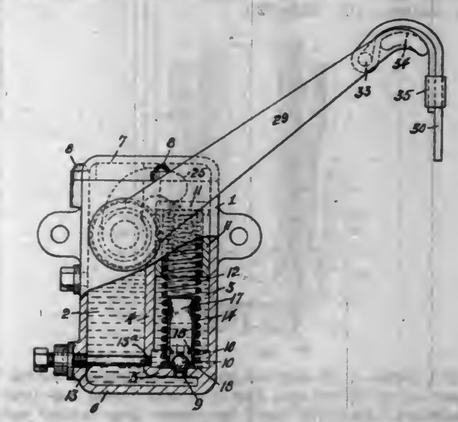


3. In an automatic die press, the combination with a continuously moving press element, a feed way for the work and clutch and brake throwing mechanism for starting and stopping the press, of a normally inactive arm, operatively connected to and moving with a member of said clutch and brake throwing mechanism, arm actuating means operated by said moving press element and including a normally inactive connecting member between said arm and arm actuating means, a movable element extending into said feed way and arranged to be operatively engaged by an abnormal number of metal strips entering said feed way, and operative connections between said movable element and said connecting member.

1,663,019. AUTOMATIC DIE-PRESS-STOPPING MECHANISM. CHARLES D. MCDONALD, Chicago, Ill., assignor to McDonald Machine Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1927. Serial No. 167,411. 12 Claims. (Cl. 192—128.)

4. In automatic press stopping mechanism for die presses having manually operated press starting and stopping mechanism, and a crank shaft for operating the ram of the press, the combination with the hand lever of the press starting and stopping mechanism, of a vacuum head having a suction end arranged to contact with said hand lever when in operative position, said vacuum head being connected with a vacuum source and having a vent tube opening to its suction end and leading therefrom, there being an air vent in said tube controlled by a vacuum release valve normally closing said air vent, a throw amplifying lever for actuating said valve, and normally inactive lever actuating means mounted on the crank shaft of the press arranged to actuate said lever when the crank shaft is subjected to abnormal strain.

1,663,020. AUTOMATIC PRESS-STOPPING MECHANISM. CHARLES D. MCDONALD, Chicago, Ill., assignor to McDonald Machine Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1927. Serial No. 167,412. 11 Claims. (Cl. 192—128.)

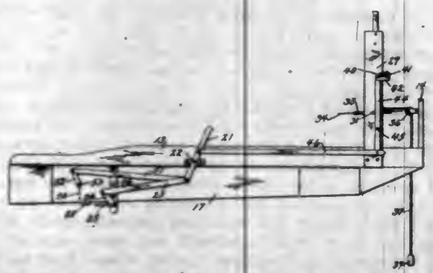


3. Automatic die press stopping mechanism, comprising in combination, the hand lever of the press starting and stopping mechanism of a press having a strip feed way and connectible and disconnectible finger bar actuating mechanism, a vacuum head having a suction end arranged to contact with said hand lever, whereby the lever is supported in starting position when vacuum is created at the suction end of said vacuum head, said vacuum head being connected with a vacuum source, a vent tube leading from the suction end of said vacuum head, an air valve on said vent tube and mounted on one member of said connectible and disconnectible finger bar actuating mechanism, and a valve actuating trigger, which is held in an inactive position by the other member of the finger bar actuating mechanism when said members remain connected.

1,663,021. HOLDER FOR MANICURE PREPARATIONS AND THE LIKE. WILLIAM MEYER, Chicago, Ill. Filed Nov. 26, 1926. Serial No. 150,854. 3 Claims. (Cl. 206—1.)

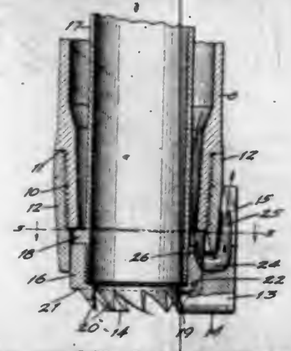
1. In a device of the class described, the combination of a body of glass having an integral boss extending laterally from the side of the body and having a plurality of wells in the body, said boss having a pair of openings vertically therethrough, a pair of posts headed at their upper ends and having shanks passing down through said openings and engaging in nuts below the boss, the headed upper end of each of said posts having a lateral opening therein, a cross pin having its opposite ends engaging in said openings, a sheet metal cover fitting over the top of the body for covering and uncovering said wells, an integral sheet metal tab extending laterally from said cover and rolled back upon said pin, said cover being held in covering position upon the top of said body solely by the rolling of said tab around said pin and the fit of the tab between the headed upper ends of said posts, said cover having a depending marginal flange adapted to fit over the body when the cover is closed, and the top of said cover being raised so that it will not come into contact with the contents of the wells when the cover is closed.

1,663,022. RECOIL-CHECKING DEVICE. DON D. MYERS, Toledo, Ohio, assignor to Monroe Auto Equipment Manufacturing Co., Monroe, Mich., a Corporation of Michigan. Filed June 26, 1926. Serial No. 118,656. 15 Claims. (Cl. 267—8.)



1. In a device of the class described, a body, a lever means, and a piston means resisting movement of the lever means in one direction, said body and lever means having coaction to prevent separation thereof except when the lever means is in a predetermined position relative to the body.

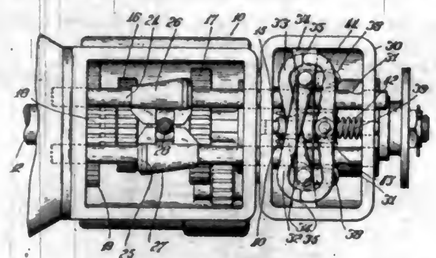
1,663,023. AUTOGRAPHIC REGISTER. GEORGE J. NETH, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed May 27, 1922. Serial No. 564,191. 19 Claims. (Cl. 282—21.)



1. In combination, in an autographic register, paper engaging means and wrapping means, and means for actuating said wrapping and engaging means to eject the wrapped paper.

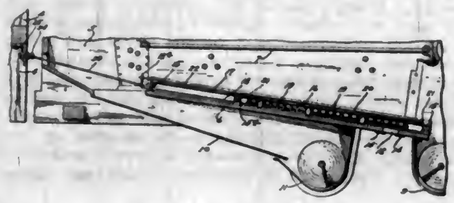
1,663,024. GAME APPARATUS. HARRY W. NOYES, West Haven, Conn. Filed Oct. 1, 1926. Serial No. 138,995. 20 Claims. (Cl. 273—118.)

1. A game apparatus having an alley partitioned table; a ball; a rotary carrier adjacent to the alley and in the path of and engaged and actuated by the ball from the alley; cards connected with the carrier; tension means for moving the carrier in a direction opposite to that by which it was moved under the impact of the ball; and means engaging the cards to stop the rotation of the carrier in one direction.



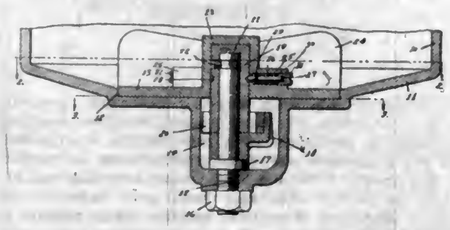
1,663,025. CORE DRILL. JOHN T. PHIPPS, Huntington Park, Calif., assignor to H. C. Smith Manufacturing Company, Whittier, Calif., a Corporation of California. Filed Nov. 27, 1925. Serial No. 71,841. 9 Claims. (Cl. 255—72.)

1. A rotary core drill adapted for attachment to the lower end of a drill pipe and to receive circulation fluid therefrom, said drill being provided with means for reversing the flow of said fluid and for discharging said fluid upwardly from a point closely adjacent the lower end of the drill.



8. A hollow core drill body having fluid circulating passages communicating with its interior and terminating in discharge openings disposed to direct circulation fluid upwardly.

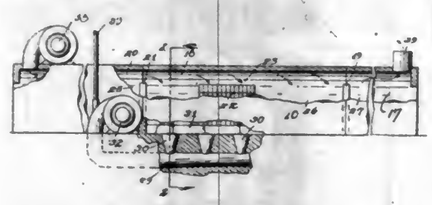
1,663,026. TRANSMISSION MECHANISM. HELMUTH A. SCHULTZE, Chicago, Ill., assignor to Flexo-Motive Corporation, Chicago, Ill., a Corporation of Delaware. Filed Sept. 11, 1922. Serial No. 587,274. 32 Claims. (Cl. 74—58.)



28. In a transmission gearing, the combination with shiftable speed changing elements, and means for shifting said elements, including parts individual to the shiftable elements and operable independently of each other, of a clutch including a shiftable member, shiftable out of and into engaging position during each speed shifting operation, and means operable by any one of said parts for shifting the clutch member.

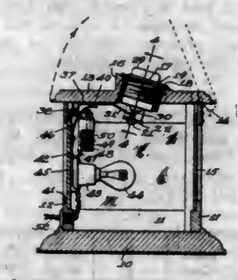
1,663,027. DOCKAGE SCREEN FOR THRASHING MACHINES. SEVERIN N. SORENSEN, St. Paul, Minn. Filed Apr. 25, 1925. Serial No. 25,797. 1 Claim. (Cl. 209—387.)

The combination with a relatively fixed frame and a vibratory shoe of a thrashing machine, of a dockage screen applied to said shoe, a lower cleaning device working against the under surface of said screen and having extended bars with upturned rear ends, an upper cleaning device working on the upper surface of said screen and having extended bars anchored to the upturned ends of the bars of said lower cleaning device, and thrust rods applied to the upturned ends of said latter noted bars and anchored to said frame, said bars and thrust rod constituting means for causing a relative movement of said cleaning devices in respect to said screen.



1,663,028. WASHING-MACHINE GEAR. BERT A. STOCKING, Des Moines, Iowa. Filed Feb. 21, 1927. Serial No. 169,875. 4 Claims. (Cl. 259—101.)

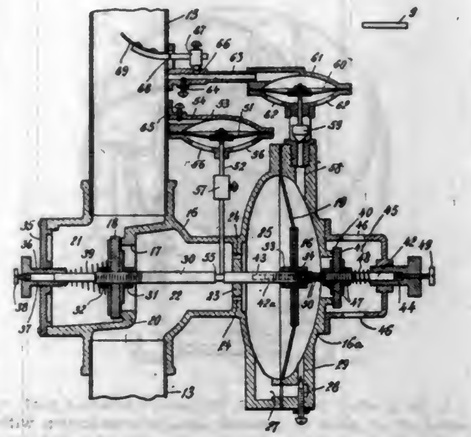
4. In a washing machine, a tub having a bottom, an upright post, a sleeve rotatively mounted on said post,



a dolly detachably supported on said sleeve, yieldable means for retaining said dolly against removal from said sleeve, means for operatively connecting said sleeve with said dolly, and means for imparting oscillatory movement to said sleeve.

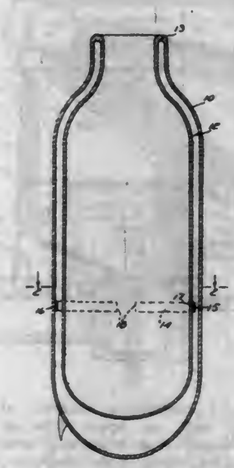
1,663,029. TUNNEL KILN. HALVER R. STRAIGHT, Adel, Iowa. Filed May 25, 1926. Serial No. 111,528. 11 Claims. (Cl. 25—142.)

1. In combination, a kiln car having a platform, of a ware supporting floor carried by said platform comprising a series of spaced and transverse rows of hollow tile, the tile of each row being arranged in separated groups.



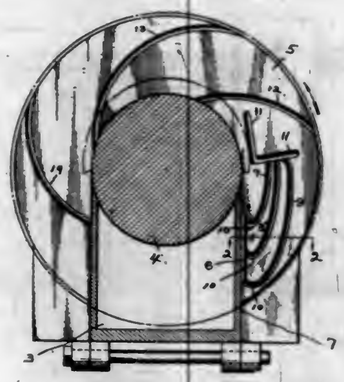
1,663,030. CIGAR LIGHTER AND ADVERTISING CABINET. CARL J. UNDERWOOD and JAMES A. UNDERWOOD, Huntington Beach, Calif. Filed Mar. 16, 1925. Serial No. 16,086. 1 Claim. (Cl. 219—32.)

In a combined advertising cabinet and cigar lighter, a cabinet, a lid hinged thereto, a threaded socket arranged for movement through an opening in said lid, a bearing supported on the under side of the lid, springs arranged between said bearing and threaded support, a heating coil carrying plug, removably seated in said threaded support, one of the terminals of the coil carried by said plug extending to the under side of said plug, a spring tongue with which the terminal of said coil is adapted to make contact when moved inwardly, electric conductors leading from said bar and said spring contact to the under side of the lid spring, contact members secured to the inner face of one of the walls of the cabinet and adapted to make contact with the contact members on the under side of the lid when the same is closed and a source of electrical energy connected to said spring contact arms.



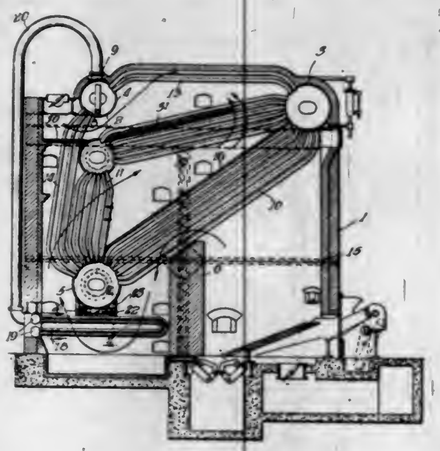
1,663,081. PNEUMATIC DISPATCH SYSTEM. EDMUND WEIGELE, Bergenfield, N. J., assignor to Atlas Devices Company, Inc., a Corporation of New York. Filed Apr. 6, 1923. Serial No. 630,215. 15 Claims. (Cl. 243—9.)

1. The method of operating pneumatic dispatch systems wherein a tube line is used for the transmission of carriers, which consists in initiating a carrier-propelling flow of air upon insertion of a carrier in the



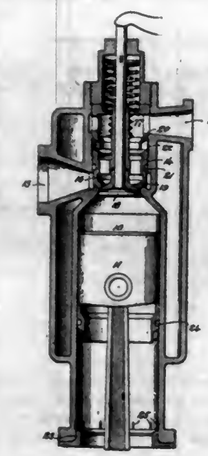
line, and maintaining an intermittent flow through the line when the latter is unoccupied by carriers; substantially as described.

1,663,032. DOUBLE-WALLED VACUUM RECEPTACLE. MINER P. WETMORE, Norwich, Conn., assignor to The American Thermos Bottle Company, Norwich, Conn., a Corporation of Ohio. Filed Jan. 4, 1927. Serial No. 158,856. 7 Claims. (Cl. 215—13.)



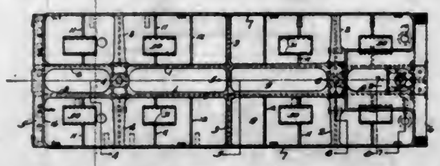
1. A double-walled vacuum receptacle in which the outer and inner glass cylinders are spaced by a one-piece open ring of spring metal provided with outwardly extending rounded humps suitably spaced and arranged to engage only the outer cylinder, said ring being so shaped that the inner cylinder is engaged only by those portions of the ring that are intermediate said humps, whereby said ring when inserted under tension into the space between said cylinders automatically adjusts itself into contact with both cylinders.

1,663,033. HUB-LINER LUBRICATOR. MILTON W. WHALEN, Baltimore, Md. Filed Mar. 22, 1927. Serial No. 177,373. 5 Claims. (Cl. 308—165.)



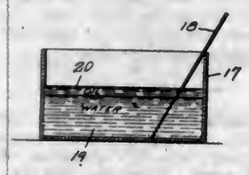
5. In a wheel hub liner a lubricant collecting port, a series of oil ports in constant open communication with said collecting port, and a second series of ports open at each end and extending from the perimeter of the liner to its journal bearing face, said ports being formed in and open to the hub bearing face of the liner.

1,663,034. BOILER. RALEIGH J. ADAMS, Chicago, Ill. Filed Sept. 14, 1922. Serial No. 588,189. 4 Claims. (Cl. 122—478.)



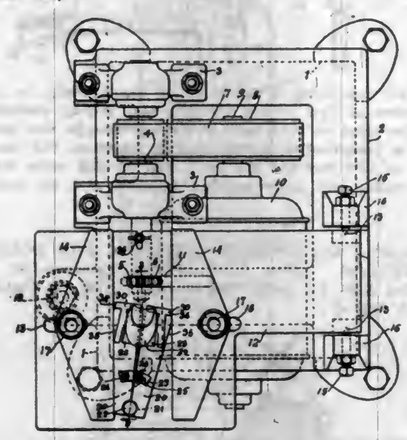
1. In a boiler, a combustion chamber at the front thereof, a bridge wall, an upper forward transverse steam drum, an upper rear transverse steam drum, a transversely extending mud drum located at the rear part of the boiler in spaced relation with the bottom and rear wall thereof, a bank of tubes extending forwardly from the mud drum to the front part of the boiler above the combustion chamber and connecting the mud drum and the forward upper steam drum, banks of tubes connecting the rear steam drum to the forward steam drum and to the mud drum, baffling means for directing the heated gases from the combustion chamber beneath the mud drum, and a superheater arranged below the said mud drum and extending adjacent the rear wall of the boiler, the superheater being connected with the upper rear steam drum.

1,663,035. METHOD OF AND MEANS FOR PREVENTING LEAKAGE. DORSEY F. ASBURY, Broomes Island, Md. Filed Feb. 19, 1925. Serial No. 10,293. 7 Claims. (Cl. 74—109.)



1. Means to prevent leakage of fluid past a member reciprocal in a passageway between high and low pressure fluid chambers, including means operated by movement of said member in the direction of said low pressure chamber to raise the pressure of a portion of the fluid in the low pressure chamber, and means whereby the fluid compressed by said first named means is forced past a portion of said member in the direction of the high pressure fluid chamber to balance the tendency of fluid in the high pressure chamber to pass by said member into the low pressure chamber.

1,663,036. RAILWAY VEHICLE STRUCTURE. WILLIAM O. ASHE and HARRY M. PFLAGER, St. Louis, Mo., assignors to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed July 1, 1927. Serial No. 202,877. 21 Claims. (Cl. 105—286.)

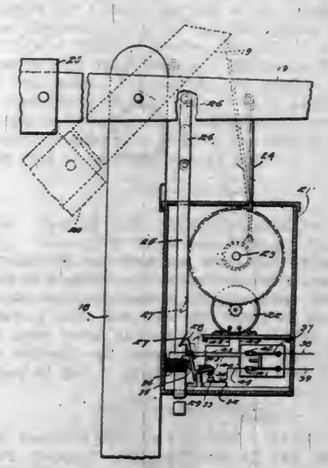


1. A railway vehicle underframe casting comprising a complete tank bottom member.

1,663,037. METHOD OF GALVANIZING. JASPER BLACKBURN, Webster Groves, and ARTHUR ALBRECHT, St. Louis, Mo.; said Arthur Albrecht assignor to said Jasper Blackburn. Filed Dec. 7, 1925. Serial No. 73,558. 3 Claims. (Cl. 91—70.2.)

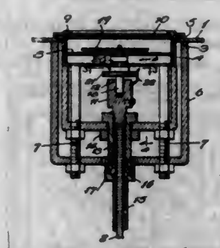
2. The method of galvanizing which comprises first making a bundle of a number of articles to be treated, second pickling said bundle, third dipping said bundle into a bath of molten metal, fourth removing said bundle from said bath and simultaneously therewith subjecting the same to a flame for increasing its temperature, fifth jarring said articles so as to separate the same from each other, sixth passing said bundles through oil and into water by a continuous movement for cooling and setting the metal adhering to the articles.

1,663,038. CONCAVING HEELS. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed May 10, 1927. Serial No. 190,335. 13 Claims. (Cl. 12—46.)



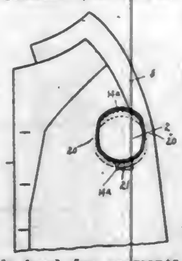
1. In a heel concaving machine, a supporting platform, a cutter rotating therethrough, a guide, a heel holder having a tapering surface adapted to be moved over the cutter, and clamping members arranged to hold the heel in position to be operated on by the cutter when the holder and heel are moved over the cutter.

1,663,039. TENNIS RACKET. EDWARD J. CRAVEN, Springfield, Mass. Filed June 25, 1927. Serial No. 201,331. 10 Claims. (Cl. 273—73.)



5. In a racket, a frame and a handle, a perforated tightener, a string having its ends fastened to said frame, and being looped three times through the frame and twice through the perforation in said tightener, and means to move said tightener endwise.

1,663,040. AUTOMATIC RAILWAY GATE. MATTHEW DUCHSHERER, Balfour, N. Dak. Filed Sept. 7, 1926. Serial No. 134,040. 5 Claims. (Cl. 246—125.)

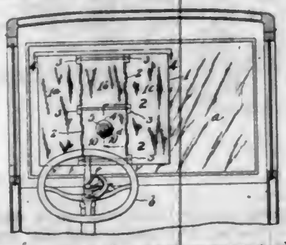


1. An automatic barrier for a railway crossing comprising a pivoted and weighted gate, a winding drum, a cable connected to the gate and drum, an electric circuit, a motor in the circuit operatively connected with the winding drum for closing the gate, a rod carried by the gate, and having a detent receiving means, a circuit breaker in the circuit, and a detent associated with the circuit breaker normally held by the rod to maintain the circuit closed, said detent being arranged to operate the circuit breaker to break the circuit upon engaging with said detent receiving means and to maintain the gate in closed position until a train has passed the crossing.

1,663,041. LIQUID-LEVEL INDICATOR. GEORGE J. DUNBAUGH, Jr., Chicago, Ill., assignor to Champion Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 10, 1923. Serial No. 667,672. 3 Claims. (Cl. 116—129.)

2. An indicator comprising a dial cup, a dial arranged thereacross, a bracket for holding said dial cup in position, a drive shaft carried by said bracket and having a socket at one end, a spindle rotatably journalled in said socket and extending through said cup, a pointer carried by said spindle and movable across said dial, enlargements on said spindle on opposite sides of said cup so as to prevent axial displacement of said spindle, and means for transmitting rotation between said spindle and shaft and comprising a notched wheel carried by one of said members, a resilient arm carried by the other of said members and having a tooth engageable in said notches, whereby said members may be adjusted angularly of one another.

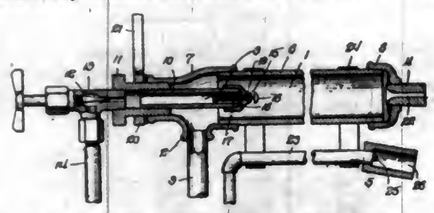
1,663,042. ARMHOLE BEAD FOR GARMENTS. FRANK J. DUX, Utica, N. Y. Filed Mar. 15, 1927. Serial No. 175,564. 5 Claims. (Cl. 2—93.)



4. In an armhole bead for garments having a sleeve portion and a chest portion, and an armhole at the junction of said portions, said sleeve comprises an outside material and an inner trim and said chest portion comprises an outside material and an inner trim and an unyielding cord fastened adjacent the junction of said sleeve and chest portions, whereby to aid in supporting said chest portion.

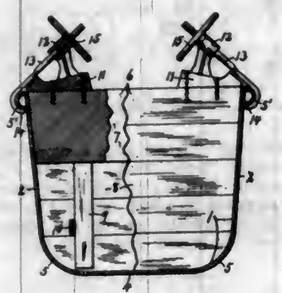
1,663,043. LINK. DON J. EDWARDS, Portland, Me., assignor to The Thomas Laughlin Company, Portland, Me., a Corporation of Maine. Filed Feb. 12, 1923. Serial No. 618,662. 2 Claims. (Cl. 59—90.)

1. A link of the character described comprising a connecting end portion integral with opposite side portions having offset terminals formed to interlock when forced endwise towards each other into overlapping relation, the side portions having their greater diameter at right angles to the general plane of the body of the link and a substantially shorter diameter in said general plane, whereby to facilitate the forcing of the arms into overlapped relation and resist the bending of the arms out of said plane.



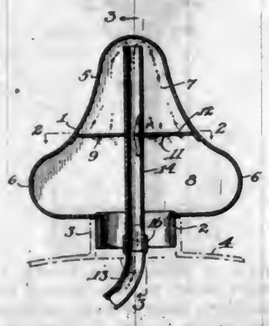
1,663,044. ANTITHEFT DEVICE FOR AUTOMOBILES. JAMES J. FURLONG, Youngstown, Ohio. Filed Feb. 26, 1926. Serial No. 90,946. 5 Claims. (Cl. 296—95.)

2. The combination of a nontransparent plate consisting of a plurality of sections; means for hingedly connecting the said sections whereby folding upon each other is permitted in one direction only; and means for detachably locking the said plate to the windshield of an automobile so that the direction of folding will be towards the said windshield.



1,663,045. OIL BURNER. JEFFERSON C. GIBSON, Chicago, Ill. Filed Nov. 17, 1922. Serial No. 601,641. 1 Claim. (Cl. 158—76.)

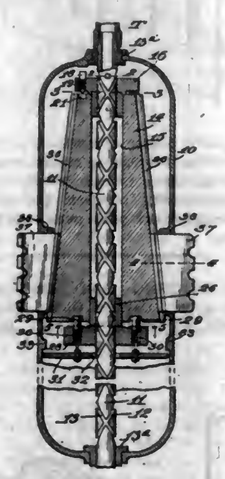
An oil burner comprising an elongated tubular mixing chamber having an axially alined restricted outlet at one end thereof and an air inlet adjacent the other end thereof, a concentrically disposed oil inlet nozzle extending into said mixing chamber and having its discharge end located between said air inlet and said restricted outlet, a cap having a port therethrough screwed on the end of said oil nozzle, a valve for said port having a transversely disposed head located on the outside of said



cap for producing a spray of oil transversely to the direction of flow of air through said mixing chamber, a valve stem on said valve extending through said port, and a compression spring bearing between the inner wall of said cap and the inner end of said valve stem for urging said baffle member to close said oil nozzle port.

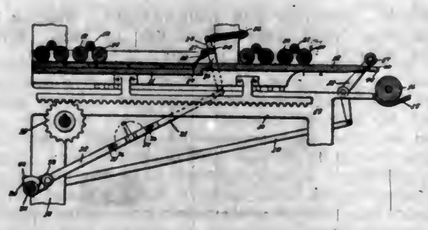
1,663,046. ADJUSTABLE PARTITION FOR DOUGH TROUGHS. LOUIS F. GOTTWALD, Syracuse, N. Y. Filed Nov. 24, 1925. Serial No. 71,134. 5 Claims. (Cl. 107—7.)

4. An adjustable partition for dough troughs having brackets secured to the upper edge thereof and provided with downwardly diverging guides and clamping bolts adjustable in said guides and provided with means for engaging opposite sides of the trough for clamping the partition in its adjusted position.



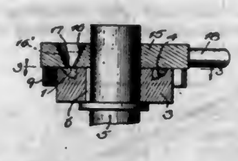
1,663,047. ATTACHMENT FOR AUTOMOBILE RADIATORS. GAROLD C. J. GRAY, Hastings, Nebr. Filed Mar. 26, 1927. Serial No. 178,627. 7 Claims. (Cl. 257—25.)

1. A device of the character described comprising a casing having an upper chamber and a lower chamber, a



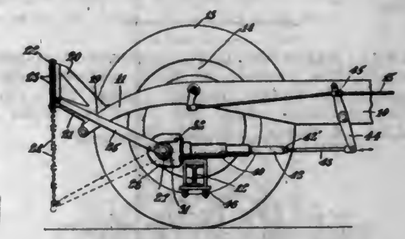
perforate baffle between said chambers, and a downdraft vent pipe extending upwardly through the lower chamber and into the upper chamber and in communication at its upper end with the latter-named chamber.

1,663,048. UNDERREAMER. EARL S. HARTSON, Los Angeles, Calif. Filed Apr. 11, 1927. Serial No. 182,723. 7 Claims. (Cl. 255—74.)



1. In an underreamer, a housing, a tubular mandrel extending axially through said housing, said mandrel having right and left hand threads, a conical member arranged within the housing, cutter blades arranged for movement through the wall of the housing, the inner portions of which cutter blades have inter-engagement with said conical member, nuts loosely mounted in the ends of said conical member, one of which nuts engages in the right hand thread of the mandrel, the other nut having engagement with the left hand thread of the mandrel and automatically acting means for effecting an alternate locking of said nuts to the ends of said conical member.

1,663,049. INK-CLEANING DEVICE FOR FLAT-BED CYLINDER PRINTING PRESSES. BOARDMAN J. HILL, Des Moines, Iowa. Filed Apr. 26, 1927. Serial No. 186,690. 3 Claims. (Cl. 101—425.)

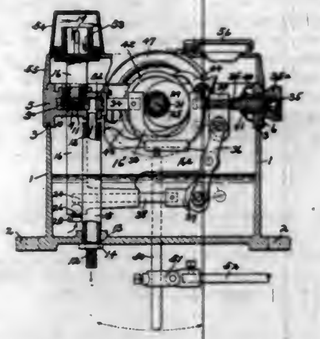


1. The combination with a printing press having a flat ink distributing plate and a series of ink distributing and form inking rollers, of a flexible cleaner above the flat ink distributing plate, means for moving the cleaner into engagement with the flat ink distributing plate during the movement of said plate in one direction and elevating said cleaner out of engagement with the said ink distributing plate during the movement of the latter in the opposite direction, a trough shaped ink receptacle attached to one end of the ink distributing plate in position to receive ink scraped from the said plate and of such size as to permit the flexible cleaner to move downwardly into the trough after the end of the ink distributing plate passes the cleaner, the side of the trough opposite from the adjacent edge of the ink distributing plate being formed into a blade to engage the side of the cleaner and remove ink therefrom and discharge it into the trough, and means for causing the flexible cleaner to swing downwardly through an arc as it passes through the trough and to approach a substantially vertical position when it engages the blade at the side of the trough opposite from the ink distributing plate.

1,663,050. MOLD FOR MAKING PACKING OR THE LIKE. NORMAN E. JOHNSON, Chicago, Ill., assignor to Chicago Rhopac Products Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 10, 1923. Serial No. 667,696. 6 Claims. (Cl. 22—150.)

1. In apparatus for molding metallic packing rings, a mold section having a mold cavity therein, a plurality of partitions arranged transversely of the mold cavity for forming a plurality of independent chambers in the mold cavity, a second mold section revolubly mounted with respect to said first mold section and having a gate for each of said chambers, and means for rotating said second mold section with respect to the first mold section.

1,663,051. FENDER. HARRY M. KATZ, New York, N. Y. Filed Aug. 9, 1927. Serial No. 211,673. 9 Claims. (Cl. 293—41.)

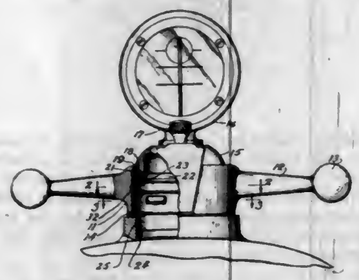


1. A safety fender for vehicles comprising in combination with the brakes of a motor vehicle, a plurality of fender bars carried by the chassis of the vehicle, lazy-tongs connections between said bars, and means connected to the lowermost of said bars actuated by the application of the vehicle brakes to operate said bars and lazy-tongs forming a protecting screen.

1,663,052. AUTOMATIC OIL PUMP WITH SIGHT FEED. JOHN J. LANGMACK, Portland, Oreg. Filed Sept. 24, 1925, Serial No. 58,413. Renewed Aug. 19, 1927. 6 Claims. (Cl. 184—27.)

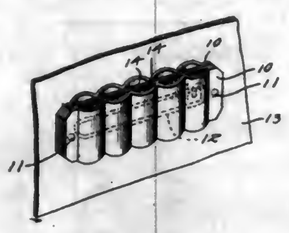
6. A sight feed oil pump including in combination a container for oil, a sleeve set in the bottom of said container and extending upwardly above the oil level and

providing an outlet through the bottom of said container, a pumping mechanism removably set in said container



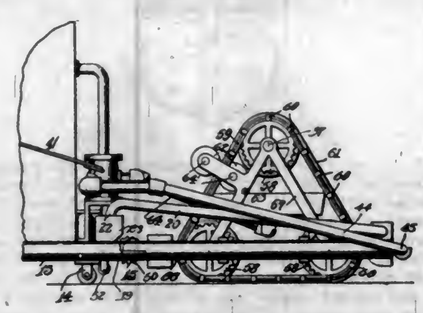
and having a discharge pipe extending through said sleeve, and means providing a sight feed of oil from the pumping mechanism to said sleeve.

1,663,053. FOLDING EYEGLASSES. CHARLES R. LAUBSCHER, Richmond Hill, N. Y. Filed Jan. 27, 1927. Serial No. 164,042. 2 Claims. (Cl. 88—44.)



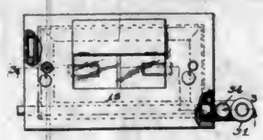
1. Folding eyeglasses comprising lens holding frames, a handle piece on one of the frames having a plurality of bores therein, a sleeve in one of said bores having an opening therein arranged to coincide with the other bore, a hook on the other frame, the hook being arranged to extend through the opening in said sleeve and into the adjacent bore and a latch for retaining the hook in said opening.

1,663,054. RADIATOR CAP. ALOYSIUS C. LIPPERT, Kenosha, Wis., assignor, by direct and mesne assignments, to The Norlipp Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1924. Serial No. 731,291. 6 Claims. (Cl. 220—24.)



1. A radiator cap, comprising an inner member attachable to the radiator neck of an automobile or the like, an outer member enclosing said inner member, a cover hinged to said outer member, a motometer permanently secured to said cover, and means extending in through said outer member and arranged tangentially to said inner member for securing said members together against theft.

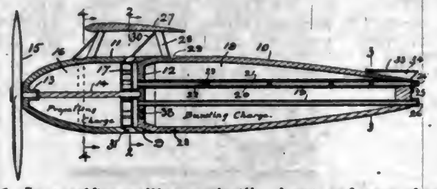
1,663,055. PEN AND PENCIL HOLDER. PATRICK F. MCAULEY, Buckner, Ill. Filed July 28, 1927. Serial No. 209,040. 1 Claim. (Cl. 24—12.)



A pen and pencil holder comprising a plurality of pen and pencil receiving tubular members, means for attaching the tubular members to a garment, and elastic strips extending longitudinally between the tubular members for frictional engagement with pens and pencils inserted into said bores.

1,663,056. SCRUBBING AND DRYING MACHINE. GEORGE C. MEOLING, Canton, Ohio. Filed Feb. 7, 1924. Serial No. 691,265. 2 Claims. (Cl. 15—99.)

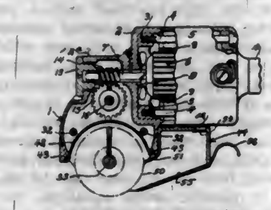
1. A drying apparatus comprising a frame, a roller mounted transversely in the upper portion of the frame, a pair of rollers mounted in the lower portion of the frame and arranged in a common horizontal plane, a mop belt engaged around the rollers whereby the portions of the same between the lower rollers will wipe the surface to be dried, and means arranged between the upper roller and a lower roller for squeezing the liquid from the belt.



1,663,057. HEATER FOR INCUBATORS. WILLIAM H. MONROE, Colfax, Iowa. Filed Feb. 15, 1924. Serial No. 693,039. 1 Claim. (Cl. 237—15.)

A heater for incubators comprising a tubular tank in the form of a loop designed to be supported substantially horizontally, one portion of said tank having an inclined downwardly and outwardly extending tubular portion, a vertical non-water-jacketed lamp flue adjacent to the outer end of said downwardly and outwardly extending portion, a heating pipe extending longitudinally through one side of said loop and through said downwardly and outwardly extending portion and communicating with the interior of said flue, that portion of said

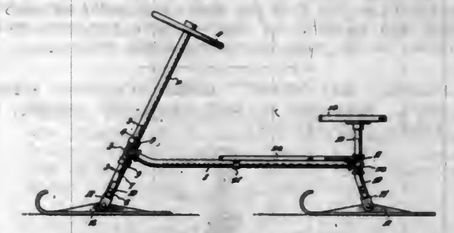
heating pipe which extends through the downwardly and outwardly extending tubular portion of said tank being mounted below the center of the inclined tubular portion, substantially as described and for the purposes stated.



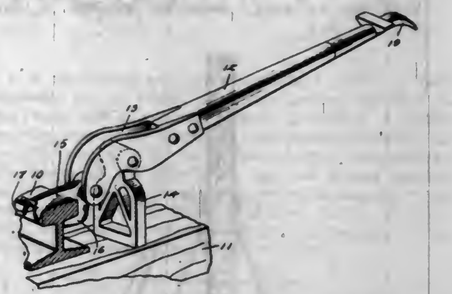
1,663,058. GLIDING PROJECTILE. JOSEPH PEPPIN, Sciota, N. Y. Filed July 1, 1927. Serial No. 202,899. 5 Claims. (Cl. 244—1.)

1. In a self-propelling projectile, front and rear chambers having a propelling charge and a bursting charge respectively, a pipe having an ignition train enclosed in the rear chamber and opening into the front chamber, a time fuse comprising a tube having its ends fixed in the rear chamber, an inner tube mounted to turn within the fixed tube and opening into the front chamber its rear end being closed, a time train filling the inner tube, said tubes being provided with corresponding vents similarly spaced longitudinally but dissimilarly spaced circumferentially; and a propeller adapted to be actuated by said propelling charge to drive the projectile.

3. In a self-propelling projectile, front and rear chambers having a propelling charge and a bursting charge respectively, a propeller adapted to be actuated by the propelling charge to drive the projectile, sustaining wings and means for detachably securing the wings on the projectile, comprising bands fixed on the wings embracing the projectile, and supporting members having button-headed elements engaging in corresponding apertures provided in the projectile.



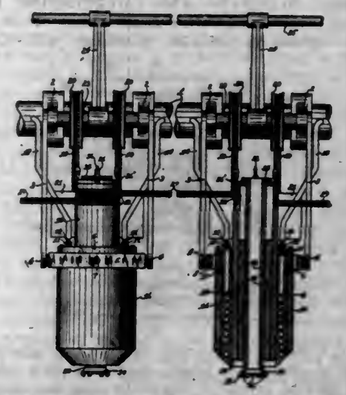
1,663,059. CLEANING AND ABRASIVE DEVICE. JOHN J. PETERSON, Steubenville, Ohio. Filed Dec. 30, 1922. Serial No. 609,923. 1 Claim. (Cl. 15—93.)



In a machine of the character described, a casing, heads fitting into the casing at the ends thereof and each provided with a peripheral flange abutting the end of said casing, a cleaning member mounted in the casing and provided with a bearing element at each end, the heads being provided with recesses for reception of said bearing elements, means for detachably securing the heads together, a supplemental casing integral with the main casing, a motor casing detachably secured to said supplemental casing and provided with a rearwardly projecting handle element, a motor in the motor casing, and driving connections between the motor and said cleaning member, said connections permitting bodily removal of the cleaning member when the heads are detached.

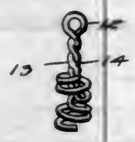
1,663,060. CHILD'S CONVERTIBLE TOY. AUSTIN E. RAINEY, Grove City, Pa. Filed Nov. 24, 1926. Serial No. 150,490. 3 Claims. (Cl. 208—165.)

1. A child's vehicle comprising a reach bar having its front end upwardly deflected, clusters at opposite ends of the reach bar, a steering post vertically adjustably mounted in the vertical portion of the front cluster, a seat post secured within the upper portion of the rear cluster, a supporting element detachably connected to the lower end of the steering post, a second supporting element coupled to the rear cluster, a platform secured to the rear portion of the reach bar, and arms projecting laterally from opposite sides of the rear cluster.



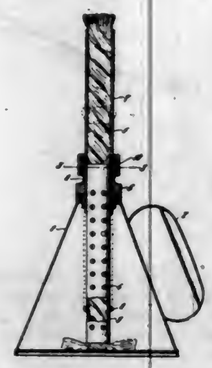
1,663,061. RAILWAY-RAIL-LIFTING BAR. DAVID RICH, Spooner, Wis., assignor of two-fifths to Garnett R. McKeever, Spooner, Wis. Filed Apr. 16, 1927. Serial No. 184,364. 1 Claim. (Cl. 254—121.)

A railway rail lifting device comprising a lever having a bifurcated end, a fulcrum leg pivotally depending from the inner end portion of the bifurcation, and a rail engaging arm pivotally mounted in the outer end of the bifurcation and having a hook portion adjacent its inner end and an angularly extending portion on its outer end, said angularly extending portion being disposed on the same side of the arm as that of the hook.



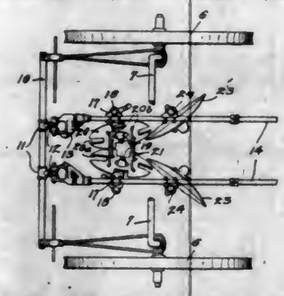
1,663,062. CAN-CAP-SOLDERING APPARATUS. ALPHEUS E. ROE, Oakland, Calif. Filed Mar. 28, 1927. Serial No. 178,888. 6 Claims. (Cl. 113—108.)

1. A can-cap soldering apparatus comprising a heating member; a soldering member within said heating member; connections for flexibly suspending said soldering member independently of said heating member;



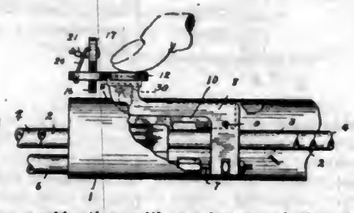
means for raising and lowering said connections to move said soldering member to and from the work; a holder member fitted within the soldering member for linear movement to and from the work; and means associated with said members for effecting their movement with relation to the work, in reversed timely order.

1,663,063. HAY SLING. HENRY SCHNEIDER, Alden, Minn. Filed May 18, 1927. Serial No. 192,375. 3 Claims. (Cl. 24—123.)



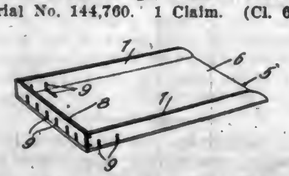
1. An eye member for a rope end consisting of a length of wire having its ends passed into the rope end and finally coiled around the rope end.

1,663,064. TORCH. HOWARD R. VAUGHAN, Victoria, Va. Filed May 14, 1927. Serial No. 191,386. 3 Claims. (Cl. 67—55.)



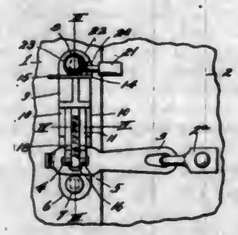
1. In a device for the purpose set forth, the combination of a torch body, a wick tube therein and a wick extending through the tube, of a sleeve slidable on the tube and receiving the wick therethrough and means for clamping the sleeve adjusted on the tube.

1,663,065. BLOCKING AND CULTIVATING DEVICE. FRANK VERJOSTA, Silver Lake, Minn. Filed Aug. 5, 1927. Serial No. 210,816. 2 Claims. (Cl. 97—12.)



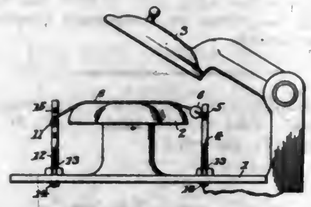
1. In a device of the class described, a wheeled frame a pair of cultivator beams supported from said frame and a pair of revoluble oppositely disposed discs having circumferentially spaced recesses extending inwardly from their peripheral edges, said discs being supported from said cultivator beams with their forward portions in close relation and diverging rearwardly and upwardly, and a pair of cultivator discs spaced some distance apart also supported from said cultivator beams behind said first mentioned discs and diverging rearwardly, said cultivator discs having their forward portions lapping the rear portions of said first mentioned discs on the inner sides thereof.

1,663,066. ADJUSTABLE VALVE-CONTROLLING MEANS. ROY VON FELDEN, Duluth, Minn., assignor of one-half to Sperling Carlson, Duluth, Minn. Filed Mar. 21, 1927. Serial No. 177,171. 2 Claims. (Cl. 251—152.)



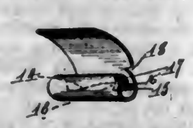
2. The combination with a plunger of the character described having a thumb engaging tread, of an extension upon one side of said tread, a screw threaded bolt adjustably mounted within said extension and protruding therebeneath, and means for sealing the bolt to said extension in any desired adjusted position.

1,663,067. ICE-HANDLING DEVICE. FRANK W. WALLACE, Chattanooga, Tenn., assignor of one-half to Blucher Blair, Chattanooga, Tenn. Filed Oct. 28, 1926. Serial No. 144,760. 1 Claim. (Cl. 62—1.)



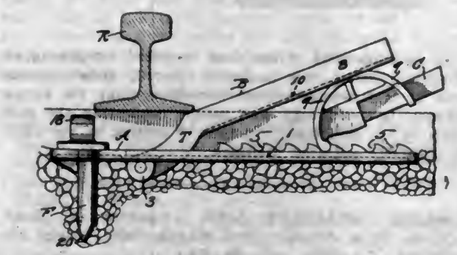
A device for handling ice from a household electric refrigerator of the type provided with a pan in which the ice is frozen in cubes; said device comprising a tray made of non-metallic material and upon which to invert the pan of ice with one hand while holding said tray with the other hand, whereby upon loosening of the ice from the pan it will be deposited in the tray, said tray having an imperforate rectangular bottom and imperforate back and side walls of a height corresponding to an ice cube, said back wall and the rear portions of the side walls being formed with saw cuts which extend into the bottom to provide drain openings, the front end of the tray being open to permit the ice cubes to slide from this end of the tray.

1,663,068. COMBINED HASP AND SEAL FOR BOX CARS. STRAUD K. WOOD, Hutchinson, Kans. Filed Jan. 24, 1927. Serial No. 163,061. 4 Claims. (Cl. 292—282.)



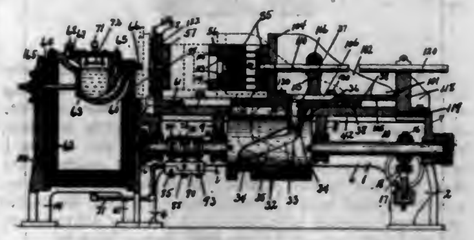
1. In a combined fastener and seal, a plate having a keeper and a staple, a slide mounted for longitudinal movement only on the plate and extending through the keeper and staple, and provided with a shelf within the former and a head spaced above the shelf, a seal strip fastening the plate and slide in looped relation and extending through said shelf into the keeper, and a head fastening the ends of the strip together within the keeper between the head and shelf of the slide.

1,663,069. PLAITING ATTACHMENT FOR PRESSING MACHINES. HYMAN DIENER, Washington, D. C., assignor to United States Hoffman Machinery Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 8, 1926. Serial No. 86,892. 7 Claims. (Cl. 68—9.)



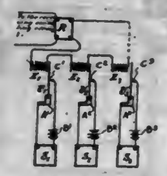
1. A plaiting attachment for garment pressing machines, including engaging elements on opposite sides of the pressing member of a machine, a spring-actuated reel engaged with one of said elements and adjustable thereon longitudinally along said pressing member and a tape secured at its one end to said reel, the opposite end of said tape being adapted for releasable engagement with the other of said engaging elements.

1,663,070. SHUTTLE THREADER BLOCK. ARSÈNE DION, Berkeley, R. I. Filed Jan. 13, 1927. Serial No. 160,977. 5 Claims. (Cl. 139—223.)



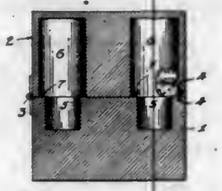
1. A shuttle threader block having a longitudinal slot and a longitudinal recess communicating with the slot, a coiled member disposed in the recess and having one end secured to one of the walls of said slot, said member having a notch cut in the forward end thereof, said member having its inner edge slanted with reference to the longitudinal axis of the coil, and a tongue projecting inwardly from said edge and disposed at the forward end of the coil.

1,663,071. TRACK LINER. CLARKSON A. DISBROW, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed May 1, 1923. Serial No. 636,033. 2 Claims. (Cl. 254—44.)



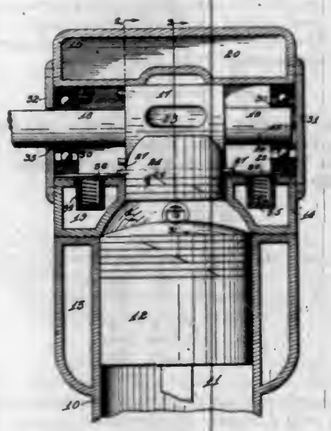
1. A track lining device including a base provided at one end portion thereof with an opening, means carried by said base at the upper side thereof and in rear of the said opening for exerting a lateral force against the rail, and an anchoring plate removably mounted in the said opening and of a cross-sectionally flanged formation, the said plate being provided with a pointed lower end for penetrating the ballast and at its upper end with a tapping head engaging over the said base.

1,663,072. DIE-CASTING MACHINE. WILLIAM J. DURNO, Syracuse, N. Y., assignor to Precision Castings Company Incorporated, Fayetteville, N. Y., a Corporation of New York. Filed Apr. 23, 1925. Serial No. 25,301. 18 Claims. (Cl. 22—69.)



1. A die-casting machine comprising a frame, a shaft journaled on the frame, a slidable member mounted on the frame and adapted to carry a die-section, a sliding carriage adapted to carry the other die-section and frictionally engaged with the sliding member, and cooperative means on the main shaft and the sliding carriage for effecting simultaneous reciprocating movement of the carriage and sliding member within limits of movement of the latter, and then positive movement of the carriage independent of the slide member.

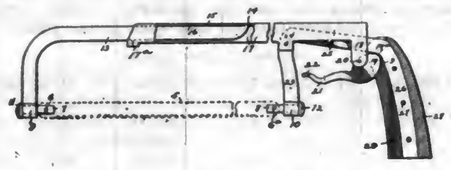
1,663,073. RADIO TELEMECHANIC SYSTEM. EMANNO FIAMMA, Aquila, Italy. Filed July 1, 1924, Serial No. 723,490, and in Italy June 14, 1923. 1 Claim. (Cl. 250—9.)



In a radiotelemechanical system a transmitting station equipped with a number of modulators equal to the number of orders to be transmitted, consisting each of a group of two bands of reeds of magnetic metal, secured at one end and free at the other, tuned by construction to a determined frequency of vibration equal for the two bands of the same modulator, but different for each modulator, and kept vibrating by an electro-magnet whose circuit is periodically interrupted by a contact made by one of the bands in its vibration, while the other band makes a similar contact which can be inserted at will of the operator in the circuits of the transmitting station, so as to cause the emission of a wave train for each vibration of the band, and a receiving station equipped with a selector consisting in an electromagnet whose armature is connected to a number of metallic reeds equal to the number of signals to be received secured at one end and free at the other, and tuned each to a frequency of vibration equal to the frequency of the corresponding transmitting modulator, the electromagnet being connected to the radio receiver conveniently tuned, and each of the receiving reeds, when in vibration closing a contact causing the electromechanical execution of the corresponding order.

1,663,074. GAME DEVICE. JACOB W. FIELD, Peoria, Ill. Filed Sept. 24, 1926. Serial No. 137,488. Renewed Feb. 3, 1928. 6 Claims. (Cl. 273—145.)

1. A box for the game of dice consisting of two bodies adapted to lie upon one another, one of the bodies having a series of shallow pockets exposed at the meeting place of the bodies, each of a diameter but slightly in excess of that of a die, the other of the bodies also having a series of pockets greater in diameter and of greater depth than the first named pockets and exposed to the latter and so disposed with respect to the same when the bodies overlie one another as to expose an annular abutment on the first body at each of said first named pockets.

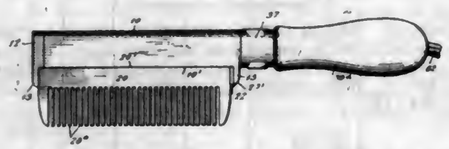


1,663,075. ROTARY-VALVE STRUCTURE. PEARL G. FRAZIER, Ankeny, Iowa. Filed July 10, 1924. Serial No. 725,147. 9 Claims. (Cl. 123—190.)

1. In a rotary valve structure, a valve chamber, a passage communicating therewith, a rotary valve mounted in said chamber, a sleeve in said passage having no parts of a maximum diameter greater than that of the passage and having grooves, said sleeve being mounted for slight vertical adjustment to take care of expansion and contraction, and means projected into said grooves for imparting yielding pressure on said sleeve in one direction.

1,663,076. HACK-SAW FRAME. CHARLIE R. GARNER, Chase City, Va. Filed Sept. 13, 1927. Serial No. 219,267. 4 Claims. (Cl. 145—34.)

1. A hack saw frame, comprising a pair of frame members pivoted to each other for rocking movement with respect to each other, one of said frame members comprising a longitudinally extending run and a downturned forward end portion, which carries a member adapted to engage one end of the hack saw blade, the other of said frame members comprising a hand grip portion, and a downturned leg carrying a member adapted to engage the other end of said hack saw blade, and a manually operable cam acting between said frame members to rock



them with respect to each other to move the leg of the grip portion away from the downturned member of the other frame portion.

1,663,077. GLUE GUN. WILLIAM I. HALLOCK, Los Angeles, Calif. Filed Dec. 13, 1926. Serial No. 154,493. 6 Claims. (Cl. 221—47.)

1. A syringe-like device for dispensing liquids, comprising in combination a cylindrical chamber, a conical piston in said chamber, said conical piston having its concave side disposed rearwardly, a flexible diaphragm in said chamber, said diaphragm having its marginal edge secured to the walls of said chamber at the forward end thereof, and its center portion attached to said piston, thereby forming a liquid-retaining space forwardly of said diaphragm, an air-retaining chamber between said diaphragm and said piston, whereby motion of said piston will compress the air in said air chamber and force the flexible diaphragm forwardly to expel liquid from said liquid-retaining space.

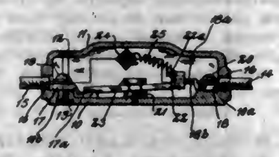
1,663,078. ELECTRICAL HAIR-TREATING IMPLEMENT. SOLOMON HARPER, New York, N. Y., assignor to Clifford L. Miller, New York, N. Y. Filed Oct. 25, 1924. Serial No. 745,830. 6 Claims. (Cl. 132—14.)

1. An implement of the class described comprising an elongated casing, lugs projected laterally from opposite ends of said casing, a comb extending along the casing between the said lugs, and means connecting the said comb to the said lugs to permit of setting of the comb in angularly adjusted positions.

1,663,079. BRACELET LINK. CHARLES A. HART, Walla Walla, Wash. Filed May 2, 1925. Serial No. 27,360. 2 Claims. (Cl. 59—79.)

1. In a bracelet link, a laterally formed body portion provided with a longitudinally disposed keyway, laterally formed indentures provided in said body portion, an open

link mountable in said body portion, and engageable with said indentures to form with said body portion a rigid



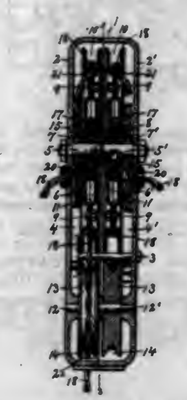
continuous link, and a yieldingly operable closed link slidably secured in said continuous link, and adapted to engage a succeeding link.

1,663,080. FISH BAIT. CHARLES HEDDON, Dowagiac, Mich., assignor to James Heddon's Sons, Dowagiac, Mich., a Corporation of Michigan. Filed May 29, 1926. Serial No. 112,590. 12 Claims. (Cl. 43—42.)

1. A bait consisting of a body and a head connected with the body by a neck of reduced transverse diameter as compared with the transverse diameters of the head and body, the neck and head extending obliquely downward with respect to the longitudinal axis of the body, the upper surface of the head being flattened substantially from the tip thereof to the point of mergence into the neck to afford an obliquely presented area of impingement adequate to impart life-like movements to the bait when the bait is in trailing position, and the body being divided at its rear end to simulate the legs of a frog, substantially as described.

1,663,081. SNAP SWITCH. HARRY HERTZBERG, Brooklyn, N. Y., assignor to M. Propp Co., New York, N. Y., a Firm composed of Morris Propp and Louis Propp. Filed Apr. 17, 1926. Serial No. 102,708. 5 Claims. (Cl. 200—67.)

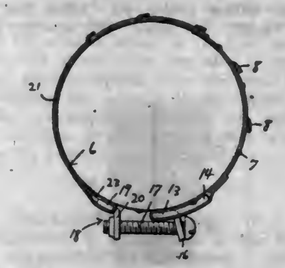
1. In a switch of the kind described a casing, a pivot centrally located therein, a switch blade having two equal arms oscillatably mounted on said pivot, a contact plate for each end of said blade, one plate being mounted to engage the upper face and the other the lower face of said blade at diagonally opposite places of said casing and common resilient means for snap operation of said blade and for pressing its opposite faces against said contact plates.



1,663,082. FUMIGANT MATERIAL AND PACKAGE. HARRY W. HOUGHTON, Glen Echo, Md., assignor to Safety Fumigant Company, Boston, Mass., a Corporation of Massachusetts. Filed June 25, 1925. Serial No. 39,614. 9 Claims. (Cl. 167—6.)

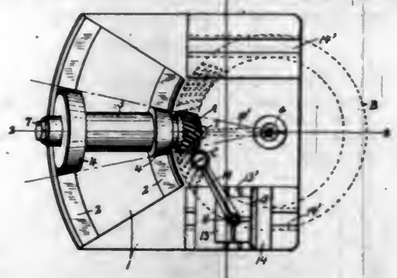
1. A caked mixture of a cyanide and an oxidizing agent with a protective binder not affected by moisture in proportions to produce a lachrymatory fumigant gas by the addition of dilute hydrochloric acid.

5. A cake for producing hydrocyanic acid gas and cyanogen chloride in lachrymatory proportions for fumigant purposes comprising a cyanide and a chlorate of an alkali metal mixed with slacked lime and sand in plastic condition with the addition of a small amount of common salt and allowed to harden.



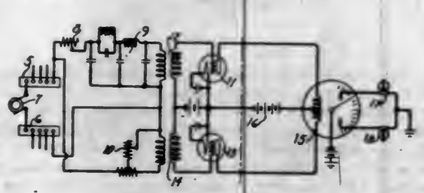
7. A hardened cake of plastic material comprising a cyanide and an oxidizing agent in proportions to form hydrocyanic acid gas and halogen cyanide when treated with hydrochloric acid for the purpose described.

1,663,083. SPRING REEL FOR CONDUCTORS. OSCAR C. KAYLE, Syracuse, N. Y., assignor to E. Frederics, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 8, 1925. Serial No. 74,110. 4 Claims. (Cl. 242—109.)



1. In a device of the character described, a case, a drum and a sheave both rotatably mounted within the case to rotate about parallel axes and in substantially the same plane, a cable wound around the drum and extending from one side thereof around the opposite side of the sheave and outwardly through an opening in the case and provided with an electric implement, the other end of the cable being extended through a separate opening in the case to the exterior thereof and provided with means for attachment to a source of electric energy, and a spring for rotating the drum in a direction to rewind the cable thereon.

1,663,084. PISTON-RING COMPRESSOR. STEPHEN G. LING, Cleveland, Ohio. Filed June 22, 1927. Serial No. 200,657. 2 Claims. (Cl. 29—86.4.)

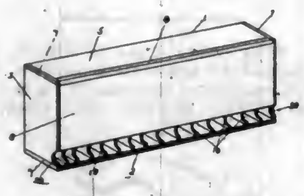


1. In a piston ring compressing tool, a split band, a bracket carried by one end of the band, lugs provided on said band, a resilient strap provided with openings engageable with said lugs, a second bracket carried by one end of said strap, and a bolt cooperable with said brackets for contracting the ends of said band.

1,663,085. APPARATUS FOR TESTING BEVEL-GEAR TEETH. CHARLES H. LOGUE, Syracuse, N. Y., assignor to The Gear Grinding Machine Company, Detroit, Mich. Filed Apr. 16, 1926. Serial No. 102,368. 14 Claims. (Cl. 73—51.)

1. In a device for testing the teeth of bevel gears, a test tooth, movable supporting means for said tooth, means for supporting the gear to move about the apex of a cone corresponding to the pitch cone of the gear with a tooth of the gear in contact with the test tooth.

1,663,086. MEANS FOR INDICATING FREQUENCY CHANGES. MAURICE B. LONG, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 4, 1924. Serial No. 696,772. 8 Claims. (Cl. 175—368.)

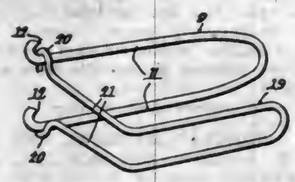


1. A frequency indicating system comprising a source of alternating current, a non-reactive transmission path and a low pass filter of the broad band type associated therewith, and an indicating instrument differentially connected to said resistance element and filter.

1,663,087. METHOD OF MAKING FULL-FASHIONED HOSIERY AND PRODUCT THEREOF. MAX A. MARSCHNER, Willow Grove, Pa. Filed Dec. 7, 1925. Serial No. 73,627. 2 Claims. (Cl. 66—178.)

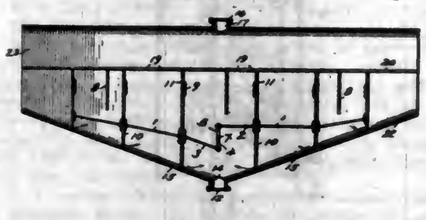
1. The method of making full fashioned hosiery, which consists in knitting a hose in the flat condition along parallel lines, narrowing or shaping said hose along the edges thereof by shifting inwardly at suitable intervals, a relatively few of the outermost stitches, thereby to position the narrowing marks a relatively small distance from the respective edges of the flat hose form, and spaced therefrom, and seaming the edges of said flat hose form so as completely to gather in, within said seam, said narrowing marks.

1,663,088. DISPLAY RECEPTACLE. AVERY A. MATHESON, Binghamton, N. Y., assignor to Ansco Photo-Products, Inc., Binghamton, N. Y. Filed May 11, 1926. Serial No. 108,393. 1 Claim. (Cl. 312—42.)



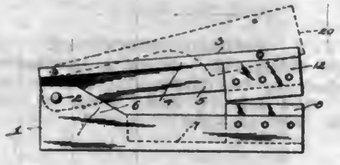
A receptacle comprising a box, vertical partition members in said box forming a plurality of sets of compartments varying in depth and width, backing members for said portions extending across all of said sets, said partition members for each set being folded from a single piece of material.

1,663,089. NAIL FILE AND CLIP THEREFOR. ROSS MCFARLAND, Portland, Oreg. Filed Apr. 4, 1927. Serial No. 180,730. 1 Claim. (Cl. 24—3.)



A nail file having a handle portion at one end, a tongue integrally connected adjacent the outer extremity of the handle portion and struck out from the handle material to extend in spaced parallel relation longitudinally of said handle portion extending over the aperture from which said tongue is formed towards the opposite end of the file.

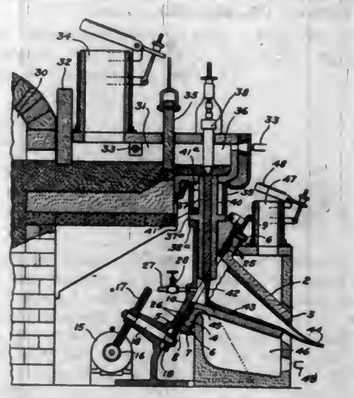
1,663,090. WINDOW SHADE AND CURTAIN HANGER. WILLIAM W. MULLENDORE, Knoxville, Tenn. Filed June 14, 1926. Serial No. 115,909. 1 Claim. (Cl. 156—23.)



An end member for combined window shade and curtain hangers embodying a main section formed of a length of wire bent intermediate its ends defining parallel leg members, spurs formed at the ends of the parallel leg members, an auxiliary section including a length of wire bent intermediate its ends and defining leg members, the last mentioned leg members having right angled portions terminating in inwardly extended hooks to grip the leg members of the main section, and supporting members to which the leg members are secured.

1,663,091. CONVEYING-PIPE COTTON CLEANER. THOMAS L. OATES, Rhodhiss, N. C. Filed Aug. 3, 1926. Serial No. 126,890. 4 Claims. (Cl. 19—77.)

1. In a device of the class described, a conduit, a screen in the conduit and dividing the conduit into upper and lower portions, the lower portion being provided with an outlet, doors in the lower portion of the conduit on opposite sides of the outlet, the doors being movably mounted to permit trash to pass through the outlet, and transverse baffles located between certain of the doors and below the screen.



1,663,092. SHEARING MACHINE. ANDY PARTS, Canton, Ohio. Filed May 4, 1926. Serial No. 106,736. 2 Claims. (Cl. 164—58.)

1. In a shearing machine, a pair of relatively movable frames, one of said frames being formed with a longitudinal socket opening to the upper side thereof, a flat cutter bar mounted in said socket, fastening elements extending transversely through the walls of said socket and through said cutter bar to reversibly retain the latter in said socket, the other of said frames being formed with a depending web arranged in the place of said socket, a second flat cutter bar, and fastening appliances for uniting said last named cutter bar to either of the vertical side walls of said web, said appliances passing transversely through said web and the last named cutter bar.

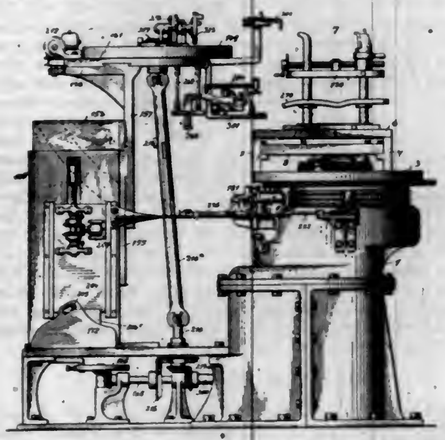
1,663,093. MANUFACTURE OF GLASS TUBING AND CANE. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Jan. 3, 1927. Serial No. 158,461. 22 Claims. (Cl. 49—17.1.)

16. Apparatus for continuously drawing glass in tubular form, comprising a conical receiver inclined downwardly toward its smaller end and having a flange at its larger upper end, a gear ring and an annularly grooved bearing member clamped to opposite sides of said flange, rollers engaging the groove of said bearing member for rotatably supporting said receiver, means for driving said gear ring, a stationary closure member adjacent to said gear ring, means for introducing compressed air into said receiver through said closure member, means for preventing escape of air between said gear ring and said closure member, means for introducing a stream of molten glass into said receiver, comprising a feed tube extending through an opening in said closure member and having an external flange for supporting said feed tube and for preventing escape of air from said receiver around said feed tube, and means for supplying a regulated quantity of molten glass to said feed tube.

1,663,094. SHOE AND METHOD OF MAKING THE SAME. FREEMAN PERKINS, Seabrook, N. H. Filed Dec. 9, 1926. Serial No. 153,562. 3 Claims. (Cl. 36—18.)

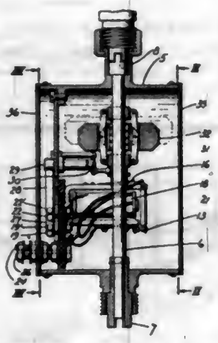
1. A shoe comprising an outsole, an upper, a half insole, including a heel portion and a shank portion, and a flanged heel counter, the fore part of the outsole being provided in its inner side with an inner channel extending from the ball at each edge portion to and around the toe, the bottom of said channel being separated from the margin of the sole by between substance, the rear part of the outsole being provided in its outer side with outer channels extending from the ball to the heel, at opposite edge portions, and with lips to close said outer channels, turn-shoe machine stitches securing the fore part of the upper to the fore part of the outsole, and extending through the said between substance, said stitches being formed while the outsole and upper are wrong side out, tacks uniting the heel portion of the upper and the counter flange to the heel portion of the half insole, and driven when the shoe is right side out, and McKay stitches formed when the shoe is right side out and uniting the outsole to the upper and insole between the tack-united portion of the upper and the turn-shoe machine stitches, the McKay stitches being covered by the outer channel flaps.

1,663,095. BUILDING MATERIAL. RAY P. PERRY, Upper Montclair, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed July 10, 1920. Serial No. 395,336. 8 Claims. (Cl. 92—21.)



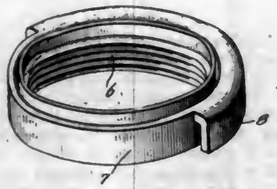
1. The herein described process which comprises forming a sheet containing fibrous material and an emulsion of bituminous material, an emulsifying agent and water, drying said sheet, and introducing into said sheet waterproofing material having a larger percentage of volatile constituents than said bituminous material.

1,663,096. CORE DRILL. JOHN T. PHIPPS, Huntington Park, Calif., assignor to H. C. Smith Manufacturing Company, Whittier, Calif., a Corporation of California. Filed Mar. 11, 1925. Serial No. 14,688. 27 Claims. (Cl. 255—72.)



1. Improvements of the character disclosed, comprising a tubular drill body, and a core tube within the same, means being provided for retaining the core tube against vertical movement within the drill body and in driving relation thereto and removable at the bottom thereof, said means comprising a detachable member applied within the bottom of the drill body, said detachable member having a vent communicating with the interior of the core tube and leading to the exterior of the drill body above its lower end.

1,663,097. AUTOMATIC SHOEMAKING MACHINE. EDWIN J. PRINDLE, East Orange, N. J., assignor, by mesne assignments, to United Shoe Machinery Corporation, Boston, Mass., a Corporation of New Jersey. Filed July 31, 1916. Serial No. 112,292. Renewed Apr. 13, 1927. 135 Claims. (Cl. 12—17.)



135. In a shoe machine, a tool, a shoe support, mechanism for automatically bringing the tool and support into working relation, mechanism for relatively rotating and moving the support and tool to transfer the tool along the shoe, mechanism for stopping the relative movement, mechanism for disengaging the tool and shoe, and mechanism for relatively moving the support and tool in reverse direction to starting position.

1,663,098. SPEED SIGNAL SWITCH. PAUL RUEGG, San Francisco, Calif., assignor to Steven A. Rice, San Francisco, Calif. Filed Jan. 18, 1926. Serial No. 82,083. 2 Claims. (Cl. 200—80.)

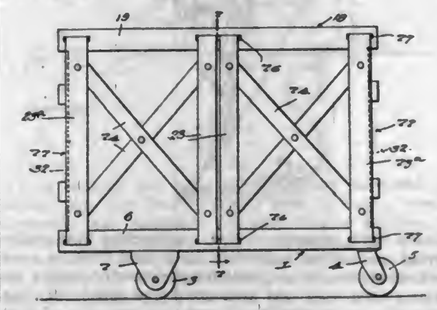
1. In a switch of the character described, a rocker shaft, a governor, a movable part on the governor adapted to be moved in accordance to the speed of the governor, a connection between said movable part and the rocker shaft whereby a rocking movement is imparted to the rocker shaft, a pair of leaf spring arms disposed one on top of the other and secured at one end to the rocker shaft, one of said leaf spring arms being longer than the other and each leaf spring arm having a contact member on its outer end and a pair of stationary cooperating contact members adapted to be successively engaged during the rocking movement of the rocker shaft.

1,663,099. BUSHING STRUCTURE. MORRIS SCHWARTZ, Chicago, Ill., assignor to American Flange & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed July 21, 1926. Serial No. 123,923. 4 Claims. (Cl. 220—39.)

1. The combination with a sheet metal member including a body portion, a circular rim portion angular to the body portion and surrounding a circular opening formed through said member, said body portion of said member being dished around said rim portion to form, with said rim, a pocket, this pocket being outwardly bulged away from the side of the rim portion to widen the pocket at one portion thereof, shoulders being formed at the ends of the bulged portion of the pocket; of an interiorly threaded bushing having a body portion surrounded by said rim portion, a returned portion surrounding and spaced apart from the body portion of the bushing and received in said pocket and surrounding the aforesaid rim portion which extends into the space between said body and returned bushing portions, said bushing having a second portion returned upon the first returned portion toward the connected rim of the latter and itself received, where connected with the first returned bushing portion, in the bulged portion of the aforesaid pocket and engaging the aforesaid shoulders to obstruct turning movement of the bushing, the unconnected rim of the bushing body portion lapping the base of the rim portion of the aforesaid sheet metal member, the outer wall portion of said pocket where the pocket is outwardly bulged being formed to offer no material resistance to the turning movement of said bushing.

1,663,100. COATING COMPOSITION CONTAINING RUBBER AND DRYING OILS AND METHOD OF MAKING SAME. CHARLES M. STINE, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 19, 1923. Serial No. 681,648. 14 Claims. (Cl. 134—17.)

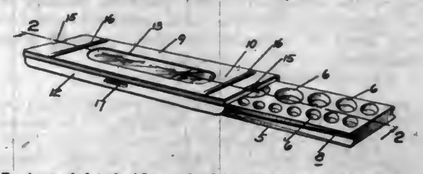
5. The process which comprises mixing 10 parts of unvulcanized rubber dissolved in a rubber solvent with from about 4 to 31 parts of a drying oil, and with an amount of a drier equal to between 0.4 and 5% of the oil, and heating the resulting composition in the form of a thin film to a temperature between about 70 and 125° C. to volatilize the solvent, oxidize the oil, and cure the rubber.



9. A coating composition comprising uncured rubber, a vegetable drying oil, a drier, an amount of sulfur not in excess of 2% of the amount of rubber, a vulcanization accelerator, and a thinner.

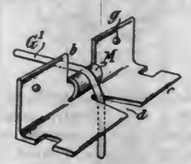
1,663,101. COATING COMPOSITION AND PROCESS OF MAKING THE SAME. CHARLES M. A. STINE and COLE COOLIDGE, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 5, 1924. Serial No. 736,018. 18 Claims. (Cl. 134—54.)

4. The process which comprises preparing a solution of rubber in a volatile solvent, said solution having a suitable consistency for use as a coating composition, and incorporating therein a drying oil and an amount of metallic drier having, upon exposure to the atmosphere, an effect on the viscosity of the rubber solution equal to that of an amount of cobalt drier equivalent to from about 0.001% to 0.01% cobalt metal on the basis of weight of oil employed.



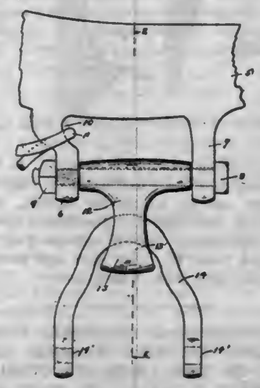
6. The process which comprises mixing 10 parts of unvulcanized rubber dissolved in a rubber solvent with from about 30 to 80 parts of a drying oil, thinning with a volatile solvent to a suitable consistency for coating purposes and incorporating therein an amount of cobalt drier equivalent to from about .001% to .01% cobalt metal on the basis of weight of oil used, whereby, with exposure to atmospheric oxygen ordinarily encountered in the art, the viscosity of the composition remains satisfactory for coating purposes over a period of time in excess of two days.

1,663,102. SHIPPING CRATE. DALLAS TAYLOR, Lorain, Ohio. Filed Apr. 26, 1926. Serial No. 104,761. 3 Claims. (Cl. 220—4.)



1. In a crate structure of the class described, a wheel supported base, a top, side members and end members, said base, top and side members being provided with latches and cooperating slots, the side members and end members being provided with apertured tongues extending through said slots, and said latches being engaged with the tongues to retain the parts in assembled relation for producing a crate.

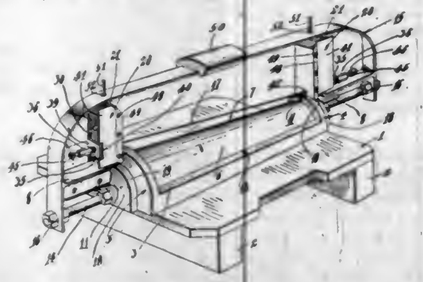
1,663,103. WEIGHT CONTAINER. FRED W. THOMPSON, Denver, Colo. Filed Sept. 19, 1925. Serial No. 57,373. 8 Claims. (Cl. 206—1.)



7. A weight holder of the character described, comprising a tray member having grooves on the sides thereof; and a flanged, sliding cover member having detents to fit in the grooves, the distance from the top of the detent to the under surface of the top of the cover being not more than the distance from the upper and lower edge of the groove to the top and bottom of the tray respectively.

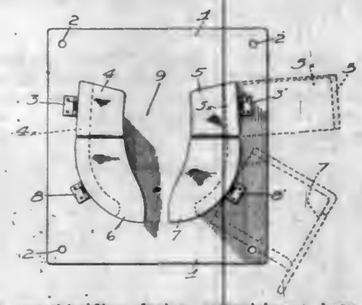
1,663,104. WIRE ANCHOR. ROWLAND T. WALES, New Rochelle, N. Y. Filed May 22, 1926. Serial No. 110,902. 25 Claims. (Cl. 24—130.)

1. An anchor for holding a taut tie-wire for concrete forms comprising a base portion through which the taut wire passes having a flat seating surface in a plane perpendicular to the taut wire, adapted to seat against the form, and integral wire-gripping means including surfaces between which the wire may be drawn, of such angular relation as to grip and mutually hold the wire, and integral means for engaging the wire to prevent its escape from such gripping surfaces.



1,663,105. HARNESS CONSTRUCTION. JAMES M. WALSH, Milwaukee, Wis., assignor to James M. Walsh Co., Milwaukee, Wis., a Corporation of Delaware. Filed May 11, 1925. Serial No. 29,528. 7 Claims. (Cl. 54—30.)

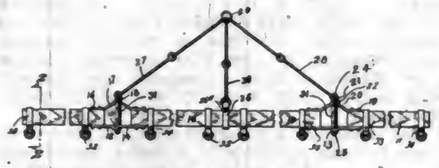
5. A harness construction, comprising a hame member having spaced projecting eyed arms, one of said arms having a recessed portion spaced from the hame,



a breast strap link engaging the recessed portion of the recessed arm, a bolt extending through said arms, a T-shaped connector member journaled on the bolt between the arms to swing laterally with respect to the hame and having a projecting stem portion provided with an eye in parallel alinement with the bolt, and a trace member extending loosely through the eyed stem portion of the connector member and movable in a line parallel to the movement of the connector member and also at right angles thereto, said connector and trace members being of increased thickness at their points of engagement.

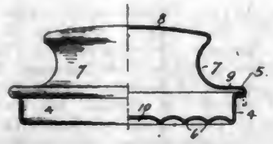
1,663,106. METHOD AND MEANS FOR PRODUCING HANDMADE TILE. JOHN R. WARFIELD, Los Angeles, Calif., assignor to True-Tile Corporation, Reno, Nev., a Corporation of Nevada. Filed June 23, 1926. Serial No. 117,923. 22 Claims. (Cl. 25—42.)

4. In an apparatus for forming hand made clay tile, the combination of a base, a core removably supported on the base, retaining plates secured to the said base, a cutting element, and means secured to the said base for actuating the said cutting element to cut the surplus clay from a billet of clay kneaded on the said core.



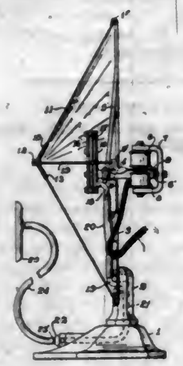
1,663,107. TOWEL HOLDER. BEVERLY WHITE, Chicago, Ill., assignor of one-half to Charles M. Bender, Chicago, Ill. Filed Feb. 23, 1927. Serial No. 170,318. 2 Claims. (Cl. 211—16.)

1. A towel-holding device, comprising a base, a pair of towel-holding members having their edges contiguous to one another, spring hinges for holding each of said members to said base and for permitting them to swing in different directions, and a second pair of holding members spaced from the first pair and movable toward and away from said first-named pair.



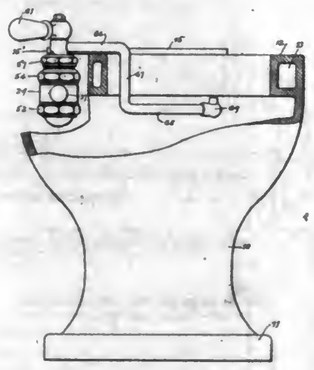
1,663,108. HINGED-DRAG DRAWBAR. FRANK A. BESSMAN, Hubbard, and EMIL WARMBIER, Alden, Iowa. Filed Mar. 25, 1926. Serial No. 97,241. 1 Claim. (Cl. 55—84.)

A draw bar structure comprising a bar, connecting means on said bar whereby devices may be connected to the bar and drawn thereby, said connecting means comprising a band encircling the bar and engaging three sides thereof, the fourth side of the band being substantially spaced from the fourth side of the bar for providing a substantially V-shaped loop, a clamping bolt extending through the sides of the band and engaging



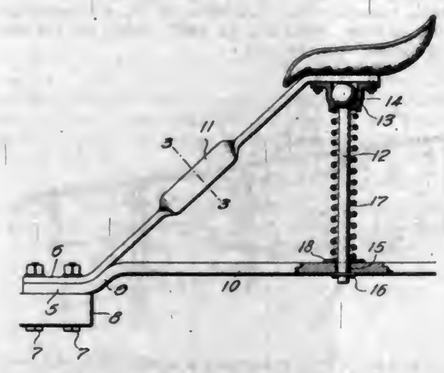
the fourth side of the bar whereby said band may be loosened and moved longitudinally relative to the bar or clamped thereto, the portion of the band extending beyond the bolt serving to prevent distortion of the band when the bolt is tightened.

1,663,109. HAND WASHER FOR CLOTHES. ADDISON B. BRADLEY, Indianapolis, Ind. Filed Feb. 11, 1927. Serial No. 167,449. 1 Claim. (Cl. 68—8.)



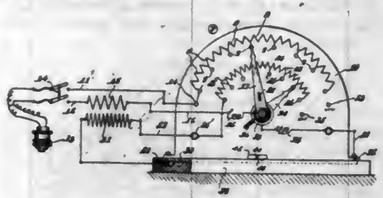
A clothes washer comprising two cup shaped metal members with adjacent rims lock-seamed together, one of said members being formed for convenient grasp and firm hold by the hand of the user and the other member having a rubbing surface with a central depression and a series of corrugations concentric with said depression forming annular ribs extending from the depression to the outside limits of the rubbing surface.

1,663,110. RADIORECEIVER. WILLIAM M. BRUCE, Jr., Springfield, Ohio. Filed Sept. 3, 1925. Serial No. 54,233. 3 Claims. (Cl. 179—116.)



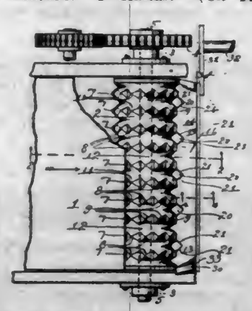
1. In a radio receiving device, a supporting base, audio receiving mechanism supported upon said base, a cone shaped diaphragm of an amplifying character having its apex connected with said mechanism and supported from said base, a sound chamber located on one side of said diaphragm, and a conduit leading from said sound chamber to a connector carried by said base, said connector being arranged to receive the tube of an ear reception member.

1,663,111. LAVATORY. CESARE C. CAMPUS, Santa Monica, Calif. Filed Aug. 25, 1925. Serial No. 52,357. 7 Claims. (Cl. 4—7.)



1. In an apparatus of the class described, a closet bowl having a seat attachment flange at the rear thereof, a support member, means for attaching the support member to the seat attachment flange at the rear of the bowl, a valve carried in the said support member, a delivery pipe connected to the said valve to extend into the said bowl to be movable horizontally at the top of the same from a position in which the free end of the delivery pipe lies beneath the rim of the bowl to a position for use in which the free end of the delivery pipe lies approximately centrally of the bowl, and means for moving the delivery pipe from its non-use position to its position for use and vice versa.

1,663,112. TRACTOR SEAT. AMOS B. CASLOW, Elizabethtown, Pa. Filed Aug. 17, 1926. Serial No. 129,715. 2 Claims. (Cl. 155—51.)

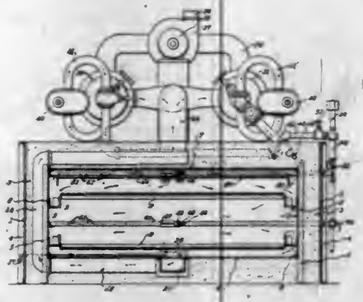


1. A support for seats of the nature indicated comprising top and bottom spring bars having a common anchorage and angularly disposed floated portions, the bottom bar having an offset constituting an abutment for defining the angle between the bars, the top bar having horizontally disposed flat ends and having a vertically disposed spring panel between its flat ends, a spring interposed between the free ends of the top and bottom bars, and a pin connected at one end to one of the bars for universal movement and at the other end to the other of the bars for sliding movement through it, substantially as described.

1,663,113. ELECTRIC SOLDERING DEVICE. SIDNEY CLAYTON, Chicago, Ill. Filed May 18, 1925. Serial No. 30,944. 2 Claims. (Cl. 219—22.)

1. An electric soldering device having, in combination, a primary circuit; a rheostat incorporated therein; a secondary circuit; a rheostat incorporated in the secondary circuit; and a work plate comprising an electrical conductor for holding work thereon and imparting its current thereto inserted in the secondary circuit, substantially as described.

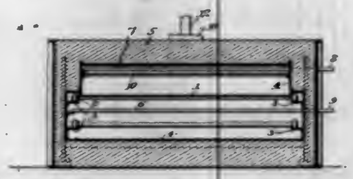
1,663,114. FODDER CUTTER AND THE LIKE. OSCAR B. CLEMENS, Grand Rapids, Mich. Filed Jan. 15, 1927. Serial No. 161,266. 4 Claims. (Cl. 146—109.)



2. In mechanism of the character described: a rotatable feeding element having a plurality of axially spaced series of angularly spaced radially extending work-engaging members, the adjacent sides of adjacent series being outwardly inclined from each other and the forward surfaces of said members being outwardly and rearwardly inclined relatively to the intersecting radii respectively of said element; an element having an edge adjacent said feeding element provided with a serration comprising recesses having sides inclined from each other toward said edge and cooperating with the sides of said series to compress between said elements the work in its feeding movement, the recesses having bottoms spaced farther from the outer extremities of said members cooperating therewith than the sides of said members are spaced from the adjacent sides of the recesses.

1,663,115. BAKER'S OVEN. CORRY B. COMSTOCK, New York, N. Y., assignor to Comstock Oven Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 5, 1923. Serial No. 661,064. 27 Claims. (Cl. 107—57.)

2. In a baker's oven, the combination of a chamber, a substantially horizontal support for articles to be baked within the chamber, means for heating the chamber including burners arranged above said support, a stationary baffle arranged between said support and burners and adapted to maintain a body of vapor generated in the baking operation in contact with the articles being baked while shielding said burners from said vapor, and means for relieving the articles being baked from excessive pressure of said vapor by creating a suction downward through the chamber.

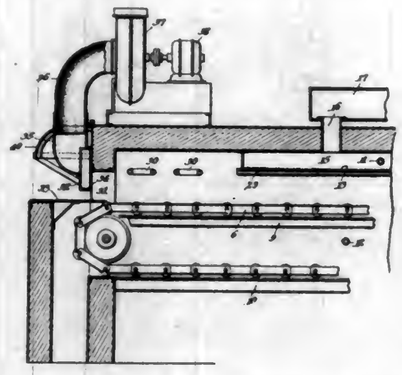


27. In a baker's oven, the combination of a substantially horizontal, elongated, baking chamber, means for

moving articles to be baked longitudinally through the baking chamber, a plurality of burners extending transversely of the baking chamber and spaced apart longitudinally of the chamber to provide a plurality of heating zones, a pilot light adjacent each burner, a thermo-

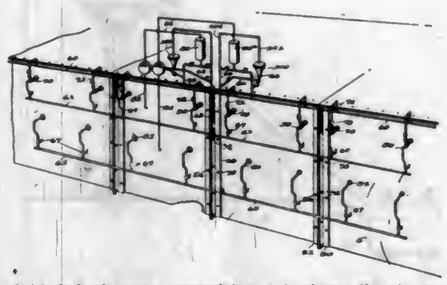
statically actuated valve controlling supply of fuel to all of the burners of each heating zone, and an independent manually operable valve controlling the supply of fuel to each individual burner, the pilot lights being supplied with fuel independent of said valves.

1,663,116. BAKER'S OVEN. CORRY B. COMSTOCK, New York, N. Y., assignor to Comstock Oven Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 5, 1925. Serial No. 48,310. 31 Claims. (Cl. 107—57.)



1. In a baker's oven, the combination of a baking chamber, a travelling conveyor for supporting articles to be baked and transporting them through said chamber, and means for heating the chamber, the opposite side walls of the chamber having portions overhanging the edges of the travelling conveyor and reducing the width of the chamber above the conveyor to less than that of the conveyor.

22. The combination with a baker's oven including a baking chamber having a series of vents extending through the top of the chamber to the exterior of the oven, the portions of the body of the oven through which said vents extend immediately surrounding the vents being constructed to offer less resistance to outward pressure from within the baking chamber than other portions of said body, of a common duct or conduit communicating with all the vents.



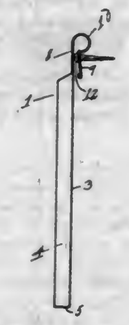
1,663,117. BAKER'S OVEN. CORRY B. COMSTOCK, New York, N. Y., assignor to Comstock Oven Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 16, 1926. Serial No. 88,611. 26 Claims. (Cl. 107—57.)

1. In a baker's oven, the combination of a casing, an endless conveyor mounted to travel substantially horizontally through the casing and support the articles to be baked, means for generating heat to bake articles supported on the conveyor, means for spraying steam upon the articles on the conveyor at points adjacent the receiving end of the casing, a door supported to slide vertically across the feed opening at the receiving end of the casing and provided near its lower edge with a series of steam escape apertures extending substantially throughout the width of the conveyor, a conduit on the exterior of the door and communicating with said apertures, and a fan adapted to draw steam outward from the casing through said apertures and conduit.

20. In a baker's oven, the combination of a casing having an interior substantially horizontal support for articles to be baked, burners positioned respectively above and below said support, means for shielding the articles on the support from the direct action of the upper burners, a plurality of ducts extending transversely of the casing, and each provided within the casing below the horizontal plane of the lower burners with a plurality of inlet openings, means for creating suction through said ducts to draw vapor generated during the baking operation and the products of combustion of the lower burners downward and outward from the oven, and manually adjustable means for varying the area of the inlets of each of said ducts.

1,663,118. BAKER'S OVEN AND MEANS FOR CONTROLLING THE HEATING THEREOF. CORRY B. COMSTOCK, New York, N. Y., assignor to Comstock Oven Company, Inc., New York, N. Y., a Corporation of New York. Filed May 23, 1927. Serial No. 193,538. 15 Claims. (Cl. 107—57.)

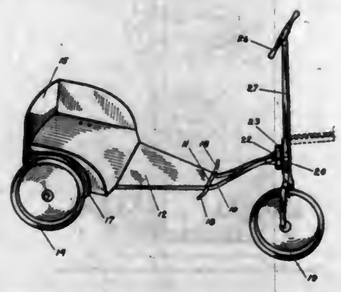
3. A baker's oven comprising a horizontally elongated baking chamber formed by a plurality of connected sections arranged end to end and each having sheet metal inner and outer walls and columns or uprights between said walls, one of the sections being immovably secured to the supporting base or floor, and a series of rolls each arranged beneath and supporting one of the columns or uprights of the other sections, whereby the last said sections may move bodily in the direction of the length of the oven relative to said immovable section.



11. In a baker's oven, the combination with a baking chamber, of means for heating the chamber comprising a plurality of burners, a gas supply pipe connected with all of the burners, a thermostatically controlled valve in said supply pipe, whereby the flow of gas to the burners will be varied in accordance with variations in the temperature in the baking chamber, a by-pass connecting portions of the supply pipe at opposite sides of the thermostatically controlled valve, and an automatically acting valve for regulating flow through said by-pass when the thermostatically controlled valve is closed to maintain a uniform pressure of gas in all of the burners.

1,663,119. COATING COMPOSITION AND PROCESS OF MAKING THE SAME. COLE COOLIDGE, Wilmington, Del., and HERBERT E. EASTLACK, Parlin, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 3, 1925. Serial No. 41,411. 16 Claims. (Cl. 134—54.)

1. A process of regulating the viscosity of a coating composition containing a non-aqueous solution of rubber which comprises adding to said composition a delobbering agent.

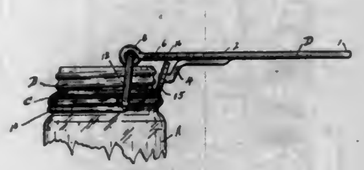


16. A coating composition comprising a solution of rubber, a pigment which ordinarily gives rise to lobbering in a rubber solution, a drying oil and a delobbering agent comprising from .05 to 10% of oleic acid.

1,663,120. PAD HOLDER. CECIL COSPER, Walla Walla, Wash. Filed Apr. 15, 1926. Serial No. 102,155. 2 Claims. (Cl. 45—58.)

1. In a pad holder, the combination with a body portion, of a back extended upward from the holder, the extended portion being provided with screw engaging slots and bent back upon itself to form an apron, said apron being adapted to provide a yielding securing means for said holder.

1,663,121. TOY VEHICLE. BENJAMIN F. DUDEK and ROY J. MANDERY, Lincoln, Nebr. Filed May 10, 1927. Serial No. 190,360. 3 Claims. (Cl. 280—87.5.)

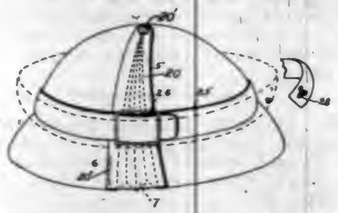


2. A vehicle comprising a frame supported on two rear wheels and a front steering wheel, a wagon box having side walls and one end wall but being open on the end of the wagon box opposite the end wall, means for reversibly positioning said wagon box on said frame with either of its ends directed forwardly, and a handle for controlling said steering wheel, said handle being adapted to be latched in upright position when the vehicle is to be used as a scooter and to be projected either forwardly or rearwardly when the vehicle is to be used as a wagon or as a coaster.

1,663,122. DRAPERY CARRIER. WILLIAM H. EDSALL, Wallingford, Conn., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed July 21, 1926. Serial No. 123,830. 1 Claim. (Cl. 156—21.)

In a drapery carrier of the character described, a body having bearings at the opposite edges thereof, a guide lug depending from said body in a plane between said bearings, a plate secured to said body in a plane corresponding to the line of travel of said carrier, a cord loop passage extending transversely through the plate, the edge of said plate being recessed at a point above the lower end of said cord loop therein to form a supporting shoulder for a cord loop.

1,663,123. FRUIT-JAR SEALER. GEORGE A. EVANS, Layton, Utah. Filed Mar. 21, 1927. Serial No. 176,926. 1 Claim. (Cl. 81—15.1.)

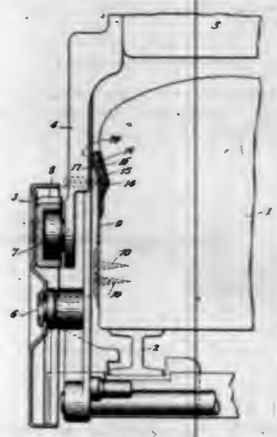


In a device of the class described, the combination of a handle portion made by bending a wire back upon itself and then bifurcating the ends, loops formed in the bifurcated ends, a jar-engaging portion pivoted in said loops and adapted to engage with the top flange of a fruit jar, another member provided on the under side of said handle portion, a roller rotatably mounted thereon adapted to be rolled around the outer edge of a fruit jar cap when the jar-engaging portion is encircling a fruit jar to seal said cap to said rubber and jar.

1,663,124. ADJUSTABLE HAT. PHILIP A. FISCHER, New York, N. Y. Filed Nov. 25, 1922. Serial No. 603,175. 4 Claims. (Cl. 2—175.)

1. An adjustable hat of generally conventional design, having a few closely grouped, pleats in one side thereof, the pleats beginning in the crown of the hat and extending downwardly and outwardly into the brim of the hat the rest of the hat having the usual

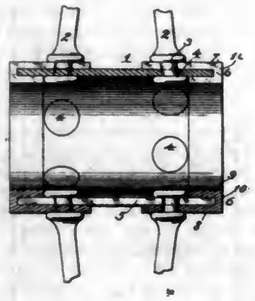
smooth outer surface, the pleats gradually widening toward the lower or brim end thereof, means engageable with the hat on opposite sides of the pleats for



holding the pleats in various positions for varying the head size of the hat, and a covering member for concealing the pleats.

1,663,125. METHOD OF TREATING CALCIUM CYANIDE. PALMER W. GRIFFITH, Elizabeth, N. J., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Feb. 24, 1926. Serial No. 90,425. 4 Claims. (Cl. 23—79.)

1. A method of increasing the cyanogen content of impure calcium cyanide which comprises agitating the same with an excess of liquid hydrocyanic acid and distilling off the unreacted hydrocyanic acid.

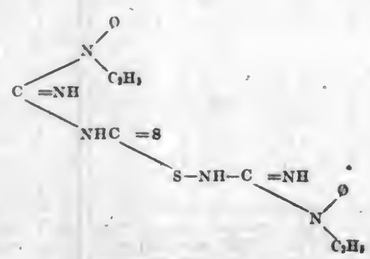


1,663,126. CAR-SEAT CONSTRUCTION. CONRAD T. HANSEN, Detroit, Mich., assignor to The American Motor Body Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 21, 1923. Serial No. 675,984. 2 Claims. (Cl. 155—188.)

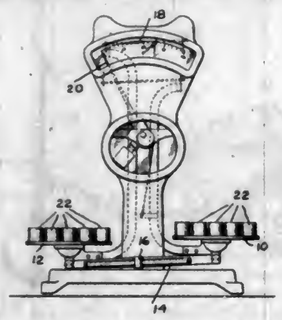
1. A car seat closure adapted to close a crevice between a seat cushion and an end plate of a car seat, said closure comprising a part to be firmly affixed to the structural portion of said cushion, a second part pivoted to said first part, a spring co-operating with both of said parts to normally hold said second part in horizontal position, and a covering for said pivoted part, said covering arranged to extend over the junction of said two parts to prevent clothing or other articles from engaging said spring or from being pinched by reason of the pivoting of the said second part on said first part.

1,663,127. WHEEL HUB. JOSEPH L. HECHT, Davenport, Iowa, assignor, by mesne assignments, to French & Hecht, Inc., Davenport, Iowa, a Corporation of Iowa. Filed May 26, 1922. Serial No. 563,808. 7 Claims. (Cl. 301—74.)

1. In combination with a hub shell, spokes fastened thereto and formed on their inner ends inside the shell with fastening heads projecting beyond the interior surface of the shell, and a comparatively narrow sleeve



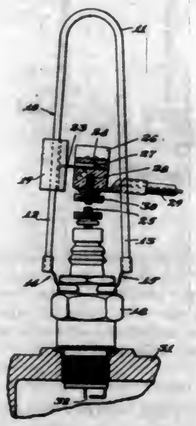
seated in the hub shell between the end of the same and said spoke heads and serving as a bearing for a box or axle.



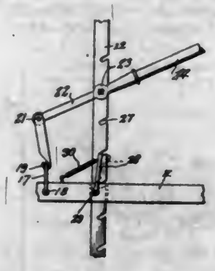
1,663,128. GUANIDINE COMPOUND. RALPH V. HEUSER, Elizabeth, N. J., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Apr. 24, 1926. Serial No. 104,476. 8 Claims. (Cl. 260—125.)

1. A composition of matter comprising the oxidized product of the reaction between a substituted guanidine having at least one unsubstituted amino hydrogen and carbon disulphide.

8. A composition of matter comprising diethyl-diphenyl-diguany-carbodisulphide having most probably the following structural formula where Ø indicates a phenyl group:



1,663,129. WEIGHING METHOD. JOSEPH HOPKINSON, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Feb. 19, 1926, Serial No. 89,260, and in Germany Oct. 23, 1925. 3 Claims. (Cl. 265—61.)

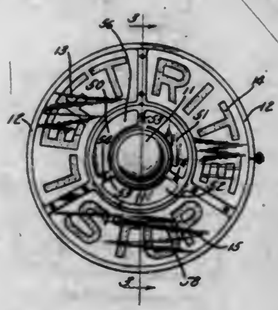


1. The method of apportioning equal parts by weight of a commodity into a plurality of unequal weight containers, which consists of first placing a plurality of empty containers upon each platform of an even balance automatic scale, and then filling single containers on each platform alternately while gauging each filling operation by an observed displacement of the scale indicator which is equal for successive filling operations.

1,663,130. IGNITION TESTER. HERBERT HOUGHTON, Los Angeles, Calif. Filed Jan. 13, 1925. Serial No. 2,094. 3 Claims. (Cl. 175—183.)

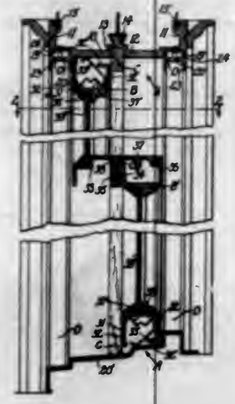
3. A spark plug tester comprising a standard having a limb of stiff wire, means forming a readily detachable physical connection between the standard and a spark plug and constituting an electrical connection with one of the electrodes thereof, a sleeve of insulating material carried by said limb and capable of free movements both axially and rotationally thereof, and a contact member, carried by said sleeve, having its one end in engagement with said limb and its other end projecting radially through the wall of said sleeve for relation to the other electrode of the spark plug.

1,663,131. SCAFFOLD. FRANK B. JOHNSTON, Roselle Park, N. J., assignor to American Safety Device Company, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1927. Serial No. 170,542. 1 Claim. (Cl. 304—18.)



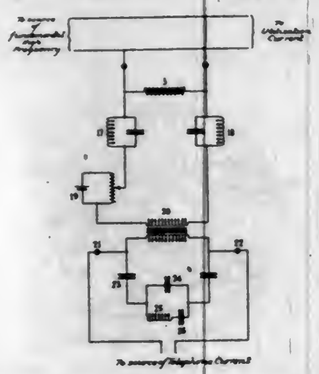
In a scaffold, a platform having a putlog projecting from the edge thereof, a vertical support having inwardly and downwardly inclined notches along one edge, a lever adjustable upwardly on the support, a connection between the lever and the putlog for elevating the latter, a loop pivoted upon the putlog, and a spring disposed between the putlog and the loop for normally urging the latter against the edge of the support and moving the loop into a registering notch as the putlog is elevated by the lever.

1,663,132. SCOURING DEVICE. RUSSELL B. KINGMAN, Orange, N. J., assignor to Metal Textile Corporation, West Orange, N. J., a Corporation of Rhode Island. Filed Jan. 21, 1925. Serial No. 3,740. 2 Claims. (Cl. 15—209.)



1. A scouring device, comprising a center core comprising a readily deformable elastic body, an abrasive cover engaged upon and around said core so as to be backed thereby said cover consisting in a metallic fabric knitted from flat ribbon-like wire to produce a multiplicity of scraping elements, and means to secure said cover relative to said core.

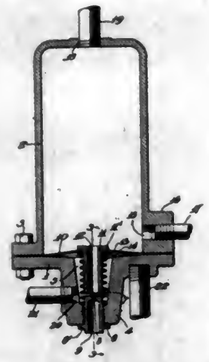
1,663,133. SAFETY SIGNAL. MORRIS P. KIRK, Los Angeles, Calif. Filed Nov. 24, 1923. Serial No. 676,834. 3 Claims. (Cl. 177—329.)



1. In a vehicle safety signal, the combination of: a colored bull's-eye adapted to be constantly illuminated; a housing for said bull's-eye; means for illuminating said bull's-eye; signal segments of transparent material radially extended outward from said bull's-eye, said segments having direction indicia carried thereby; sub-central lights whereby said segments may be separately illuminated; means for confining the rays of said sub-central lights to the proper segments; and a transparent pane of a color contrasting with that of the bull's-eye disposed between each of the adjacent segments and said bull's-eye, and adapted to be illuminated with its adjacent signal segment by the same sub-central light illuminating said adjacent signal segment so as to cause a contrasting series of color impressions to be produced in a given direction from the bull's-eye.

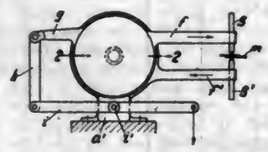
1,663,134. METAL WINDOW CONSTRUCTION. ALFRED M. LANE, St. Louis, Mo. Filed July 16, 1925. Serial No. 43,902. 15 Claims. (Cl. 189—67.)

1. A metal window framing member of substantially channel-shaped section, the web of the channel being formed with a longitudinal recess and an undercut rib and the flanges thereof being formed with undercut grooves.



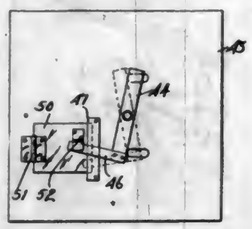
1,663,135. STATIC FREQUENCY MULTIPLIER AND MODULATOR. MARIUS LATOUR, Paris, France, assignor to Latour Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Nov. 20, 1923, Serial No. 675,832, and in France Dec. 9, 1922. 6 Claims. (Cl. 179—171.)

4. A system for producing modulated high frequency current comprising a source of moderately high frequency current, a source of low frequency current; a source of direct current; a coil receiving said high frequency current, said low frequency current and said direct current; and a core for said coil adapted to be magnetically saturated by said currents.



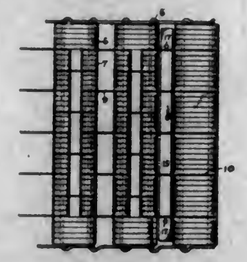
1,663,136. RETARDING VALVE FOR AUTOMATIC SPRINKLER SYSTEMS. LEROY M. LEWIS, Ardmore, Pa., assignor to Central Automatic Sprinkler Company, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 29, 1926. Serial No. 105,345. 7 Claims. (Cl. 169—23.)

1. A retarding valve for automatic sprinkler systems comprising a dome having an inlet adjacent its lower end and an outlet adjacent its upper end, a flexible diaphragm extended across the lower end of the dome, a valve chamber beneath the diaphragm, a valve movable with the diaphragm and having a passage extending from the interior of the dome to the interior of the valve chamber, a seat adapted to close said passage when



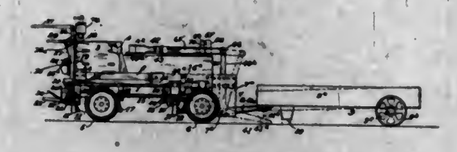
engaged by the valve, a restricted orifice leading from the valve chamber adapted to drain water from the dome irrespective of the position of the valve, a discharge port leading from the valve chamber, and yielding means tending to flex the diaphragm so as to normally hold the valve out of contact with said seat.

1,663,137. ELECTRIC SPOT-WELDING MACHINE. RICHARD MACK, Berlin-Tempelhof, Germany. Filed Feb. 20, 1925, Serial No. 10,512, and in Germany Feb. 28, 1924. 6 Claims. (Cl. 219—4.)



2. Electric welding machine, comprising a transformer with a primary and a secondary winding, two cups movable relatively to each other and enclosing the primary winding and the laminations of the said transformer, said cups forming the secondary winding of the transformer.

1,663,138. SWITCH-OPERATING MECHANISM. CHARLES F. PARKER, San Francisco, Calif., assignor to Western Safety Manufacturing Company, Inc., a Corporation of California. Filed Jan. 28, 1924. Serial No. 688,903. 1 Claim. (Cl. 200—50.)



Switch operating mechanism comprising a casing, a cover plate for said casing, a pair of electric switches having insulating bases mounted in said casing and levers for operating said switches, a pivoted bar mounted on said cover plate and adapted to bear on said levers—whereby the closing of one switch will open the other, but the movement of said pivoted bar independently will operate but one of said switches at a time, a hinged door in said cover plate, a lug on said door adapted to be engaged by an arm on said pivoted bar to lock said door when one of said switches is closed, and means to operate said pivoted bar independently of said switch levers.

1,663,139. MATTING. WILLIAM J. REILLY, deceased, Brooklyn, N. Y., by Helen Reilly, administratrix, New York, N. Y. Filed Apr. 9, 1926. Serial No. 100,998. 1 Claim. (Cl. 20—78.)

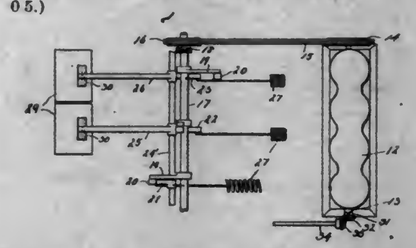
In a mat of the class described, a row of end links of leather connected by a rod, another row of links separated therefrom by a space, metal links intervening said leather links, and a rod in said space positioned by said metal links.

1,663,140. INDUSTRIAL TRUCK. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 31, 1924. Serial No. 759,026. 19 Claims. (Cl. 280—33.1.)

1. In apparatus of the class described, the combination of a truck frame, supporting wheels therefor, means for driving certain of said wheels, a combined connecting and lifting device pivotally mounted at the rear end of said frame and having an outwardly extending arm adapted to be projected into lifting relationship with a trailer and an upwardly extending arm, and means connected to the latter arm for swinging said device to lift said trailer and to connect it and said frame together.

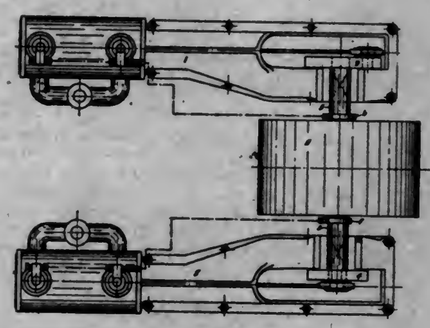
1,663,141. SOLDERING MATERIAL. SAMUEL RUBEN, New York, N. Y. Filed Oct. 1, 1926. Serial No. 139,021. 2 Claims. (Cl. 75—1.)

1. A solder compound of substantially lead 34%, tin 34%, zinc 31% and magnesium 1%.



1,663,142. FRICTION-RETAINED CLOSURE. EDGAR SCOFIELD, New York, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Feb. 25, 1925. Serial No. 11,433. 10 Claims. (Cl. 215—38.)

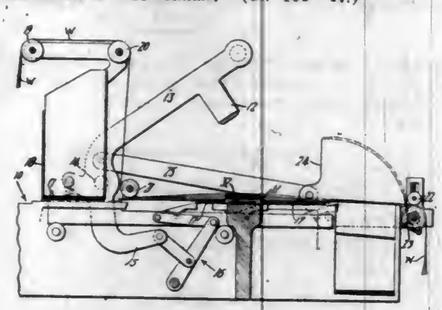
1. In a closure cap; a skirt comprising a pair of annular zones spun inwardly to form container grasping means, each of said zones being corrugated to adapt it for expansion to size it to the individual container



to which the closure may be applied; and a connecting band between said zones, said band being adapted to be deformed when the closure is applied to a container.

1,663,143. SPRING-POWER MARINE PROPULSION DEVICE. LOUIS SHER, Philadelphia, Pa. Filed Nov. 22, 1927. Serial No. 234,984. 2 Claims. (Cl. 115—0 5.)

1. A spring power marine propulsion device comprising, in combination, a hull having after portions spaced apart, a pair of parallel transverse shafts between the spaced hull portions, standards independently rotatable on one shaft, levers carried by said standards, springs to actuate said standards in one direction through the levers, blades hinged to the outer free ends of the standards to present flat surfaces to the water when moving astern and to feather when moving forward, radial arms fixed to the other shaft at different angles for co-operation with the levers to successively actuate the blade standards in the other direction and placing the springs under tension, an air propeller at the stern, and means to actuate selectively the blades and air propeller.



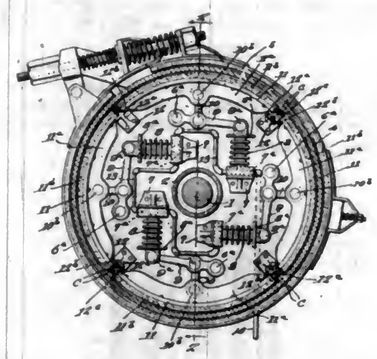
1,663,144. ENGINE. ALLAN D. SKINNER, Erie, Pa., assignor to Skinner Engine Company, Erie, Pa., a Corporation of Pennsylvania. Filed Aug. 4, 1921. Serial No. 489,727. 5 Claims. (Cl. 60—97.)

1. In an engine, the combination of a crank shaft; two cranks on the shaft; two eccentrics, one eccentric having operative relation with one crank and the other eccentric having operative relation with the other crank; a carrier for the eccentrics; two governors, one for each eccentric, each governor comprising a weighted arm on which an eccentric is rigidly mounted, a shaft on which the arm is fixed, and bearings for the shafts in

the carrier; and connections between the shafts compelling equal responses by the eccentrics, said connections being at the opposite sides of the bearings from the governor arms.

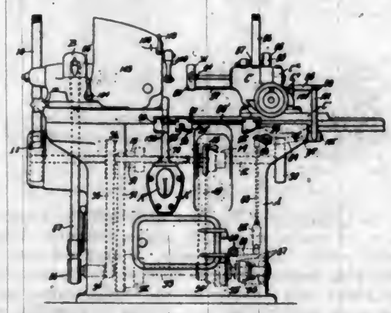
1,663,145. MANIFOLD-WEB-PRINTING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed June 29, 1926. Serial No. 119,279. 15 Claims. (Cl. 101—47.)

1. In a manifold-web-printing machine, in combination, a printing bed over which may be passed a multiple-ply longitudinally-fan-folded work-web having a plurality of carbons interleaved therewith, a plate mounted at each side of said web, and a pair of diagonal guides arranged on each of said plates, one guide of each pair being positioned in front of said printing bed and the other in the rear of said printing bed, each pair of said guides being disposed to extend inwardly between two adjoining superposed plies of said work-web for turning one of said carbons which may enter between said workplies at right angles to the same in the opposite direction of the movement of said work-web and thence away from said work-web at right angles and on the same side from which the carbon entered said work plies.



1,663,146. MUSICAL INSTRUMENT. JOSEPH C. SOCIN, Brooklyn, N. Y. Filed Sept. 5, 1925. Serial No. 54,599. 11 Claims. (Cl. 84—404.)

10. In a device of the character described, a plurality of tongues of different lengths mounted upon a sounding box, a key for vibrating each tongue, each key having a lever pivoted thereon, said levers carrying pickers to strike said tongues in one direction, pivoted levers above said tongues to prevent the same from being struck by said pickers as they move in the opposite direction, and means for adjusting the positions of said levers on said keys.



1,663,147. HYDRAULIC BRAKE. CHESTER A. SPOTZ, Greenwich, Conn. Filed Apr. 16, 1926. Serial No. 102,563. 1 Claim. (Cl. 188—152.)

In a brake mechanism for motor vehicles, a brake drum and axle housing, a disc member carried by the housing and closing the open side of the drum, a plurality of arc-shaped radially movable brake shoes within the drum, brackets mounted on said disc between said shoes, said brackets being adapted to guide said shoes and to limit their inward movement, plates removably mounted one on each bracket to normally hold the shoes against axial movement in the drum, a plurality of expansible metal bellows carried by said disc, one for each shoe, a plurality of levers each mounted at one of its ends on a fixed pivot

on said disc, and each connected at its other end to one of said bellows, a plurality of links each swivelly connected at one end to an intermediate portion of a lever and swivelly connected at the other end to a shoe, said bellows being connected in series so as to be simultaneously operable by fluid pressure.

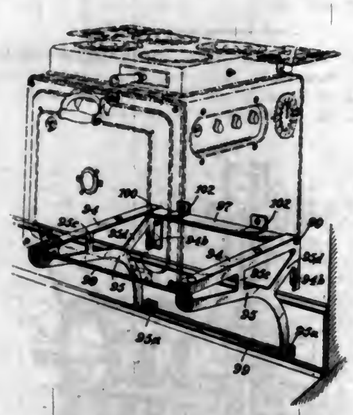
1,663,148. GRINDING MACHINE. PAUL STONER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1920. Serial No. 424,898. 29 Claims. (Cl. 51—95.)

1. In an abrading machine, a carriage, gearing to reciprocate the same, a control lever for said gearing, a yieldable plug extending upward from said lever, dogs on the carriage adapted to engage the plug and swing the lever from side to side, said lever being also swingable toward and from the carriage, and said dog having a beveled face adapted to ride over the plug in one position of the lever without moving the lever, substantially as set forth.

1,663,149. ADJUSTABLE BACK REST FOR BABY CARRIAGES. FREDERICK D. TRYON, New York, N. Y. Filed Apr. 22, 1927. Serial No. 185,750. 1 Claim. (Cl. 280—47.)

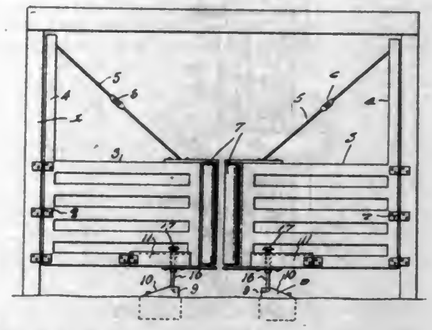
A baby carriage comprising a body, a bedding supporting floor in the body, an inwardly extensible and adjustable back rest hingedly supported on the front wall

of the carriage and maintained in normal position thereon by the bedding and a foldable brace on the back rest



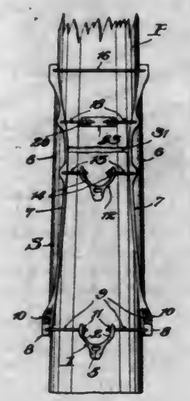
cooperating with the front wall of the carriage to maintain the said back rest in an inclined position and resting on the bedding when the said back rest is extended.

1,663,150. ALUMINUM-BASE ALLOY. ROBERT S. ARCHER, Cleveland, Ohio, assignor to Aluminum Company of America, a Corporation of Pennsylvania. Filed June 30, 1925. Serial No. 40,702. 7 Claims. (Cl. 75—1.)



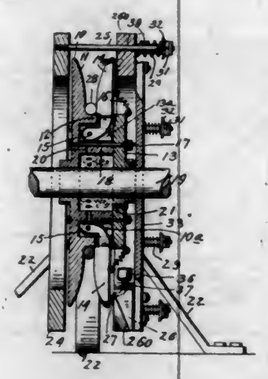
1. An aluminum base alloy containing from about 3 to 15 per cent silicon with more than about 0.8 per cent iron, and more than about 0.05 per cent of a metal of the sixth group of the periodic system having an atomic weight less than 190.

1,663,151. STOVE. CHARLES C. ARMSTRONG, Huntington, W. Va. Filed Oct. 2, 1926. Serial No. 139,154. 2 Claims. (Cl. 248—30.)



1. A bracket for supporting a cooking stove or the like from the wall and adapted to leave clear floor space beneath, said bracket being composed of two side members connected together, each side member having a horizontal arm of angle iron-like form in cross section, each of which arms has a downward extension at its rear end of right angular form in cross section to bear on the wall, each side member having also an inclined arm extending from the front end of the horizontal arm rearwardly and downwardly to a point below the end of said downward extension, said inclined arms having each a bearing at its lower end in advance of the vertical plane in which the rear face of the said downward extension lies, to rest against the face of the base board and means for securing the bracket to the wall and to the base board, substantially as described.

1,663,152. GATE LATCH. HENRY R. BARTH, Content, Mont. Filed May 25, 1926. Serial No. 111,590. 1 Claim. (Cl. 292—93.)

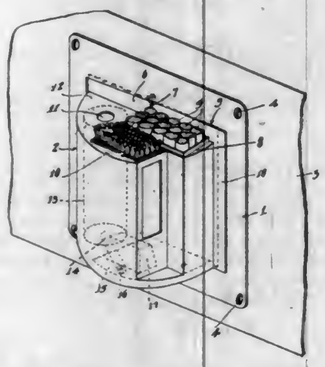


In combination, a keeper in a gate way, a horizontally swingable gate, a horizontally swingable chambered unlatching member hingedly connected at one end to the gate and arranged at one side of the gate and offering an abutment to an approaching automobile, an upright sleeve carried by the gate, a tube carried by said sleeve and having an upright portion in parallelism to the sleeve and also having a lateral portion, an upright latching bolt movable rectilinearly in said sleeve and having a horizontally disposed head above the sleeve, a plunger connected to the unlatching member and arranged therein and disposed and movable in the lateral portion of said tube, an upright plunger arranged in the upright portion of the tube and arranged when raised to act against said head and raise said latching bolt, and anti-friction units in the tube and interposed between the plunger on the swingable member and the upright plunger.

1,663,153. POLE-SUPPORTING DEVICE. ALBERT W. BENSLEY, Pawtucket, R. I. Filed Sept. 22, 1927. Serial No. 221,307. 7 Claims. (Cl. 20—100.)

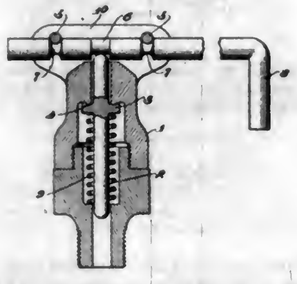
5. In a device of the type set forth connecting means formed to engage a stub and a pole, means to secure the connecting means to the pole, ground engaging means formed to be driven into the ground from above the surface thereof, and means to secure the ground engaging means to the connecting means.

1,663,154. PULLEY. JOHN W. BISSETT, Garrison, Pa. Filed Dec. 9, 1924. Serial No. 754,779. 8 Claims. (Cl. 64—40.)



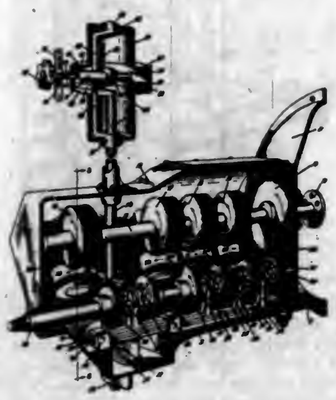
1. A grooved pulley for cooperation with a rope passing partially over the circumference of the pulley, said pulley having laterally movable rope-engaging fingers with surfaces that engage only the rope side, whereby the rope is free to move in a direction radial of the pulley into and out of contact with the circumference thereof, and automatic means to press such fingers against the rope side yieldable outwardly, the movement of the fingers outward depending entirely on the thickness of the rope.

1,663,155. PROCESS FOR THE RECOVERY OF VOLATILE SOLVENTS. JEAN HENRY BRÉGEAT, Paris, France. Filed Aug. 1, 1925, Serial No. 47,648, and in France June 8, 1925. 3 Claims. (Cl. 252—4.)



1. A process for the recovery of volatile normally non-gaseous substances carried in gaseous mixtures, which comprises the use as absorbing agents, of hydrogenized terpenes.

1,663,156. HOLDING DEVICE FOR SMOKERS' ARTICLES. CAL V. BROWN, Santa Barbara, Calif. Filed July 17, 1926. Serial No. 123,048. 6 Claims. (Cl. 206—1.)



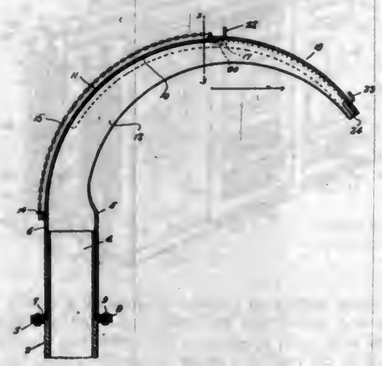
1. In a holding device for smokers' articles, the combination of a supporting member having an opening therein, a holder pivotally mounted in said opening to revolve on a vertical axis located about on the vertical axis of the opening, said holder having a vertical dimension smaller than the vertical dimension of the opening and having one of its side edges at less distance from the axis of rotation of the holder than the vertical edge of said opening whereby the holder is capable of revolving in the opening so as to place the holder in position to expose the articles carried in the holder, and means for stopping the revolving movement of the holder in each direction operating to hold the holder in its open position and in its closed position.

1,663,157. AIR-VENTING VALVE. HAROLD BROWN, Kansas City, and GEORGE RUDOLPH UHL, Tongonoxie, Kans., assignors to The Mid-Continent Equipment and Supply Company, a Corporation of Kansas. Filed July 11, 1925. Serial No. 42,973. 1 Claim. (Cl. 303—80.)

An air brake auxiliary reservoir casing having a guide bore at one end thereof, a piston valve reciprocable in said casing to control the release of air therefrom and having a guide stem longer than and slidable in said bore, a spring in said casing to maintain the piston valve normally closed with the stem thereof normally projecting endwise from said bore, and a rod rotatably mounted on said casing and having a cam part in slidable engagement with the projecting end of said stem and operable by the rotation of said rod to control the opening and closing of said valve.

1,663,158. VARIABLE-SPEED TRANSMISSION MECHANISM. SAMUEL M. DICK, Pasadena, Calif., assignor of one-half to H. H. Ward. Filed Nov. 30, 1925. Serial No. 72,122. 8 Claims. (Cl. 74—59.)

1. In a transmission mechanism, a housing, a drive shaft, a transmission shaft, a plurality of worms on one of said shafts, a plurality of gears on the other of said shafts, a plurality of intermediate elements having worm portions in mesh with said worms and gear portions in mesh with said gears, whereby said drive shaft and said transmission shaft are operatively connected by said worms, gears and intermediate elements, and a plurality of clutch elements for selectively operating one shaft from the other through said connections.

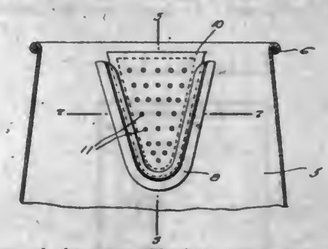


1,663,159. PROCESS FOR PURIFYING AND BLEACHING HEAVY SPAR. KARL EBERS, Ahrensburg, Germany. Filed Dec. 22, 1925, Serial No. 77,132, and in Germany Dec. 24, 1924. 3 Claims. (Cl. 252—8.)

2. Process of purifying and bleaching heavy spar consisting in mixing the ground spar with manganese dioxide and heating this mixture with hydrochloric acid and washing.

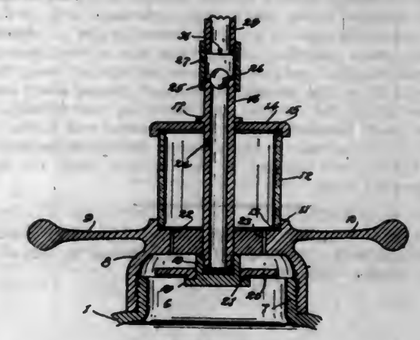
1,663,160. COATING AND IMPREGNATING MEDIUM. CARLETON ELLIS, Montclair, N. J. Filed Dec. 7, 1920. Serial No. 428,852. 12 Claims. (Cl. 13—26.)

12. A substantially clear solution of a phenol-sulfur-halide resin, which is not readily soluble in any one of the following, namely, alcoholic bodies including methyl alcohol, ethyl alcohol, denatured alcohol, acetone and higher ketones, methyl acetate, ethyl acetate, benzol, homologues of benzol, chlorbenzol; in a composite solvent which includes at least one of the mentioned solvents.



1,663,161. ADJUSTABLE DEFLECTOR FOR SILO FILLERS. WILLIAM C. FABER, Pawpaw, Ill. Filed Feb. 23, 1927. Serial No. 170,275. 2 Claims. (Cl. 193—3.)

1. In combination, a silo filler pipe having a circumferential flange at an intermediate point and also having a tubular portion extending above said flange, a deflector member having a tubular portion surrounding said tubular portion of the filler pipe and flanged at its lower end to bear on the flange of the filler pipe and also having a curvilinear arm with a curved back wall and with skirt flanges extending therefrom, said skirt flanges extending a considerable distance beyond the forward end of said curved wall, an annulus superposed on the flange of said deflector member, and also superposed on the flange of the filler pipe and connected to the latter flange, and a curvilinear extensible member mounted on the said arm of the deflector, and adapted when retracted to permit of ensilage being shot between the forward portions of the skirt flanges of the arm; the said arm of the deflector being provided with side flanges, and the said endwise adjustable curvilinear member being provided with channel portions receiving said flanges of the arm, and the arm being provided with stop means, and the endwise adjustable curvilinear member being provided with means to bring up against said stop means.



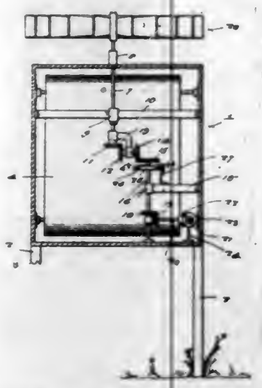
1,663,162. COFFEEPOT. GEORGE L. GESSNER, Toledo, Ohio. Filed Mar. 7, 1927. Serial No. 173,578. 1 Claim. (Cl. 53—3.)

In a coffee pot of the class described, wherein the same is formed with a substantially triangular shaped opening in the side wall thereof adjacent its upper edge, and from which extends a pouring spout; a relatively V-shaped metallic strip secured to the inner face of the wall of the pot and surrounding the triangular opening, the inner edge portion of the strip being bent inwardly and thence laterally to provide a V-shaped offset and a similar shaped retaining flange, the edge of said flange terminating beyond the adjacent side edges of the opening formed in the side edges of the pot, and a triangular shaped plate formed with a series of openings and being curved transversely throughout its length to conform to

the contour of the pot, said plate being of greater dimensions than the triangular openings and being adapted for detachable disposition between the inner wall of the pot and said V-shaped flange, the side edges of the plate engaging the offset portions of the V-shaped strip, the upper edge of the plate extending beyond the upper ends of the V-shaped strip and terminating below the upper edge of the coffee pot.

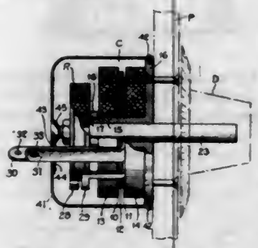
1,663,163. COMBINATION HUMIDIFIER AND DECARBONIZER. MELVIN EDGAR GILLESPIE, Regina, Saskatchewan, Canada. Filed Dec. 7, 1925, Serial No. 73,781, and in Canada Sept. 22, 1925. 3 Claims. (Cl. 123—25.)

1. A combination humidifier and decarbonizer for attachment to a radiator of an internal combustion engine comprising a demountable radiator cap, a transparent cylinder mounted on the cap and having the ends thereof closed and communicating through suitable openings provided in the cap with the interior of the radiator, and an extending vapor outlet pipe opening to the top of the cylinder, said pipe being cut adjacent the cylinder and having the cut ends detachably connected together and a ball valve normally seated within the pipe.



1,663,164. SCREEN FASTENER. AUGUST E. HELMAN, Cleveland, Ohio, assignor to The W. S. Tyler Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 9, 1924. Serial No. 685,082. 4 Claims. (Cl. 209—403.)

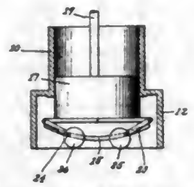
1. Screen fastening means comprising a U-shaped metal strip enclosing the edge portion of a woven wire screen,



and the legs of said strip being arranged parallel with the screen and having the connecting end bent on a soft, round curve through more than 90 degrees to form a hook portion.

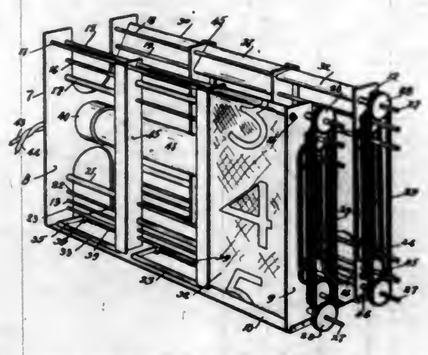
1,663,165. ADVERTISING DEVICE. ALVIN J. HILL and GUY PURNELL, Angleton, Tex. Filed Oct. 9, 1926. Serial No. 140,604. 1 Claim. (Cl. 40—38.)

An advertising device comprising a housing provided at one side thereof with a window pane, upper and lower shafts within the housing, drums on said shafts, an endless advertising band movable over said drums with one of its stretches opposed to said window pane, a horizontally disposed driven shaft, gearing between said driven shaft and the lower of the first named shafts, a vertical driving shaft extending through the top of the housing, a wind wheel on said shaft above and spaced from the housing, a gearing train between said driving shaft and driven shaft for rotating the latter by the former, a brake shaft included in said gearing train and having a notch in its periphery, and a spring detent supported in the housing and adapted to seat in said notch for the purpose set forth.



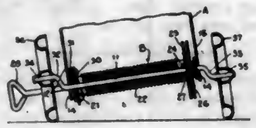
1,663,166. VARIABLE GRID LEAK. LESTER L. JONES, Oradell, N. J. Filed Mar. 16, 1923. Serial No. 625,484. 12 Claims. (Cl. 250—16.)

1. A new article of manufacture comprising a fixed condenser, connecting terminals integral with opposite plates of said condenser, a resistance element and contact means for said resistance element formed integrally with said condenser plates.



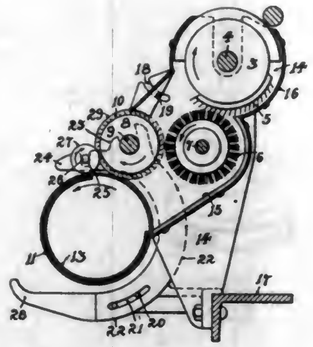
1,663,167. MASSAGE APPARATUS. WALTER KOESTER, New York, N. Y. Filed June 15, 1927. Serial No. 198,901. 3 Claims. (Cl. 128—57.)

1. In a massaging device, a square housing having an annular cylinder integral therewith, the side walls of the housing having downwardly curved channels therein, a plunger reciprocal in said cylinder, rollers pivoted to the plunger and hanging suspended when the plunger



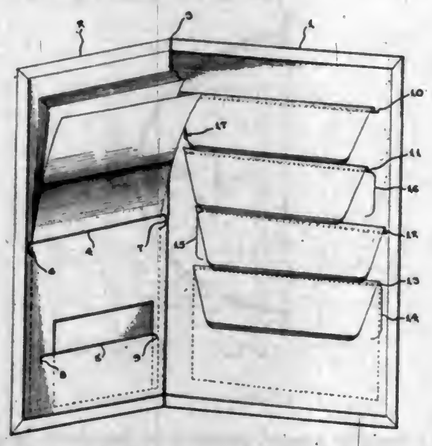
is in lifted position, and means on the end of said rollers registering in said channels for guiding the rollers in a downwardly curved path into contact with the skin.

1,663,168. PRICE-INDICATING MACHINE. DAVID F. MACK, Winnipeg, Manitoba, Canada. Filed July 3, 1926. Serial No. 120,407. 2 Claims. (Cl. 40—95.)



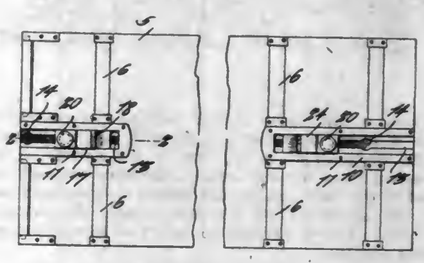
1. A price indicating machine comprising a casing having one end closed and the other open and provided in the sides with sight openings, a removable cap closing the open end of the casing, a frame insertable within the casing through the open end thereof and presenting opposing end plates and a connecting base plate, upper and lower guide members carried by the frame and located in the upper corners of the casing, upper and lower sets of winding shafts rotatably mounted in the end plates, said shafts having their forward ends square and contained within the cap receiving end of the casing, chain wheels secured to the latter ends of the shafts, chains connecting the chain wheels in pairs, winding ribbons arranged side by side and passing over the guides and having their ends secured to the pairs of shafts, said winding ribbons being opaque and having transparent portions appearing thereon and indicating numbers arranged in arithmetical progression throughout the length of the ribbons and a centrally disposed illuminated light carried by one end of the frame.

1,663,169. TOY VEHICLE. LOUIS MARX, Brooklyn, N. Y. Filed Mar. 26, 1927. Serial No. 178,530. 4 Claims. (Cl. 46—48.)



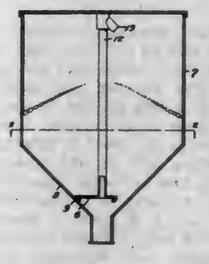
1. A motor driven toy vehicle comprising a vehicle body and means for propelling the same in an erratic manner, said means comprising a drive axle journalled in said body, motor means supported on said body and connected to said axle to drive the same, at least one of the ends of said axle being provided with an integral crank section having a wheel receiving portion offset from the axis of said axle, and wheels loosely mounted at their centers on said axle, one of said wheels being mounted upon the offset portion of the crank end of said axle whereby upon energization of said motor the vehicle may be propelled with a skip and start action combined with a side to side oscillating or rollicking motion.

1,663,170. COMBING MACHINE FOR TEXTILE FIBERS. JOHN WILLIAM NASMITH, Manchester, England. Filed Aug. 1, 1927, Serial No. 209,906, and in Great Britain Apr. 6, 1926. 6 Claims. (Cl. 19—116.)



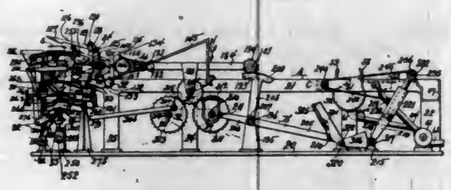
1. In a combing machine in which the combing cylinder is cleared of waste by a brush for the subsequent removal of such waste by means of an aspirator, a doffing roller interposed between the brush and aspirator the said roller having teeth which strip the brush bristles and pass closely adjacent to the aspirator surface; means for rotating the doffing roller; and means supporting the said roller so that it may be bodily adjusted toward and from the brush.

1,663,171. PAPER PORTFOLIO. ARTHUR EDWARD OSBORN, Marion, Ind. Filed Sept. 13, 1927. Serial No. 219,291. 2 Claims. (Cl. 28—31.)



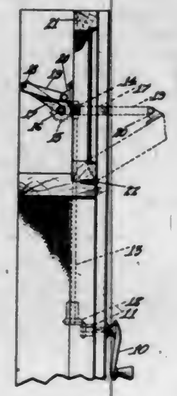
1. A portable paper portfolio having pocket portions on the inside surfaces for receiving and displaying envelopes, blotters and paper, the pocket portions on one side of the portfolio being arranged to receive envelopes, and on the other, paper and blotter, the pockets for the envelopes being provided along one side edge with a slit for allowing easy access to the pockets and, at the same time, function to hold the envelopes in position.

1,663,172. CASKET-RETAINING DEVICE. WILLIAM B. PARSELS, Pleasantville, N. J. Filed Mar. 23, 1927. Serial No. 177,704. 3 Claims. (Cl. 296—18.)



1. In a hearse having a floor with a longitudinally extending groove reduced in width at its bottom, shoulders formed between the wide and narrow portions of the groove, a plate resting on said shoulders, said plate being slotted longitudinally, upstanding flanges at the edge of the plate forming a guide, means for anchoring the plate to the floor of the hearse, a bolt having a shank extending through the slot of the plate and its head slidable in the reduced portion of the groove under the plate, a casket clamp having a base slidable on the plate and guided by the flanges, the said base having an aperture therethrough for the reception of the shank of the bolt, and an element threaded on the bolt for drawing the head of the bolt into engagement with the under surface of the plate.

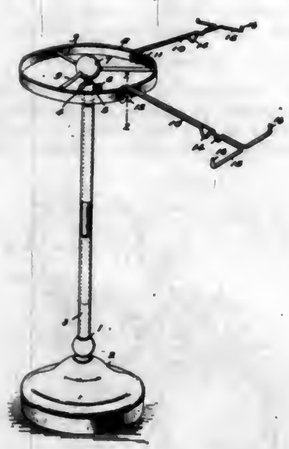
1,663,173. PROCESS OF AND APPARATUS FOR CONTROLLING THE MOVEMENT OF MASSES OF SOLIDS OF VARIOUS SIZES. LOUIS E. W. PIODA, San Francisco, Calif. Filed Dec. 26, 1923. Serial No. 682,702. 4 Claims. (Cl. 83—46.)



1. The process of controlling the gravital movement of a mass of relatively finely divided solids of various sizes from a container through a discharge outlet in the bottom thereof in which movement pockets of air are entrapped in the mass in the container, which comprises venting the entrapped air from the mass before the air pocket reaches the discharge outlet.

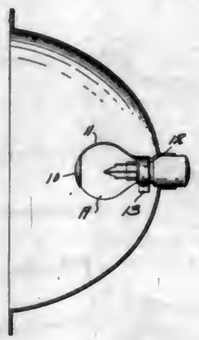
1,663,174. CIGAR-BUNCH-MAKING MACHINE. JOSEPH LEOPOLD POLDY, New York, N. Y. Substitute for application Serial No. 411,175, filed Sept. 18, 1920. This application filed May 17, 1926. Serial No. 109,804. 14 Claims. (Cl. 131—142.)

14. In a cigar bunch making machine the combination of a shaft journaled therein, swinging pressers fastened to the shaft, an oscillating arm in the machine, a pin extending from the arm and a cam with one end fastened to the shaft and its cam surface coacting with said pin, the oscillations of the arm causing the swinging pressers to actuate through the intervention of the intervening elements.



1,663,175. TRANSOM ADJUSTER. WILLIS E. PUTNAM, Worcester, Mass. Filed Apr. 1, 1925. Serial No. 19,984. 1 Claim. (Cl. 268—105.)

In a device for operating a vertical transom pivoted on a horizontal axis at its lower edge, the combination of a horizontal shaft above said axis and at one side thereof, means for rotating said shaft, an arm fixed to the shaft, and a link pivoted to the free end of the arm and to the sash of the transom at a point above the shaft, whereby when the shaft is turned in one direction and the arm turns with it, the sash will swing open on its pivot, the link and arm being arranged to extend substantially in the same horizontal direction when the sash is closed, so as to exert a powerful leverage to close the sash and hold it closed when the link and arm are moved inwardly into horizontal position.

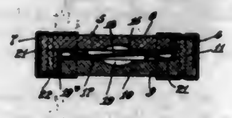


1,663,176. DISPLAY RACK FOR GARMENTS AND THE LIKE. HENRY E. REYHER, Kendallville, Ind. Filed July 8, 1926. Serial No. 121,211. 1 Claim. (Cl. 211—124.)

In a device of the class described, a support including a rim, and a display member outstanding from the rim and including resilient arms which are straight throughout the major portion of their length, the arms being connected at their inner ends by means whereby they are mounted on the rim and held thereon against downward swinging movement, the arms being provided,

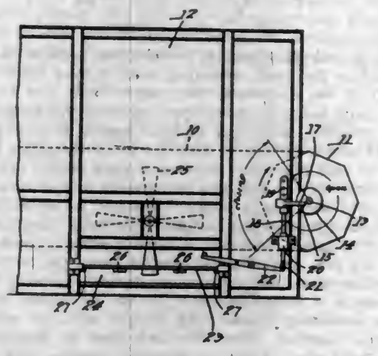
adjacent to their outer ends, with approximately V-shaped parts disposed out of alinement with each other and disposed vertically, each arm sliding on the aforesaid part of the other arm, to prevent the arms from becoming crossed on each other, at their outer ends.

1,663,177. HEADLIGHT DIMMER. DREW REYNOLDS, Denver, Colo. Filed Nov. 21, 1925, Serial No. 70,596. Renewed June 6, 1927. 1 Claim. (Cl. 240—48.6.)



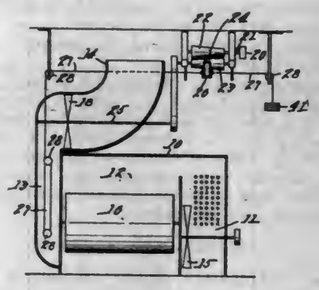
A headlight dimmer comprising an imperforate opaque disk having an integral, thin, rearwardly extending, outwardly bowed, relatively narrow arm adapted to fit longitudinally along an electric light bulb, the arm terminating in an integral split, resilient collar.

1,663,178. PHOTOGRAPHIC SHUTTER. WILLIAM A. RIDDELL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 12, 1923. Serial No. 612,218. 12 Claims. (Cl. 95—63.)



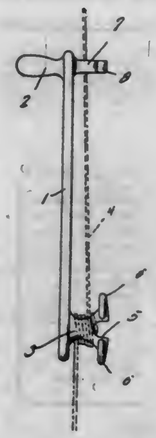
1. In a photographic shutter, the combination with a blade mechanism and a blade actuator, of a master member having an operating engagement with the actuator in one direction and a releasing movement therefrom in a relatively transverse direction.

1,663,179. RENEWABLE FUSE. FREDERICK J. ROTH, New York, N. Y. Filed Sept. 10, 1926. Serial No. 134,725. 4 Claims. (Cl. 200—131.)



1. A renewable fuse comprising separable body portions, a link positioned between said body portions, end caps for releasably holding said body portions together, and contact springs connecting the link and said end caps.

1,663,180. AUTOMATIC DAMPER-OPERATING DEVICE FOR DRYING MACHINES. FREDERICK G. SARGENT, Westford, Mass., assignor to C. G. Sargent's Sons Corporation, Graniteville, Mass., a Corporation of Massachusetts. Filed Aug. 18, 1926. Serial No. 130,056. 3 Claims. (Cl. 34—12.)



3. In a drier, the combination with an exhaust fan for taking out the moisture laden air and an outlet therefor, of a damper for controlling the opening of said outlet, said damper being arranged normally to remain open, means adapted to engage the damper and close it, and means controlled by the operation of the drier for periodically actuating said means and opening the damper.

1,663,181. EXHAUST-FAN CONTROL FOR DRYING MACHINES. FREDERICK G. SARGENT and FRANK L. FURBUSH, Westford, Mass., assignors to C. G. Sargent's Sons Corporation, Graniteville, Mass., a Corporation of Massachusetts. Filed Aug. 18, 1926. Serial No. 130,058. 5 Claims. (Cl. 34—12.)

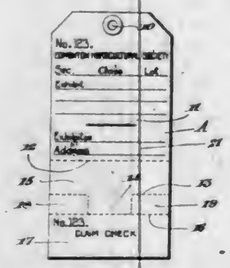
4. The combination with a drying chamber, an exhaust air duct and an exhaust fan for drawing the air out of the air duct, of a variable speed drive for the exhaust fan comprising a belt, a belt shifter for controlling the position of the belt along the variable speed drive, a moisture absorbing cord connected with the belt shifter for moving it along, a series of loose pulleys in the air duct, said cord passing around said pulleys several times so as to be free to come and go as it expands and contracts, one end of the cord having a counterweight thereon for holding that end normally in constant position but capable of moving up and down if the shrinkage of the cord is greater than the traverse of the belt shifter.

1,663,182. LINE-TIGHTENING TOOL. FRANK SEMMLER, West Allis, Wis. Filed May 10, 1927. Serial No. 190,236. 1 Claim. (Cl. 24—71.3.)

As a new product of manufacture, a lever provided at one end and on one side with right angularly disposed winding drum about which a portion of the line is

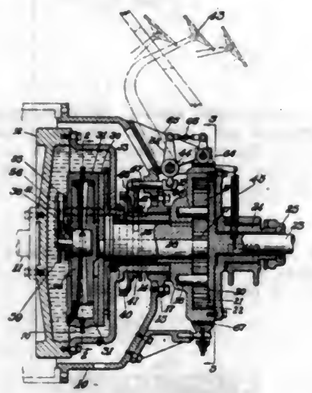
adapted to be coiled, said drum being formed at its outer end with a notch to facilitate the winding of the line on the drum, retaining flanges formed on said drum adjacent said notch, a keeper at the opposite end of the lever and on the same side thereof, said keeper comprising an angularly disposed extension provided with oppositely extending retaining hooks, and a hand grip at the last named end of the lever and on the opposite side of the latter.

1,663,183. PHTHALIC ANHYDRIDE-GLYCEROL RESINS AND PROCESS OF PREPARING SAME. JOHN H. SCHMIDT, Chicago, Ill., assignor to Bakelite Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1924. Serial No. 709,667. 2 Claims. (Cl. 260—8.)



1. Process comprising reacting with phthalic anhydride upon a polyhydric alcohol at a temperature below 175° C. to form a colorless initial condensation product; subjecting said product to prolonged heating at temperatures below that at which a substantial amount of inherent color is formed; and continuing the heating until a hard, tough and infusible product substantially free from inherent color is produced.

1,663,184. RAILROAD GATE. ROBERT D. STOKES, Bristol, Va. Filed Feb. 15, 1927. Serial No. 168,361. 2 Claims. (Cl. 246—125.)

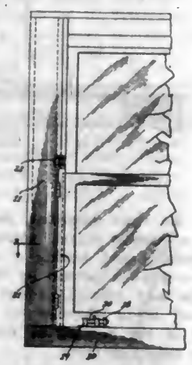


1. The combination with a track and a highway crossing, of a gate shaft supported for rotation, a highway gate carried by the shaft, a reversible motor, a connection between the motor and the gate shaft and including a clutch, spring means for rotating the clutch in one direction to close the gate, and train-actuated means near the track for operating the motor directly and reversely, thereby to tension the spring means and to open the gate when the motor is operated directly, and to render the clutch rotatably responsive to the spring means, thereby to close the gate, when the motor operates reversely.

1,663,185. TAG. WILLIAM EDWARD WEBB and ERNEST PENROSE WILLIAMS, Edmonton, Alberta, Canada. Filed Apr. 1, 1927. Serial No. 180,257. 5 Claims. (Cl. 40—2.)

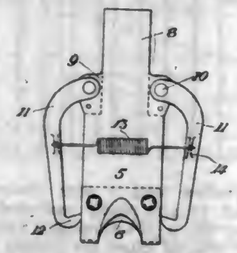
1. An entry tag of the character described comprising a main panel having a slot therein, a middle panel separated from the main panel by a weakened line, an irregular weakened line spaced from the aforementioned weakened line to provide the middle panel with a tongue, and a weakened line between the tongue and the lower panel whereby on the lower panel being detached and the tongue and middle panel folded the tongue on the middle panel engages with the slot in the main panel.

1,663,186. FLUID CLUTCH AND REVERSE GEAR. ALFRED C. ANDERSON, Worcester, Mass. Filed July 21, 1926. Serial No. 124,073. 10 Claims. (Cl. 74—34.)



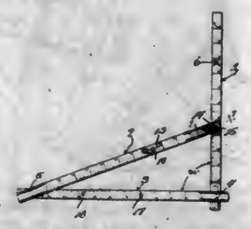
1. In a fluid clutch and speed change gearing, the combination with a driving shaft and a casing for a liquid secured to rotate therewith, of a shaft, cylinders fixed with respect to the last named shaft, cylinders rotatable with said casing, and pistons connected together and working in the cylinders and constituting means for transmitting the motion of rotation to the last named shaft from the first named cylinders.

1,663,187. MULTIPLE TIMER. THOMAS J. BARRETT, Los Angeles, Calif. Filed May 20, 1925. Serial No. 31,575. 1 Claim. (Cl. 200—36.)



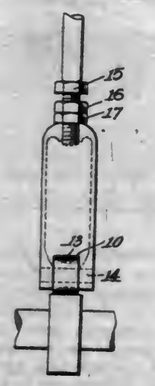
In a multiple timer, in combination with a clockwork including dial and indicating hand carried by a central shaft of the clockwork, the central shaft and therewith the hand being in continuous operative connection with one terminal, indicating members having head pieces disposed on the outside of said dial to contact with the free end of said indicating hand at desired points throughout the circle of the dial and terminating on the rear-side of the dial carrying a contact member in operative connection with a second terminal normally insulated from the first-named terminal, a second contact member having its free end disposed spaced from the free end of the first-named contact member thereby normally forming a gap in a circuit while in direct connection with the said indicating member and thereby with the said first-named terminal when the said hand is disposed over the head piece of said indicating member, and a plug receiving means disposed at a point to bring an inserted plug between the two free ends of said contact members to bridge the said gap on the rear-side of said dial for closing the circuit and at a point adjacent to each of said indicating members.

1,663,188. PIVOTED WINDOW. RUDOLF BENZENBERG, New York, N. Y. Filed July 28, 1927. Serial No. 208,975. 4 Claims. (Cl. 20—42.)



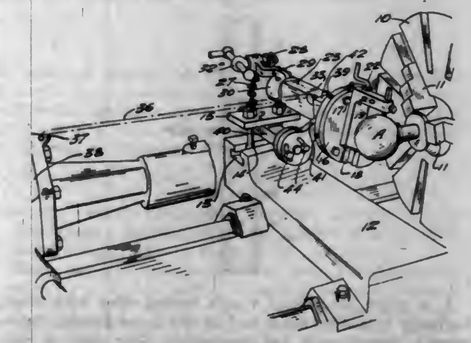
1 In window construction means for pivoting the window sash on the window frame comprising an eyelet on the sash and a slide bolt on the frame adapted to engage said eyelet, and means for normally retaining the sash in vertical position.

1,663,189. CABLE CUTTER. ALFRED BERGSTROM, Vancouver, British Columbia, Canada. Filed Jan. 13, 1927. Serial No. 160,891. 2 Claims. (Cl. 164—47.)



1. In a device for cutting cables the combination comprising, a pair of concavely curved angular edged cutters sliding one against the other, one of said cutters being adapted to slide past the other by hammer blows delivered upon a projection on it, and means for intercepting the reaction of the said blows upon the cutter so that the latter may be in effective contact with a cable during successive blows, the said means comprising claw-like arms in pivotal connection with the said hammer driven cutter engaging corresponding ratchet-racks on the other said cutter.

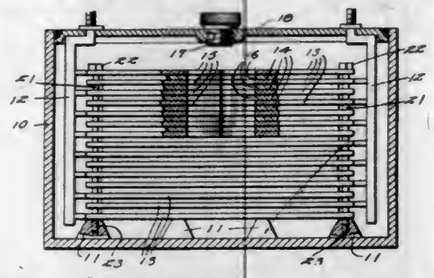
1,663,190. RULE. WILLIAM F. BOAST, Casper, Wyo. Filed May 21, 1925. Serial No. 31,883. 2 Claims. (Cl. 33—98.)



1. An instrument of the class described comprising end and intermediate sections, the end sections being each pivotally connected at one end to a respective end of the intermediate section whereby the sections may be relatively angularly adjusted, one of the end sections having an opening therein and being formed with slits extending radially in opposite directions from the opening whereby to permit of expansion of the opening, and means for holding the sections in a definite position of angular adjustment comprising a stud carried by the other end section and engageable in the said opening and having an entering end of less diameter than the opening, the body of the stud being of a diameter slightly greater than that of the opening whereby to provide for a tight fitting of the stud in the opening to prevent disarrangement of the sections when adjusted.

1,663,191. METHOD OF MAKING VALVE LIFTERS. HJALMAR G. CARLSON, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 15, 1922. Serial No. 543,952. 4 Claims. (Cl. 29—156.4.)

1. The method of making a valve lifter which consists in drawing a tube or cup from flat stock, elongating the tube so that the body portion thereof will be thin and so that the stock near the open end thereof will be thick, and crimping or pressing in the stock near said open end so as to produce a blank in integral tubular form having a uniform outside diameter with the stock near the open end thicker than the body portion thereof.

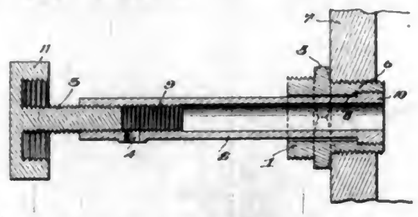


1,663,192. BALL-TURNING ATTACHMENT FOR LATHES. JOHN T. COMPTON, Montgomery, Ala. Filed May 26, 1927. Serial No. 194,433. 3 Claims. (Cl. 82—12.)

1. The combination with a lathe having a rotatable work supporting chuck, of a tool support mounted upon the lathe and including an oscillatably mounted head, the

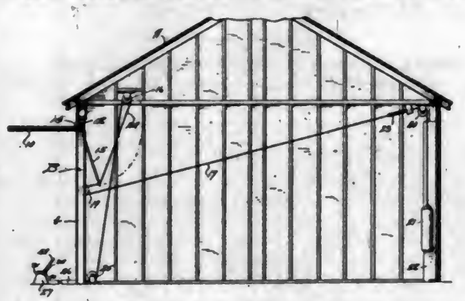
head oscillating in a plane at right angles to the plane of rotation of the work, a tool holder mounted upon said head for radial movement and carrying a tool at its extremity adapted to engage the work, means for oscillating the head by hand, and means for oscillating the head by power including a plurality of headed studs projecting from the rear face of the head, a longitudinally extending rod having a hook-like member pivotally engaged therewith at one end, the hook-like member being engageable with any one of said studs and the rod being engageable with a movable part of the lathe.

1,663,193. STORAGE BATTERY. FRANK PAUL DANNA, Plaquemine, La., assignor of one-third to Hubert J. Lamson, Plaquemine, La. Continuation of application Serial No. 196,575, filed June 4, 1927. This application filed Aug. 11, 1927. Serial No. 212,306. 3 Claims. (Cl. 136—17.)



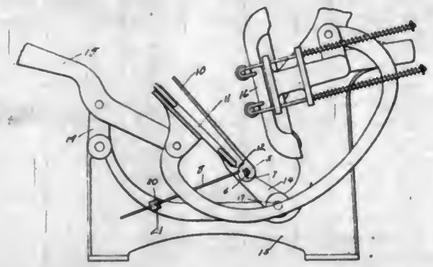
1. In a storage battery, a cell, a plate group comprising positive and negative connection straps extending vertically, horizontally disposed plates carried by said straps and interdigitating in the assembled relation thereof, separators between adjacent faces of the plates, said plates having apertures at the corners thereof and insulated rods extended through said apertures threaded at their lower ends for engagement in the cell bottom and at their upper ends having heads for engagement with the uppermost plate and an electrolyte within the cell and surrounding said plates.

1,663,194. WALL BRUSH. ARTHUR G. DENMAN, Sedan, Kans. Filed Aug. 18, 1927. Serial No. 213,854. 5 Claims. (Cl. 15—198.)



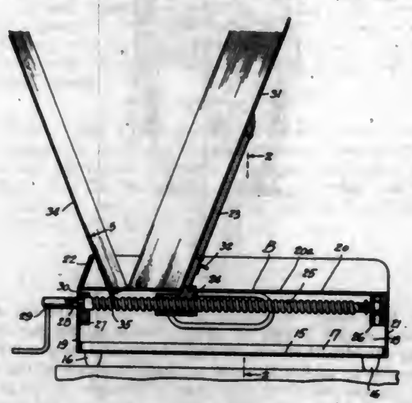
1. A brush comprising a core having sides with longitudinally extending flutes and having bores passing transversely therethrough and opening at their ends in diametrically opposite flutes, and lengths of wire cable mounted in the bores and having their ends projecting beyond the major diameter of the core.

1,663,195. BARREL SPIGOT. MICHAEL FORD, Long Beach, Calif. Filed Nov. 14, 1925. Serial No. 69,160. 5 Claims. (Cl. 221—27.)



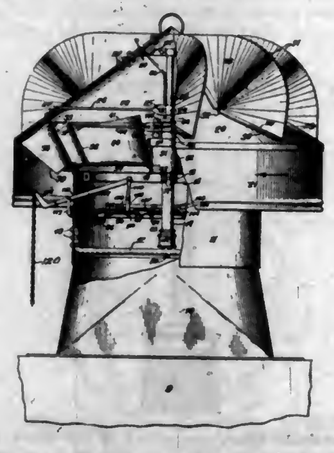
1. A spigot of the class described, comprising an attaching bushing, a tubular spigot member telescopically carried by the bushing and having a lateral discharge port, and a valve member carried by the outer end of the discharge tube and controlling the discharge port, the discharge port being disposed to lie within and closed by a wall of the housing at the inner limit of movement of the spigot member.

1,663,196. DOOR-OPERATING MECHANISM. JOHN R. GIBBONS, Pleasant Ridge, Mich. Filed Apr. 16, 1927. Serial No. 184,822. 8 Claims. (Cl. 268—74.)



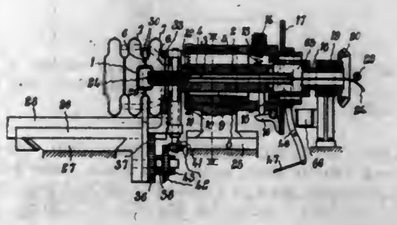
1. The combination with a door pivotally mounted at its upper end, an arm rigidly connected to the door to swing therewith, a counterweight operatively connected to said arm to cause the raising of the door from a vertical position to a horizontal position, a lever operatively connected with the arm to cause the simultaneous lifting of the counterweight and the closing of the door, and means for locking the lever with the door in a closed position against the action of the counterweight.

1,663,197. PRINTING PRESS. CHARLES W. GLASNAPP, Meriden, Conn., assignor to The Kelsey Press Company, Meriden, Conn., a Corporation. Filed Feb. 8, 1927. Serial No. 166,655. 2 Claims. (Cl. 101—408.)



1. In a printing press, the combination with the frame and oscillating platen thereof, of a transversely-arranged gripping-finger shaft carried by the said platen, gripper-fingers mounted upon said shaft, a transverse socket formed in said shaft, a reciprocating spring-arm provided at one end with an offsetting coupling-finger adapted to enter the said socket and to be yieldingly held therein by the tension of the spring-arm, and a bearing mounted upon the said frame for the reception and guidance of the said spring-arm.

1,663,198. POSTING TRAY. CECIL BERNARD HARRISON, Hollywood, Calif., assignor, by mesne assignments, to Bankers Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 24, 1924. Serial No. 751,722. 11 Claims. (Cl. 129—1.)



10. A posting tray comprising a base, a member in inclined position on the base to support stacked sheets approximately vertically thereon, a second member supported on and removable from the base, a stationary member on the base, and means for moving the first member on the base toward or away from the other members.

1,663,199. ROTARY VENTILATOR. WILLIAM F. HIRSCHMAN, Buffalo, N. Y. Filed Jan. 3, 1925. Serial No. 348. 4 Claims. (Cl. 98—85.)

8. In a ventilator, a circular vent stack, a plurality of parallel louvers arranged transversely in said stack and conforming at their ends to the shape of said stack, means for pivotally supporting each end of each of said louvers on said stack to swing about a longitudinal axis, the axes of at least two of said louvers being disposed between the longitudinal center line of said louver and the longitudinal inner edge thereof, said louvers being adapted to engage each other and form a closure and to be disengaged and permit air to pass through the stack, and means for swinging said louvers into open, closed or intermediate positions.

1,663,200. RESISTANCE WELDING MACHINE. ANDERS JÖNSSON, Helsingborg, Sweden. Filed Nov. 10, 1926, Serial No. 147,556, and in Sweden Oct. 19, 1925. 12 Claims. (Cl. 219—4.)

1. A machine for electrically welding together metallic radiator sections having connection openings the peripheral edges of which are brought together for welding, comprising a rotatable spindle mounted to revolve eccentrically abont an axis, and an electrode carried by said spindle adapted while rotating, to revolve within the connection openings in contact with the peripheral edges thereof.

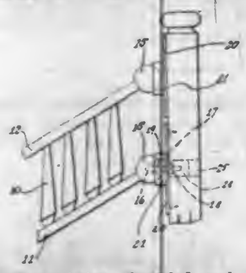
1,663,201. PROCESS FOR MAKING BISMUTH TARTRATES AND PRODUCT PRODUCED THEREBY. PHILIP ADOLPH KOBER, Evanston, Ill., assignor to G. D. Searle & Co., Chicago, Ill., a Corporation of Illinois. Filed May 28, 1926. Serial No. 112,398. 17 Claims. (Cl. 260—11.)

1. A process for making bismuth tartrates which consists in treating a basic bismuth compound with an alkali and tartaric acid at not exceeding normal room temperature.

1,663,202. HAIR DYE. WOLF KRITCHEVSKY, Chicago, Ill. Filed Mar. 29, 1926. Serial No. 98,285. 5 Claims. (Cl. 167—9.)

1. A dye and shampoo for hair consisting of soap, ethylene glycol and paraphenylenediamine.

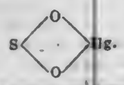
5. A composition of matter consisting of soap, solvents and organic bases of the general formula



in which C stands for an organic cyclic hydrocarbon, R stands for a hydroxy group, an amino group and their substituted products, and in which the position of two of the R's to each other is such that they are capable of forming a quinoidal structure.

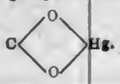
1,663,203. BANISTER-CONSTRUCTION JOINT. FRANK LUIPERSBEK, Boundbrook, N. J. Filed Mar. 5, 1927. Serial No. 172,983. 1 Claim. (Cl. 20—92.)

Means for joining a banister rail with a rigid support comprising a socket having a partly spherical surface mounted on said support, said socket having less than a hemispherical seat, a ball attached to said rail, a shank adapted to pass through said socket, a part of said ball seating on the entire area of said seat, a second and smaller ball rigid with one end of said shank, said second ball being rotatably secured at the center of the first



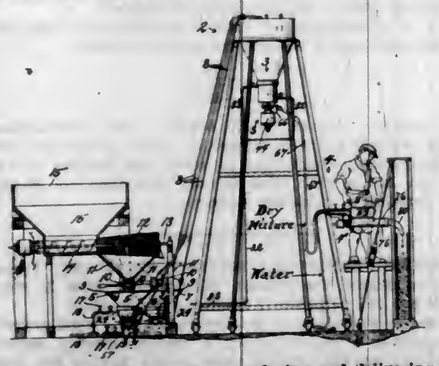
ball, a radial portion of the first ball being cut out between its center and its surface to allow universal movement of the shank with respect to the first ball, the other

end of said shank being threaded and having a nut adapted to be tightened to draw said first ball into said socket.



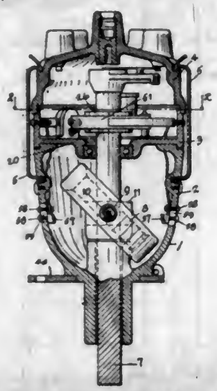
1,663,204. ORGANIC MERCURY COMPOUND. EDWARD LYONS, Detroit Mich., assignor to Parke, Davis & Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 12, 1923. Serial No. 674,387. 12 Claims. (Cl. 260—13.)

1. A new organic mercury compound containing the following group:



1,663,205. ORGANIC MERCURY COMPOUND. EDWARD LYONS, Detroit Mich., assignor to Parke, Davis & Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 12, 1923. Serial No. 674,388. 7 Claims. (Cl. 260—13.)

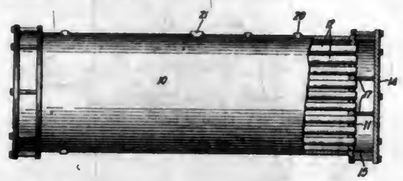
1. A new organic mercury compound which is the reaction product of mercuric oxide with an organic compound containing two or more carbonyl groups, said compound containing the mercury directly linked to one or more of the carbonyl groups according to the formula



1,663,206. METHOD OF AND MEANS FOR MAKING AND DELIVERING QUANTITATIVE MIXTURES. THOMAS MACRAE, Florence, Ariz. Filed June 25, 1923. Serial No. 647,616. 10 Claims. (Cl. 83—73.)

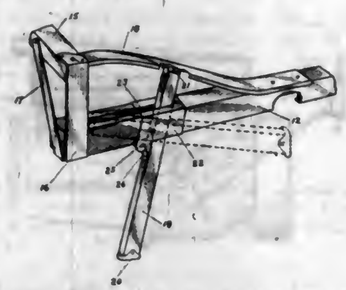
1. The method set forth of producing and delivering a quantitative mixture which consists of isolating predetermined charges of materials to be mixed, simultaneously spreading such materials under pressure through a common orifice meanwhile spreading the charges to form parallel thin sheets and forcibly impacting said sheets against each other, thus thoroughly mixing the materials, separating the produce into charges and successively delivering such charges to a chamber, then adding water and mixing the product and discharging the mixture to the place where it is to be used.

1,663,207. ENGINE IGNITION SYSTEM. MARION MALLORY, Toledo, Ohio. Filed Dec. 26, 1925. Serial No. 77,807. 3 Claims. (Cl. 123—117.)



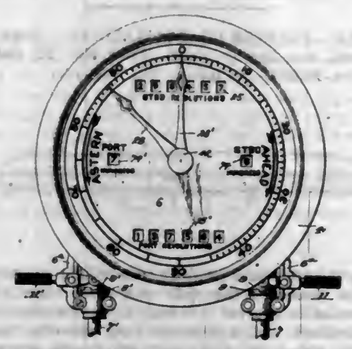
1. In a timer for ignition systems of an internal combustion engine, a pair of circuit closers, a cam for operating the circuit closers, the circuit closers disposed with reference to each other and the cam that one of the circuit closers will close and open in advance of the other of the circuit closers and will open between the closing and opening of the other of the circuit closers, an induction coil having a primary and secondary, the primary coil connected to both circuit closers and the circuit closers connected in parallel in the circuit of the primary coil, a secondary coil located in inductive relation to the primary coil.

1,663,208. BROMOIL BRUSH. EMIL MAYER, Vienna, Austria, assignor to Drem Products Corporation, New York, N. Y., a Corporation of New York. Filed May 23, 1927. Serial No. 193,716. 4 Claims. (Cl. 15—143.)



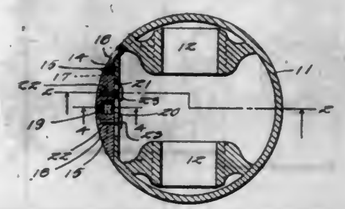
1. A bromoil brush comprising a handhold substantially aligned with the axis of the handle of the brush, and spring means connecting the said hand-hold and said handle, the said hand-hold and the handle being movable with respect to each other, said spring means being sufficiently soft to permit said brush to freely vibrate when the head thereof is pushed against the print to be covered with pigment.

1,663,209. HEAT INTERCHANGER. EDWARD B. MCCABE, Carbondale, Pa., assignor to Carbondale Machine Company, Carbondale, Pa., a Corporation of Pennsylvania. Filed June 3, 1927. Serial No. 196,188. 3 Claims. (Cl. 219—10.)



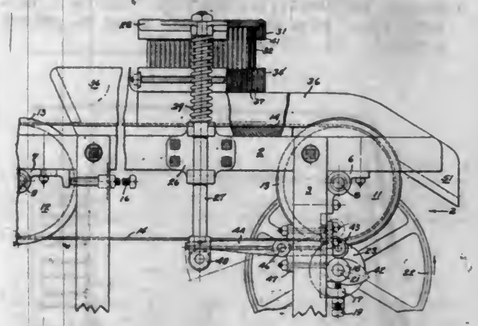
1. A heat interchanger having a tube sheet provided with a groove in the inner surface thereof to form a short cylindrical flange and a shell of substantially the same internal and external diameters as said flange, and butt-welded thereto.

1,663,210. BED LEG. EARL E. MCGREW, Lincoln, Nebr., assignor to McGrew Machine Company, Lincoln, Nebr., a Corporation of Nebraska. Original application filed Sept. 2, 1924, Serial No. 735,513. Divided and this application filed June 11, 1926. Serial No. 115,281. 6 Claims. (Cl. 5—315.)



1. In combination with the channel iron side rail of a bed, the open side of the channel iron being the bottom side of the side rail, a box secured to and surrounding said side rail, said box being provided with a pair of depending ears, a leg pivotally connected with said depending ears and normally inclined to the side rail when the leg is in its supporting position, the leg being foldable on its pivot into said channel iron side rail.

1,663,211. LOGOMETER. ALEXANDER MCNAB, Bridgeport, Conn. Filed Sept. 20, 1920. Serial No. 411,502. 3 Claims. (Cl. 235—144.)

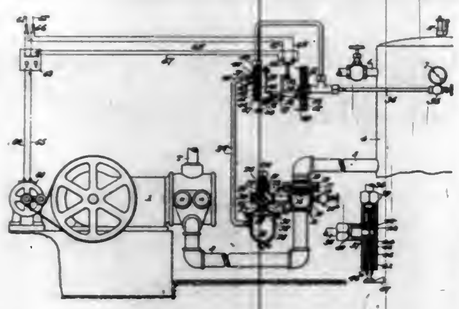


1. In a device of the character described, the combination with two hands independently rotatable about the same axis, of hand setting means including a member rotatable about said axis and movable along said axis to one position for locking said hands together, when brought into coincidence, to permit both hands to be turned together to a desired position, the hands being unlocked from each other by restoration of the handle to its original position along said axis.

1,663,212. PISTON FOR INTERNAL-COMBUSTION ENGINES. ROBERT H. MCQUIDDY, Marshall, Mo. Filed Mar. 23, 1927. Serial No. 177,776. 6 Claims. (Cl. 74—108.)

1. The combination with a piston embodying the usual head and skirt sections and bosses, of chordally extending vertically disposed faces formed upon the piston adjacent to and at opposite sides of a diameter thereof perpendicular to the axis of the piston pin bosses, a wall section slidable transversely of each face, means urging the wall sections apart and means preventing vertical movement of the wall sections upon the faces.

1,663,213. PIERCING MACHINE. ERNST F. MULLER and CARL G. MULLER, Oakland, Calif. Filed Oct. 26, 1925. Serial No. 64,821. 6 Claims. (Cl. 146—56.)

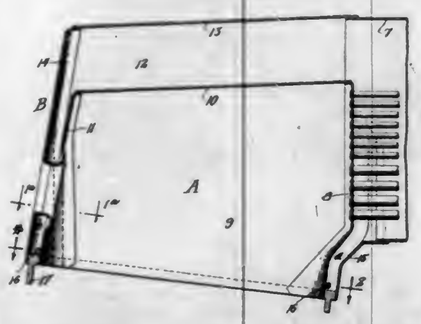


1. A piercing machine comprising a conveyor belt adapted to carry the objects to be pierced, a head arranged for vertical movement above said conveyor, a group of piercing points disposed on the underside of said head, a driving cam engaging said belt during a part of the revolution of the cam, and means operative during the period of no engagement between cam and belt for depressing said head.

1,663,214. COMPRESSOR UNLOADER MECHANISM. FREDERICK A. MULLER, Richmond Hill, and LORENTZ L. BASBERG, Brooklyn, N. Y., assignors to Janet E. Cleary, trading under name of American Air Compressor Works, Brooklyn, N. Y. Filed July 7, 1927. Serial No. 204,113. 11 Claims. (Cl. 230—4.)

1. In a system of air compressor control, a compressor, an air receiver, an air line leading from the compressor to said receiver, a check valve in said line, an outlet

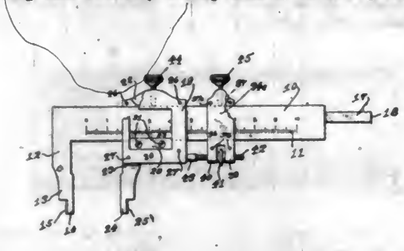
to external atmosphere leading from the control side of said check valve, a normally closed atmospheric valve in said outlet, a relatively small air line leading exteriorly from said receiver to said last named valve for



opening the same to unload the compressor when the pressure in the receiver reaches a predetermined high point, and a motor switch controlled by variations in pressure in said relatively small air line to stop and start the motor.

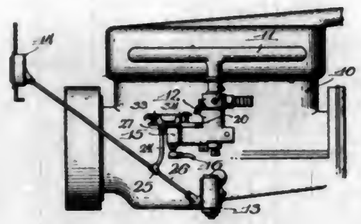
1,663,215. ZINC-BASE ALLOY. WILLIS MCGERALD PEIRCE and EDMUND ARNOLD ANDERSON, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 5, 1927. Serial No. 159,237. 6 Claims. (Cl. 75—1.)

1. A zinc base alloy containing 1 to 15% aluminum, 0.5 to 4% copper, 0.05 to 0.5% magnesium and 0.01 to 0.5% nickel.



1,663,216. LOCOMOTIVE FIRE BOX. WILLIAM L. REID, Lima, Ohio. Filed Apr. 20, 1923. Serial No. 633,371. 4 Claims. (Cl. 122—58.)

1. A locomotive fire box comprising the usual inside and outside boxes, the corners of the boxes, however, being materially rounded and formed on radii diminishing upwardly, the radius of the outside corners at the bottom being approximately equal to the radius of the inside corners at the bottom and both bottom radii being not less than the distance between side sheets.

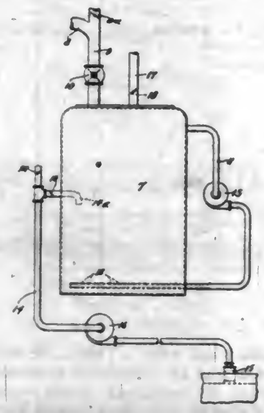


1,663,217. CALIPER AND DEPTH GAUGE. EDWARD J. RYAN, Torrington, Conn. Filed Jan. 19, 1927. Serial No. 162,057. 1 Claim. (Cl. 33—163.)

In a vernier caliper, a graduated bar provided at one end with an integral caliper jaw, a sliding member embracing said bar and carrying a movable caliper jaw, and an auxiliary sliding member embracing said bar, screw means for connecting said sliding members, means for locking said auxiliary sliding member to said graduated

bar, each of said sliding members comprising a pair of side plates, and filler blocks for spacing said side plates apart.

1,663,218. PRESSURE CARBURETOR-CONTROL DEVICE. WILLIAM F. SCHULTZ and LAWRENCE MARCHE, Ripon, Wis. Filed Oct. 18, 1926. Serial No. 142,515. 5 Claims. (Cl. 123—196.)



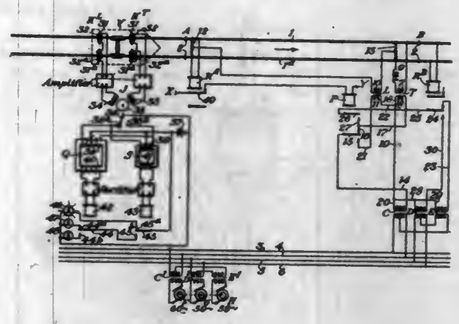
1. A pressure carburetor control device adapted to be applied to the float chamber of the carburetor of an internal combustion engine having a pressure feed or circulating oiling system, comprising means providing a diaphragm chamber, a diaphragm in said chamber, said diaphragm being subjected on one side to the pressure of said oiling system, a spring-controlled lever fulcrum above the other side of said diaphragm, and devices depending from said lever, one engaged with said diaphragm, and one adapted to be engaged against the float valve head in said float chamber to make the opening movement of said float valve dependent upon the movement of said diaphragm.

1,663,219. PLASTER-BOARD WALLING. JOHN SCHUMACHER, Los Angeles, Calif. Filed Mar. 22, 1926. Serial No. 96,653. 2 Claims. (Cl. 72—16.)

1. A plaster board walling, comprising plaster board members placed in the wall with their edges abutting, and formed to provide a trough along the joint between said members, and a covering strip separate from said members placed in said trough after said members are placed in the wall and having its surface formed of a material having the same absorptive properties as the surface of the adjacent plaster board members.

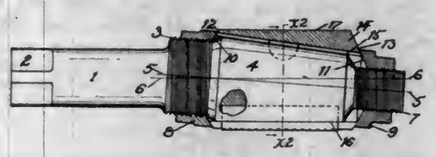
1,663,220. FUEL-CONDITIONING SYSTEM. CARL SCHWARTZ, New Rochelle, N. Y., assignor to International Combustion Engineering Corporation, a Corporation of Delaware. Filed Mar. 11, 1924. Serial No. 698,411. 4 Claims. (Cl. 110—104.)

1. In a pulverized fuel conditioning system, the combination of a source of fuel supply, a point of use, an interposed conditioning vessel having a fuel and air circulator adapted to maintain a mixture of the fuel with the air in the vessel, and a separate air inlet leading from the atmosphere to the conditioning vessel independent of the circulator.



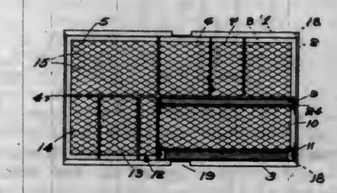
1,663,221. HOCKEY BOOT. PHILIP SCROGGINS, Galt, Ontario, Canada. Filed July 11, 1927, Serial No. 204,973, and in Canada July 2, 1927. 1 Claim. (Cl. 36—71.)

A boot provided with an ankle support secured along its lower edge within the upper; a tongue formed on or secured at its lower end to the upper, secured by one edge to one edge of the front of the ankle support and provided with a strap guide at its opposite edge; a strap secured to the opposite edge of the angle support and passed through the strap guide on the tongue; and a buckle secured to the outside of the upper whereby the strap may be detachably connected therewith, said upper having an opening therethrough for the passage of the strap.



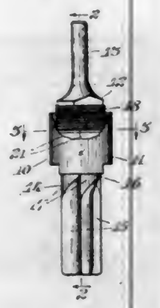
1,663,222. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. ANDREW A. SKEEN, Wilkinsburg, and HOWARD A. THOMPSON, Edgewood Borough, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 20, 1926. Serial No. 155,844. 14 Claims. (Cl. 246—63.)

1. Railway traffic controlling apparatus comprising means for supplying the trackway with two alternating currents of different frequencies, two train carried receivers separately responsive to such currents, a relay having two windings supplied with energy from the two



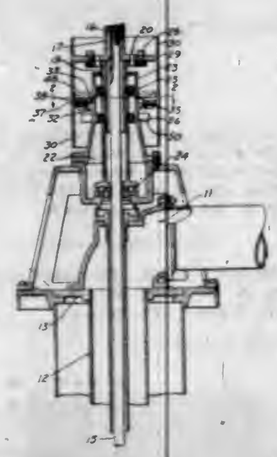
receivers respectively, and governing means controlled by said relay in accordance with the relation between the frequencies of said currents.

1,663,223. ADJUSTABLE REAMER. HJALMAR THOMASON, Los Angeles, Calif., assignor to Shepard-Thomason Co., Los Angeles, Calif., composed of A. M. Shepard and Hjalmar Thomason. Filed June 13, 1921, Serial No. 477,104. Renewed Aug. 22, 1927. 16 Claims. (Cl. 77—75.)



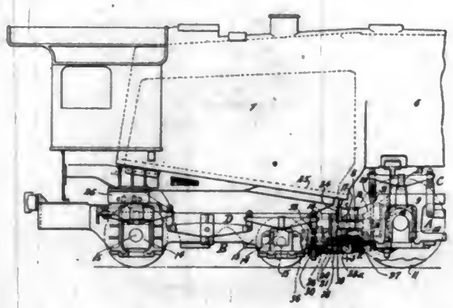
12. An adjustable reamer comprising a cutter; a stock therefor and a sleeve adapted to be mounted on the stock and to provide a support along the side opposite the cutting edge of the cutter, the axis of the stock being oblique to the axis of the sleeve.

1,663,224. BEAUTY CASE. FRANCESCA VAN DER KLEY, New York, N. Y. Filed Feb. 3, 1927. Serial No. 165,620. 4 Claims. (Cl. 220—1.)



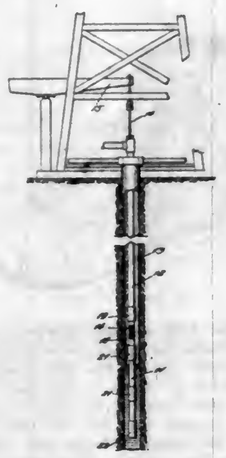
1. A beauty case composed of side walls forming a rectangle, a removable cover, a removable under-bottom, and an over-bottom consisting of perforated material attached to said side walls, positioned above and in contact with said under-bottom for the purpose specified.

1,663,225. TOOL. FRANK J. WIDMAN, Oak Park, Ill. Filed Nov. 17, 1926. Serial No. 148,797. 3 Claims. (Cl. 144—219.)



1. In a wood-working tool, the combination with a collar having a constricted opening therein communicating with the bore thereof, complemental cutting elements, each element terminating in an enlarged head complemental to each other in embracing relation with the bore of said collar to abut the constriction therein, and a shank adjustably associated with said collar to retain said complemental cutting elements in rigid relation.

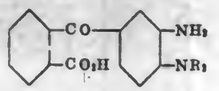
1,663,226. NONREVERSING MEANS FOR PUMP HEADS. JOHN A. WINTROATH, Los Angeles, Calif., assignor to Peerless Pump Company, Los Angeles, Calif., a Corporation of California. Filed May 11, 1926. Serial No. 108,280. 13 Claims. (Cl. 188—81.)



7. In a pump head, the combination of: a stationary part; an annular ratchet carried by said stationary part; a rotatable part having a pulley surrounding said annular ratchet; a riser plate carried between said pulley and said annular ratchet, said riser plate being adapted to rotate with said pulley and to be lifted by windage; and an engager carried by said riser plate adapted to engage said annular ratchet and to prevent a reverse rotation of said rotatable part, said engager being disengaged when said riser plate is lifted.

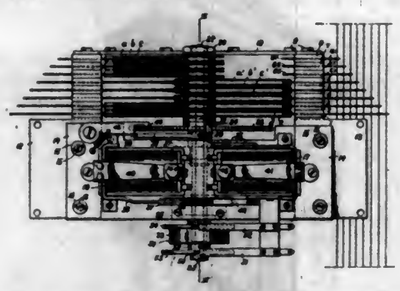
1,663,227. LOCOMOTIVE EQUALIZING MECHANISM. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed Jan. 2, 1926. Serial No. 78,833. 18 Claims. (Cl. 105—82.)

1. The combination with a main locomotive frame equalizing system and an articulated supplemental frame equalizing system, of equalizing means connecting said systems, and including a movable carrier for said equalizing means operating to maintain said means in a predetermined relation to the supplemental frame equalizing system as the supplemental frame articulates, said carrier being mounted to transmit reacting thrusts of the equalizing systems to the main frame.



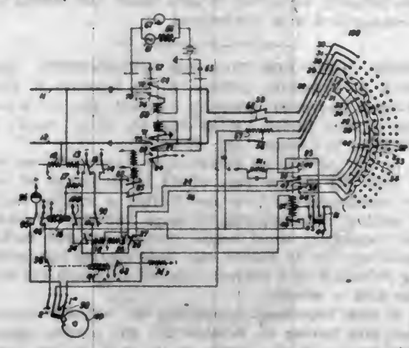
1,663,228. SECTIONAL BARREL FOR OIL-WELL PUMPS. JOHN A. ZUBLIN, Los Angeles, Calif. Filed Feb. 16, 1925. Serial No. 9,673. 4 Claims. (Cl. 74,108.)

1. In combination in an oil well pump, a working barrel comprising: a plurality of sections, said sections having sleeve portions at each end thereof and having male thread formations adjacent to said sleeve portions; and collars for holding adjacent sections together, each of said collars having a central cylindrical portion into which sleeve portions of adjacent sections extend and female thread formations into which male thread formations of adjacent sections thread, engagement between said male and female portions holding the ends of said adjacent sections in abutting relationship.



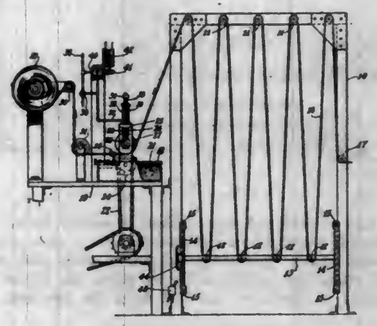
1,663,229. 3,4 DIAMINO BENZOYL O-BENZOIC ACIDS AND PROCESS OF MAKING THE SAME. ROGER ADAMS and JAMES MEYER DAVIDSON, Urbana, Ill., and IVAN GUBELMANN, South Milwaukee, Wis., assignors to The Newport Company, Carrollville, Wis., a Corporation of Delaware. Filed Sept. 13, 1926. Serial No. 135,293. 3 Claims. (Cl. 260—64.)

1. As new articles of manufacture, compounds of the general formula—



where R represents a hydrogen atom, or an alkyl, aryl or substituted alkyl or substituted aryl group.

1,663,230. ELECTROMECHANICAL TELEPHONE SYSTEM. FRITZ ALDENDORFF, Berlin-Wilmersdorf, Germany; Charlotte Aldendorff, heiress of Friedrich Ernst Aldendorff, deceased. Filed Mar. 30, 1925, Serial No. 19,556, and in Germany Apr. 3, 1924. 31 Claims. (Cl. 179—27.5.)



1. In an electro-mechanically controlled telephone system, a switch having brushes and sets of bank contacts, means for driving said brushes in a continuous motion over a plurality of said contacts, means including a brush setting magnet for setting said brushes onto any desired set of bank contacts, and a switching device for connecting said brush setting magnet alternately to different sets of bank contacts.

1,663,231. AUTOMATIC TELEPHONE SYSTEM. FRITZ ALDENDORFF, Berlin-Wilmersdorff, Germany; Charlotte Aldendorff, heiress of Friedrich Ernst Aldendorff, deceased. Filed Nov. 9, 1925, Serial No. 67,977, and in Germany Nov. 10, 1924. 11 Claims. (Cl. 179—18.)

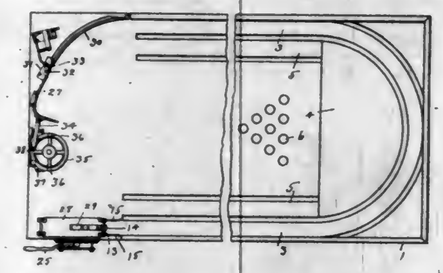
1. A numerical selector comprising a bank of contacts, brushes, a power device for driving the brushes over said bank, an impulse responsive contact, a controlling magnet for positioning said brushes, a relay which is alternately energized and deenergized during the operation of said impulse responsive contact, and circuits including contacts of said relay and alternate contacts of said bank for intermittently energizing said controlling magnet.

1,663,232. STRIP-COATING APPARATUS. ROBERT R. AMBLER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 3, 1927. Serial No. 188,466. 1 Claim. (Cl. 91—50.)

Strip-coating apparatus comprising means for supporting a variable storage-supply of a continuous strip of material in a series of loops and for drawing the strip into the said supply by yieldingly maintaining the loops taut, hold-back means for giving off the strip to the drawing means, the hold-back means comprising a driven coating roll and loosely journaled presser roll mounted for movement into and out of coacting relation to the coating roll, and means for so guiding the strip about the presser roll that the tension of the strip will cause it to leave the coating roll when the presser roll is moved away from the coating roll.

1,663,233. PREPARATION OF LEVULOSE FROM PURIFIED DAHLIA JUICE. WILLIAM C. ARSEM, Schenectady, N. Y., assignor to Industrial Technics Corporation, Schenectady, N. Y., a Corporation of New York. Filed Jan. 31, 1927. Serial No. 165,043. 3 Claims. (Cl. 127—38.)

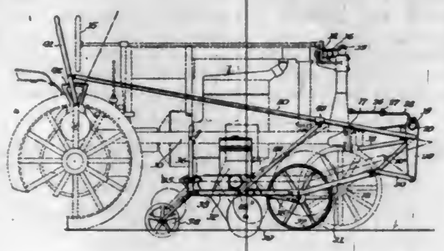
1. The herein described process consisting essentially of clarifying the juice of inulin-bearing plants to form a mixture of inulin and other carbohydrates in solution, hydrolyzing the carbohydrates to convert them into levulose, adding a ferment to the solution and fermenting to remove protein impurities.



1,663,234. LEVULOSE FROM SOLUBLE NONSUGAR CARBOHYDRATES OF THE DAHLIA. WILLIAM C. ARSEM, Schenectady, N. Y., assignor to Industrial Technics Corporation, Schenectady, N. Y., a Corporation of New York. Filed Jan. 31, 1927. Serial No. 165,044. 8 Claims. (Cl. 127—38.)

1. The herein described process consisting essentially of hydrolyzing the non-sugar carbohydrates contained in the residue after inulin has been recovered from the juice of inulin-bearing plants, and separating the levulose formed from the juice.

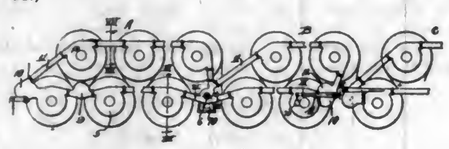
1,663,235. GAME. ARTHUR C. BARNES, Baltimore, Md. Filed Mar. 12, 1927. Serial No. 174,761. 2 Claims. (Cl. 273—39.)



1. A game comprising a base having a run-way extending around part of the sides and one end thereof, a stationary guide secured to the upper surface of the

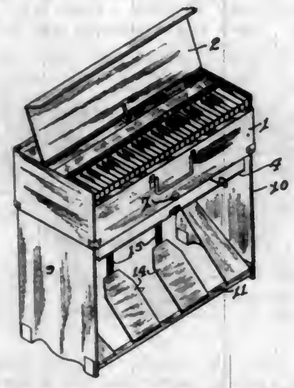
table at one end of said run-way, an adjustable guide having one end adjustably secured to the table at the end of said stationary guide, a wheel pivoted to the upper surface of said table, a rod connecting said wheel with one end of the adjustable guide, a buffer mounted

at one end of said run-way, a shaft mounted under said table having a handle on one end thereof, a cam on said shaft, and means connecting the buffer with said shaft whereby when the handle is forced down the buffer will be operated to discharge the ball from the run-way.



1,663,236. PLANTER ATTACHMENT FOR TRACTORS. BERT R. BENJAMIN, Oak Park, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed July 30, 1926. Serial No. 125,855. 4 Claims. (Cl. 111—59.)

1. The combination of a self-propelled vehicle having a longitudinal body frame, traction and steering means supporting opposite ends of the frame, a carrying member extending across the front end of the body frame and projecting beyond it at each side, planter units positioned to trail at each side of the body frame and each having ground wheels normally supporting the unit, draft connections including means carried by the projecting ends of the carrying member for bodily lifting and lowering the planter units while maintaining said units in parallel relation to the ground surface, and means operable from a station on the vehicle for actuating the lifting and lowering means.

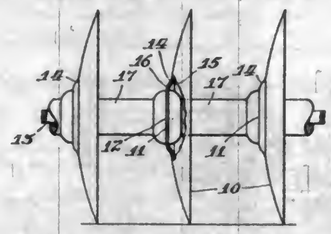


4. The combination of a self-propelled vehicle comprising a rear axle housing having an operator's station thereon and supported at its ends on traction wheels and a body frame extending centrally from said housing and supported on a steering truck, planter units located on each side of the body frame and truck and in advance of the axle within the treads of the traction wheels, supporting wheels individual to each planter unit, means for actuating the units from certain of said wheels, combined draft and lifting means connecting each unit to the body frame, and means operable from the operator's station for actuating the lifting means.

1,663,237. CHAIN DRIVE FOR DRIERS. EARL E. BERRY, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a Corporation of Wisconsin. Filed May 13, 1926. Serial No. 108,745. 5 Claims. (Cl. 84—48.)

1. In a drier unit, a plurality of drying cylinders, and a chain mechanism for driving sections of said drying cylinders independent of other sections.

1,663,238. FOLDING ORGAN. PETER P. BILHORN, Chicago, Ill. Filed Dec. 3, 1924. Serial No. 753,578. 4 Claims. (Cl. 84—354.)



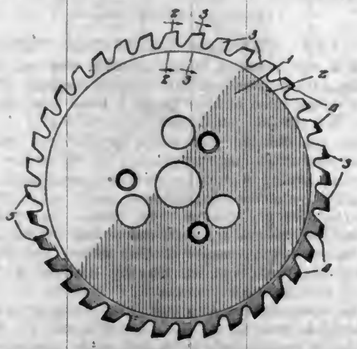
4. A folding organ comprising a case, a bellows herein, flat leg panels hinged in overlapping relation within the opposite ends of the case, and swingable downwardly and laterally in the open position, a case bottom closure panel overlying the leg panels in the folded position and swingable downwardly and rearwardly, means connecting the sides of the said closure panel in the open position to the rear edges of the leg panels whereby to brace the latter, a pedal frame hinged to the free edge of the said closure panel for disposition flatwise against the inner face thereof in the folded position, and swingable downwardly and forwardly therefrom in the open position, means connecting the forward side portions of said pedal frame to the lower forward edges of the leg panels, and pedals hingedly supported on said frame and having flexible connections with the bellows.

1,663,239. DISK FOR TILLAGE IMPLEMENTS. FREDERICK A. BUCKNAM, Auburn, N. Y., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 31, 1922. Serial No. 585,364. 11 Claims. (Cl. 97—217.)

1. As an article of manufacture, an earth working disk with the greater part of its radial extent of ordinary concavo-convex form and having a smaller central hub portion, corresponding in shape and size to conventional supporting spool heads, pressed out and forming a protrusion on its convex side, said central hub portion being delimited by a narrow zone within which the metal of the disk is crimped.

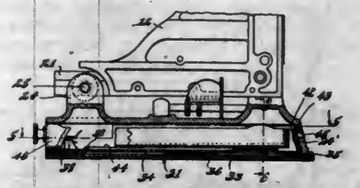
5. A disk implement comprising an ordinary concavo-convex disk having an integral flat hub portion approximately one-fourth the width of the disk pressed out at the back of the disk, the metal surrounding said flat portion merging with the body of the disk on a reverse curve, whereby a saucer shaped depression is formed in the face

of the disk, and supporting means for the disk comprising clamping elements engaging the opposite faces of said flat portion and occupying the entire area thereof.



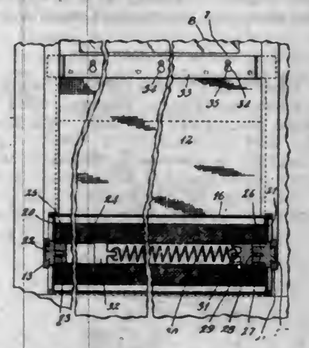
10. In a disk implement, the combination of an earth working disk with the greater part of its radial extent of ordinary concavo-convex form and having a relatively small central hub portion pressed out and forming a protrusion on its convex side, said central hub portion being delimited by a narrow zone within which an annular band of the metal of the disk lies in obtuse angular relation to the disk surfaces adjacent said zone, and disk supporting means occupying all that portion of the hub within said zone.

1,663,240. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed June 14, 1924. Serial No. 719,925. 9 Claims. (Cl. 24—211.)



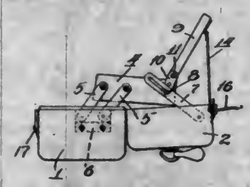
1. A stud and socket fastener comprising, in combination, a socket including a casing, a stud-receiving part movable relative to said casing, a cooperating stud for engagement with said stud-receiving part, locking means forming part of the fastener assembly for locking said stud with the socket and unlocking means separate from said locking means and carried by said stud for displacing said locking means to permit separation of the fastener when said stud and stud-receiving part are moved relative to said casing.

1,663,241. SAW BLADE. EDWARD CHESHIRE, St. Petersburg, Fla. Filed Dec. 9, 1926. Serial No. 153,483. 10 Claims. (Cl. 143—133.)



1. A saw blade for cutting both hard and soft materials comprising a supporting portion and teeth projecting therefrom, said supporting portion having a substantially uniform thickness, said teeth being flared continuously from said supporting portion outwardly, intermediate teeth being beveled at their outer edges to provide clearance.

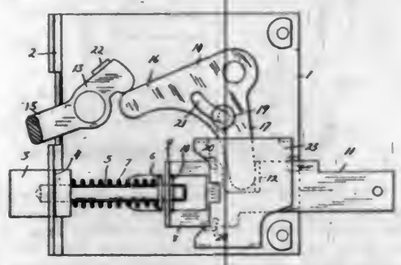
1,663,242. STAPLING MACHINE. JOHN B. CROFOOT, Arlington Heights, Ill. Filed July 1, 1926. Serial No. 119,843. 2 Claims. (Cl. 1—2.3.)



1. In a stapling machine, an auxiliary base structure composed of upper and lower plates; a covering for the lower plate clamped between the plates; lugs on the lower plate piercing said covering and bent over upon the upper plate; and attaching means on the upper plate, substantially as described.

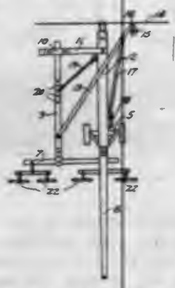
1,663,243. WINDOW SCREEN. AGUSTAL DAGROSA, New York, N. Y. Filed July 20, 1926. Serial No. 123,663. 2 Claims. (Cl. 156—39.)

1. In a spring roller window screen of the class described, a roller housing guide and mounting brackets for supporting the housing and screen in connection with the window frame and for guiding the same in its movement in said frame, said brackets being mounted at the opposite sides of the window frame and comprising rails of channel formation extending longitudinally of the side rails of the window frame and opening outwardly adjacent the lower ends of said brackets, said brackets including bearing portions arranged angularly to said rails and having dove-tailed sockets in which corresponding members of the housing are adapted to be placed in detachably coupling the screen with the window frame.



1,663,244. VANITY BOX. CLARENCE L. DEWEY, Elkhart, Ind. Filed July 20, 1927. Serial No. 207,042. 7 Claims. (Cl. 132—83.)

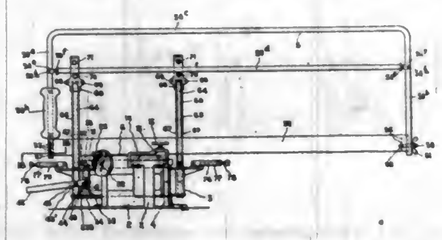
1. In a vanity box, a body portion, a cover hinged to the body portion, a tray connected to the body portion and to the cover for movement over the cover when the



same is opened, a mirror normally superposed on the tray and means connecting the mirror and the cover for elevating the mirror during the opening movements of the cover.

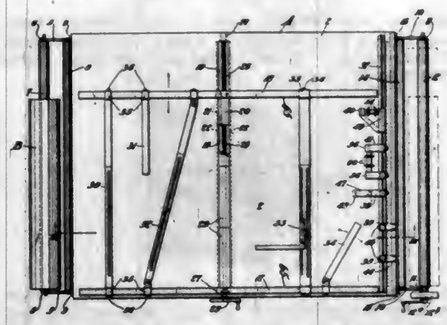
1,663,245. DOOR LATCH. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed Nov. 22, 1926. Serial No. 150,081. 8 Claims. (Cl. 292—173.)

1. In a latch, the combination with a latch bolt, of actuating means for said bolt including a yoke having a slidable and an operative connection therewith, a pivoted bolt retracting member, and an intermediate member having portions normally engaging said bolt retracting member and yoke whereby movement of said bolt retracting member will cause said intermediate member to actuate said yoke.



1,663,246. DRAFT HITCHING DEVICE. JOHN THOMAS DOOLAN, Edmonton, Alberta, Canada. Filed May 10, 1926. Serial No. 108,071. 1 Claim. (Cl. 278—5.)

In a draft hitching device, a binder frame, a pole, an equalizing bar and singletrees secured thereto, a truck frame suitably secured to the binder frame and supported by running gear, and comprising a main beam, a parallel bar pivotally secured to said equalizing bar and a pivoted transverse bar having a guide slot for the said parallel bar slidable therein, a draw bar from said parallel bar to said binder frame braced by a rod self adjustably connected to the main truck beam, and a draw bar from said main truck beam adjustably secured to said parallel bar.

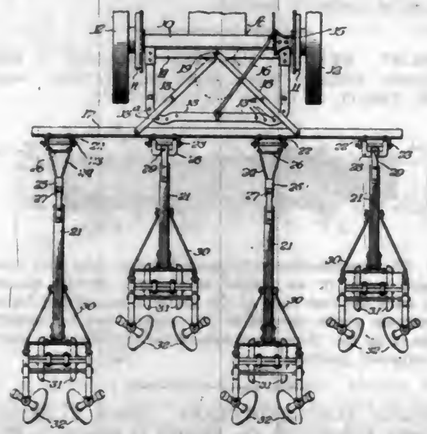


1,663,247. MITERING MACHINE. GEORGE OPIE EDWARDS and LEVANDER BROWN, Jr., Montreal, Quebec, Canada. Filed Apr. 4, 1925. Serial No. 20,582. 8 Claims. (Cl. 143—89.)

1. A mitering machine consisting of a work support, a carriage adjustably mounted upon the work support, a pair of posts rigidly mounted upon the carriage and located one at each end thereof and projecting upwardly therefrom, said posts being slotted from their upper ends downwardly to within close proximity of the carriage and the upper ends of the slots being open to allow the saw to be lifted off at will, and a saw unit consisting of a frame having a horizontal member, a blade mounted in the frame in parallelism with the member, and sleeve guides suspended from the said member and having slots through which said blade passes, said unit being adapted to be mounted upon the carriage with the sleeve guides

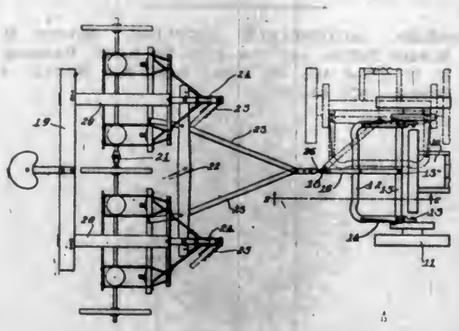
enclosing the posts and with the saw blade passing through the slots therein the unit being instantly removable from the carriage as a whole.

1,663,248. WORKTABLE. JOHN A. FRITSCH, Pittsburgh, Pa. Filed Dec. 26, 1925. Serial No. 77,685. 5 Claims. (Cl. 33—32.)



1. A work table for laying out and otherwise working on cloth and other flexible material, comprising an elongated table portion, a fixed straight edge adjacent one side edge of said table, a second straight edge adjustably mounted between the side edges of said table, screw means for adjusting said adjustable straight edge transversely of said table and a plurality of layout bars adjustably mounted on said straight edges and extending transversely of said table, at least some of said layout bars being connected to both said stationary and said adjustable straight edges, and said last named layout bars being extensible.

1,663,249. TRACTOR CULTIVATOR. WILLIAM S. GRAHAM and ARTHUR D. GALLAGHER, Canton, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed June 30, 1926. Serial No. 119,565. 9 Claims. (Cl. 97—47.)

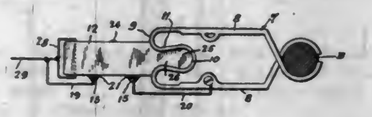


1. The combination comprising a traction frame, a draft member extending transversely of the frame, tillage units each having a tongue pivotally connected to the draft member and having transport means supporting the rear portion of the tongue, and means connecting the draft member to the traction frame for limited lateral sliding movement thereon including means for vertically adjusting the draft member thereby rocking the tillage units on the transport means.

4. The combination comprising a traction frame, a hitch member pivoted to the traction frame for vertical movement, a transversely extending draft member carried by the hitch member and connected thereto for limited sliding movement thereon, tillage units each with a tongue pivotally connected to the draft member and having transport means supporting the rear portion of the tongue, and means on the traction frame for adjusting the hitch member about its pivot thereby swinging said draft member vertically and rocking the tillage units on the transport means.

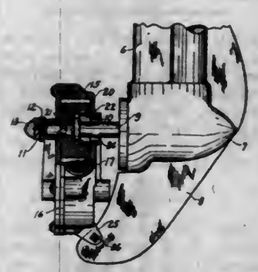
9. An implement attachment for tractors comprising a ball-shaped hitch bar the arms of which are adapted for connection to a tractor, a draft member extending at right angles to the arms in substantially the same horizontal plane therewith, a draft connection between the member and hitch bar comprising linkage extending from the draft member and pivotally connected to the hitch bar on a line between the ends of the hitch bar arms and slidably engaging the bight portion of the hitch bar, and lister cultivator units connected to the draft member in spaced relation by means permitting independent lateral movement of each unit.

1,663,250. TRACTOR HITCH. WILLIAM S. GRAHAM, Canton, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Aug. 6, 1926. Serial No. 127,545. 4 Claims. (Cl. 280—33.44.)



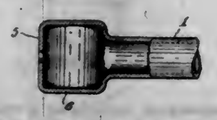
1. A draft device comprising the combination with a tractor of a horizontally positioned arched member comprising a flat bar having parallel arms connected to the tractor on horizontal pintles and its arch extending back of the tractor wheels, supporting links connecting the arched member with the tractor at desired elevation, a longitudinally extending draft link supported intermediate its ends on said arch for lateral movement limited by said supporting links, and pivotal supporting means for the draft link located midway between the arms of said arched member.

1,663,251. PURIFICATION OF 3:4-DICHLOROANILINE. IVAN GUBELMANN, HENRY J. WEILAND, and OTTO STALLMANN, South Milwaukee, Wis., assignors to The Newport Company, Carrollville, Wis., a Corporation of Delaware. Filed Aug. 19, 1926. Serial No. 130,348. 8 Claims. (Cl. 260—130.5.)



1. The method of separating 3:4-dichloroaniline from a mixture of dichloroanilines, which comprises forming the sulfates of the dichloroanilines in the presence of water and separating the practically insoluble sulfate of 3:4-dichloroaniline from the dissolved sulfates of the other dichloroanilines.

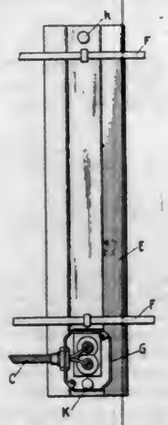
1,663,252. FUSE HOLDER FOR ELECTRICAL CIRCUITS. MILTON B. HERBRICK, Omaha, Nebr. Filed Apr. 3, 1926. Serial No. 99,515. 2 Claims. (Cl. 200—115.5.)



1. In a fuse holder for a clip in an electrical circuit, said clip being provided with a recess having a constricted part, an insulating block having a head and neck adapted to approximately fill the recess and constricted part and having a chamber opening on its side, a pair of keepers entering said chamber in communication with the electrical circuit, a fuse in the chamber engaging said keepers and a transparent plate covering said chamber.

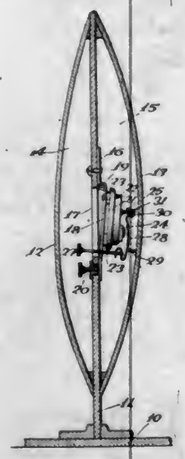
1,663,253. PUMP ATTACHMENT FOR OUTBOARD-MOTOR ENGINES. HERBERT J. HILLBORN, Milwaukee, Wis., assignor to Evinrude Motor Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 24, 1926. Serial No. 156,822. 10 Claims. (Cl. 103—87.)

1. The combination with the submersible parts of an outboard motor including a propeller shaft, gear housing and skeg; of a pump including a casing apertured to receive said shaft and detachably connected with said skeg.



1,663,254. PROCESS OF MAKING TIE-ROD ENDS. GEORGE H. HUFFERD, Detroit, Mich., assignor to Thompson Products Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 26, 1926. Serial No. 90,841. 2 Claims. (Cl. 29—152.)

1. The process of making a one-piece, seamless, tubular connecting rod, consisting in expanding the open

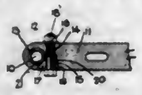


end of a seamless metal tube, forming it into substantially spherical form, shaping the substantially spherical end into cylindrical form, and finally removing the end walls of the cylinder.

1,663,255. ELECTRIC PIPE HEATER. LEE P. HYNES, Albany, N. Y., assignor to Hynes & Cox Electric Corporation, Albany, N. Y., a Corporation of New York. Filed Nov. 25, 1924. Serial No. 752,141. 6 Claims. (Cl. 219—38.)

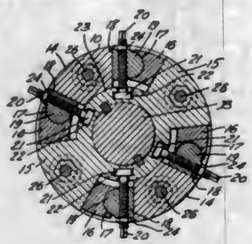
1. An electric pipe-heater comprising a flat metal casing adapted to seat on the outside of the pipe, with a heating resistance enclosed therein, a hollow extension with a removable cover secured on the said casing and projecting above it, connection-terminals in the said extension, an insulating cover on the casing, a metal plate on said cover, and means for clamping the casing on the outside of the pipe.

1,663,256. SOUND REPRODUCER. GEORGE C. LINDSEY, Los Angeles, Calif., assignor of seven thirty-seconds to Michael Gozzo, one-eighth to Don Eminger, six thirty-seconds to Victor P. Hendrick, and four thirty-seconds to Robert Turner. Filed Sept. 18, 1925. Serial No. 57,153. 3 Claims. (Cl. 179—116.)



2. A sound reproducer comprising a sound responsive medium, an operating unit adapted to swing relative to the sound responsive medium, a vibrator carried by and adapted to swing relative to the operating unit, said vibrator being actuated by the operating unit and adapted to vibrate the sound responsive medium, adjusting means for swinging the operating unit relative to the sound responsive medium, and adjusting means for swinging the vibrator relative to the operating unit and the sound responsive medium.

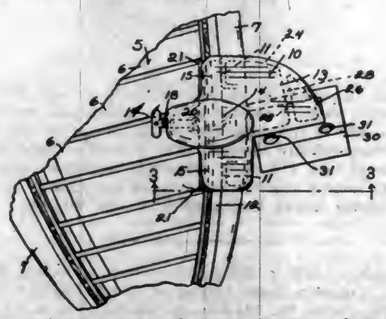
1,663,257. GRADING MACHINE. RODERICK A. MACKENZIE, Dishman, Wash. Filed Aug. 31, 1926. Serial No. 132,817. 2 Claims. (Cl. 209—240.)



1. The combination with spaced guide rails and their hinged gates, of an arched bar having pivotal connection with the free ends of the gates, a supporting frame, adjustable plates carried by the arched bar for slidable support on the frame, and means for securing the plates in adjusted position.

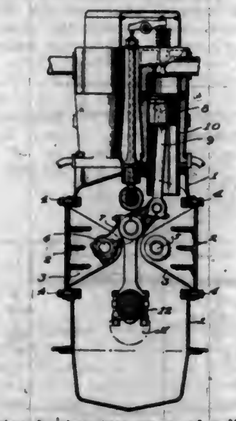
1,663,258. ELECTRODE CLAMP. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1925. Serial No. 6,046. 7 Claims. (Cl. 219—4.)

1. In a device of the class described, an electrode holder provided with a seat for reception of an electrode and a transverse passage extending through said holder to one side of said seat and, said passage having an off-set portion in communication with said seat, an electrode clamping member having one arm projecting through said transverse passage and another arm seated in the offset portion thereof, the rear edge of the second-mentioned arm being inclined with respect to the axis of the first-mentioned arm.



1,663,259. ADJUSTABLE COUPLING. MILTON D. MORRIS, Buffalo, and EDWARD G. DU BARRY, Hamburg, N. Y. Filed Apr. 30, 1926. Serial No. 105,712. 5 Claims. (Cl. 64—90.)

1. An adjustable coupling including a pair of coupling members, each having projections extending into alternate arrangement with the projections of the other coupling member about the axis of said coupling, the opposite faces of adjacent projections being inclined relatively to each other, and wedges arranged between said inclined faces and movable to different positions relatively thereto, said wedges each including a part having a convex substantially cylindrical portion adapted to interfit with a concave substantially cylindrical por

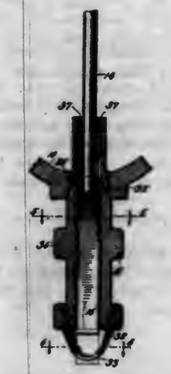


tion of the other wedge part to permit an angular adjustment of said parts to the wedge relatively to each other about centers extending substantially parallel to the axis of the coupling.

1,663,260. OUTBOARD-MOTOR BRACKET. JAMES A. MOULD, Milwaukee, Wis., assignor to Evinrude Motor Company, Milwaukee, Wis. Filed Aug. 1, 1924. Serial No. 729,485. 13 Claims. (Cl. 115—17.)

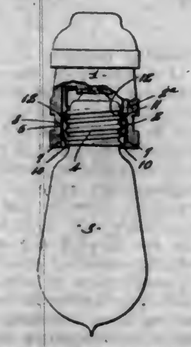
1. A universal outboard motor bracket adapted for mounting at the side of a canoe or light craft portable outboard motors having transom engaging devices, said bracket comprising a fitting adapted to extend transversely across the gunwale of a canoe at the side thereof, relatively fixed means for engaging said gunwale exteriorly thereof, an adjustable clamping mechanism connected with said fitting and opposed to said relatively fixed means whereby to be adapted to clampingly engage the side of a boat, and a transom member comprising a block secured to said fitting adjacent said means and having a free margin with which the transom engaging devices of portable outboard motors are engageable, said block being at such an angle with respect to said fitting as to be adapted to be approximately normal to the keel of a boat when said fitting is applied to one of the rearwardly converging gunwales of such a boat.

1,663,261. ENGINE. ALVAH LEIGH POWELL, Miles City, Mont., assignor to The A. L. Powell Power Company Incorporated, Miles City, Mont. Filed Mar. 19, 1924. Serial No. 700,808. 5 Claims. (Cl. 123—54.)



1. An engine having two rows of cylinders, the plane passing through the axes of the cylinders of one row being parallel to the plane passing through the axes of the cylinders in the other row and means for firing explosive charges in two of said cylinders simultaneously said last mentioned cylinders being spaced apart by a distance at least equal to one-half the length of the engine so that the engine is almost perfectly balanced.

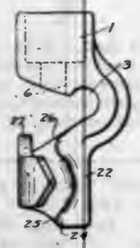
1,663,262. GOLF TEE. ISRAEL F. ROBERSON, Springfield, Ohio. Filed Aug. 24, 1927. Serial No. 215,241. 5 Claims. (Cl. 273—33.)



1. In a golf tee, a head, a pair, of prongs projecting from the head, said head and prongs being formed from a single elongated blank of sheet metal with the head formed from the central portion thereof and the prongs formed from the end portions by bending the metal of the blank.

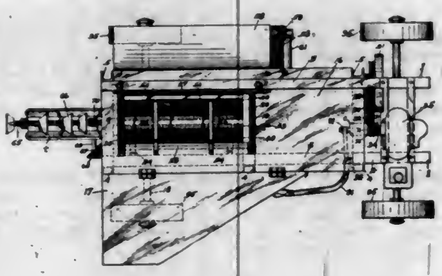
1,663,263. SPRAYING NOZZLE FOR MACERATING MACHINES AND THE LIKE. ROBERT W. SHARP, Baton Rouge, La. Filed Mar. 22, 1924. Serial No. 701,015. 3 Claims. (Cl. 299—59.)

1. In a spraying nozzle for macerating machines, a body portion having a cylindrical bore, longitudinal grooves on opposite sides of the bore, a thin blade adapted to slide in said grooves, a rod attached to the blade, a detachable tip provided with an elongated slot and means for reciprocating the blade in the grooves and slot.



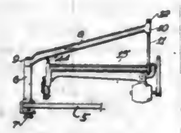
1,663,264. LAMP RETAINER FOR LAMP SOCKETS. DON N. THOMPSON, Syracuse, N. Y., assignor to Pass & Seymour Inc., Solvay, N. Y., a Corporation of New York. Filed Sept. 13, 1922. Serial No. 588,014. 10 Claims. (Cl. 173—356.)

1. A lamp retainer for lamp sockets comprising an expansible and contractile split sleeve formed with tongues



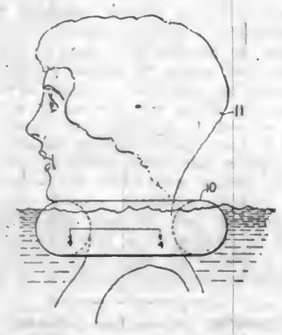
extending in a direction parallel to the axis of the sleeve and provided with projections at their ends for engaging the lamp base, substantially as and for the purpose described.

1,663,265. HOOK. HENRY R. BENSON, Seattle, Wash. Filed Feb. 3, 1926. Serial No. 85,644. 7 Claims. (Cl. 24—123.)



1. In a hook, a cylindrical shaped socket with one end open and the other closed, said socket having a slot in one side and extending into the center of the closed end, another member in combination with the said socket, said latter member having grooves arranged therein and said grooves being so arranged that a cable may be placed in them, twisted and then substantially straightened so that it may also pass through the slot in the socket.

1,663,266. CORN-HUSKING MACHINE. EARLE H. DANIEL, Springfield, Ohio, assignor to H. E. Pearce, Kenton, Ohio. Filed May 24, 1926. Serial No. 111,227. 5 Claims. (Cl. 130—5.)

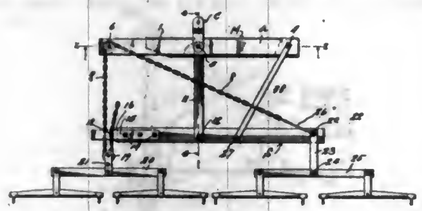


1. In a corn husking machine, a pair of snapping rolls, a plurality of husking rolls, one of said snapping rolls being yieldable and the other nonyieldable, shafts for said snapping rolls, the shaft of the nonyieldable roll being extended to the forward end of the machine, a gear, a transmission member and a fly wheel all connected with said latter shaft supported by said frame, a gear on said short shaft meshing with said other gear, a flexible connection between said short shaft and the shaft of the yieldable roll, an internal combustion engine mounted on the forward end of the frame and having a longitudinally-extending crank shaft, a transmission member normally loose on said crank shaft and connected with said first mentioned transmission member, and an operating lever extending to the forward side of the machine for connecting and disconnecting said crank shaft transmission member with said crank shaft.

1,663,267. MEANS FOR CUTTING. VINCENT V. COLBY, Chicago, Ill., assignor to International Register Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1922. Serial No. 598,688. 10 Claims. (Cl. 164—75.)

1. In combination, an arm mounted at one end for movement about a vertical axis, a second arm connected at one end to the other end of the first arm and movable independently thereof about a vertical axis and a horizontal axis, a member depending from the other end of said second arm for travel upon material to be cut, and cutting means associated with said member.

1,663,268. LIFE PRESERVER. JOHN R. FOLEY, Kelso, and MARJORIE HART, Vancouver, Wash. Filed Oct. 27, 1926. Serial No. 144,430. 2 Claims. (Cl. 9—17.)

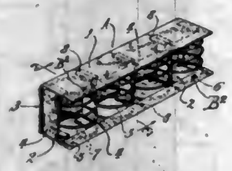


2. A life preserver consisting of an inflatable pneumatic ring having an internal inflating means adapted to be actuated manually, said ring having an inside diameter which will permit same to pass over the wearer's head to enable same to be worn around the neck, but which cannot be removed from the neck of the wearer while inflated.

1,663,269. AUTOMOBILE BUMPER BRACKET. OSCAR H. GOETZ, Bridgeport, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed July 30, 1924. Serial No. 729,033. 5 Claims. (Cl. 293—55.)

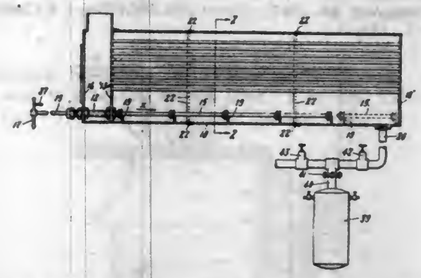
1. An automobile bumper bracket comprising a supporting arm, having an eye, a clamping member connected with said arm by a pivot-bolt mounted in said eye, and serving therewith to embrace a bumper bar, a wedge member arranged to operate between said supporting arm and bumper bar, and means to actuate said wedge.

1,663,270. DRAFT EQUALIZER. GUST JOHNSON, Orrin, N. Dak. Filed June 8, 1926. Serial No. 114,569. 8 Claims. (Cl. 278—8.)



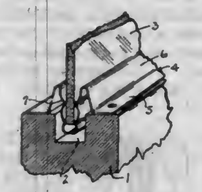
6. A draft equalizer comprising a main evener, a supplemental evener member disposed in advance of the main evener, a connector from the main evener to the supplemental evener having connection with the latter at a point intermediate its length, draft means connected to one end of the supplemental member, separate draft means for the other end of the supplemental member, and an equalizing connection connected to the end of the supplemental member to which the first-mentioned draft means is attached and extending between the main and supplemental evener members, said separate draft means being connected to the equalizing connection at the other end of the supplemental member.

1,663,271. PIPE FITTING. AUGUST KEHM, Chicago, Ill. Original application filed Apr. 3, 1924, Serial No. 703,909. Divided and this application filed Aug. 31, 1925. Serial No. 53,515. 2 Claims. (Cl. 137—75.)



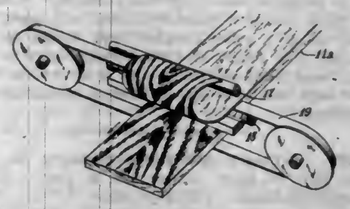
1. A pipe fitting having opposed openings of the same size in substantial alignment and an intermediately disposed lateral opening directed transversely to the opposed openings, an obstruction between one of the opposed openings and the intermediate opening, and a single eccentric tube carried by the obstruction and extending towards the other opposed opening.

1,663,272. SPRING-CONTAINING STRIP. FRANCIS A KELLAR, Grand Rapids, Mich., assignor to James L. MacInerney, Grand Rapids, Mich. Filed Dec. 16, 1926. Serial No. 155,123. 6 Claims. (Cl. 5—353.)



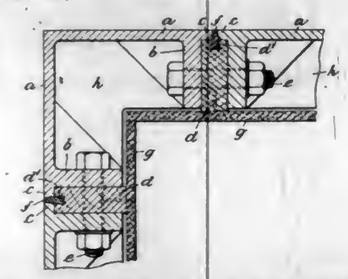
1. A spring retaining strip for cellular cushion construction, comprising a continuous piece of fabric folded between its side edges to form longitudinally extending top and bottom strip portions and one side strip portion, the other side being open, a series of spring elements mounted in said retaining strip, and means for securing the ends of each spring element to said top and bottom strip portions adjacent the open side of said retaining strip comprising means secured to said top and bottom strip portions adapted to slidably receive the top and bottom coils of the springs respectively, whereby said spring elements are held on three sides by said strip portions.

1,663,273. BOILER CLEANER. IRVING L. KEMP, Milton, Mass., assignor to Oscar Hussa, Watertown, Mass. Filed July 21, 1927. Serial No. 207,528. 4 Claims. (Cl. 122—379.)



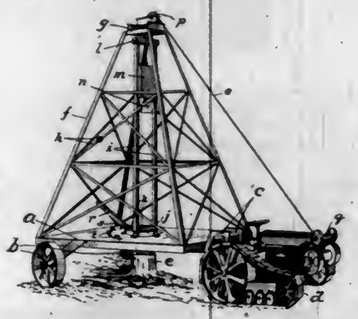
1. A steam boiler having a longitudinally extending guide at its forward end communicating with the water space of the boiler, and a bottom cleaner comprising a rod longitudinally movable and adapted to turn in said guide, a plurality of arms fixed to the rod and projecting laterally therefrom, a plurality of scrapers, and links loosely connecting the scrapers with the rod and arms, and permitting independent edgewise movements of the scrapers.

1,663,274. METAL WINDOW GUIDE. LAWRENCE LIPPER, Houston, Tex. Filed Aug. 2, 1926. Serial No. 126,359. 2 Claims. (Cl. 296—44.5.)



1. In combination with a window casing having a window receiving channel therein, and a slidable window pane in said channel, of resilient guides of sheet metal supporting said pane and comprising a base member for attachment to said casing adjacent each side of said channel, each guide having an inwardly inclined side portion and a recurved portion formed thereon, said recurved portion being corrugated longitudinally and adapted to bear resiliently against said pane at a plurality of lines of contact for the purpose described.

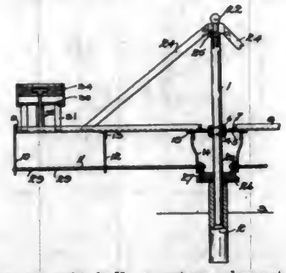
1,663,275. METHOD OF PRODUCING GRAINED-RUBBER ARTICLES. TOD J. MELL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 18, 1926. Serial No. 149,149. 2 Claims. (Cl. 18—59.)



1. The method of producing a grained rubber article which comprises passing two rubber compounds of different colors through an extruding machine together to produce an internally grained strip and removing rubber from the strip to expose the internal grain thereof.

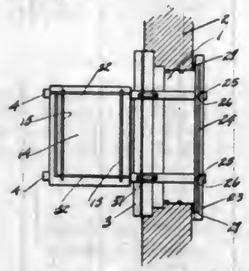
1,663,276. WALL FOR BUILDING CONSTRUCTION. THOMAS VIVIAN MILES, near Sheffield, England, assignor of one-half to Newton Chambers & Company Limited, near Sheffield, England, a British Company. Filed Apr. 23, 1927. Serial No. 186,039½. 3 Claims. (Cl. 189—1.)

1. The improved construction of walls for buildings comprising the combination of metal plates provided with flanges presented inwardly and with marginal rims projecting at right angles to the said flanges, strips of wood inserted between the adjacent flanges of the assembled plates, the said strips of wood having their ends adjacent to the said marginal rims formed with dove-tailed recesses, and a cement filling inserted between the adjacent marginal rims of the assembled metal plates and extending therefrom into and filling the recesses in the wooden strips.



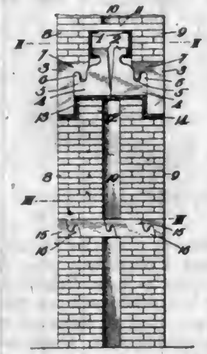
1,663,277. APPARATUS FOR HARVESTING STUMPS. JASPER T. MURRY and CLARK B. PATTERSON, Hattiesburg, Miss., assignors to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 15, 1927. Serial No. 168,271. 2 Claims. (Cl. 144—193.)

1. In an apparatus for harvesting stumps, in combination, a platform, means for supporting the platform substantially horizontal to and at a distance from the ground and permitting the platform to be moved from place to place, a base rotatable relatively to said platform, guide members extending from said base, a blade engaged by said guide members and means for raising said blade to a height and for permitting it to drop by gravity, said platform being apertured within the confines of said rotatable base to permit said blade to pass therethrough.



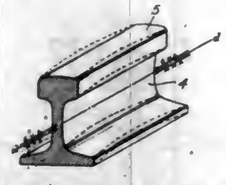
1,663,278. ROTARY SWING. FREDERICK W. OLTERSDORF, Detroit, Mich. Filed Apr. 8, 1927. Serial No. 182,008. 1 Claim. (Cl. 272—33.)

A rotary swing comprising a stationary hollow centre post, a frame rotatably mounted around said post, a stationary gear secured around said post, cranked shafts rotatably mounted on said frame, pinions mounted on said shafts and meshing with said stationary gear so that when said cranks are turned said pinions travel around said gear, a pocket in the upper end of said post, having a semi-spherical lower end, a ball in said pocket, a vertical spindle rotatable in said pocket and having its lower



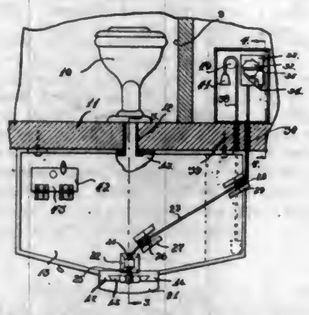
end resting on said ball, a rotary element around the upper end of said spindle above said post, and braces extending downwardly and outwardly from said element to said frame.

1,663,279. WINDOW SCAFFOLD. BYRON A. PORTT, Bay City, Mich. Filed May 7, 1926. Serial No. 107,337. 2 Claims. (Cl. 304—27.)



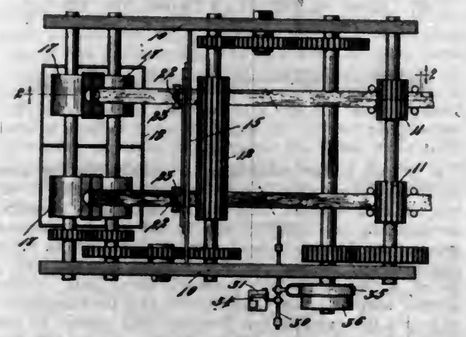
1. A window scaffold comprising a slotted platform, grooved side bars, wall brackets adjustably engaging said side bars and each having a spring tensioned section intermediate the length of the bracket, a transversely disposed bar connecting the inner ends of the side bars and provided with a grooved edge, and padded blocks mounted in said groove.

1,663,280. FURNACE-WALL CONSTRUCTION. GEORGE P. REINTJES, Kansas City, Mo. Filed May 9, 1927. Serial No. 190,021. 9 Claims. (Cl. 72—102.)



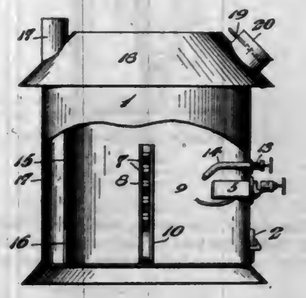
1. A wall comprising superposed sections of masonry, a horizontal metal supporting member above and spaced from one section and extending longitudinally of and through the overlying section, and tile suspended from the supporting member and underlying and supporting the section of the wall through which said supporting member extends.

1,663,281. STRUCTURE HAVING COINCIDENCE OF NORMALLY ECCENTRIC AXES OF FORCE AND MASS. HARRY F. ROACH, St. Louis, Mo. Filed Oct. 31, 1927. Serial No. 229,943. 11 Claims. (Cl. 238—125.)



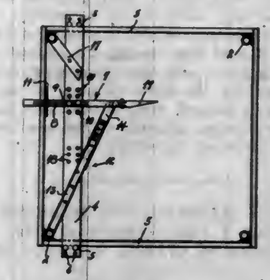
1. A structure having at least one unsymmetrical section and subject to the effect of forces tending to distort it, in which the geometrical neutral axis of the structure and the metallurgical neutral axis are caused to coincide.

1,663,282. TOILET DEVICE. NICK RUSHE, Detroit, Mich. Filed Apr. 14, 1927. Serial No. 183,646. 3 Claims. (Cl. 4—8.)



1. In a device of the class described, a reserve tank having an opening formed in its base; a pair of guide brackets extending at opposite sides of said opening; a closure slidably mounted between said guide brackets for opening and closing said opening; a boss projecting outwardly from the lower surface of said closure; a bar secured to and projecting transversely of said brackets adjacent one end thereof; and a spring engaging at one end of said bar and at its opposite end, said boss for normally retaining said closure in closing position.

1,663,283. STOP MOTION FOR GILL BOXES. WALTER J. SCOTT, Woonsocket, R. I. Filed July 27, 1927. Serial No. 208,859. 2 Claims. (Cl. 19—165).

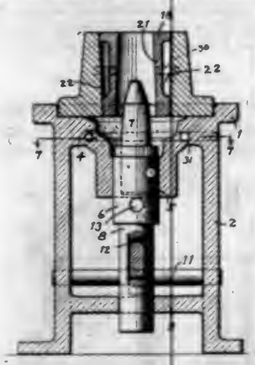


1. In a stop motion for Gill boxes, an electric circuit, a set of draft rolls to act on the sliver, a pair of pivotally suspended feeler arms arranged to straddle the travelling sliver and held from circuit-closing position by contact with opposite edges of the travelling sliver whereby when fibers from the sliver are broken by action of the rolls the width of the sliver is reduced permitting one of said feelers to move and close the circuit to stop the machine.

1,663,284. OIL AND WATER BURNER STOVE. ANDREW O. SLETTAGER, Fertile, Minn. Filed Apr. 15, 1927. Serial No. 183,944. 4 Claims. (Cl. 126—95.)

1. An oil and water burner stove, comprising a casing having a combustion chamber and provided with a controllable air inlet opening through its side wall at its bottom and having a rear wall having an opening at its bottom for the discharge of excess of cold air and the products of combustion and having an exit flue communicating with said discharge opening, and oil and water nozzles extending into said combustion chamber above said air inlet opening.

1,663,285. PIPE RETAINER FOR DERRICKS. ORVILLE R. STUMP and JOHN N. HILES, Long Beach, Calif. Filed Feb. 19, 1927. Serial No. 169,655. 6 Claims. (Cl. 255—1.)

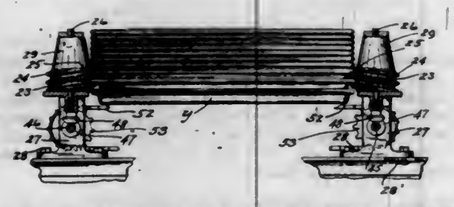


1. A pipe retainer for derricks comprising a board, means removably securing said board to the derrick, and a finger extending inwardly from the said board, said board and finger being formed of metal, and said finger being provided with a tip on the end thereof, and means pivotally mounting said tip on the finger, and means rigidly securing said tip, said last named means being releasable under high stress.

1,663,286. MOLD AND METHOD OF CASTING. CONRAD VAUGHAN, Cleveland, Ohio, assignor to The Permold Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 7, 1923. Serial No. 617,439. 3 Claims. (Cl. 22—200.)

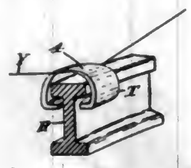
1. The method of forming castings of metal of a relatively high crystallization shrinkage and a relatively low

freezing point which consists in introducing molten metal of such characteristics into a permanent mold having a



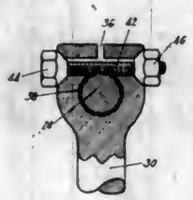
mold cavity and sprue cavity, cooling the mold adjacent the more remote sections of the casting and then cooling that portion of the mold surrounding the sprue cavity.

1,663,287. COW-TAIL HOLDER. ANTHONY VOLENCE, Browerville, Minn. Filed May 17, 1924. Serial No. 714,122. 1 Claim. (Cl. 119—105.)



As a new article of manufacture, a cow tail holder comprising a clamp of substantially U-shape in plan constructed from a relatively wide thin strip of resilient metal including an intermediate semi-circular body portion having its ends arranged in converging relation and a pair of elongated resilient legs disposed in parallel relation on said ends defining a restricted neck entrance leading to the semi-circular body portion, the free terminals of the legs being flared outwardly, and a flat resilient plate disposed in abutting relation to the outer face of one of said legs having its opposite ends bent outward away from said legs, the outer flared end of said plate engaging the flared terminal of the mentioned resilient leg and secured thereto, the inner flared end of said plate terminating adjacent to the semi-circular body portion and diverging therefrom.

1,663,288. MACHINE FOR WASHING SERVING TRAYS. CARL J. ULRICH, Mankato, Minn. Filed Nov. 16, 1923. Serial No. 675,073. 3 Claims. (Cl. 241—1.)

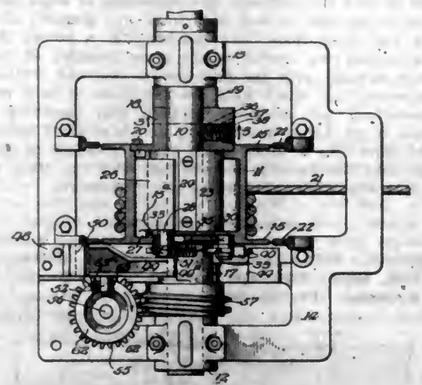


1. A tray-supporting and releasing device comprising, in combination with a conveyor, a plurality of revoluble upright feed screws adapted to support a stack of trays on their threads and successively remove the trays from the bottom of the stack and then release the same to said conveyor, said feed screws having conical truncated upper end portions for directing the stack of trays onto their threads.

1,663,289. RING TRAVELER AND METHOD OF PRODUCING SAME. PHILIP C. WENTWORTH, Providence, R. I. Filed May 11, 1927. Serial No. 190,583. 3 Claims. (Cl. 118—61.)

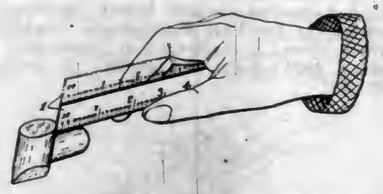
1. A ring traveler comprising a solid imperforate bow and terminal horns of uniform width throughout, said bow gradually decreasing in thickness from the horns towards the center thereof so that the center of gravity of the traveler is lowered to a point corresponding approximately to the geometrical center of the traveler.

1,663,290. LEVER MOUNTING. VINCENT BENDIX, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed May 3, 1926. Serial No. 106,307. 19 Claims. (Cl. 188—194.)



5. A brake comprising, in combination, a drum and backing plate, a friction device engageable with the drum, operating means for said device including a shaft passing through the backing plate and having a worm thread outside the backing plate, an arm having a split hub embracing the threaded part of the shaft, a bolt bridging the split in the hub and having a thread meshing with the thread of the shaft, the arm being adjustable angularly of the shaft by turning the bolt, and a nut on the bolt to lock the split hub on the shaft.

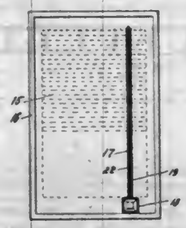
1,663,291. HAIR CURLER. PHILIP C. P. BOOTY, Chicago, Ill., assignor to Innovation Specialties Co., Inc., Chicago, Ill., a Corporation of Illinois. Filed Nov. 11, 1927. Serial No. 232,628. 4 Claims. (Cl. 132—34.)



1. A hair curler comprising in combination an elongated tubular member, a head revolubly mounted at one end of said tubular member, an end piece revolubly mounted on the opposite end of the tubular member, means for causing said head and said end piece to rotate together with respect to said tubular member, and a coiled spring removably mounted about said tubular member adapted by engagement with said tubular member to rotate therewith in one direction with respect to said head and adapted by engagement with said head to prevent rotation of the tubular member in the opposite direction with respect to the head.

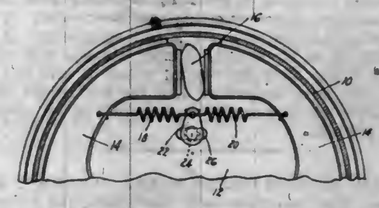
1,663,292. SHOVEL-OPERATING MECHANISM. SETH CARLSON, Chicago, Ill., assignor to Weller Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 12, 1926, Serial No. 87,763. Renewed Feb. 9, 1928. 8 Claims. (Cl. 254—173.)

1. In power driven mechanism of the character described at the end of the forward movement of said driven members, of cooperating clutch members connected respectively to said driving and driven members, a latch for holding said clutch members disengaged, a stop-dog for disengaging one of said clutch-members from the other at the end of the forward movment of said driven member, and means operated by power derived from the driving member, to impart initial movement to said driven member in forward direction for tripping said latch to engage said clutch-members.



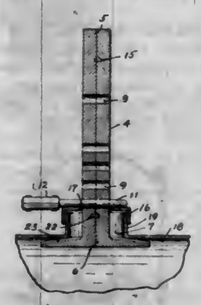
1,663,293. MEASURING RULER. ALVIN B. COOK, Athol, Mass., assignor to The L. S. Starrett Company, Athol, Mass., a Corporation of Massachusetts. Filed Apr. 4, 1927. Serial No. 180,689. 2 Claims. (Cl. 33—111.)

1. A rule comprising a flat relatively thin flexible strip having only two series of differentiated graduations thereon, one series extending along one longitudinal edge of the front face of the rule and the other series extending along the opposite longitudinal edge of the back face of the rule and in nonsuperimposed relation to the graduations on the front face, and both series of graduations reading from the same end of the rule so that by turning the rule on its longitudinal axis either series of graduations may be alternately exposed in the same relative reading position and sequence for direct observation.



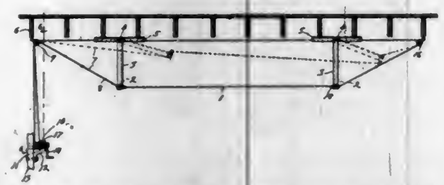
1,663,294. PERFORATING AND SCORING ATTACHMENT FOR PRINTING PRESSES. JOHN A. DAVIDSON, Glendale, N. Y. Filed Mar. 12, 1927. Serial No. 174,872. 5 Claims. (Cl. 101—250.)

1. In a printing press, the combination with a form and a platen having a bodily movement in relation to one another, of a blade disposed in said form and adapted to move in and out of the same, means cooperating with said blade located in the path of and actuated by said platen for causing said blade to project out of said form



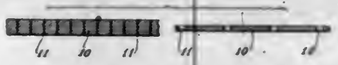
into engagement with the work carried by said platen, and means for returning said blade to its normal position on disengagement of said platen from said actuating means.

1,663,295. BRAKE. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed July 16, 1927. Serial No. 206,184. 2 Claims. (Cl. 188—78.)



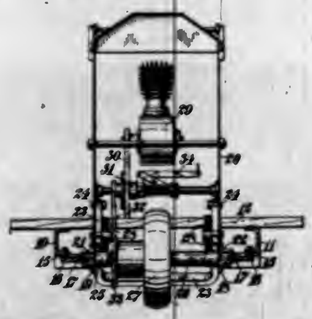
1. A brake comprising oppositely-movable friction parts, in combination with a spring resisting movement of each of said parts, an angularly movable arm to which said springs are connected and which is shifted to balance the springs by application of the brake, and means for securing said arm with the springs balanced, to prevent it from shifting further.

1,663,296. LOCKED CLOSURE FOR TANK OPENINGS. JOHN H. FALSTER, Oakland, Calif. Filed May 20, 1926. Serial No. 110,338. 5 Claims. (Cl. 220—25.)



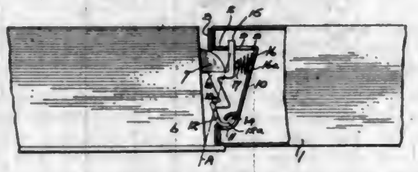
1. In combination with a tank having a wall provided with an aperture, a lock having a bolt, a screw cap providing a closure member for said aperture, and a locking member passing through said aperture and closure member arranged to bear on the inner face of said wall and to receive said lock bolt at a point thereof above said closure member whereby a releasing movement of said cap will effect a forcible engagement of said member with the inner wall face and the displacement of said latter member to uncover said aperture may be prevented.

1,663,297. CLOTHES-DRYING RACK. OSCAR A. FRUEHAUF, Detroit, Mich. Filed Feb. 11, 1927. Serial No. 167,416. 2 Claims. (Cl. 211—117.)



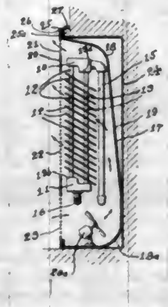
2. In a clothes drying rack, the combination with a pair of parallel substantially horizontal bars, of a plurality of clothes lines extending between said bars, a pair of members supporting each of said bars for swinging movement about an axis parallel to said bars, an elongated flexible member connecting said bars having its end portions respectively extending oppositely from said bars in a substantially transverse relation to said bars, and having an intermediate portion extending transversely to and above said bars, and guide members engaging said flexible member at the junctures of its intermediate portion and said end portions, said flexible member having a portion downwardly extending from one of said junctures, means engaging said downwardly extending portion adapted to exert a pull upon either of said end portions of the flexible member whereby said frames may be swung upwardly toward either of said end portions, and means associated with the last named frames for holding the frames and clothes lines in an upwardly swung position.

1,663,298. RUBBER FILTER SHEET. WILLIAM C. GEER, Akron, Ohio, and CHARLES F. SHERWOOD, San Francisco, Calif., assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 17, 1925. Serial No. 37,664. 10 Claims. (Cl. 210—169.)



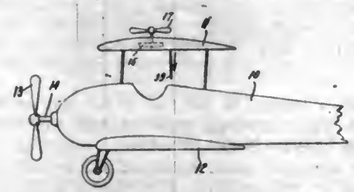
1. A filter medium comprising an elastic rubber sheet having perforations therein.

1,663,299. POWER-DRIVEN VEHICLE. GEORGE GRIST, Norton, St. Philip, near Bath, England, assignor to R. A. Lister & Company Limited, Dursley, Gloucestershire, England, a British Company. Filed Nov. 26, 1926, Serial No. 150,857, and in Great Britain June 22, 1926. 1 Claim. (Cl. 180—26.)



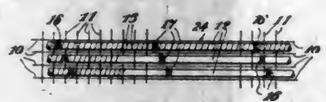
In a power-driven vehicle, the combination of a pair of chassis longitudinals, a vertical steering framework having a turntable connection with the same and arranged to rotate about a vertical axis, at least one driving road wheel journalled in said framework to rotate about a horizontal axis and support the framework and chassis longitudinals, and a power-unit supported by said framework and arranged to drive the road wheel, which turntable connection comprises a disc-like bearing-ring carried by said longitudinals, two pluralities of angle strips fixed on the side of said framework, one plurality above and the other below said bearing-ring, a second disc-like bearing-ring carried by the lower plurality of angle strips co-axial with the first bearing-ring and rotatably supporting the latter with the flat faces of said rings face-to-face and extending between said pluralities of angle strips, and a floating ring that is situated between said pluralities of angle strips and is arranged to maintain said bearing-rings co-axial one with the other and is free to rotate in relation to said framework.

1,663,300. STRIKER PLATE. SAMUEL H. HALPER, Detroit, Mich. Filed Apr. 30, 1927. Serial No. 187,717. 8 Claims. (Cl. 292—340.)



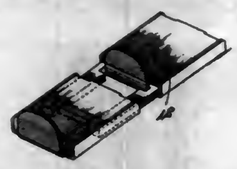
1. In an article of the character described the combination of a striker plate having a trough-shaped central portion, means for attaching the marginal portions of said plate to a door frame, a retainer pivotally mounted in said trough-shaped portion adapted to swing either wholly within the latter or so that it projects partly therefrom, means on the outer surface of said retainer adapted to engage a latch bolt, means for limiting the outward swing of said retainer, and means for tending to hold the retainer so that its outer surface projects outwardly from said trough-shaped portion.

1,663,301. RADIATOR. MAXWELL S. HART, New Britain, and MAURICE GAYLORD STEELE, Hartford, Conn., assignors to The Hart & Hutchinson Company, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 3, 1926. Serial No. 133,320. 18 Claims. (Cl. 257—137.)



4. In an air-heating radiator, a plurality of upwardly extending tubes for containing a heating medium, a pair of angle-shaped headers at the upper and lower ends of said tubes, means for introducing a heating medium to the upper header, means for withdrawing the spent heating medium from the lower header, said tubes being arranged in two parallel rows in stepped relationship, and deflecting means for directing the inflowing current of air diagonally around said tubes.

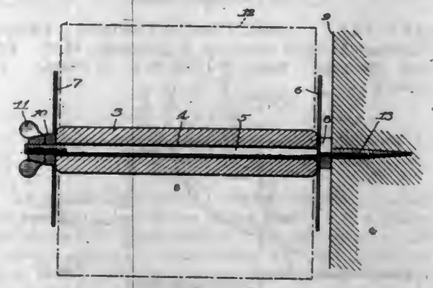
1,663,302. AUXILIARY POWER SYSTEM FOR AERIAL VESSELS. MARK HERZL, New York, N. Y. Filed Oct. 27, 1927. Serial No. 229,126. 1 Claim. (Cl. 244—15.)



1. An auxiliary propelling mechanism for aeroplanes, including a rotary internal combustion engine having a vertical driven shaft extending through the top aerofoil of the aeroplane, a propeller attached to said shaft above said aerfoil rotatable in a horizontal plane, means associated with said engine for exploding solid explosive charges and permitting the resulting gases to act upon the rotor of said engine, and means within the reach of the operator's seat in the body of said aeroplane for feeding explosive charges to said first-mentioned means and for actuating the charge explosion means.

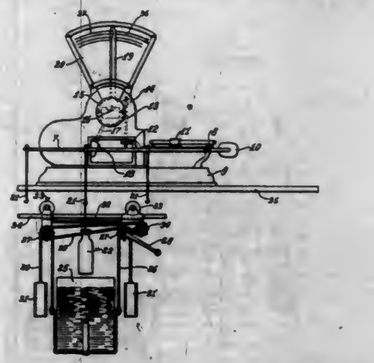
1,663,303. ELASTIC WEBBING. JOSEPH HIRSCH, Yonkers, N. Y., assignor to Kops Bros. Inc., a Corporation of New York. Filed Jan. 27, 1927. Serial No. 163,891. 3 Claims. (Cl. 139—421.)

2. In an elastic webbing, inelastic warp and weft threads, and a plurality of elastic strands each elastic strand having a core and a cover of inelastic threads in which at spaced intervals the cover threads are wound in a plurality of superimposed turns so as to slightly compress the core when in its normal condition and also to have an exterior diameter appreciably greater than the normal diameter of the elastic strand.



1,663,304. BRACELET. CARL HOECKELE, Newark, N. J., assignor to New Jersey Chain Corporation, Newark, N. J., a Corporation of New Jersey. Filed Feb. 21, 1927. Serial No. 169,898. 5 Claims. (Cl. 59—79.)

4. An expandible bracelet comprising a series of box links having top and bottom walls, a frame link connecting said box links and slidable between said walls, said frame comprising a pair of separate members, cooperating means on said members to interlock to prevent separation longitudinally of the bracelet, said interlocking means being prevented from lateral separation by the top and bottom walls of said box.



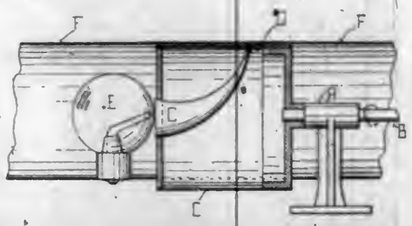
1,663,305. PAPER HOLDER. JAMES E. HUDSON, Galva, Ill. Filed Jan. 7, 1926. Serial No. 79,753. 1 Claim. (Cl. 242—55.2.)

A holder of the class described, comprising a core having a bore therethrough, a spindle extended through said bore with one end threaded, an independent disk at one end of the core and having a threaded boss rigid therewith, an independent disk at the other end of the core and having a threaded spacer rigid therewith, and a lock nut on the threaded end of the spindle bearing against the boss of the adjacent disk for firmly securing

the holder in place, the spindle being passed loosely through the bore of said core and having its other end provided with an elongated tapered thread for securing the holder in any desired position whereby the holder is supported solely by said spindle.

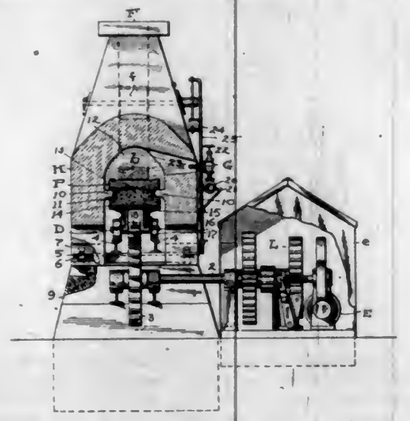
1,663,306. PROCESS OF CHECKING MOLDS DESIGNED FOR THE MOLDING OF GLASSWARE. OLIVER C. K. HUTCHINSON, Alton, Ill., assignor to Illinois Glass Company, Alton, Ill., a Corporation of Illinois. Filed May 26, 1926. Serial No. 111,679. 8 Claims. (Cl. 73—51.)

1. The process of checking a mold designed for the molding of a definite article of a predetermined shape or volume and material, comprising, filling the mold cavity with another moldable material so as to form therein a test piece conforming thereto, and measuring the displacement of the test piece in order to determine the accuracy of the mold.



1,663,307. BOOKMARK. GLENN L. JACKSON, Chicago, Ill. Filed Oct. 18, 1926. Serial No. 142,345. 2 Claims. (Cl. 116—119.)

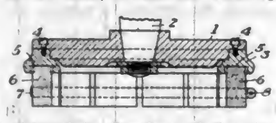
2. A book mark comprising a strip of relatively thin, tenuous flexible material bent between its extremities in a straight line to form two flatly opposed legs, and a portion intermediate the ends of said legs doubled



and flattened in such a manner that three sections of a leg are parallel and in close proximity, thus forming a slightly projecting rib to provide means for attaching and releasing said book mark from the margin of a page.

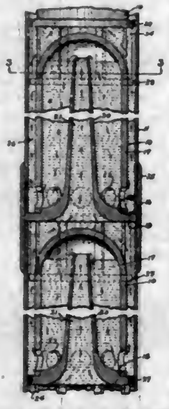
1,663,308. LIGHT-CONCENTRATING DEVICE. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Oct. 22, 1924. Serial No. 745,214. 5 Claims. (Cl. 178—7.)

1. In apparatus of the class described, a circularly-formed surface, the marking means the source of which is located approximately at the axis of the circular surface, and means for directing the marking means into pointed contact with said surface, in a plane longitudinally removed from the plane of location of the source.



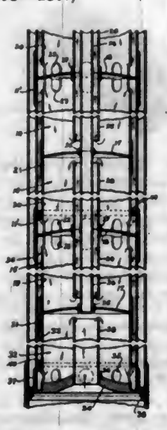
1,663,309. APPARATUS FOR PRODUCING CLAY PRODUCTS. MATTHEW LANG, Akron, Ohio. Filed Apr. 11, 1924. Serial No. 705,827. 5 Claims. (Cl. 25—142.)

1. An apparatus for making clay products, comprising an arched kiln having an open bottom, an endless track and an endless conveyor close to said open bottom, a series of valved burners arranged at intervals longitudinally of the kiln and a series of power units for the conveyor located at intervals longitudinally of the kiln.



1,663,310. SEGMENTAL GRINDING WHEEL. WILLIAM T. MACAULAY, Brooklyn, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed July 13, 1923. Serial No. 651,350. 3 Claims. (Cl. 51—209.)

1. In a segmental grinding wheel, a flanged center disk, a ring member on the flange whose diameter is substantially the same as the diameter of the central portion of the disk, the ring and disk having contacting shoulders by means of which the ring is centered on the flange of the disk, means for securing the ring to

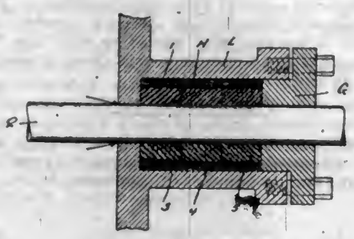


the disk, a channel in the face of the ring at the side opposite the contacting shoulders and a plurality of grinding sections in the channel.

1,663,311. APPARATUS FOR ELEVATING FLUID. LESTER H. MILES, Los Angeles, Calif. Filed Sept. 8, 1926. Serial No. 134,170. 4 Claims. (Cl. 166—2.)

1. In a device of the class described, a casing, said casing having oil lifting means therein, said means comprising a plurality of sections, each section constituting a lifting stage, each of said sections including an inverted cup-shaped member and a necked member fitted within said cup-shaped member, said cup-shaped member having apertures near the bottom thereof, a passageway through said neck member, said neck member terminating short of the closed end of said cup-shaped member.

1,663,312. APPARATUS FOR ELEVATING OIL AND OTHER FLUIDS. LESTER H. MILES, Los Angeles, Calif. Filed Oct. 27, 1926. Serial No. 144,597. 7 Claims. (Cl. 103—239.)

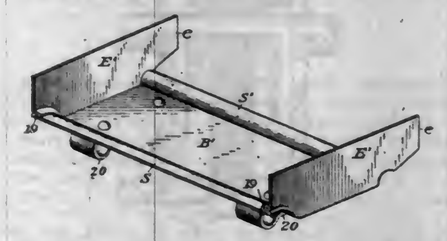


1. In a fluid operated pump, a pair of spaced tubes comprising an inner and outer tube, means to divide said outer tube into a plurality of pumping compartments, means to divide said inner tube into a plurality of pumping compartments, and means to afford communication between said compartments, means for admitting the operating fluid and the liquid to the bottom compartment and means for discharging the pumped liquid from the top compartment.

1,663,313. ADJUSTING MECHANISM FOR PRESSURE GAUGES. JOSEPH W. MOTHERWELL, Melrose, Mass., assignor to The Ashton Valve Company, a Corporation of Massachusetts. Continuation of application Serial No. 715,399, filed May 23, 1924. This application filed Dec. 27, 1924. Serial No. 758,414. 4 Claims. (Cl. 73—109.)

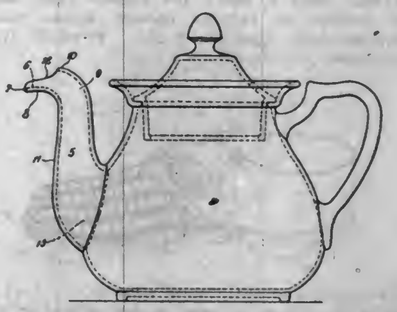
1. A device of the character described comprising an indicator; a Bourdon tube; means to operatively connect said indicator and said tube including two leaf springs; and a member rotatable to adjust said springs.

1,663,314. PACKING. NORMAN B. MILLER, New York, N. Y. Filed Aug. 25, 1923. Serial No. 659,857. 4 Claims. (Cl. 154—45.5.)



1. A packing adapted to be placed within a stuffing box encircling a shaft in the usual manner, said packing consisting of an elongated body presenting in cross section when within the stuffing box an inner part disposed so as to engage directly against the shaft and an outer part radially beyond the inner part to engage directly against the annular wall of the stuffing box, said two parts being connected together as an integral mass, the inner part extending the full width of the body and being made up throughout of alternate layers of relatively stiff and relatively resilient material, said layers extending obliquely through said inner part, and the outer part also extending the full width of the body and being of a substantially uniformly resilient character throughout its width adapted to serve as a cushion for the inner part substantially as described.

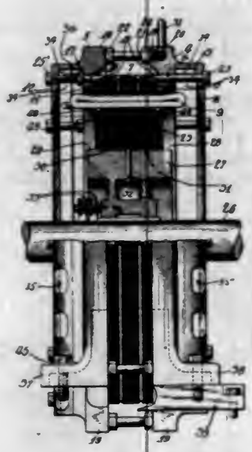
1,663,315. CONNECTING MEANS FOR SPRINGS. LOUIS EDWARD PITTONI, Jamaica, and GEORGE F. SISBOWER, Flushing, N. Y., assignors to Rome Metallic Bedstead Company, a Corporation of New York. Filed Aug. 5, 1924. Serial No. 730,206. 4 Claims. (Cl. 5—269.)



1. An upholstery spring, a connecting member adapted to engage the upholstery spring and having a bearing point adapted to press against a spacer spring to hold the spacer spring in engagement with the upholstery spring, a spacer spring having an end portion adapted to be brought into compression between said bearing point and the upholstery spring by rotation of the spacer spring, and a latch on the spacer spring adapted to engage the upholstery spring to prevent the spacer spring from rotating in a reverse direction and separating from the upholstery spring.

1,663,316. METHOD OF MAKING SHEET-METAL ARTICLES. ROBERT V. PROCTOR, Youngstown, Ohio, assignor to The Commercial Shearing and Stamping Company, Youngstown, Ohio, a Corporation of Ohio. Filed July 16, 1924. Serial No. 726,315. 11 Claims. (Cl. 153—3.)

11. The method of manufacturing sheet metal articles comprising forming a blank, shaping said blank to produce a plurality of corrugations, subjecting said corrugations to pressure to cause the metal therein to flow into one fold and compressing said fold.

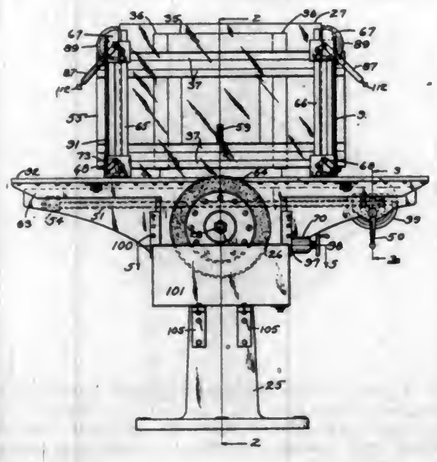


1,663,317. SPOUT FOR COFFEEPOTS AND THE LIKE. ISAAC D. RICHHEIMER, New York, N. Y. Filed Aug. 20, 1924. Serial No. 733,048. 2 Claims. (Cl. 53—3.)

1. A spout for a coffee pot, or the like, having an elongated lip projecting beyond the top of its discharge end, and an abrupt elbow connecting the spout and the lip,

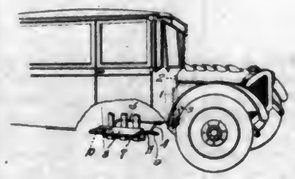
the top side of the lip and the bottom side of the lip being slightly convexly curved longitudinally and the extreme outer ends of said top side and bottom side being slightly rounded to merge together at the extreme outer end of the lip, the said longitudinal curvature of the top side and of the bottom side of the lip being so slight that both said top side and said bottom side are almost horizontal and parallel, the top side having such a slight curvature that when the pot is returned to horizontal position after pouring whatever fluid remains on the top side of the lip will draw back and run down inside the spout, and the bottom side of the lip being sufficiently lowered at its extreme end to prevent any accumulation of fluid thereon from traveling outside the spout.

1,663,318. ELECTRIC MACHINE. THEODOR SCHOU and RICHARD L. BEHRENS, Mansfield, Ohio, assignors to The Ideal Electric & Manufacturing Company, Mansfield, Ohio, a Corporation of Ohio. Filed June 4, 1923. Serial No. 643,159. 8 Claims. (Cl. 171—252.)



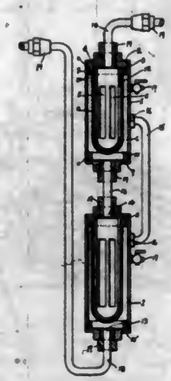
2. An electrical machine comprising an annular core, two annular frame parts on opposite sides of the core and secured tightly against the latter, and adjusting screws between the peripheral edges of the frame parts tending to secure even pressure throughout the core.

1,663,319. SHOE AND METHOD FOR FORMING THE SAME. JOHN B. SNELL, Los Angeles, Calif., assignor of one-half to Anthony Richard Kuhns, Colorado Springs, Colo. Filed Mar. 9, 1927. Serial No. 173,880. 2 Claims. (Cl. 36—3.)



1. The method of forming a shoe which comprises cutting a strip of leather in the shape of a sole, punching a plurality of apertures marginally around said sole, weaving a strand of leather transversely of said sole through said apertures, weaving a second strand of leather transversely of said sole through said apertures in and about said first mentioned strand, thereby forming a cross-weave, cutting a second strip of leather in the form of a sole, and fastening the same beneath said first mentioned strip as and for the purpose specified.

1,663,320. GLASS-GRINDING MACHINE. EDGAR R. STODDARD and LOUIS C. ZILKY, South Bend, Ind., assignors to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed June 11, 1925. Serial No. 36,382. 4 Claims. (Cl. 51—92.)



2. In a machine for forming the edges of glass plates, a stationary base provided with a slidable carriage having vertically disposed slides carrying a frame, vertically disposed supporting members horizontally adjustable on said frame and vertically adjustable glass clamping members supported on said supporting members, a grinding wheel disposed beneath said clamping members, and a vertically adjustable table carried by said base for initially positioning said plates in said clamping members in respect to said wheel.

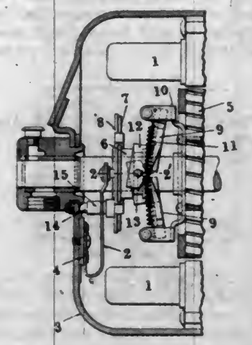
1,663,321. EXTENSION STEP. JOHN BELL STROUD, Pass Christian, Miss. Filed June 7, 1926. Serial No. 114,353. 1 Claim. (Cl. 280—166.)

In combination with a fixed step, an extensible step, Z-shaped arms supporting the extensible step, a transverse bar secured to the fixed step at the rear edge of the latter, said arms bearing upon and being slidable over said bar, and means for imparting longitudinal movement to said arms, said means comprising a vertical shaft provided with a turning crank, and a lateral arm at the lower end of the shaft having a universal connection with one of the first said arms, both of the first said arms being connected together beyond said universal connection.

1,663,322. GASOLINE AND OIL FILTER. JOHN TEKAVEC, Cleveland, Ohio. Filed May 9, 1927. Serial No. 189,922. 5 Claims. (Cl. 210—183.)

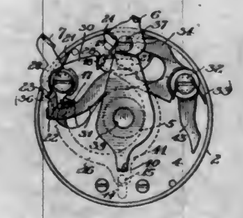
1. The combination of a container having a testing cock and an auxiliary by-pass on its outer surface, a lower cap screw threadedly engaging the container, a closing cap detachably secured to the container and having a threaded socket integrally formed therein, a cylinder having a plurality of longitudinal apertures and a semi-spherical closed end, said cylinder screw threadedly engaging the closing cap, a filtering element externally engaging the cylinder, holding means for securing the filtering element to the cylinder and sealing means positioned between each cap and the container.

1,663,323. PRODUCTION OF EMULSIONS. WILFRED AMBROSE WHATMOUGH, Finchley, England. Filed May 14, 1927, Serial No. 191,546, and in Great Britain May 13, 1926. 3 Claims. (Cl. 167—6.)



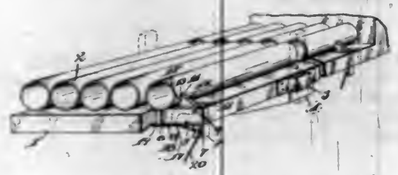
2. A process for the production of an emulsion consisting in mixing with a fatty oil a small quantity of oleic acid and then mixing said mixture with water containing neutralized casein to which a small quantity of an alkali has been mixed, said quantity being an amount such that the interfacial tension between the oil and water phases is sufficiently reduced to permit rapid and substantially spontaneous emulsification.

1,663,324. SLEEPING DOLL. JOHN N. WHITEHOUSE, New York, N. Y., assignor to Markon Mfg. Co. Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1925. Serial No. 65,283. 2 Claims. (Cl. 46—40.)



1. An eye mechanism for dolls comprising an attaching plate, a shaft carried by said plate, a hollow eye open at the rear mounted on said shaft on either side of said plate, a weight, a wire secured to said weight and having two extending ends, one of said ends being bent around said shaft inside of one of said eyes at such an angle that the wire touches each side of the eye and engages the inner surface of the shaft at a point inside the eye.

1,663,325. AUTOMATIC SWITCH MECHANISM. CARL H. WOLFF, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Jan. 18, 1926. Serial No. 82,056. 2 Claims. (Cl. 200—80.)

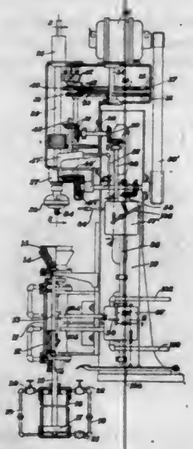


1. In a dynamo electric machine having stationary and revolving parts, a pair of resiliently mounted contacts carried by a stationary part, stop members limiting the forward movement of said contacts, a circular circuit closing member mounted on a revolving part of the machine, means holding said circuit closing member in engagement with said contacts and in frictional engagement with said stops when the revolving member is at rest, and centrifugal means for moving said circuit closing member out of engagement with said contacts and stops when the revolving member has attained a predetermined speed.

1,663,326. PHOTOGRAPHIC SHUTTER. ANDREW WOLLENSAK, Rochester, N. Y., assignor to Wollensak Optical Company, Rochester, N. Y., a Corporation of New York. Filed June 18, 1925. Serial No. 37,981. 12 Claims. (Cl. 95—63.)

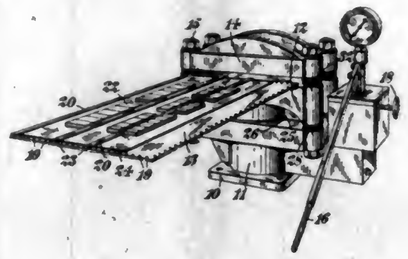
1. In a photographic shutter, the combination with a blade mechanism and an operating member, of a master member adapted to actuate the blade mechanism and having a combined pivotal and bodily movement influenced by the operating member.

1,663,327. SAFETY DOG FOR TRUCKS AND CARS. DAVID H. YAKE, Los Angeles, Calif., assignor of one-half to Otis Scott, Whittier, Calif. Filed Feb. 14, 1927. Serial No. 168,063. 9 Claims. (Cl. 280—145.)



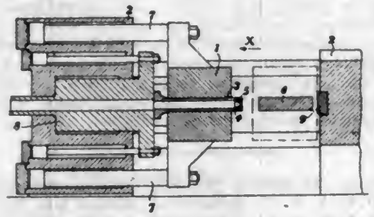
1. A safety dog for truck platforms and the like, comprising a housing adapted to be embedded in said platform, a latch pivoted in said housing and means for normally urging said latch into a position projecting above said platform.

1,663,328. SWIMMING DEVICE. FELIX ARNOLD, Santa Barbara, Calif. Filed Mar. 23, 1927. Serial No. 177,543. 5 Claims. (Cl. 9—21.)



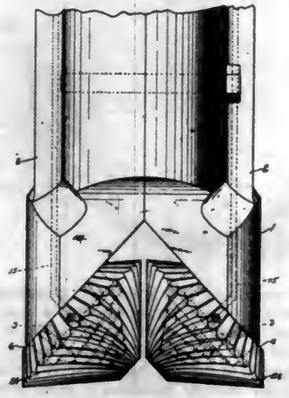
1. A swimming paddle comprising in combination a back adapted to be attached to a limb of the user, said back being wedge-shaped, a channel piece attached to said back, said channel piece being narrower than said back, angle pieces disposed against said channel pieces and against said back, and a pair of paddles pivoted within said angle pieces for swimming movement.

1,663,329. FORMING AND TAPPING MACHINE. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Feb. 12, 1925. Serial No. 8,824. 33 Claims. (Cl. 25—3.)



1. The combination with a thread forming device of a spindle for rotating said device, means for moving said spindle longitudinally when rotated and a drive for rotating said spindle, said drive including an interrupted gear for reversing the rotation of said spindle at a definite position in the movement thereof.

1,663,330. EMBOSSING MACHINE. FRANK STANLEY BAKER and JOHN LOUGHER RICHARDS, London, England, assignors to Hydro-Press Machines Limited, London, England, a British Company. Filed June 20, 1927, Serial No. 200,208, and in Great Britain June 11, 1926. 2 Claims. (Cl. 101—393.)

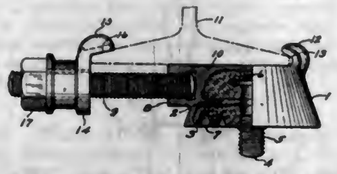


1. In an embossing machine of the kind described, a platen provided along its marginal edges with rows of spaced holes; and an alignment bar having two projecting members, one at each end, directed transversely to the direction of length of the bar and adapted to enter corresponding holes in opposite margins of the platen, said projecting members being displaced laterally from the longitudinal center line of the bar toward the same side thereof.

1,663,331. EXTRUSION PRESS. ALFRED BORN, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed June 24, 1926, Serial No. 118,381, and in Germany June 24, 1925. 1 Claim. (Cl. 207—9.)

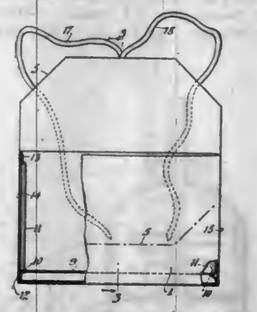
An extrusion press for the manufacture of rod shaped or tubular bodies comprising a hollow ram, a matrix mounted on said ram, a counter-pressure abutment opposite said ram, said ram and abutment being relatively movable, a billet holder adapted to slip over said ram, said holder being shorter than said ram and shorter than the distance between the head of said ram and said abutment in their most remote relative positions, and means for reciprocating said holder, the stroke of said reciprocating means being of such length that said matrix is exposed in either end position of the holder.

1,663,332. ROCK BIT. CLINTON H. BULL, Columbus, Ohio, assignor of one-half to Clarence C. Le May, Columbus, Ohio. Filed Aug. 4, 1925. Serial No. 48,065. 6 Claims. (Cl. 255—71.)



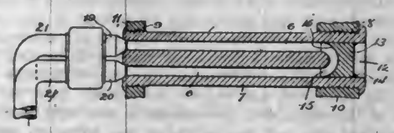
3. The combination with a rotary drill head, of a stub shaft carried thereby, a bushing engaged with the stub shaft, a bit rotatably engaged upon the bushing, and plates rockable in the bearing shaft and rotatably interlocking the bit and body, as and for the purpose set forth.

1,663,333. FUSE. JAMES H. CARMEAN, Kansas City, Mo. Filed Nov. 2, 1925. Serial No. 66,358. 1 Claim. (Cl. 200—142.)



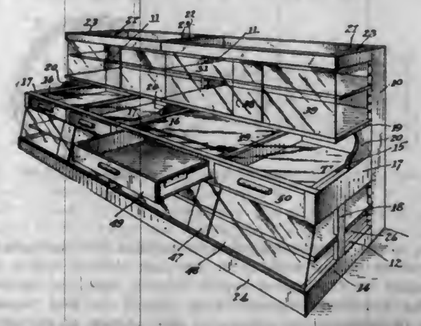
A cut-out element connecting terminals in an electrical heating circuit, comprising resilient members engaged with the terminals, and a link comprising a disk having opposite heat-reflecting and heat-absorbing surfaces and hooks fusibly attached to the disk and engaged with said resilient members, the hooks being tensioned by said members toward separation from said disk.

1,663,334. SUPPORT. HOMER P. CHANDLER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed July 27, 1926. Serial No. 125,170. 7 Claims. (Cl. 191—40.)



1. A hanger comprising a body member, a supporting stud projecting therefrom and having means of attachment to a conductor support, insulation interposed between the body member and stud, hook-shaped means integrally secured to and projecting at one point from the top edge of the body member to engage an overhead support, means projecting from the side of the body member at the opposite side from the hook means, a slidable member mounted on the projecting means and having hook-shaped means to engage the overhead support and an adjustable member mounted on the projecting means to engage the slidable means to move the slidable means into engagement with the overhead support and maintain the hook-shaped means in locked relation with the said support.

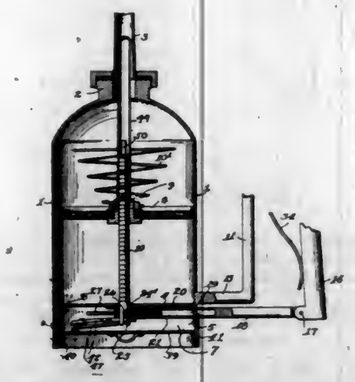
1,663,335. PORTFOLIO. LEONARD DANZIGER, New York, N. Y. Filed May 6, 1927. Serial No. 189,377. 5 Claims. (Cl. 129—1.)



2. A portfolio, comprising a body defining a pocket, a flap for covering said pocket, a folder adapted to be positioned in said pocket, and flexible means connected with the body and with the folder for limiting the movement of the folder as it is moved out of the pocket.

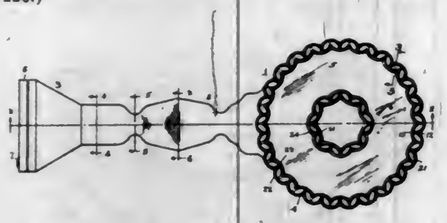
1,663,336. STAY BOLT FOR BOILERS. ETHAN I. DODDS, Central Valley, N. Y., assignor, by mesne assignments, to Flannery Bolt Company, a Corporation of Delaware (1926). Filed Sept. 24, 1925. Serial No. 58,373. 13 Claims. (Cl. 85—1.5.)

1. A staybolt having a plurality of longitudinal passages side by side and in communication at their inner ends and receiving testing means.



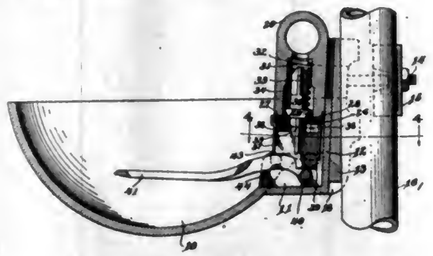
1,663,337. WALL CASE. ROBERT I. EUSTIS and FRED S. BEIGER, Los Angeles, Calif. Filed Jan. 19, 1926. Serial No. 82,210. 7 Claims. (Cl. 312—122.)

1. A wall case unit comprising two upright side members, supporting members projecting forwardly from said side members, shelves mounted between said side mem-



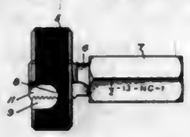
bers having their end edges flush with the faces of said side members, whereby when a plurality of said units are assembled side by side, the end edges of the shelves will abut each other forwardly of said side members so as to present shelves of continuous appearance extending across all of the units, and closures mounted upon said supporting members adapted to close over the forward edges of said shelves whereby when a plurality of units are placed side by side, said closures may be completely slid from one unit to another.

1,663,338. DISPENSING DEVICE. LOUIS GAGNE, Willow Bunch, Saskatchewan, Canada. Filed May 6, 1926. Serial No. 107,158. 10 Claims. (Cl. 221—47.)



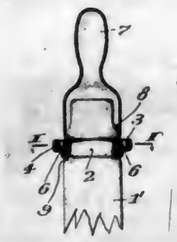
3. The combination of a receptacle having a lubricant containing chamber and a base chamber, a removable closure for the base chamber, a piston in the lubricant-containing chamber, a rod in said chamber and in threaded engagement with the piston and extending at its lower end into the base chamber, pawl and ratchet mechanism in said base chamber for intermittently rotating said rod in one direction for advancing the piston, means for operating said pawl and ratchet mechanism from the exterior of the receptacle, and means in said base chamber for rotating the rod for returning the advanced piston to initial position.

1,663,339. GAS BURNER. BERNARD A. GEURINK and LOUIS H. GEURINK, East Cleveland, Ohio. Filed July 13, 1923. Serial No. 651,237. 2 Claims. (Cl. 158—116.)



1. A gas burner comprising a tubular gas passageway, a valved intake member at one end thereof and a jet member at the opposite end thereof, said jet member being angularly disposed with respect to said tubular gas passageway, an inner and outer series of lenticular orifices formed in said jet member, each alternate orifice being angularly disposed with respect to its immediately adjacent orifices.

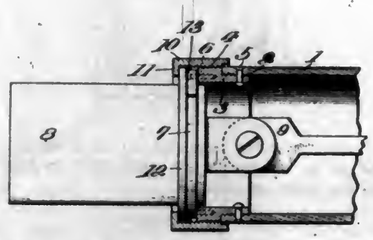
1,663,340. WATER BOWL FOR STOCK. HAAKON P. HANSON, Albert Lea, Minn., assignor to Olson Manufacturing Company, Albert Lea, Minn., a Corporation of Minnesota. Filed June 26, 1925. Serial No. 39,761. 4 Claims. (Cl. 119—75.)



1. In a device of the character described, the combination of a receptacle formed with a rearwardly disposed recess, the outer faces of the sides of said recess being formed with depending lugs a bracket for supporting said receptacle having hooks for receiving said lugs a water supply member including a valve housing, means for securing the water supply member to the bracket and in engagement with a wall of said recess to lock the receptacle to said bracket, a valve seat, a valve within said housing, a lever mounted within the receptacle and operable to lift the valve from its seat, and means for returning the valve to its seat as soon as the lever is released.

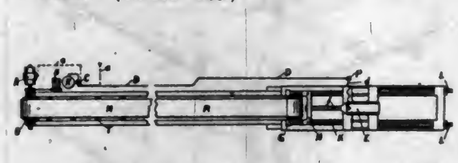
1,663,341. SCREW-THREAD TOLERANCE INDICATOR. JOHN O. JOHNSON, New Haven, Conn. Filed Sept. 26, 1925. Serial No. 58,773. 8 Claims. (Cl. 116—114.)

2. A screw thread tolerance indicator including a threaded ring and plug, said ring formed with a sight opening intersecting the bore, one wall of said opening being a plane face, the line defining the intersection of such face with the wall of the bore being substantially parallel to the axis of the bore, and with a second opening communicating with the sight opening and peripheral to the bore, said plug sectioned in the threaded portion thereof to provide a face adapted to be brought into the plane of the aforesaid face.



1,663,342. FEEDING BOTTLE FOR INFANTS. JOSEF KÖLLNER, Schaffhausen, Switzerland. Filed May 12, 1927, Serial No. 190,908, and in Switzerland May 18, 1926. 4 Claims. (Cl. 215—11.)

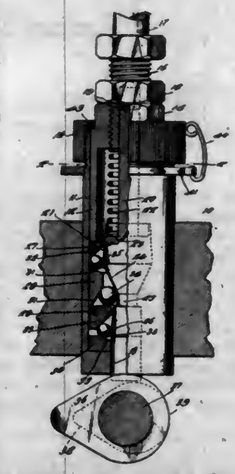
1. An arrangement for fixing teats to feeding bottles for infants, comprising a circular ring of a rigid material and having a U-shaped cross-section, the open part



of the cross-section pointing towards the inner side of the ring, and an elastic ring inserted in said U-shaped cross-section of the ring and adapted to cause a pressure on the neck of the bottle when pushed over the latter.

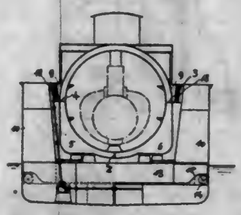
1,663,343. RENEWABLE FUSE. MAX M. LEAR, Jamestown, N. Y., assignor to Monarch Refillable Fuse Company, Jamestown, N. Y., a Corporation of New York. Filed Mar. 17, 1926. Serial No. 95,338. 4 Claims. (Cl. 200—132.)

1. A fuse end cap comprising an open-ended ferrule having an inwardly projecting flange on its outer end and a second internal inwardly projecting portion spaced from said flange, a slotted metal washer seated in said ferrule, said washer being of less diameter than the open end of said ferrule and of greater diameter than the inner diameter of said flange, and means adapted to be inserted within said ferrule between the washer and said second portion for retaining said washer in position within said ferrule, said means being constructed and arranged to permit said washer to be rotated relatively to said ferrule.



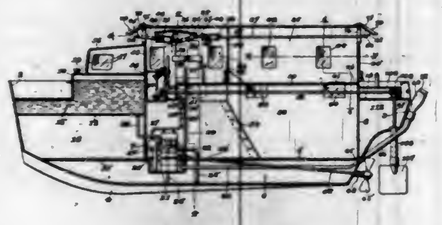
1,663,344. ENDLESS BELT CONVEYER. THOMAS CAYGILL LENNARD, Glasgow, Scotland. Filed July 2, 1927, Serial No. 203,134, and in Great Britain May 21, 1926. 4 Claims. (Cl. 198—208.)

1. In electrically-driven endless belt conveyers, a belt tensioning device, a fluid-pressure engine connected thereto, a pressure fluid supply pipe connected to the engine, a valve controlling the pressure fluid supply, and means controlling said valve and actuated by fluctuations in the current supply to the driving motor of the conveyer.



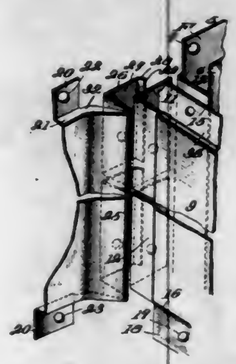
1,663,345. PUSH ROD. JOSEPH BENJAMIN LIEVRE, Mexico, Mexico, assignor of one-tenth to L. D. Ornsby, Bexar County, Tex. Filed Apr. 20, 1925. Serial No. 24,655. 6 Claims. (Cl. 123—90.)

6. In a valve operating mechanism, a push rod comprising inner and outer relatively movable sleeves, means carried by the inner sleeve to engage the stem of a valve, yieldable means to force the inner sleeve outward, a plurality of relatively movable rings having inclined edges and defining annular grooves, balls within the grooves, a grooved cam engaging the push rod to actuate the latter to open the valve, a stem movable within the push rod and controlled by the pressure of the spring of the valve during the opening movement of the latter



to engage certain of the balls and move said balls outward and position the rings to hold the inner sleeve against inward movement, means included in the ball engaging stem to lock the rings in position and means included in the grooved cam to actuate said stem and release the rings during the operation of the valve.

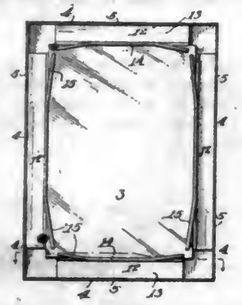
1,663,346. TESTING DOCK FOR SUBMARINES. PAUL MATTHIESSEN and ADOLF DETLEF MÖLLER, Hamburg, Germany. Filed May 12, 1926, Serial No. 108,626, and in Germany May 18, 1925. 1 Claim. (Cl. 114—0.5.)



A separable dock comprising in combination a testing cylinder itself of a buoyant capacity sufficient to float itself loaded with a submarine, but not the additional weight of the water for testing, and said dock including complementary portions receiving said tesing cylinder portion, of sufficient buoyancy to float the latter above water level when loaded with the testing water, said complementary portions being laterally expansible to vary the width of the space within which the testing cylinder portion is received, the sides of said space fitting the testing cylinder portion closely when the complementary portions are in contracted position.

1,663,347. MARINE VESSEL. RUDOLPH MILLER, Detroit, Mich., assignor of one-half to Louis C. La Coursiere, Detroit, Mich. Filed Aug. 3, 1927. Serial No. 210,344. 7 Claims. (Cl. 114—211.)

1. In a marine vessel, a hull, means connected to the hull to provide a lower chamber and a pair of upper chambers, said upper chambers arranged one in advance of the other and each provided with a ventilating opening, the floor of said rear chamber having means for the passage of air thereto from the lower chamber, the bottom of said forward chamber having means for the passage of air from such chamber to the lower chamber, ventilators arranged exteriorly of said upper chambers for controlling said ventilating openings, and means for simultaneously adjusting said ventilators and operated from within said forward chamber.

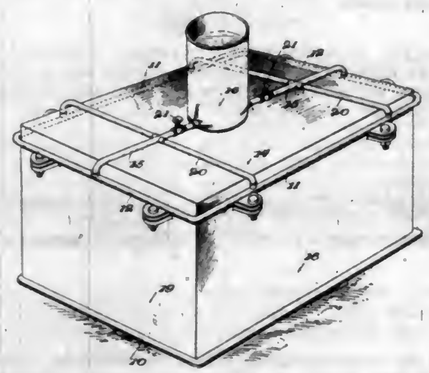


1,663,348. GAS-RANGE CONSTRUCTION. HENRY MOECKER, Jr., Flossmoor, and THEODORE THOMPSON and OTTO HAMMERMEISTER, Harvey, Ill., assignors to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Apr. 16, 1927. Serial No. 184,278. 12 Claims. (Cl. 126—39.)

1. A range construction comprising a cooking top having an oven at one side and a splash plate at its rear, a beveled connection between the splash plate and the oven, and the bevel forming said connection being an integral part of said splash plate.

1,663,349. SIGN-LETTER PLATE. ALFRED OTTO, Taylor, and ROBERT OTTO, Lee County, Tex. Filed Apr. 27, 1926. Serial No. 104,078. 4 Claims. (Cl. 40—133.)

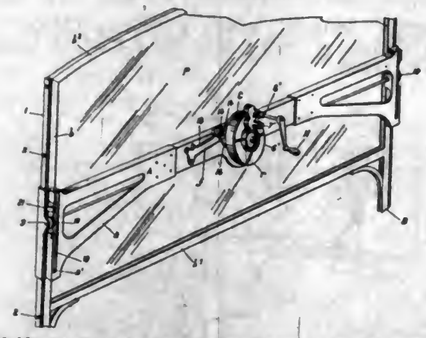
1. A sign comprising a sheet metal stencil plate having a perforate portion delineating a sign character and provided with marginal rearwardly extending flanges forming a rear housing, an open frame sign character disposed upon the face of said plate, retaining members upon the rear of said plate within the space bounded by said housing, said retaining members having rearwardly extending flanges, and a backing plate disposed between said retaining members and marginally engaged



thereby, said retaining members having bendable fingers adapted to be projected over upon said backing plate to hold the same in position.

1,663,350. METHOD OF PRODUCING ACETONE. KOLOMAN RÓKA, Konstanz, Germany, assignor to Holzverkohlungs-Industrie A. G., Konstanz, Germany, a Corporation of Germany. Filed Dec. 12, 1925, Serial No. 75,085, and in Germany Dec. 10, 1924. 10 Claims. (Cl. 260—134.)

1. Process for the production of acetone consisting in bringing into reaction ethyl alcohol and water vapor at temperatures from about 250° C. to about 650° C. in the presence of a catalyst.

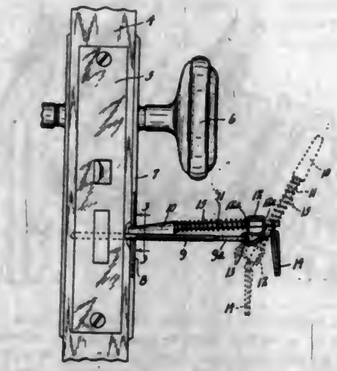


1,663,351. PROCESS FOR TREATING PIG IRON. EDWARD P. ROSS, Riddlesburg, Pa. Filed Sept. 24, 1926. Serial No. 137,634. 1 Claim. (Cl. 148—13.)

The process of treating ingots having a temperature of approximately the temperature of pig iron after being poured into a mold, which comprises confining the ingots in a volume of air enclosed by a heat conducting medium and applying a cooling medium to the heat conducting medium for gradually cooling the ingots.

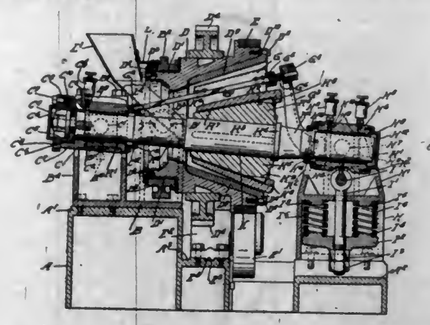
1,663,352. DEVICE FOR RAISING OR LOWERING WINDOW PANES. JACQUES SAOÛTCHIK, Neuilly-sur-Seine, France. Filed July 7, 1926. Serial No. 120,977. 4 Claims. (Cl. 268—132.)

1. A raising and lowering device for window and like panes, comprising independent end members of channel form in cross section and an intermediate connecting member of channel form in cross section and fitted within the channel formation of the end members, each of the end members being integrally formed with a channel offset from the longitudinal plane of the member and opening inwardly toward the member to



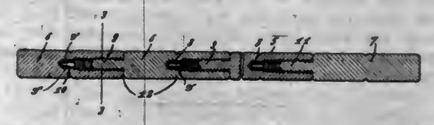
slidably receive a pane-carrying frame, the end members being further formed with an integral channel arranged in the longitudinal plane of the member and opening at right angles to said plane, said latter channel serving to house an operating means and a locking means for the pane frame.

1,663,353. TELEGRAPH CABLE WITH LOADING COILS. HANS SALINGER and JOHANN STAHL, Berlin, Germany. Filed Feb. 8, 1926, Serial No. 86,956, and in Germany Feb. 10, 1925. 1 Claim. (Cl. 178—45.)



Cable with loading coils exclusively for direct current telegraphy in which the natural frequency of a coil section is at least equal three times the direct current telegraphing frequency.

1,663,354. DOOR-KEY RETAINER. ALLIE SMITH, Minneapolis, Minn. Filed Jan. 12, 1927. Serial No. 160,586. 2 Claims. (Cl. 70—65.)



1. A door key retainer comprising a tapered member adapted to be seated against oscillation in the round part of a key hole against the shaft of a key, a plunger carried by said tapered member and axially alined therewith, a connection member in which said plunger is slidably mounted but held against oscillation, an elastic element interposed between said tapered member and said connection member, a stop disposed adjacent the rear end of said plunger to limit the slidable movement of said plunger in said connection member, said connection member having a substantially flat hook adapted to pass through the annular handle of a key to hold said key against oscillation in the door lock.

1,663,355. CONICAL CRUSHING MILL. CHARLES F. SMITH, ARTHUR C. THIELE, and LLOYD P. WALKER, Milwaukee, Wis., assignors to Smith Engineering Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 21, 1926. Serial No. 110,684. 31 Claims. (Cl. 83—13.)

1. A conical crushing mill comprising a rotatably mounted conical concave and a conical crushing head within the concave with its axis at an angle to the axis of the concave, a shaft for such head, a pivotal support for such shaft positioned beyond one end of the concave and a yieldingly mounted support for the opposite end of the shaft positioned beyond the opposite end of the concave.

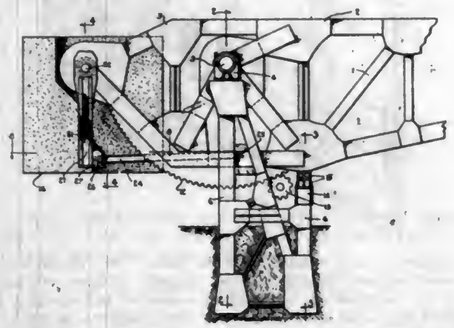
1,663,356. CURTAIN POLE. CHARLES W. SMITH, Grand Rapids, Mich. Filed Sept. 20, 1926. Serial No. 136,581. 1 Claim. (Cl. 156—19.)

A curtain pole comprising a pair of terminal units and a plurality of interchangeable intermediate units, each of said intermediate units provided with a socket opening at one end thereof and a reduced extension projecting from the other end thereof, one of said terminal units formed with a socket opening at its inner end, the other of said terminal units having a reduced extension projecting from its inner end, the wall of each of said sockets threaded from its outer end to a point removed from its inner end, each of said extensions peripherally threaded to a point removed from its outer end, thereby providing a smooth peripheral portion for frictional engagement with the non-threaded portion of the wall of a socket and in connection with the threaded portions of the walls of said sockets and the threaded portion of the peripheries of said extensions detachably connecting said units together in abutting engagement.

1,663,357. LIGHTING FIXTURE. GEZA STEFAN, Chicago, Ill. Filed Feb. 2, 1927. Serial No. 165,327. 1 Claim. (Cl. 240—81.)

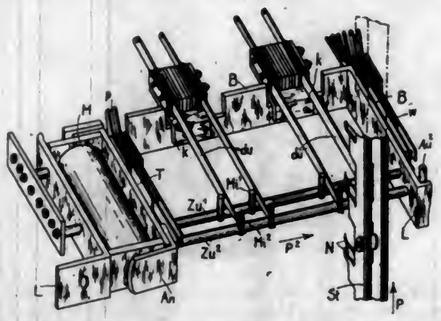
In a lighting fixture of the character described the combination of a base of metal having tubular telescoping members of metal mounted thereon, and electric light bulbs supported by said telescoping members, an electric circuit supplying current to said bulbs, said base

and tubular members forming one conductor for said circuit, an electric conductor comprising a single wire extending through said tubular members to said bulbs forming a portion of the other conductor for said circuit, means cooperating with said tubular members, for assuring a good electrical contact therebetween at all times, said means comprising a metallic sleeve having inwardly extending spring fingers formed thereon, said sleeve being rigidly secured to one of said tubular members in position for bringing the spring fingers thereof into yielding engagement with the other of said tubular members, a me-



tallic bracket mounted and supported within said base and insulated therefrom, a metallic shaft mounted on said bracket, said shaft having a metallic spring wound drum mounted for rotation thereon, said drum having a portion of said wire wound thereon for permitting the extension or withdrawal thereof as the telescoping members are extended or collapsed, and means surrounding said drum for insulating the same from said base, said drum and shaft being electrically connected with said single wire wound thereon so as to form the remaining portion of said conductor for said circuit.

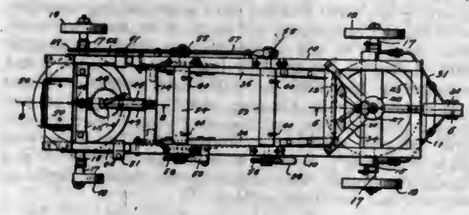
1,663,358. COMBINED PROTECTIVE AND SIGNALING DEVICE. JAY G. STEPHENSON, Athens, Tenn. Filed Nov. 6, 1926. Serial No. 146,756. 6 Claims. (Cl. 116—135.)



6. In a signal, a supported open-ended casing, a longitudinally shiftable actuating rod passing therethrough, a plurality of signal elements mounted on the rod and normally disposed within the casing, the actuating rod being shiftable to predetermined positions to successively expose the signal elements, and latch means for retaining the actuating rod in selected positions.

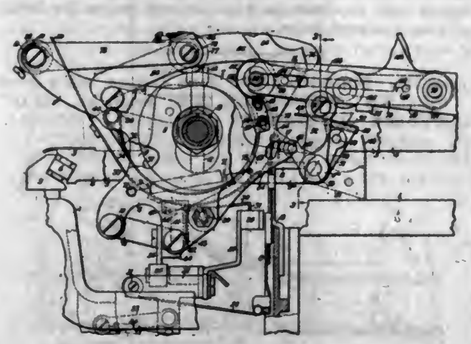
1,663,359. BRIDGE. JOSEPH B. STRAUSS, Chicago, Ill. Filed June 11, 1923. Serial No. 644,526. 8 Claims. (Cl. 14—38.)

4. A bridge comprising a moving leaf having separated main trusses, trunnions connected with said trusses, supports upon which said trunnions are carried, a concrete counterweight, a metal frame embedded in said counterweight having separated top and bottom members, a link connecting the counterweight with the leaf support, said link connected with said bottom member, said counterweight metallic frame having side members connected with the bottom member and pins connecting said side members with said trusses.



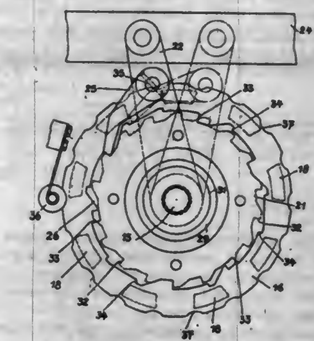
1,663,360. SWITCH DEVICE FOR AUTOMATIC TELEPHONE-EXCHANGE SYSTEMS. FRITZ TRACHSEL, Bern, Switzerland, assignor to Chr. Gfeller Aktiengesellschaft, Bern-Bumpliz, Switzerland. Filed Apr. 14, 1927, Serial No. 183,764, and in Germany Apr. 17, 1926. 1 Claim. (Cl. 179—27.5.)

In an automatic telephone exchance system the combination of a switch device comprising a stirrup-shaped bracket, an electromagnet fixed to one leg of said bracket, a contact set fixed to the outside of the other leg and included in the circuit of the magnet, an intermediate leg of the bracket and an angular armature pivoted at the end of this leg, two rods disposed inside of the bracket and provided with insulated carrier pins, one rod slidingly held at one end in a bracket leg and attached to said armature and the other rod slidingly supported in a leg of the bracket and in the intermediate leg and attached to a contact member of said contact set, transverse insulated contact springs, capable of maintaining the relief



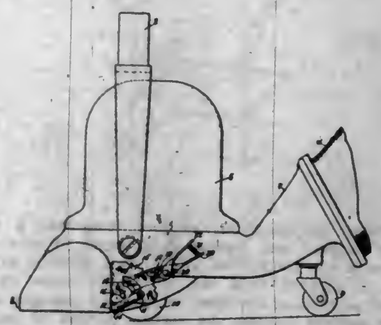
position of said armature while leaning against the pins of the first rod and capacle of assuming a position of readiness when displaced by the first rod hinged to the armature, and electrically conducting switching blades arranged transversely to said rods, and springs near the ends of the latter and provided with sideways projecting lugs adapted to seize the ends of these springs in order to establish the contact and to displace the second rod for breaking the circuit of the magnet and restoring again the initial position.

1,663,361. DIRIGIBLE AXLE FOR AGRICULTURAL IMPLEMENTS. WILLIAM R. WAGONSELLER, Montague, Tex. Filed Nov. 8, 1923. Serial No. 673,581. 2 Claims. (Cl. 280—99.)



1. In an agricultural implement, a carrying frame including a bed and arch-shaped axle, coacting rings one on said bed and one on the bight of said axle forming a fifth wheel connection, a cross member on and within the vertical confines of said bed forwardly of the rings, an upstanding shaft surrounded by the rings extending above and below the bed, brackets extending rearwardly from said cross member one above and one below said bed, said shafts being journaled in said brackets, a pivot member extending from the bed through the rings, said axle and lower bracket, an element on the lowermost ring having a concave toothed surface, a gear on said shaft below the bed in engagement with said toothed surface, a detent plate on said shaft between the uppermost bracket and said bed, and a detent adjacent the detent plate for coaction therewith.

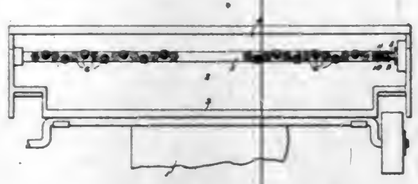
1,663,362. TYPEWRITING MACHINE. SIGURD L. WALSON, Lyndhurst, N. J., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Sept. 2, 1926. Serial No. 133,228. 35 Claims. (Cl. 197—127.)



1. In a typewriting machine, the combination of a platen; paper feed rollers; a spindle on which said feed rollers are mounted; means for guiding said spindle to receive a shifting movement towards and from the platen for shifting the feed rollers into and out of contact therewith; and manually controlled means for shifting said spindle, said manually controlled means comprising a toggle coacting with said end of the spindle, a finger piece, and connections therefrom for simultaneously straightening both toggles to apply to feed rollers.

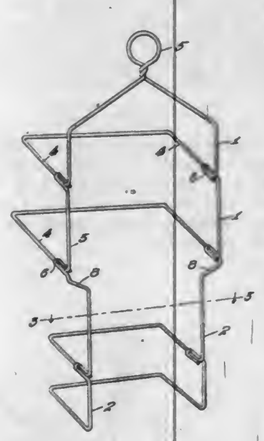
1,663,363. PLATEN PRINTING PRESS. PAUL WIEGHARDT, Magdeburg, Germany, assignor to the Firm: Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Dec. 31, 1926, Serial No. 158,369, and in Germany Jan. 6, 1926. 6 Claims. (Cl. 101—198.)

1. In a platen printing press having a reciprocating printing plate for printing materials fed through the press with variably composed patterns, a rotatable disk having an axially disposed interrupted flange, a stop member on said printing plate adapted to cooperate with said interrupted flange to hold said printing plate in inoperative position or to permit said printing plate to execute a printing stroke depending upon the angular position of said disk, means for rotating said disk, an auxiliary mechanism connected with said disk rotating means adapted to permit said disk rotating means to operate only at predetermined positions of said auxiliary mechanism.



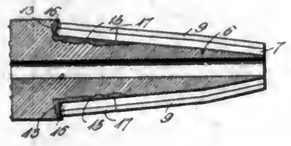
1,663,364. NOZZLE ADJUSTMENT FOR VACUUM CLEANERS. THOMAS O. ADAMS, New Philadelphia, Ohio, assignor, by mesne assignments, to Wise-McClung Corporation, New Philadelphia, Ohio, a Corporation of Ohio. Filed May 19, 1923. Serial No. 640,042. 1 Claim. (Cl. 15—16.)

A portable cleaner provided with a suction nozzle, a crank shaft journaled upon the cleaner adjacent to the nozzle and having crank arms, wheels upon the crank shaft, a sector fixed upon the cleaner and having an arcuate slot, a lever journaled upon the cleaner and having a lug extending through said arcuate slot and bearing upon one crank arm of the crank shaft, a pawl pivoted



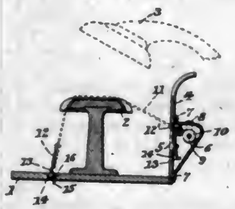
upon the lever for engagement with the sector, and provided with a handle portion and a spring between said handle portion and lever for normally holding the pawl in engagement with the sector.

1,663,365. BRUSH FOR VACUUM CLEANERS. WILLIAM J. WISE and THOMAS O. ADAMS, New Philadelphia, Ohio, assignors, by mesne assignments, to Wise-McClung Corporation, New Philadelphia, Ohio, a Corporation of Ohio. Filed July 5, 1923. Serial No. 649,392. 3 Claims. (Cl. 15—10.)



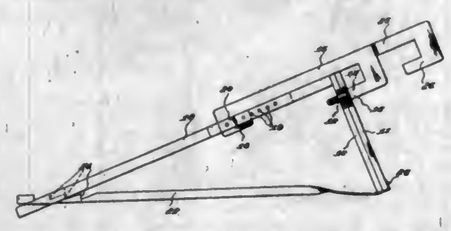
1. A vacuum cleaner provided with a suction mouth and a brush journaled therein and having a zig-zag row of bristles frictionally engaging the objective surface at all times and means for limiting the movement of the brush in each direction whereby to and fro movement of the cleaner upon the objective surface will cause oscillation of the brush.

1,663,366. HOLDER. FRANK BERRY, Anita, Pa. Filed Jan. 7, 1927, Serial No. 159,652. Renewed Dec. 12, 1927. 1 Claim. (Cl. 211—119.)



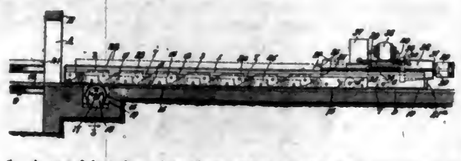
A holder of the class described comprising a number of sections each formed of a length of wire bent to form a vertical portion and a shelf forming portion which is inclined from the horizontal, hooks on the vertical portions of the lower sections for engaging parts of the inclined portion, the vertical portion of the top section having a loop formed at its upper end, the hooks being arranged parallel with the arms of the shelf forming portions with portions of the hooks engaging portions of the section above, with the bights of the hooks resting upon the arms of the shelf forming portions so that sheets of paper of the like will be held on the shelf forming portions by having parts placed under the hooks.

1,663,367. PROCESS OF REPAIRING TOOLS. CHARLES HENRY BROWN, Breckenridge, Tex. Filed Sept. 2, 1926. Serial No. 133,251. 3 Claims. (Cl. 76—101.)



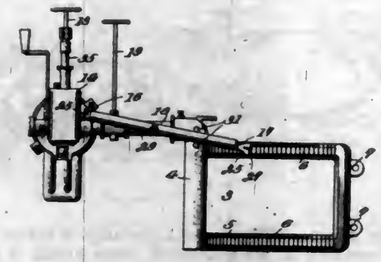
3. A process of repairing a tool of a type having a body formed with a guiding surface for a movable member, a bumping shoulder at one end of said surface, and parallel undercut guide ridges at two edges of said surface terminating in spaced relation with said bumping shoulder; said process comprising the steps of building up worn-away portions of said surface and said bumping shoulder with molten metal, finishing the surface of such metal, substituting for worn or broken end portions of said ridges toward said bumping shoulder, a pair of preformed ridge sections and disposing them in contact with said bumping shoulder, welding said ridge sections in place, including a welding of said ridge sections to said bumping shoulder, and tempering the finished built up portions and the ridge sections.

1,663,368. COMBINATION BACKPLATE AND PLAITING ATTACHMENT FOR PRESSING MACHINES. HYMAN DIENER, Washington, D. C., assignor to United States Hoffman Machinery Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 4, 1926. Serial No. 146,206. 5 Claims. (Cl. 68—9.)



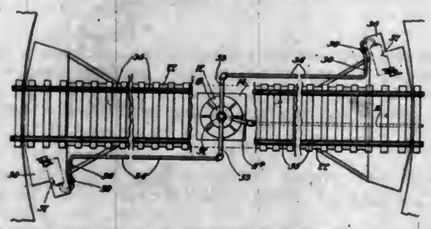
1. In a pressing machine, the combination with a table and pressing element thereon; of a back plate carried on said table and extensible means supported on the rear of said plate and adapted for cooperation with said pressing element to retain garments in position on the latter at predetermined times.

1,663,369. BOLT HOLDER. JOHN DOBSON, Black River Falls, Wis. Filed Sept. 14, 1926. Serial No. 135,467. 3 Claims. (Cl. 81—13.)



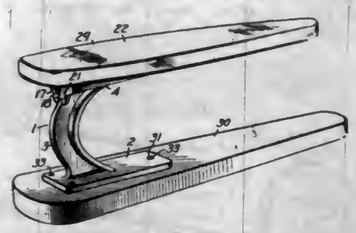
1. A bolt holder comprising a bar having a return bend terminating in a slot engaging extremity, a lever fulcrumed to the bar and adapted to co-act with the teminus to clamp together the work, and means engaging the work and the lever for holding the lever in clamping position.

1,663,370. MACHINE FOR CHARGING AND DISCHARGING ANNEALING OVENS, ETC. HARRY E. EDWARDS, Niles, Ohio. Filed Feb. 1, 1927. Serial No. 165,183. 6 Claims. (Cl. 214—26.)



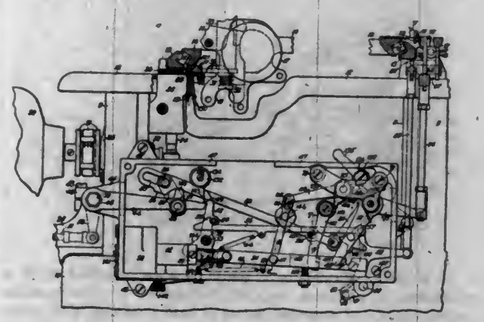
1. A machine for charging ovens or the like comprising a movable base frame, anti-friction devices carried by the base frame, load-supporting bars mounted over the base frame and having inclined cam surfaces on their under sides to ride on the anti-friction devices, a pressure cylinder mounted on the base frame, arms connected to the supporting bars to move the latter longitudinally when the pressure is admitted to the cylinder to cause the bars to elevate a load thereon, and springs on said arms to retract the bars and release the load.

1,663,371. LIGHTER FOR BURNERS OF RANGES. FREDERICK L. FULDAUER, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 21, 1926. Serial No. 156,159. 10 Claims. (Cl. 126—44.)



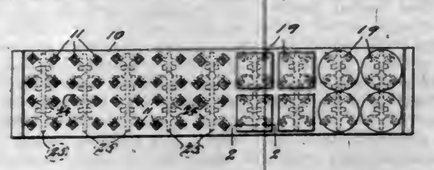
1. A hydrocarbon range comprising an open burner portion and an oven, a main burner located in the open burner portion comprising a housing, a generator adapted to supply vapor to the said housing, a burner located in the said oven portion, a conduit passing through the wall nearest to the open portion, one end connected with the main burner housing and the other end connected with the oven burner, and a lighting tube extending through the said wall having its outer end adjacent the main burner housing, its inner end adjacent the oven burner, and a vapor communication between the said lighter tube and the said conduit, whereby the oven burner may be lighted as described.

1,663,372. AIR-SUPPLY CONNECTION FOR TURNTABLES. CHAUNCEY MARSH GOODRICH, Windsor, Ontario, Canada. Filed Dec. 23, 1926, Serial No. 156,688, and in Canada Dec. 14, 1926. 1 Claim. (Cl. 104—17.)



Air supply connection for turntables including the combination with a hollow stationary center bearing member and the turntable proper structure, of an air supply pipe extended into said hollow stationary center bearing member to supply air thereto, a stationary vertical air conducting pipe leading from said hollow stationary center bearing member and extending upwardly into the turntable proper structure, said vertical air conducting pipe being composed of two sections detachably connected together, a hollow coupling casting surrounding the upper end of said vertical air conducting pipe, a sealing bushing surrounding the upper end of said pipe and mounted in said casting to form a rotary sealed joint therewith, a T-connection threaded in said hollow coupling casting and communicating with the upper end of said vertical air conducting pipe, cross pipes connected to said T-connection and mounted in the turntable proper structure to rotate therewith, and air conducting pipes connected with said cross pipes and extending along the main center beams of the turntable proper structure toward the opposite ends thereof to supply air to the air engines or hoists for the turntable.

1,663,373. PRESS BOARD. ARO M. HARVEY, Kansas City, Mo. Filed Nov. 22, 1926. Serial No. 149,928. 6 Claims. (Cl. 68—10.)

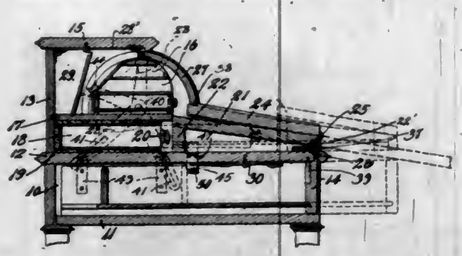


1. In a device of the class described, a bracket comprising a supporting member having a rearwardly extending rib, a plate integral with the upper end of the supporting member, an attaching member for seating on the plate, a pressing board secured to the attaching member, means for removably securing the attaching member to the plate and means carried by the attaching member for engaging the rib for guiding the attaching member into seated position.

1,663,374. TYPEWRITING AND LIKE MACHINE. FREDERICK A. HART, New Britain, Conn., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Aug. 5, 1926. Serial No. 127,324. 9 Claims. (Cl. 197—65.)

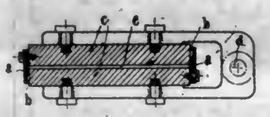
1. The combination with a traveling carriage, power mechanism for returning said carriage, a part arranged to be moved at the end of the return movement of the carriage, and a shock absorber operated by said part, of a device operable by hand to lock said part in its moved position when it is desired not to use the power mechanism.

1,663,375. TRANSPORTATION SYSTEM. HENRY W. KIRCHNER, St. Louis, Mo. Filed Apr. 4, 1921. Serial No. 458,471. 27 Claims. (Cl. 105—366.)



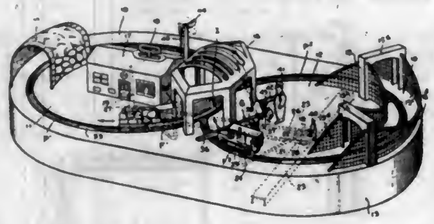
1. The combination with a carrier, of a container supported on the floor thereof and having projections engaging said carrier, said projections occupying planes relative to said carrier so that when said carrier is tilted and the center of gravity of said container is changed, the arcs of movement from the fulcrum point of said container are such as to bind said container in its seat.

1,663,376. SLIPPER. JOHN KOLLER, Johnstown, N. Y. Filed Feb. 20, 1924. Serial No. 694,090. 7 Claims. (Cl. 36—9.)



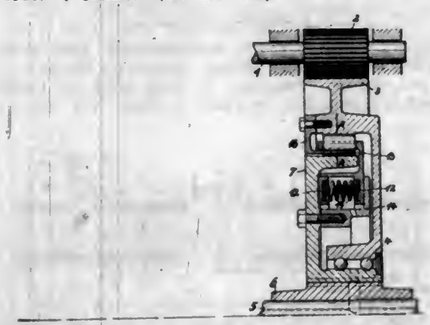
5. An article of foot wear comprising an upper, a sole, a welt strip secured to the lower margin of the upper and united to the sole, a lining for the upper, the said lower margin of the upper, the lower margin of the lining, and the inner edge of the welt strip all being in registration, and a built up insole secured upon the main sole and comprising a lining ply and a ply to give thickness arranged in marginal registration and marginally abutting and flush with said lower margin of the upper.

1,663,377. HOME DESK. LEON KNASTER, Union City, N. J. Filed May 21, 1924, Serial No. 714,909. Renewed Apr. 24, 1926. 8 Claims. (Cl. 45—6.)



1. A desk comprising a body portion provided with a platform, a partition spaced therefrom, a withdrawable secret container disposed between said platform and partition, a concealed filing chamber disposed above said partition, a sliding top normally retained to close said filing chamber, a drawer mounted in the body of the desk, a sliding table section mounted upon the desk to engage said partition and conceal the secret compartment, and a desk cover mounted upon the body portion and adapted to engage said table section and connected for operation by said drawer.

1,663,378. WAFFLE IRON OR MOLD. LOUIS LEBERT, Pantin, France, assignor to Societe Des Anciens Etablissements a Savy, Jeanjean & Co., Courbevoie, France, a Corporation of France, Baker Perkins, Ltd., London, England, a Corporation of Great Britain, and himself. Filed Mar. 11, 1927, Serial No. 174,546, and in France Mar. 12, 1926. 3 Claims. (Cl. 53—10.)

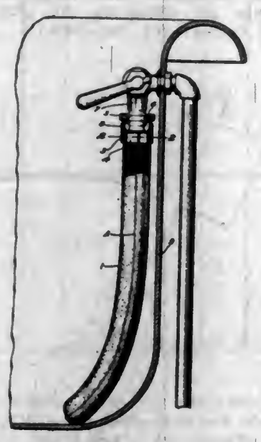


1. A waffle iron, comprising a pair of hingedly-connected, coacting plates having narrow recesses at their margins for the escape of vapours and excess batter from the iron when the plates are practically, but not completely, closed together and to shear off the excess batter when said plates are completely closed; said recesses being so shaped as to produce an abrupt change in the direction of movement of the escaping vapours and thereby cause the latter to reduce the traction exerted on the batter.

1,663,379. ROUNDABOUT TOY. LOUIS MARX, Brooklyn, N. Y. Filed Dec. 1, 1926. Serial No. 151,927. 27 Claims. (Cl. 272—31.)

1. In an amusement device, a plurality of figures movable cyclically in pre-determined paths having a given intersection, means for moving said figures and means controlled by the movement of one of said figures for automatically preventing the other of said figures from passing the said intersection while the said first figure is passing the intersection.

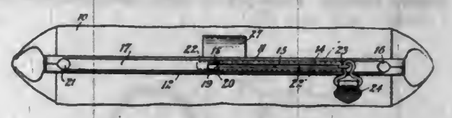
1,663,380. FREE-WHEEL MECHANISM. KARL MAYBACH, Friedrichshafen, Germany, assignor to Maybach Motorenbau Gesellschaft mit beschränkter Haftung, Friedrichshafen, Bodensee, Germany. Filed July 22, 1924, Serial No. 727,599½, and in Germany Aug. 13, 1923. 7 Claims. (Cl. 192—42.)



1. A free-wheel mechanism comprising a driving member, a driven member; rolling members arranged between corresponding faces of said first two members, said rolling members being adapted to transmit rotation from said driving member to said driven member; and a disc in frictional connection with said driven member; said disc being adapted automatically to lift said rolling members from the face of said driven member after said driven member has overrun said driving member.

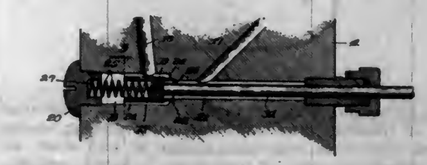
1,663,381. SHOE PROTECTOR. ARTHUR MCKINLEY, Kansas City, Mo. Filed July 13, 1926. Serial No. 122,166. 2 Claims. (Cl. 36—72.)

1. In a shoe protector, a flexible body portion having a pair of side flaps, an end flap, a pair of integral tabs on said body portion between said side and end flaps secured to the wearing face of said protector, and means for securing said side flaps together, said end flap being adapted to underlie said side flaps and being held in position thereby.



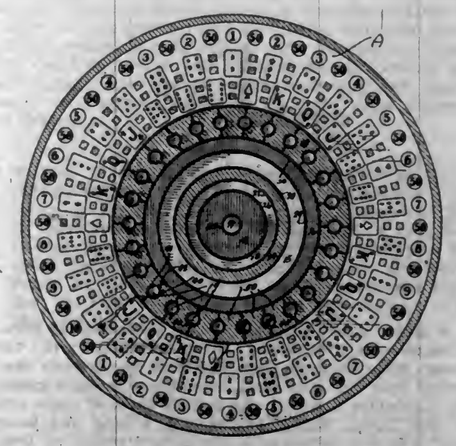
1,663,382. WATER SILENCER. SONYA BEATRICE MERKEL and EMMANUEL DOBROWSKY, New York, N. Y. Filed Apr. 16, 1927. Serial No. 184,406. 3 Claims. (Cl. 137—111.)

2. A water silencer, including a flexible fabric member, a collar, a clamping ring within the silencer securing the same in the collar, and a faucet coupling member having screw-threaded engagement with the collar.



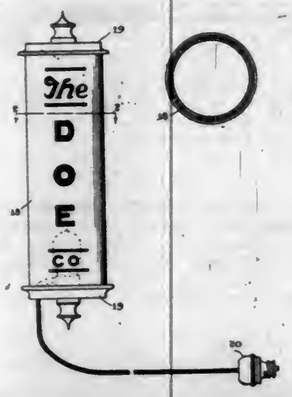
1,663,383. BAG LATCH. MURRY MILLER, New York, N. Y. Filed Feb. 8, 1927. Serial No. 166,759. 8 Claims. (Cl. 292—57.)

1. The combination with a bag frame consisting of hingedly connected sections, of a latch consisting of a bolt movably associated with two tubular members respectively carried by said hingedly connected sections, and said bolt having means movable into and out of



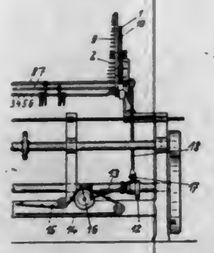
slots respectively in said tubular members for effecting the movement of said bolt, so as to latch and unlatch the sections of said bag frame.

1,663,384. VALVE DEVICE. GEORGE A. MORRISON, Park Ridge, Ill., assignor to Torchweld Equipment Company, Chicago, Ill., a Corporation of Delaware. Original application filed July 3, 1926, Serial No. 120,418. Divided and this application filed Jan. 3, 1927. Serial No. 158,709. 8 Claims. (Cl. 251—159.)



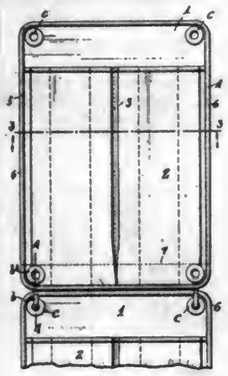
6. A gas-burning device comprising a member containing a gas-passage provided with an outwardly flaring valve seat, and a valve movable to closed position by the pressure of the gas in said passage and cooperating with said seat and having a relatively thin flexible end portion at which it bears conformingly against said seat.

1,663,385. GAME. ARTHUR F. REINHEIMER, Detroit, Mich. Filed Mar. 26, 1926. Serial No. 97,704. 1 Claim. (Cl. 273—102.)



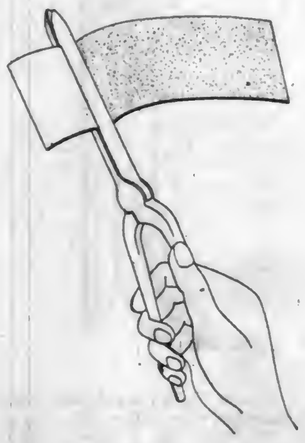
In a target game the combination of a target board having a substantially ring shaped target area thereon outlined by concentric guide walls, said guide walls therebetween having radially extending guide walls in spaced relation, each of said radial guide walls between the concentric guide walls of the ring shaped target area being circularly arranged to provide a pocket.

1,663,386. TRANSPARENT SIGN AND THE METHOD OF MAKING SAME. CYRIL M. RICE, Montreal, Quebec, Canada. Filed Apr. 5, 1926. Serial No. 99,924. 1 Claim. (Cl. 40—132.)



An advertising sign comprising an inner cylindrical sheet of transparent celluloid having advertising matter applied directly on the outer surface of said sheet, an outer cylindrical sheet of transparent celluloid enclosing said inner cylindrical sheet, said sheets having their contacting surfaces chemically treated and united by adhesion to form in effect a unitary cylinder wall with the advertising matter positioned between the inner and outer surfaces of said wall, caps closing the ends of said cylindrical sheet, and illuminating means contained within the cylinder.

1,663,387. DEVICE ON COTTON FRAMES FOR THE PRODUCTION OF BODILY THICKENINGS OF PATTERNS. ARTHUR RICHTER, Bergisdorf, Erzgebirge, Germany. Filed Mar. 9, 1927, Serial No. 173,943, and in Germany Dec. 1, 1926. 1 Claim. (Cl. 66—129.)

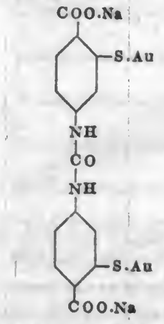


A device on cotton-frames for the production of thickening-patterns, comprising in combination with the frame, with the main shaft and with an eccentric controlled from said main-shaft, several bars carrying guides for thickening threads, one pattern-wheel at each end of said frame, tappets having each a head and being short and long according to the pattern projecting from the inner surface of each pattern-wheel and serving as abutments for said thickening-thread-guides, a pattern-chain controlled by said eccentric, means for raising said pattern wheel prior to each part rotation and means for communicating a part rotation to said pattern-wheel after the knitting of one or two rows of loops in order to bring said pattern wheel out of the range of said thread-guide-bars, so that it descends again by gravity to serve as abutment.

1,663,388. HOLDER FOR SHOES. GUSTAVE G. RONA, New York, N. Y. Filed June 23, 1926. Serial No. 117,939. 1 Claim. (Cl. 150—52.)

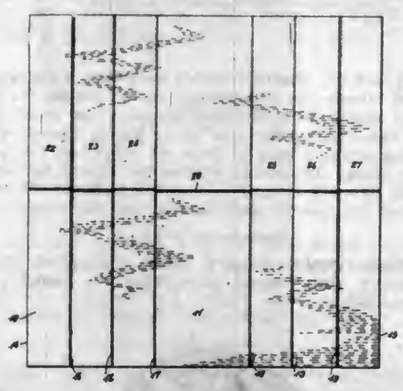
In a sectional shoe holder, a backing member of cloth, a cloth-piece superposed thereon and connected approximately at its centre to the backing with a longitudinal line of stitching, a folded piece of material at the side margins and bottom of the holder and enclosing the edges of the said two cloth members and stitched thereto, and a plurality of interlocking members at the top and at the bottom of the holder, the said interlocking members at the bottom being adapted to co-act with the top locking members of a succeeding holder.

1,663,389. WAXING STRIP FOR MARCEL IRONS. ERNEST A. SAMUELSON and RALPH W. MITCHELL, Kansas City, Mo. Filed Mar. 26, 1926. Serial No. 97,809. 3 Claims. (Cl. 132—36.2.)



3. In a waxing strip for Marcel irons, a fabric vehicle impregnated with a composition of refined beeswax, oil of eucalyptus and sodium carbonate in substantially the following proportions:

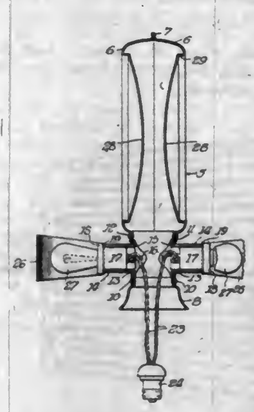
	Parts by weight.
Oil of eucalyptus	10
Refined beeswax	85
Sodium carbonate	5



1,663,390. PHARMACEUTICAL PRODUCT. WALTER SCHOELLER, ADOLF FELDT, MAX GEHRKE, and ERICH BORGWARDT, Berlin, Germany, assignors to Firm: Chemische Fabrik Auf Actien, (vorm. E. Schering), Berlin, Germany. Original application filed May 9, 1925, Serial No. 29,207, and in Germany June 2, 1924. Divided and this application filed June 1, 1926. Serial No. 113,077. 5 Claims. (Cl. 260—11.)

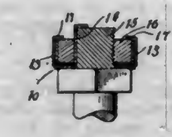
2. As a new product the sodium salt of the symmetric di-(meta-auro-mercapto benzene-para-carboxylic acid) urea, corresponding to the formula

such product having a yellowish green color and being readily soluble in water.



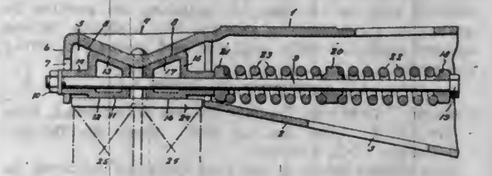
1,663,391. FOLDED SHEET AND METHOD OF FOLDING THE SAME. GLENN A. SHAFFER and FRANKLIN H. WIRTZ, Green Bay, Wis., assignors to Fort Howard Paper Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Feb. 28, 1927. Serial No. 171,703. 5 Claims. (Cl. 206—57.)

3. A folded napkin or the like comprising a center portion of two thicknesses presenting raw edges at one transverse end, a folded edge at the opposite transverse end and presenting folded edges at the opposite longitudinal sides with tabs resulting from initially folding the margins of the sheet upon themselves, said tabs lying upon the opposite sides of said double thickness portion with the edges of said tabs lying adjacent upon said opposite sides and adjacent the center portion of said double thickness.



1,663,392. ILLUMINATED ADVERTISING SIGN. JOHN C. SMITH, Chicago, Ill. Filed Sept. 30, 1926. Serial No. 138,583. 10 Claims. (Cl. 40—130.)

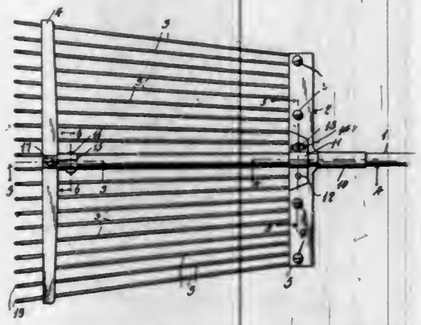
1. An illuminated advertising sign including a metallic casing forming a globe and having opposite concaved sides substantially forming sections of a sphere, means for supporting the casing from beneath, lamps projecting from opposite sides of the supporting means outwardly



of said sides, and reflectors around the lamps and open above and below for the reflection of light rays in similar directions.

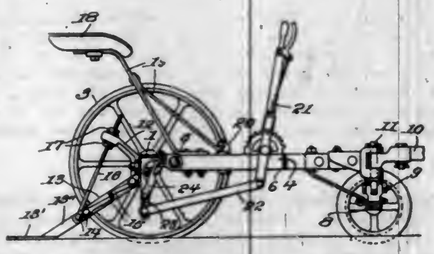
1,663,393. NUT LOCK. ORLOW C. SNYDER, Long Island City, N. Y. Filed Jan. 21, 1927. Serial No. 162,522. 1 Claim. (Cl. 151—3.)

In a nut lock, the combination with a nut and bolt, the bolt having a groove therein, a lock plate having a tongue for engagement with the groove, said lock plate having ears adapted to be bent into overlapped relation for engagement with the sides of the nut, certain of said ears having lips for engagement with the upper edges of the inner ears and with the upper surface of the nut.



1,663,394. TRUCK BOLSTER WITH ABSORPTION MECHANISM. THOMAS HARRISON SYMINGTON and PERCY R. DRENNING, Baltimore, Md., assignors to T. H. Symington & Son, Inc., Baltimore, Md., a Corporation of Maryland. Original application filed Oct. 7, 1926, Serial No. 140,181. Patented Sept. 20, 1927, Patent No. 1,642,751. Divided and this application filed Feb. 21, 1927. Serial No. 169,916. 19 Claims. (Cl. 105—197.)

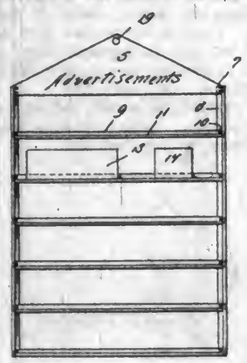
1. In a truck bolster, a pocket in each end thereof, a vertically movable follower within each pocket adapted to seat upon the truck springs, wedge members mounted within the pocket and movable toward or from each



other longitudinally of the bolster, means for opposing separating movement of the wedge members, and an intermediate wedge member in the pocket located between said wedge members.

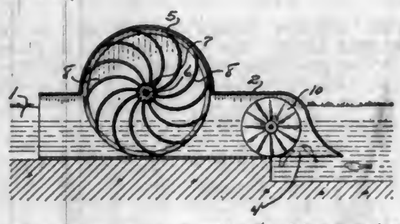
1,663,395. RAKE. KAY T. TANAKA, Salt Lake City, Utah. Filed May 26, 1927. Serial No. 194,341. 2 Claims. (Cl. 55—10.)

1. A rake comprising a handle, a spreading bar secured to the handle and provided with openings, a head slidably mounted on the handle for adjustment with respect to the spreading bar and embodying connected upper and lower plates, said lower plate being provided with openings, means for securing the head in adjusted position on the handle, teeth carrying rods slidably passing through the openings in the spreading bar and having their rear ends positioned between the head plates and provided at said ends with angular members passing through the openings in said lower head plate.



1,663,396. WEEDER. HENRY WESELOH, Lincoln Center, Kans. Filed Nov. 6, 1926. Serial No. 146,741. 3 Claims. (Cl. 97—144.1.)

1. A farm implement comprising a wheeled frame including a tiltable beam, a plurality of brackets carried thereby, an arm pivotally connected with the lower part of each bracket, a rod connected with each arm and extending through the upper end of each bracket, nuts on the rod for adjusting its position in relation to the bracket, a substantially L-shaped cutting member connected with each arm and means for tilting the beam.



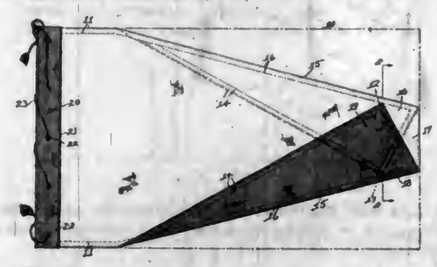
1,663,397. DISPLAY RACK. MALTBY L. BUNNELL, Oneonta, N. Y. Filed Apr. 14, 1927. Serial No. 183,757. 2 Claims. (Cl. 40—124.)

1. A display device of the class described including, in combination, a head plate, a pair of side rails having their upper ends attached to the head plate and extending therefrom in spaced parallel relation to each other, the outer edges of the side rails formed with integral flanges bent over upon themselves, a plurality of cross rails having their lower edges formed with flanges bent upwardly over upon themselves to provide channels, the ends of the flanges being pressed against the rails, the

ends of the rails being disposed between the side rails and their respective flanges, and means for securing the ends of the cross rails to said side rails.

1,663,398. FISH GUARD. JOE R. COOKE, Odem, Tex., assignor of one-half to Jesse E. Palmer, Kerrville, Tex. Filed July 3, 1926. Serial No. 120,338. 1 Claim. (Cl. 210—173.)

A guard for irrigation ditches comprising a casing employed between the ditch and the feeding stream, the said casing shaped so as to allow access to the water thru only one opening positioned in the bottom thereof, a revolving screen formed of discs set closely on the same shaft closing the opening whereby the turning movement of the screen forces any solid matter back out the opening and a means for operating the revolving screen.



1,663,399. COMB. FREDA L. DEDEN, Chicago, Ill. Filed Mar. 7, 1927. Serial No. 173,572. 1 Claim. (Cl 132—38.)

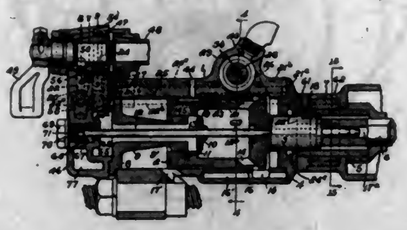
A device of the class described comprising a plurality of combs of substantially U-shape, a strap connecting

the limbs of the first comb together, rightangularly extending parts at the ends of all the combs excepting the first and means for detachably connecting said parts to the extremities of the limbs of the other combs.

1,663,400. FLAG. MARY FRANCES DESPECHER, Ralston, Nebr. Filed Apr. 16, 1927. Serial No. 184,263. 5 Claims. (Cl. 116—173.)

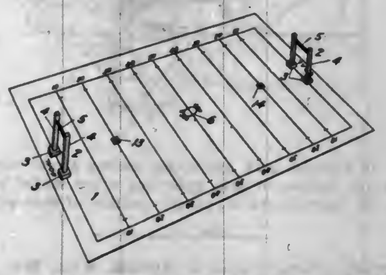
5. A flag comprising a body composed of laminated fabric having the upper and lower corners of the fly end folded toward and across the median line and overlapping and stitched into folded and overlapped position.

1,663,401. TREATMENT FOR HIDES AND SKINS. HARRY DODGE, Danvers, Mass. Filed July 8, 1927. Serial No. 204,428. 2 Claims. (Cl. 149—5.)



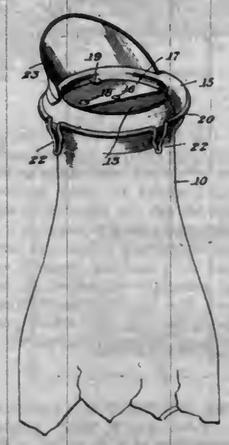
1. In the curing of hides and skins the applying thereto of a composition including salt, nitre, bicarbonate of soda and formaldehyde.

1,663,402. LENS MOUNTING. JOSEPH ENGEL, Brooklyn, N. Y., assignor to Superloid Manufacturing Company, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 9, 1925. Serial No. 61,438. 5 Claims. (Cl. 88—43.)



1. In a lens mounting, a pair of rims formed of non-metallic material, a pliable wire connecting said rims, and a pliable cable upon said wire extending from end to end of the latter and secured at its ends to said rims, said cable formed of non-metallic material.

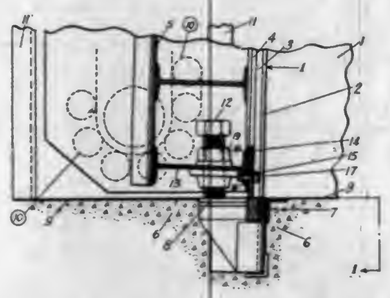
1,663,403. DRILLING MACHINE. GEORGE H. GILMAN, Boston, Mass. Filed Feb. 24, 1920. Serial No. 360,619. 36 Claims. (Cl. 121—18.)



1. A rock drill having, in combination, a hammer piston, a chuck, a motor for rotating said chuck, a casing for said hammer piston and chuck, a valve casing carried by said first named casing, a frusto conical chamber in said valve casing forming a seat for a frusto conical valve in said chamber, said valve having a longitudinal passage opening on the large end of said valve, a motive fluid supply connection to said chamber at the end thereof adjacent the large end of said valve, a port and passage intermediate the length of said valve for controlling the supply of motive fluid for operating said hammer piston, said valve by its turning movement opening and closing said port and passage, means for supplying motive fluid from said longitudinal passage to said motor for rotating said chuck comprising a cooperating port and recess in said valve and valve casing at that side of said first named port and passage which is opposite the large end of said valve, and stop means for limiting the extend of turning movement of said valve, said port and recess being in fluid communication in all positions of said valve.

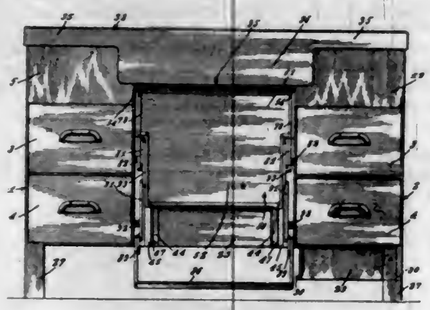
1,663,404. INDOOR FOOTBALL GAME. SIDNEY G. HANDS, Davenport, Iowa. Filed Jan. 28, 1927. Serial No. 164,216. 4 Claims. (Cl. 273—94.)

1. In a house game simulating the game of football, a fabric having marked thereon a playing field representing a football field, goals to be positioned at the ends of the playing space, and a pair of playing pieces, one being flat and adapted to be held in the hand to cause the other to be advanced along the playing field and said other being in plan similar to a football but in edge view being flattened and tapered from a thicker central to a thinner edge portion.



1,663,405. BOTTLE TOP. MARTIN H. HEALICK, Long Beach, Calif. Filed Dec. 31, 1926. Serial No. 158,359. 3 Claims. (Cl. 215—63.)

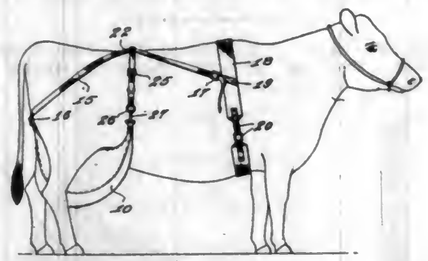
1. A container closure comprising in combination with a container having an opening and a bead surrounding the opening, a disk adapted to fit within said opening,



said disk also having an opening therein, a pivoted closure secured upon the top of the disk, means associated with the disk and engaging the bead to hold the disk in place, and a lip positioned above the disk for frictional engagement by the pivoted closure to hold the latter in position.

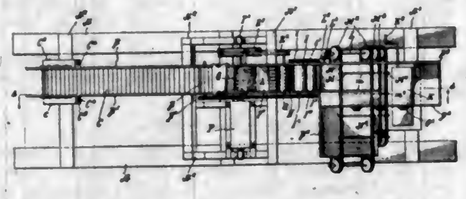
1,663,406. SLUICE GATE. HARRY W. HOLMES and ERWIN B. PHILIPS, Kenton, Ohio, assignors to Philips and Davies, a Partnership composed of Erwin B. Philips and Francis Davies, Kenton, Ohio. Filed Apr. 23, 1926. Serial No. 104,201. 8 Claims. (Cl. 61—28.)

1. In a sluice gate, adjustable sealing means mounted upon the bottom of said gate, and other means on the gate for limiting the lowermost position of said gate.



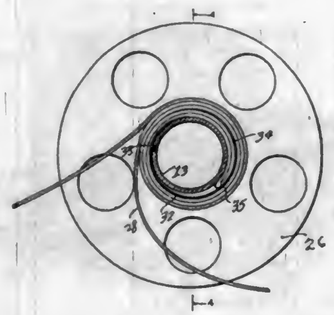
1,663,407. DESK. JOHN A. HUGHES, Waco, Tex. Filed June 7, 1926. Serial No. 114,340. 11 Claims. (Cl. 312—21.)

1. A desk of the type described comprising a body portion, a shiftable typewriter support arranged within the latter, a pair of spaced, vertically movable open top receptacles arranged within the body portion at the rear thereof, a shiftable hinged top common to said receptacles and body portion, and slidably connected to the front of the back of the latter, and a link and lever mechanism pivotally connected with said top, support and receptacles and slidably and pivotally connected to said body portion to provide for the synchronous shifting of the support and receptacles to open and closed positions on the opening and closing of said top respectively.



1,663,408. UDDER PROTECTOR. CAROLYN T. JENKINS, Dunbar, Nebr. Filed May 9, 1927. Serial No. 190,111. 2 Claims. (Cl. 119—146.)

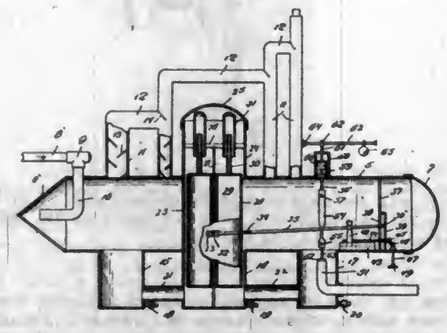
1. In combination, an udder protector, harness supporting means for said protector, said means including a body encircling band, straps connected to the opposite sides of the band and also connected at a common point with one end of the protector, a body strap terminally connected with the adjacent corners of the protector,



and said first mentioned straps intersecting each other and capable of sliding movement with relation to each other and said body strap.

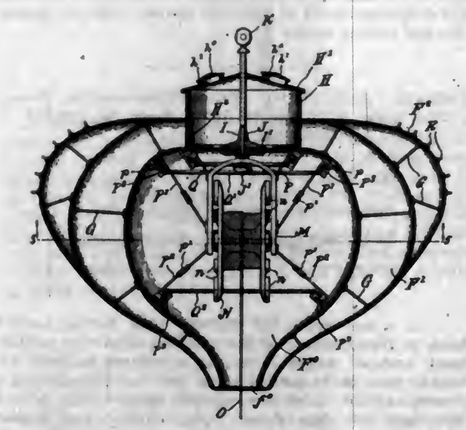
1,663,409. CANE STRIPPING AND TOPPING MACHINE. JOSEPH THOMAS LANDAICHE, Thibodaux, La. Filed Feb. 24, 1927. Serial No. 170,620. 21 Claims. (Cl. 130—31.)

7. A machine for stripping and topping cane stalks, comprising two upper conveyors of unequal length adapted to receive the cane stalks transversely thereon, with means located between said conveyors for severing the stalks into two segments while carried by said conveyors, two lower conveyors adapted to respectively receive the stalk segments in a longitudinal direction from the upper conveyors, means for stripping the stalks of green leaves, trash and other solid matter, and means for topping the stripped stalks.



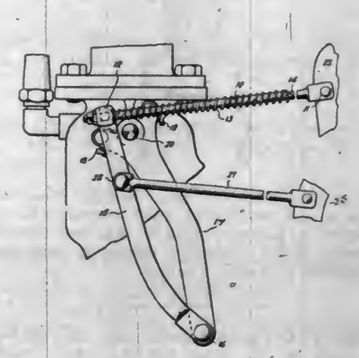
1,663,410. HOSE REEL. CARL H. LARSON and ANDREW G. LARSON, San Francisco, Calif. Filed Aug. 9, 1926. Serial No. 128,222. 1 Claim. (Cl. 242—86.)

In combination with a support and a bracket secured thereto, of a shaft fixed in the bracket, a hub member rotatable on said shaft, a casing mounted on said hub



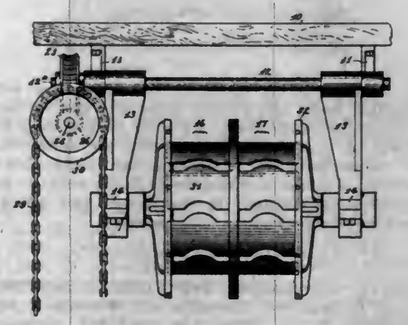
member and rotatable therewith, means carried by said casing for retaining thereon a portion of hose, said means comprising a curved resilient metal strip secured at one end to the outer periphery of said casing and spaced at its free end from said casing for receiving a folded section of the hose.

1,663,411. SEPARATOR. WILLIAM M. LITTLE and JESSIE L. SHERMAN, Norphlet, Ark. Filed Oct. 9, 1926. Serial No. 140,500. 1 Claim. (Cl. 183—2.7.)



A device of the class described, including, in combination, an elongated horizontal casing, an oil pipe leading into the casing, water outlet means associated with the casing, gas outlet means associated with the casing, an oil outlet pipe leading into the casing and terminating in a valve seat, a valve associated with the seat, a stem rising from the valve, a connecter, a wrist-pin connection between the connector and the valve stem, a drum rising from the casing and having apertures, a piston rod slidable in the drum having a stem connected with the connector, said connector having an opening, a beam extension through the opening, a float in the casing, means connecting the float with one end of the beam, a fulcrum block for the beam, and means for adjusting the fulcrum block.

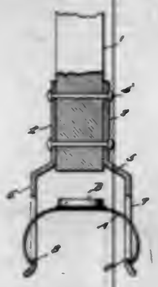
1,663,412. LIFE-SAVING AND SALVAGING APPARATUS FOR USE WITH MARINE VESSELS. BENJAMIN ALEXANDER MATHEWS, Shreveport, La. Filed Oct. 24, 1927. Serial No. 228,319. 16 Claims. (Cl. 114—51.)



1. Apparatus of the character described for use with marine vessels, comprising a skeleton frame securely attached to the vessel, and provided with a series of radially disposed, upwardly inclined beams forming a seat for the float, with cable connecting said beams, and adapted to be grappled by grappling hooks, with a float normally resting in said skeleton frame, but adapted to float upwards therefrom should the vessel sink, a cable drum journalled in said float, and a fine wire cable wound on said drum, and having one end secured to the vessel, and the other end secured to said drum.

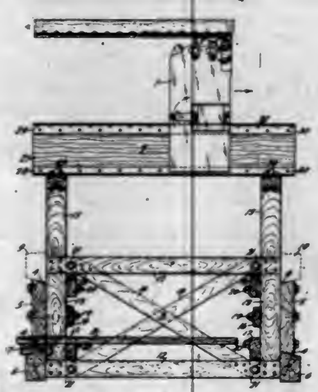
1,663,413. CLUTCH AND ACCELERATOR INTERLOCKING MECHANISM FOR AUTOMOBILE ENGINES. JOHN MILLINGTON, Bondi, near Sydney, New South Wales, Australia. Filed Dec. 16, 1926, Serial No. 155,250, and in Australia Dec. 24, 1925. 5 Claims. (Cl. 192—01.)

2. Carburetter control means for automobiles including a hand throttle control lever link connected to the carburetter throttle spindle arm through an intermediate member, and a link connection between said member and the clutch pedal, disposed so that in the clutch pedal opening movement the carburetter throttle is closed to idling position without disturbing the hand throttle lever, and in the clutch pedal closing movement is restored to the degree of opening for running determined by the position at which the hand throttle lever is set.



1,663,414. VARIABLE-SPEED PULLEY. ALBERT HORACE MIZE, Greenville, S. C. Filed Sept. 10, 1926. Serial No. 134,727. 5 Claims. (Cl. 64—8.)

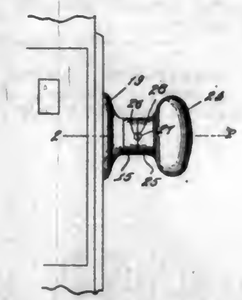
1. In combination a pair of segmental expansible and contractible pulleys, means for pivotally supporting the same, an element rotatable with each pulley, and operative connections between said elements and pulleys where-



by said elements are rotated relative to the pulleys in reverse directions to contract one pulley and expand the other simultaneously upon tensioning one of the drive belts with which the pulleys are engaged.

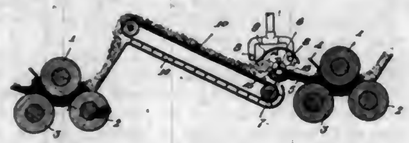
1,663,415. TORPEDO PLACER. RUFUS R. NOBLIT, Meadville, Pa. Filed May 18, 1927. Serial No. 192,382. 3 Claims. (Cl. 246—216.)

1. A torpedo placer of the character described comprising a handle, cooperating arms secured to the ends of said handle to provide a fork at each end thereof, said arms being slotted, shoulders formed in said slots and being adapted to receive a torpedo.



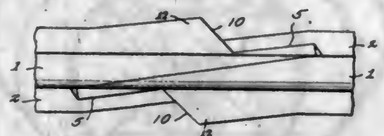
1,663,416. PLASTERING MACHINE. JOSEPH F. RAUB, New York, N. Y. Filed Feb. 24, 1926. Serial No. 90,418. 14 Claims. (Cl. 72—130.)

2. In a plastering machine, the combination with a supporting frame and a track adjustably carried thereby, of a carriage on the track, a plaster compartment in the carriage, a trowel mounted adjacent the outlet end of said compartment for smoothing the plaster delivered therefrom, a lubricant compartment in the carriage, means for delivering lubricant to the trowel, and means for extruding plaster from the outlet opening.



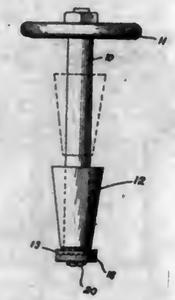
1,663,417. DOOR-KNOB AND SPINDLE FASTENING. CARL D. SCHUNCK, Brooklyn, and WILLIAM J. KELLY, Jamaica, N. Y. Filed Apr. 15, 1927. Serial No. 184,109. 4 Claims. (Cl. 292—355.)

1. In combination with a square spindle having one of its ends split inwardly, a threaded bore provided in the split end of said spindle, a collar having a square bore therein for the passage of said spindle, a key having threads for threading engagement with the walls of said threaded bore, co-acting means between said key and said spindle for expanding the split end of said spindle into engage



ment with the walls of said square bore, and a hollow door knob keyed to said collar for concealing the split end of said spindle and said key.

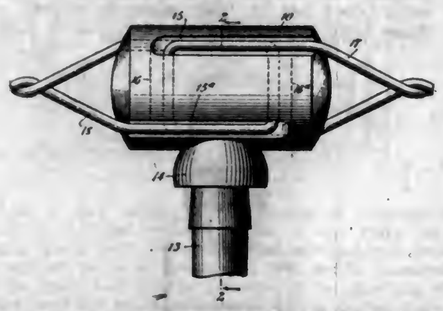
1,663,418. MEANS FOR BEATING OF BAGASSE FOR THE IMBIBITION OF SAME IN CANE-SUGAR-MAKING INDUSTRY. HIROMU SEGUCHI, Horigai, Taichu-Shu, Taiwan, Japan. Filed July 20, 1926, Serial No. 123,765, and in Japan Mar. 18, 1926. 4 Claims. (Cl. 127—4.)



1. Improved means for beating and saturating bagasse comprising in combination milling means, conveying means situated rearwardly thereof, scraping means operatively associated with the milling means, beating means operatively arranged between the scraping means and conveying means, sprinkling means operatively arranged over the beating means and positioned slightly forwardly and rearwardly thereof to effect thereon saturation of the bagasse at said points, and combined covering and deflecting means in operative relation with the sprinkling and beating means.

1,663,419. RAIL JOINT. PETER STELLINGWERF, Orange City, Iowa. Filed Apr. 25, 1927. Serial No. 186,513. 2 Claims. (Cl. 238—232.)

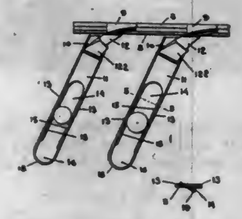
1. In a rail joint, two railway rails having beveled faces at the ends thereof designed for contacting engagement, each of said rails having a reduced laterally extending base flange portion at the end thereof providing a tongue and the under face of each tongue being formed with lugs, the base flange being widened and formed with pockets to receive the tongues of the respective rails therein and said pockets having sockets to receive the lugs on the tongues therein, in combination with bolts and nuts connecting the rail ends.



1,663,420. GRINDING TOOL. FRED W. STOLL, Cleveland, Ohio. Filed Aug. 6, 1926. Serial No. 127,652. 1 Claim. (Cl. 51—205.)

A grinding tool comprising a spindle, a hand wheel carried upon one end thereof, a tapered guide sleeve slidably mounted upon said spindle to guide the same upon its work, the remote end of the spindle being provided with a key way extended transversely thereof and communicating at an intermediate point in its length with a threaded socket portion, a cushion member provided with a key upon one side fitted within a key way and a key way slot within its opposite side, a grinding element provided with a key upon one side received within the key-way slot of the cushion member, and a fastening element passed through the grinding element, and disk and threaded within the socket to hold the grinding element against independent rotary movement upon the spindle and to prevent breakage upon the member

---

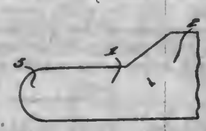


1,663,421. LINE BREAKER. EDWIN L. STUBBINGS, Huntington, N. Y. Filed Mar. 10, 1927. Serial No. 174,328. 1 Claim. (Cl. 173—366.)

A line breaker including a generally cylindrical block of insulating material having pairs of longitudinally extending grooves in its outer face, said grooves being spaced approximately equal distances apart, the pairs of grooves starting from the two ends of the block and extending nearly to the opposite ends thereof, and said block having transverse bores therein connecting the blind ends of the pairs of grooves, said block having a tapered threaded socket in one side thereof, and including a flared petticoat around the socket mouth.

1,663,422. APPARATUS FOR ASSORTING COINS. ANDERS WERNER SVENSON, Vanersborg, Sweden. Original application filed Apr. 7, 1925, Serial No. 21,407, Patent No. 1,554,140, dated Sept. 15, 1925. Filed in Sweden Dec. 16, 1924. Divided and this application filed Aug. 27, 1925. Serial No. 52,876. 2 Claims. (Cl. 133—3.)

1. In combination with a coin conveying track upon which the coins are caused to roll and a glide plate angularly arranged relative to the track, a guide member of part spiral formation having one end substantially parallel to said track and its other end substantially parallel to

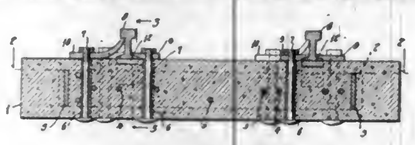


said plate for receiving a coin rolling from said track and causing the same to assume sliding position upon said plate.

1,663,423. RAILWAY SWITCH. DUKE TATUM, Dothan, Ala. Filed Nov. 14, 1925. Serial No. 69,123. 5 Claims. (Cl. 246—317.)

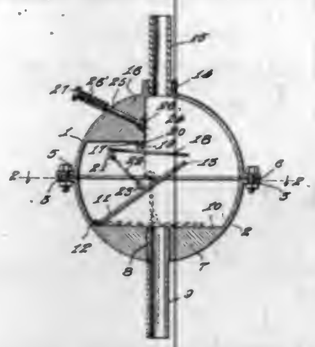
1. The combination with a switch point, of a switch point operating lever, a pivoted arm freely engaging said lever and controlling the movement thereof, a pivoted lever freely engaging the pivoted arm, said arm having detached endwise engagement with the levers and means adapted for operation by a car carried device, for controlling the lever.

1,663,424. VEHICLE IMPACT BAR. HUSTON TAYLOR, Detroit, Mich. Filed Sept. 30, 1927. Serial No. 222,979. 16 Claims. (Cl. 293—55.)



1. An impact bar comprising a resilient metallic body section tubular in appearance having integral re-inforcing end portions of stiffer resiliency than said body portion.

1,663,425. RAILWAY TIE AND RAIL CHAIR THEREFOR. WILLIAM C. TEMPLE, Munson, Fla. Filed Sept. 5, 1925. Serial No. 54,747. 1 Claim. (Cl. 238—92.)

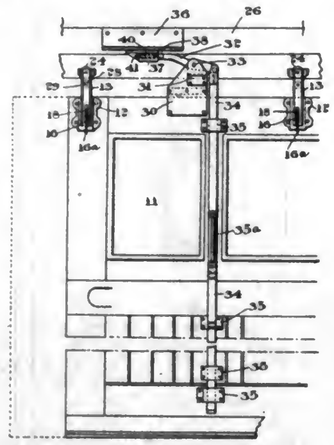


A rail tie comprising a concrete body, reenforcing plates located in and extending longitudinally of the body, members connecting the plates and anchoring them in the body, rail chairs of inverted U-form having their cross members extending transversely of the body and having their side members extending down into the body and provided in their inner faces and adjacent their lower ends with rabbets for the reception of the upper portions of the reenforcing plates, the horizontal portions of the

rabbets resting directly upon the upper edges of the reenforcing plates, said cross members being shorter than the transverse dimension of the body and the upper side

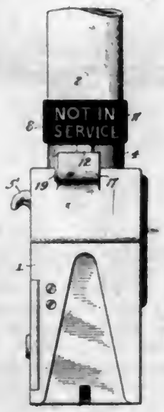
of the body inclining downwardly and outwardly from the ends of said members, and attaching elements engaging said side members and reenforcing plates.

1,663,426. GAS VALVE. ERNEST S. TRONZO, Akron, Ohio. Filed June 1, 1927. Serial No. 195,728. 1 Claim. (Cl. 67—115.)



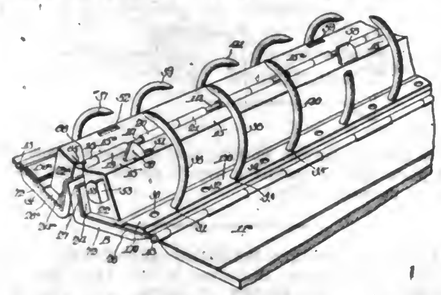
A gas valve of the character described comprising a casing formed from upper and lower semi-circular shaped sections, means for securing said sections in operative association, an inlet pipe threadedly secured to the lower section, an outlet pipe secured to the upper section, a solid portion having a flat upper surface to provide a valve seat and being formed in the lower section, a plate valve member hingedly secured in the lower section and cooperating with said seat for controlling the inlet pipe, a solid portion formed in the upper section and being laterally disposed therein, a disk hingedly secured to the solid portion of the upper section, flexible means connecting said disk with the plate valve member, spring pressed means arranged at an inclination and slidably mounted in the solid portion of the upper section, and said spring pressed means being engageable with said disk.

1,663,427. GAS COCK. FRANK L. UHL, Detroit, Mich. Filed July 21, 1927. Serial No. 207,327. 4 Claims. (Cl. 251—152.)



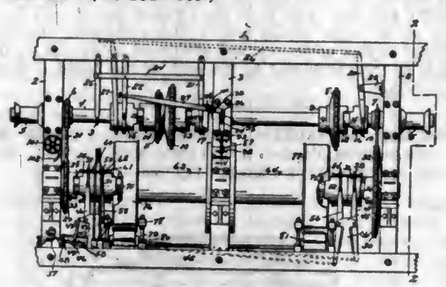
1. A valve construction comprising a body having inlet and outlet means, a ported plug rotatably mounted in said body and adapted to establish or obstruct communication between said inlet and outlet means, said plug having a longitudinal groove at its lower end and a transverse slot communicating with the upper end of the groove, a washer adapted to slide on said plug, a stop tooth projecting inwardly from said washer and adapted to slide through said groove into said slot, and means for locking said washer to said body.

1,663,428. BUFFER MECHANISM FOR CAR DOORS. ERNEST R. VIBERG, Montreal, Quebec, Canada. Filed July 8, 1925, Serial No. 42,257, and in Canada Aug. 4, 1923. 4 Claims. (Cl. 292—237.)



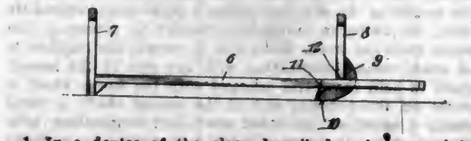
1. A buffer mechanism for car doors and the like comprising latch means which will allow the door free movement in the opening direction when said latch means is in a predetermined position and means engaging with the latch means to keep the door open at least a predetermined amount during yard operations.

1,663,429. DISPENSING DEVICE. EDWIN G. WESSMAN, Easton, Pa., assignor to Individual Drinking Cup Company, Inc., Easton, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1924. Serial No. 737,362. 17 Claims. (Cl. 312—43.)



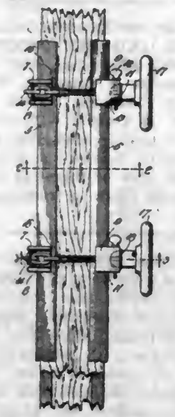
1. In a dispensing device, a supporting casing including a socket part, a container adapted to detachably seat in said socket part, the container having a ring like part thereon bearing thereupon a sign, said part being adjustable relatively to the casing to position the same with its sign facing to the front of the casing in view, or to position the same out of said position at another point about the casing out of view, and stop means for holding said ring like part in either of said positions against rotary movement relatively to the casing.

1,663,430. LOOSE-LEAF BINDER. VAN A. WIRT, Chicago, Ill., assignor to Visible Records Equipment Company, a Corporation of Illinois. Filed June 8, 1925. Serial No. 35,573. 9 Claims. (Cl. 129—17.)



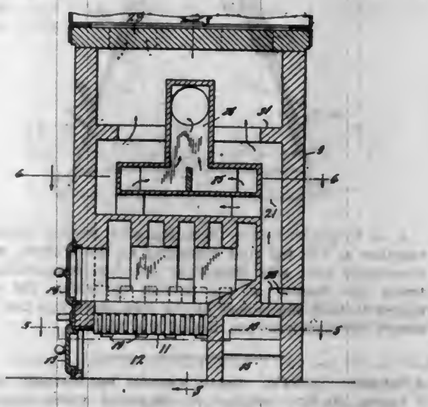
1. In a loose-leaf binder, the combination of a pair of longitudinally-extending metallic parts having opposed portions lying substantially parallel with each other and spaced apart, said parts being secured in rigid relation to each other, one of said parts having a plurality of longitudinally spaced-apart apertures therein, prongs projecting through said apertures respectively and having their inner ends abutting and spot-welded to the other of said parts, the arrangement providing that the opposed portions are sufficiently spaced-apart at said apertures to cover and conceal the flowed metal at the welded ends of the prongs.

1,663,431. DRAW WORKS. HAROLD B. ZIEGLER, Duncan, Okla. Filed Aug. 8, 1925. Serial No. 49,046. 8 Claims. (Cl. 254—185.)



1. In a draw works, the combination of a frame, a shaft, two drums freely journaled on the shaft, said drums having their confronting heads provided each with an annular series of apertures, a bolt member mounted in the frame and movable into one of the apertures of either head for locking the drum thereof against movement, said bolt being normally in inactive position, clutching means on the shaft, operating means for said clutching means to cause the same to engage with either of the drums to lock one or both of the drums to the shaft, and means for revolving the shaft at varying predetermined speeds to impart like speeds to the drum or drums clutched to the shaft.

1,663,432. BOOKRACK. CHESTER L. AMES, Phoenix, Ariz. Filed Mar. 11, 1926. Serial No. 93,908. 5 Claims. (Cl. 312—43.)



1. In a device of the class described, a base, a plate resting at its lower edge upon said base, a rocker leg depending from said plate and having its normal point of bearing disposed beyond the lower edge of the plate, and a stop on said leg disposed in the same vertical plane with the said point of bearing.

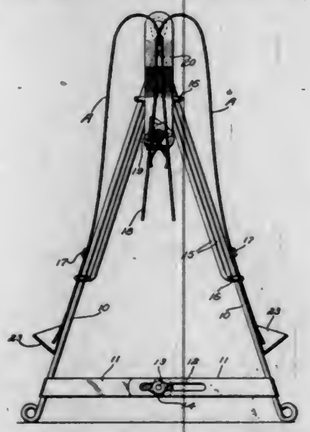
1,663,433. CLAMP. JOHN B. BENSON, Independence, Kans. Filed Nov. 16, 1925. Serial No. 69,457. 2 Claims. (Cl. 144—291.)

1. A clamp of the class described comprising a plurality of parallel transversely angular bars for engagement with a structure to be constricted, said bars having transverse enlargements on their outer sides spaced apart longitudinally of said bars, the outer sides of said enlargements having smooth-bottomed grooves extending transversely of the bars, an additional transversely angular bar having longitudinally spaced lugs on its exterior, flexible binding elements detachably secured to said lugs respectively, and screw-threaded tightening devices for said elements mounted on said lugs and connected to the free ends of said elements, said elements being slidably engageable with the smooth bottoms of the aforesaid grooves.

1,663,434. HOT-AIR FURNACE. JAMES BOUCEK, JAMES HALICK, and JOSEPH TREFNEY, Cleveland, Ohio. Filed Apr. 28, 1927. Serial No. 187,250. 2 Claims. (Cl. 126—99.)

1. A furnace comprising a housing, a fire box within the housing and having its top and side walls spaced from the walls of the housing to provide an air heating chamber having communication with the atmosphere, vertically disposed conduits extending from each corner

of the fire box, a horizontally disposed substantially H-shaped passage spaced above the top of the fire box and communicating with the vertically disposed conduits, an upwardly and outwardly centrally located conduit communicating with the H-shaped passage, and said passage and conduits being located within the heating chamber, whereby air within said chamber will circulate over and around the passage and conduits before leaving the furnace.

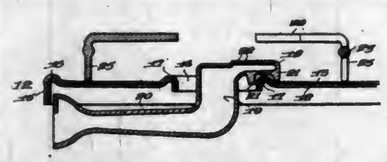


1,663,435. METHOD OF PRODUCING BASIC ALUMINUM SULPHATE AND THE PRODUCT THEREOF. DONALD B. BRADNER, Edge Moor, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 19, 1925. Serial No. 16,839. 5 Claims. (Cl. 23—124.)

2. The process of making aluminum sulphate of high basicity from material containing aluminum and iron which comprises the step of digesting the material and treating the material with a reducing agent during digestion.

1,663,436. COLORED VULCANIZED RUBBER AND PROCESS OF MAKING THE SAME. ERNEST R. BRIDGWATER, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 29, 1926. Serial No. 84,783. 3 Claims. (Cl. 260—91.)

1. The process of coloring rubber which comprises mixing rubber or rubber-like materials with a vulcanizing agent and with the sodium salt of the azo compound obtainable by coupling diazotized 2-chloro-5-toluidine-4-sulfonic acid with beta-naphthol.

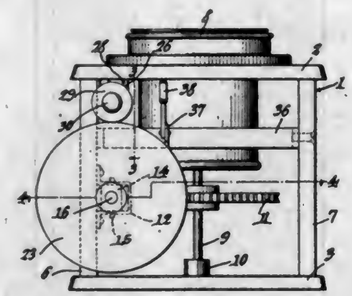


1,663,437. FLY-PAPER HOLDER. LUCY MAY SMITH BROWN, Winchester, Idaho. Filed Feb. 19, 1927. Serial No. 169,595. 4 Claims. (Cl. 43—115.)

1. A fly-paper holder including side frames connected together at the top and diverging at the bottom, means connecting said side frames at the top, connections between the frames at the bottom to stiffen the same, means to hold the papers at the side edges and means to secure the paper at the top of the holder.

1,663,438. STOVE. ISAAC VERNON BRUMBAUGH, Washington, D. C., assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 27, 1924. Serial No. 758,454. 2 Claims. (Cl. 126—215.)

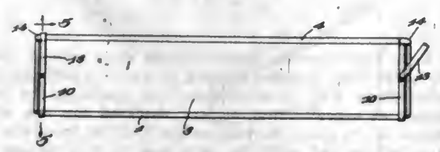
1. An improved stove and burner therefor, the stove comprising a horizontal top plate having a burner opening, a burner passing through the said opening and located wholly above the top plate, and a grate supported



above the said burner, whereby heat is reflected from the top plate upward against a utensil placed on the grate, for the purpose specified.

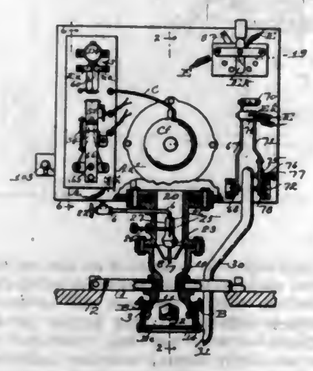
1,663,439. FOUNTAIN WASHING APPARATUS. MAGNUS CHRISTIANSON, Brooklyn, N. Y. Filed May 18, 1926. Serial No. 108,902. 2 Claims. (Cl. 15—128.)

1. A device of the character set forth, comprising a hollow staff provided at its forward end with a downwardly and forwardly extending nozzle, a bracket consisting of angularly related arms of solid formation and secured to the staff with one of its arms extending upwardly and forwardly therefrom to a point beyond the nozzle, the other arm of the bracket extending downwardly and forwardly from the forward end of said first arm at an angle to the nozzle, and a cleaning element secured to said other arm and positioned below and at an angle to the nozzle and in the path of the liquid issuing therefrom.



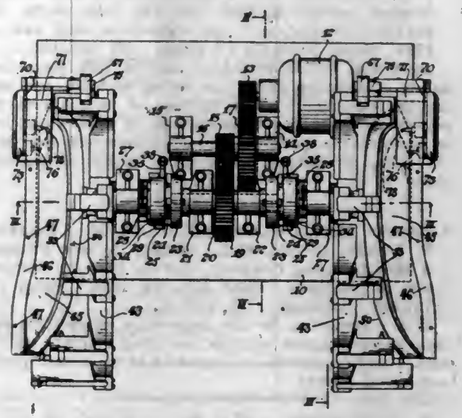
1,663,440. MEASURING INSTRUMENT. CALVIN F. CHRISTOPHER, Canton, N. C. Filed Mar. 17, 1926. Serial No. 95,418. 2 Claims. (Cl. 33—129.)

1. A measuring device comprising a frame, a register carried by the frame and including a shaft, a worm wheel on the register shaft, a second shaft, a worm on the second shaft, and meshing with the worm wheel, means for mounting the second shaft at a point intermediate its ends, for swinging movement, thereby to disengage the worm from the worm wheel and to permit the register to be reset, means cooperating with one end of the second shaft to hold the worm engaged with the worm wheel, a worm on the opposite end of the second shaft, a third shaft, a wheel on the third shaft and cooperating with the wheel on the second shaft to engage the material which is to be measured, means for mounting the third



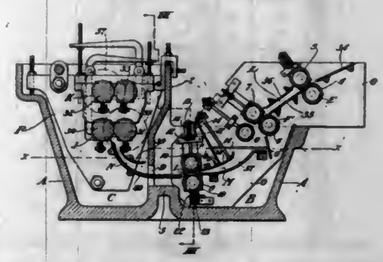
shaft for radial swinging movement in a plane approximately at right angles to the plane in which the second shaft swings, thereby to permit the wheel on the third shaft to be spaced from the wheel on the second shaft, and means cooperating with the third shaft to hold the wheel of the third shaft in engagement with the wheel on the second shaft, and out of engagement with the wheel on the second shaft, at the will of an operator.

1,663,441. BOX. AQUILLER D. CLAWSON, Chicago, Ill. Filed June 24, 1925. Serial No. 39,358. 1 Claim. (Cl. 217—12.)



A box structure including a body comprising bottom, side, and end portions, spaced cleats secured to the side members adjacent the ends thereof, the cleats disposed toward the ends being of shorter length than those disposed away from the ends, cleats secured to a cover member and the bottom member and adapted to rest upon the ends of the shorter of the cleats, said end members being adapted to be slidably positioned between the spaced cleats with their lower edge portions abutting the cleats of the bottom member, said side and bottom members having portions cut from one face thereof adjacent the ends adapted to provide shoulders, connecting bands each having end portions secured together and arranged for connecting the end members, side members, and bottom member in distended position, and bands connected to the side members fitting over beveled edges on the cover member for connecting the cover to the box when in distended position.

1,663,442. LIQUID-FUEL-BURNING HEATER. GEORGE K. CULP, Jr., GALEN D. BARKER, and WILLIAM J. STURGIS, Hamilton, Mo., assignors to Electromatic Appliance Corp., a Corporation of Delaware. Filed Nov. 26, 1924. Serial No. 752,429. 12 Claims. (Cl. 158—28.)



1. In apparatus of the character described: a combustion chamber; fuel-igniting means; means for propelling fuel to the igniting means and into the chamber; thermically-controlled means for maintaining the operation of the fuel-propelling means; a conduit adapted to convey to the thermically-controlled means gases heated directly by the flaming fuel to a degree sufficient to operate the thermically-controlled means to maintain the operation of the fuel-propelling means.

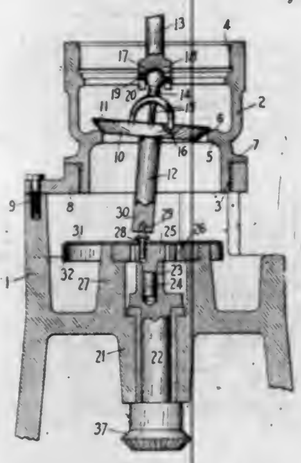
1,663,443. PUNCHING MACHINE. WALTER H. D'ARDENNE, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 13, 1920. Serial No. 423,969. 26 Claims. (Cl. 164—90.)

1. A punching machine comprising a frame, a plurality of punches mounted therein, a drive shaft, an eccentric on said shaft, and independent means controlled by said eccentric for actuating each of said punches in a predetermined sequence.

1,663,444. TINNING APPARATUS. STEWART A. DAVIS, Pittsburgh, Pa., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Original application filed June 25, 1919, Serial No. 306,521. Divided and this application filed Dec. 18, 1924. Serial No. 756,742. 3 Claims. (Cl. 19—12.6.)

1. Tinning apparatus comprising a tinning pot having compartments for the molten tin bath communicating with each other below the top of the tin bath, means in one compartment for maintaining a body of flux on top of the tin bath, means in the other compartment for maintaining an oil bath on top of the tin bath, a feeding mechanism above the flux to feed the plates into and through the flux into the tin bath, an intermediate feed

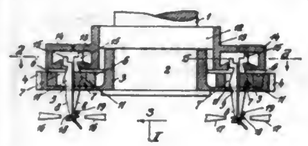
mechanism to feed said plates through the tin bath into the oil bath, said intermediate mechanism comprising a single pair of rollers set in the tin bath close to the flux so that the flux is carried rapidly and at a uniform rate to said rollers, and a feed-out mechanism in the oil bath to feed the tinned plates out of the oil bath, said feed mechanism being operatively connected to successively and uninterruptedly feed plates into, through and out of the flux, tin bath and oil bath at a relatively high and substantially equal and uniform speed.



1,663,445. TIN PLATE. STEWART A. DAVIS, Pittsburgh, Pa., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Original application filed June 25, 1919, Serial No. 306,521. Divided and this application filed Jan. 8, 1925. Serial No. 1,303. 1 Claim. (Cl. 29—180.)

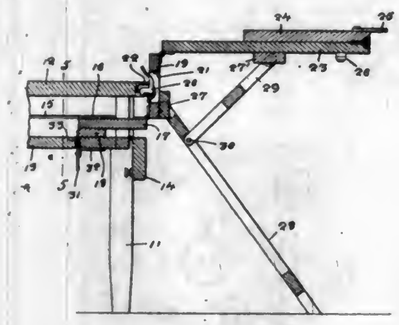
As a new article of manufacture a coke plate consisting of a ferrous metal base coated with tin, and having the thin light weight coating of from 1.5 to 2.5 pounds per base box characteristic of coke plate and being substantially continuous, non-porous and free from pin holes, providing a bright luster typical of charcoal plate.

1,663,446. METAL-CLEANING SOLUTION. CLARENCE F. DINLEY, Detroit, Mich., assignor to Rex Products & Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed July 19, 1924. Serial No. 727,035. 9 Claims. (Cl. 148—6.)



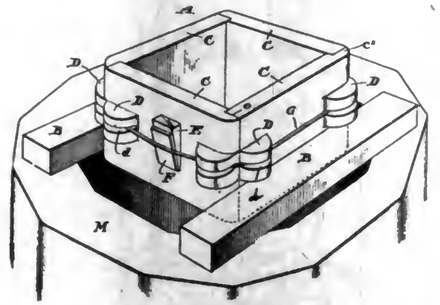
3. A composition for the preparation of metallic surfaces for subsequent coatings, including a dilute etching acid, a soluble metallic salt, an acid of the tannin group, and an oil solvent.

1,663,447. DEVICE FOR LAPPING IN VALVES. EARL E. EICKMEYER, Dayton, Ohio, assignor to The National Recoring Pump Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 31, 1924. Serial No. 703,089. 23 Claims. (Cl. 51—29.)



16. In a mechanism of the character described, a stationary element having an annular part to engage the surface of a valve, and separately operated devices each having means for connecting it with said valve, for rotating said valve in contact with said part and for tilting said valve with relation to said part during the rotation of said valve.

1,663,448. MACHINE FOR MANUFACTURING CHAIN MAIL IN TUBULAR SHAPE. ROBERT EINSELE, Pforzheim, Germany, assignor to Rodi & Wienenberger, Akt.-Ges. für Bijouterie- & Kettenfabrication, Pforzheim, Germany. Filed Jan. 29, 1925, Serial No. 5,587, and in Germany July 24, 1922. 2 Claims. (Cl. 140—8.)

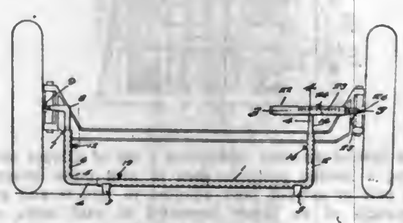


1. In a machine for manufacturing chain mail in tubular shape with opposite working points in which the finished chain mail is alternately held suspended by two groups of opposite ring holders displaced the one with regard to the other, in combination with the inner row of ring holders and with the outer row of ring holders, a fixed axle, a feeding disk rotatably mounted on said fixed axle and having slots in which said holders are oscillatably mounted, means for rotating said disk step by step the distance of one diameter of a ring, a collar on said fixed axle, stationary ring elements fixed on said collar above said feeding disk, cam-like thickenings on said ring elements at points displaced 90° with regard to the points of working, said ring elements acting upon said ring holders in such a manner that when said ring holders are passing through the points of working they are guided by the normal surface of said ring elements so that the mutual position of said ring holders remains the same, the cam-shaped thickenings of said ring elements acting upon said ring holders at points spaced 90° from said working points to make said ring holders carry out the movement required for the changing of the row of rings.

1,663,449. IRONING-BOARD TABLE. IRVIN W. FOLEY, Reynoldsville, Pa. Filed Jan. 27, 1926. Serial No. 84,182. 2 Claims. (Cl. 68—10.)

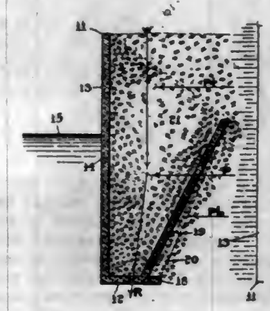
1. The combination of a table, of an ironing board slidably mounted therein and adapted to be withdrawn therefrom, a platform carried upon one end of the board, a second platform slidably mounted within the table and hingedly connected with the first mentioned platform, means for detachably locking the first mentioned platform upon the adjacent end of the table when the board is called into use, a foldable supporting frame carried by the first mentioned platform, and a brace frame carried by the ironing board and connected with the supporting frame.

1,663,450. SHRINK-HEAD CASING FOR INGOT MOLDS. EMIL GATHMANN, Baltimore, Md., assignor to The Gathmann Engineering Company, Baltimore, Md., a Corporation of Maryland. Filed Sept. 6, 1924. Serial No. 736,274. 4 Claims. (Cl. 22—147.)



3. A feeder for ingot molds comprising four slabs of refractory material fitted together at the corners, one vertical end of each slab being formed of an angular contour and the opposite end being formed of a rounded contour and having its inner portion provided with a recess.

1,663,451. PROCESS OF DYEING WITH BASIC DYESTUFFS INVOLVING THE USE OF ARYL DERIVATIVES OF AMIDES OF AROMATIC HYDROXYCARBOXYLIC ACIDS AS MORDANTS. ALFRED GUENTHER, Cologne-Riehl, JOSEF HALLER, Wiesdorf, and ERWIN KÖSTER, Cologne-on-the-Rhine, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 29, 1926, Serial No. 84,760, and in Germany Feb. 19, 1925. 8 Claims. (Cl. 8—13.)



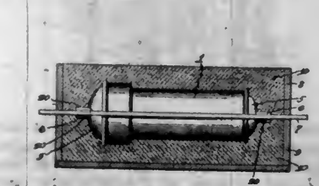
1. In a process of dyeing cotton with a basic dyestuff, the step of fixing the dyestuff by means of an aryl derivative of an amide of an aromatic hydroxycarboxylic acid as a mordant.

1,663,452. WHEEL-ALIGNING DEVICE. HELEN GENEVA HERSHMAN and FRANK HERSHMAN, Miller, S. Dak. Filed May 14, 1927. Serial No. 191,385. 4 Claims. (Cl. 33—203.)

1. A wheel aligning gage of the character described comprising a tubular body, feet depending therefrom for supporting the same, a tubular upright formed with one end of said body, a right angle shaped member telescopically mounted in the opposite end of the body, means for adjustably securing said member with respect to said body, a pointed member including a shank mounted for vertical adjustment in said right angle disposed member, a sleeve mounted for vertical adjustment in said tubular upright, a threaded rod slidable through said sleeve and terminating at one end in a point adapted to cooperate with the point of the pointed member, a nut carried by said threaded rod, and resilient means for retaining said nut in contacting engagement with one end of said sleeve for the purpose specified.

1,663,453. QUAY WALL. LIONEL COKE-HILL, Montreal, Quebec, Canada. Filed Sept. 10, 1925. Serial No. 55,526. 6 Claims. (Cl. 61—49.)

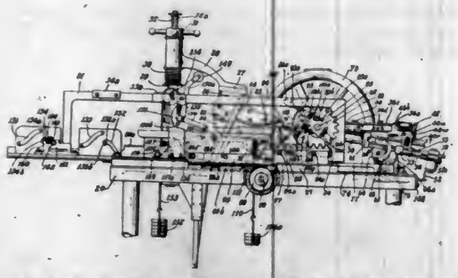
1. A quay wall of substantially truncated V formation with a flat base formed at the vertex of the angle enclosed by the legs of the V.



1,663,454. TRISAZO DYES FOR COTTON AND PROCESS OF MAKING THE SAME. HENRY JORDAN, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 10, 1926. Serial No. 128,519. 14 Claims. (Cl. 260—72.)

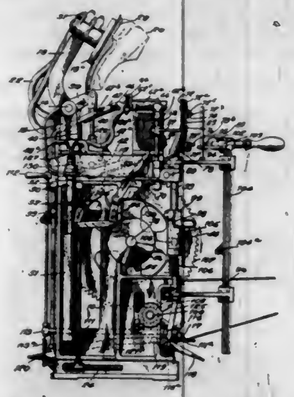
8. A compound having the general formula:

$$R_1-N=N-R_2-N=N-R_3-N=N-R_4$$



in which R_1 represents an aryl radical having no free hydroxl group, R_2 and R_3 represent naphthalene derivatives without a free hydroxyl group, and R_4 represents a 2-acylamino-8-naphthol-6-sulphonate.

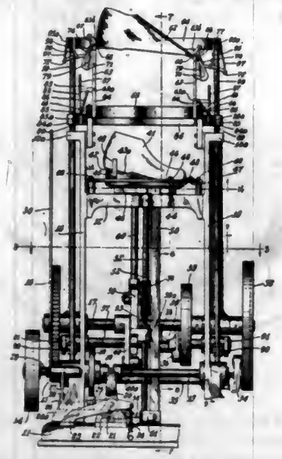
1,663,455. MOLDING APPARATUS. JOHN B. LUKOMSKI, Detroit, Mich. Filed July 9, 1925. Serial No. 42,449. 5 Claims. (Cl. 22—194.)



1. A method of molding articles wherein cores, patterns, and mold bodies constitute a molding apparatus by which my method may be carried into practice, said method consisting in first forming an oversized mold cavity from a core true to size; second, making a core pattern in the mold cavity and forming a core from said core pattern; third, using the core of true size to form another mold cavity differentiating from the first mentioned mold cavity, and fourth, placing the core made from the core pattern in the last mentioned mold cavity and forming an article.

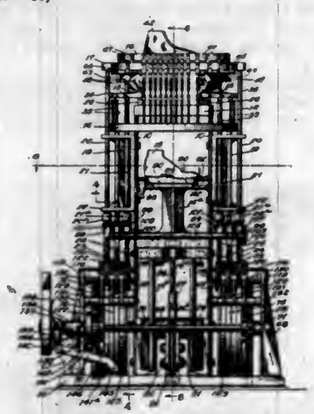
1,663,456. METHOD AND APPARATUS FOR MAKING FOOTWEAR. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 19, 1922. Serial No. 582,884. 70 Claims. (Cl. 12—7.)

10. A shoe-lasting machine comprising a last support, an upper-supporting member having a position fixed with relation to said last support and adapted to receive an inverted upper in position to be swung over onto a last on said last support, a gauge for positioning said upper on its support, and an upper-transferring mechanism including a toe-stretcher and heel-stretchers constrained to move in determinate courses to so swing said upper and apply it to the last in a position thereon determined by said gauge.



1,663,457. METHOD AND APPARATUS FOR MAKING FOOTWEAR. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 9, 1923. Serial No. 630,796. 52 Claims. (Cl. 12—7.)

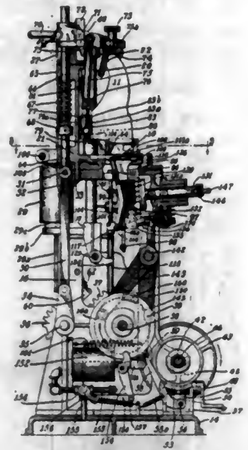
7. Apparatus for building footwear upon a last, said apparatus comprising means for holding an upper shoe part in a determinate position and in spread condition, means constrained to move in a determinate course for holding a last inverted and lowering it onto said part, and means for twisting the heel portions of said part and swinging them about the last to apply them progressively thereto.



1,663,458. LASTING MACHINE. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 3, 1924. Serial No. 703,905. 67 Claims. (Cl. 12—9.)

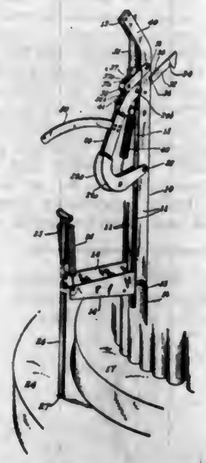
1. A lasting machine comprising a set of nipper units completely surrounding a lasting position and adapted to receive the sole margin of an upper between their opened jaws, means for concurrently closing said jaws

to hold said upper substantially throughout its perimeter, and means for relatively advancing a last from a non-contiguous position into an upper so held.



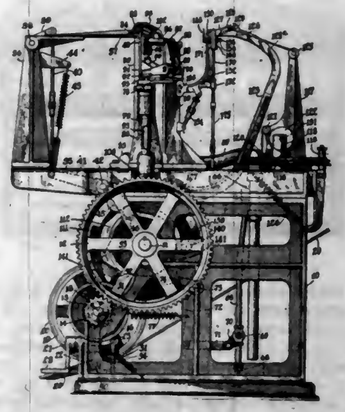
1,663,459. LASTING MACHINE. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 5, 1924. Serial No. 704,502. 22 Claims. (Cl. 12—9.)

1. A lasting machine comprising a set of gripper units defining a lasting position, each of said units comprising a pair of gripper jaws adapted to receive and grip the margin of an upper presented to said units collectively, and means having a retractive movement past said gripper jaws for drawing the upper's margin thereinto.



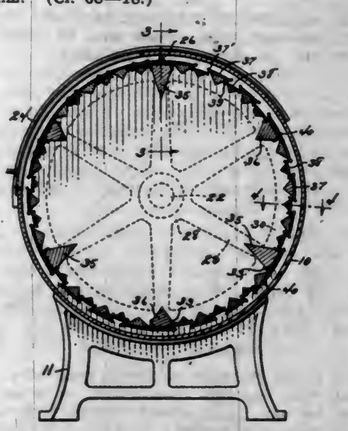
1,663,460. METHOD AND APPARATUS FOR MAKING FOOTWEAR. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1924. Serial No. 738,378. 30 Claims. (Cl. 12—7.)

4. Apparatus for making footwear, said apparatus comprising means for bringing a piece of shoe stock and a last together by determinate relative movement from isolated positions and progressively applying the stock to the last, said means comprising a gripper having movement along the face of the last and adapted to give off the stock to the last by slippage of the stock from



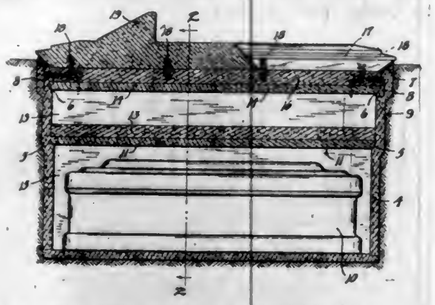
between its gripping members and locally acting means associated with the gripper and adapted therewith relatively to travel over the face of the work for pressing the stock against the last locally and by progression over the work as the stock is so given off.

1,663,461. MANIPULATING DEVICE FOR SHEET MATERIAL. FRANK J. MACDONALD, Eliet, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 25, 1925. Serial No. 11,525. 20 Claims. (Cl. 12—11.1.)



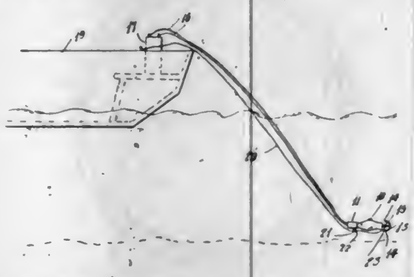
1. A sheet-manipulating device comprising a positioning member adapted to be abutted by the edge of the sheet to position the latter, means for drawing the sheet against said member to position it with its edge against the same, and means for determinately so moving the positioned margin with relation to the rest of the sheet as to give the sheet a complex form.

1,663,462. METHOD AND APPARATUS FOR FORMING SHOE LININGS OR THE LIKE. FRANK J. MACDONALD, Eliet, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 17, 1926. Serial No. 116,561. 28 Claims. (Cl. 12—52.)



1. The method of joining two margins of sheet material which comprises holding one of the margins by suction applied thereto at a distance back from its edge and while so holding it overlapping it upon the other margin with the said other margin on that side of the first margin to which the suction is applied.

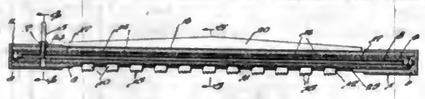
1,663,463. WASHING MACHINE. OTTO MEYER, San Antonio, Tex. Filed Nov. 23, 1925. Serial No. 70,988. 1 Claim. (Cl. 68—18.)



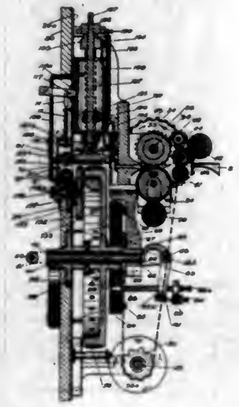
In a device of the class described, a housing, a rotatable cylinder mounted in the housing, said cylinder comprising end members, longitudinally extending devices having flanges coextensive therewith, the longitudinal devices being of triangular cross section and including bases on the outer sides and apices projecting toward the inner portion of the cylinder, and other longitudinal devices, alternating with said first named devices and being of reduced size compared with the others having bases spaced inwardly from the bases of said first mentioned devices, to form pockets, the flanges of adjacent longitudinal devices being flared in opposite directions, to form the opposite walls of individual channels extending from the interior of the cylinder outwardly toward the outer portion of the housing.

1,663,464. BURIAL VAULT. ROBERT C. PLAGGMIER, Taylor, N. Dak., assignor to National Survault Company, Bismarck, N. Dak., a Corporation. Filed Nov. 30, 1927. Serial No. 236,690. 2 Claims. (Cl. 72—7.)

1. A burial vault having in combination, a box adapted to extend into the ground and have its top surface adjacent the surface of the ground, and having a casket chamber in its lower portion, a dead air chamber above said casket chamber and sealed therefrom, supporting means in said box at the top of said dead air chamber, formed members resting on said supporting means and closing the top of said dead air chamber, a poured layer of concrete on said formed members and sealing the top of said dead air chamber, and a formed cover slab resting on the top of said box projecting downwardly somewhat therein and having members embedded therein which are also embedded in said poured layer, whereby an air-tight and moisture proof seal will be provided at the top of said dead air chamber and a heavy rigid construction provided at the top of said box.



1,663,465. LUMINOUS FISHING TACKLE. JAMES A. NEFF, Lakewood, Ohio. Filed Mar. 25, 1926. Serial No. 97,295. 1 Claim. (Cl. 43—44.)

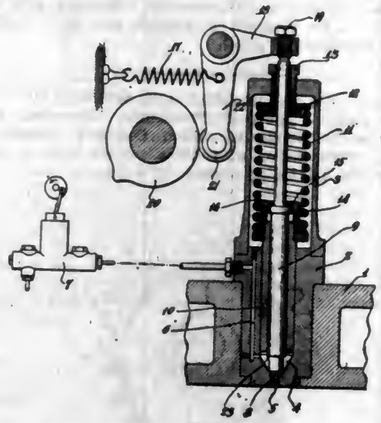


A bait of the character set forth, comprising a socket provided with contacts, conductors connected to the contacts for supplying current thereto, a bulb having one end thereof detachably engaged with the socket, said bulb being provided with a filament engaging the contacts, a hook having a shank secured directly to the other end of the bulb and provided between its ends with an eyelet, an eyelet fixed to and projecting radially from the socket, and a fishing line detachably connected to the eyelets.

1,663,466. NEUTRALIZING BAR. ALBERT J. ROSTAL, Chicago, Ill. Filed Aug. 28, 1924. Serial No. 734,771. 4 Claims. (Cl. 175—264.)

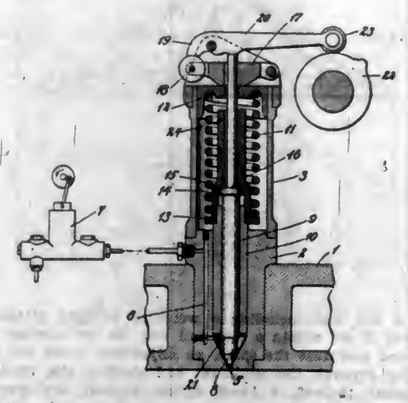
2. In a neutralizing device of the character stated, a rotatably mounted sleeve, a stationary main electrical conductor mounted within and spaced away from the sleeve, stationary means for connecting said conductor to a source of electrical energy, and a plurality of supplemental electrical conductors extending about and adjacent the main conductor, the supplemental conductors being electrically insulated from said main conductor and projecting beyond said sleeve and being movable therewith.

1,663,467. TICKET PRINTING AND ISSUING MACHINE. HENRY ROY SETRIGHT, Newtown, New South Wales, Australia. Filed May 21, 1923, Serial No. 640,603, and in Australia July 20, 1922. 27 Claims. (Cl. 101—66.)



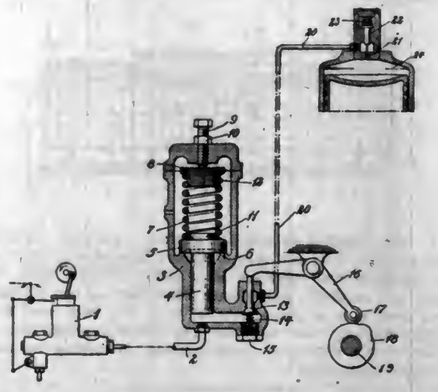
1. A ticket printing and issuing machine comprising rotatable means adapted to intermittingly feed to said machine a strip of paper from a roll thereof and optionally during such feed to print matter on ticket portions of said strip, and means for printing authentication marks on said ticket portions, and also means for cutting and ejecting from said machine said printed ticket portions, the combination of releasable means to lock said rotatable means against rotation, a press handle, an electric circuit, electro-magnetic means interposed in said circuit and controlled by said press handle, said electro-magnetic means acting to release the locking means associated with said paper feed means whereby the latter may be partially rotated together with the means for ejecting said printed ticket portions, means operated by the electro-magnetic means before said ejection occurs to print the authentication marks on said ticket portions, and means for re-establishing normality of said electric circuit and said electro-magnetic means.

1,663,468. COMB. JOSEPH V. VAUGHN, De Land, Fla. Filed June 1, 1925, Serial No. 34,188. Renewed Feb. 14, 1928. 1 Claim. (Cl. 132—14.)



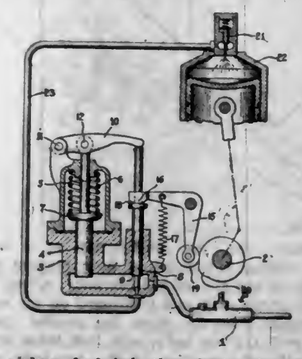
A comb for the purpose stated comprising a head of substantially cylindrical contour, a longitudinal series of relatively coarse teeth projecting radially from one side thereof, and a longitudinal series of relatively fine teeth projecting radially from the opposite side thereof, the teeth of the two series occupying a common plane, the opposite sides of the head between the series of teeth projecting beyond said plane to provide a curvilinear surface to be presented to hairs engaged and tensioned by the series of teeth.

1,663,469. FUEL-INJECTION DEVICE FOR INTERNAL-COMBUSTION ENGINES. EDUARD VON SALIS, Winterthur, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 4, 1924, Serial No. 747,706, and in Germany Nov. 23, 1923. 22 Claims. (Cl. 123—32.)



1. An airless fuel injection device for internal combustion engines comprising a fuel injection opening, a valve controlling said opening and having a valve seat surrounding said opening, means for opening said valve, means blocking said valve against opening, an accumulator having an accumulator spring and a plunger associated therewith and subject to contact with the fuel charge, and means for periodically unblocking the valve, said accumulator being operatively connected to the valve and acting to inject fuel when the valve opens and to seat the valve.

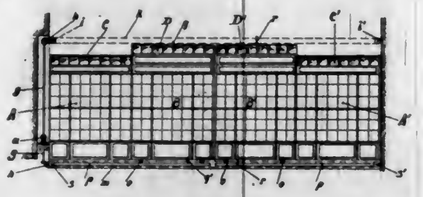
1,663,470. FUEL-INJECTION DEVICE FOR INTERNAL-COMBUSTION ENGINES. EDUARD VON SALIS, Winterthur, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 12, 1924, Serial No. 749,375, and in Switzerland Dec. 11, 1923. Renewed July 25, 1927. 33 Claims. (Cl. 123—32.)



1. An airless fuel injection device, for internal combustion engines comprising a fuel injection opening, a valve controlling said opening, and an accumulator subject to pressure of the fuel charge and operatively connected to said valve so as to press it the more tightly on its seat the higher the accumulator pressure rises.

1,663,471. FUEL-INJECTION DEVICE FOR SOLID-OIL ENGINES. EDUARD VON SALIS, Winterthur, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 12, 1924, Serial No. 749,376, and in Switzerland Jan. 24, 1924. Renewed Jan. 12, 1928. 2 Claims. (Cl. 123—32.)

1. Means for producing substantially constant fuel injection velocity in solid oil engines comprising in combination a variable delivery oil pump, an accumulator chamber connected thereto and to the engine injector nozzle and having an accumulator plunger, a spring loading said plunger, and means for controlling communication between said chamber and the injection nozzle including a valve and timed means for periodically opening it, the accumulator plunger having an abutment adapted to move inward against a relatively fixed abutment before the valve closes, thereby terminating the delivery of the fuel to the engine injection nozzle, said nozzle having a fuel valve to control the delivery of fuel into the engine cylinder automatically opened by pressure of the fuel delivered by the accumulator, and closed by spring pressure on cessation of such delivery.

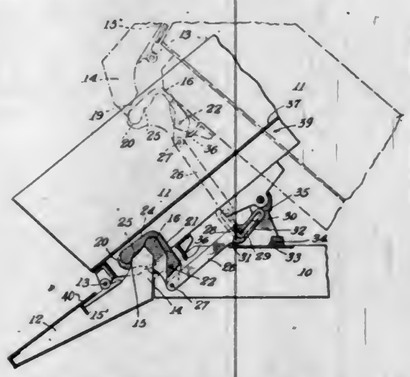


1,663,472. FUEL-INJECTION DEVICE FOR INTERNAL-COMBUSTION ENGINES. EDUARD VON SALIS, Winterthur, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 29, 1924, Serial No. 758,510, and in Switzerland Jan. 22, 1924. Renewed Jan. 12, 1928. 10 Claims. (Cl. 123—32.)

1. An airless fuel injection device for internal combustion engines comprising an accumulator located at a

distance from the cylinder, subject to pressure of the fuel charge, and having associated therewith a fuel outlet, a blocked valve commanding said outlet, means for periodically unblocking said valve, means for operating the valve when unblocked, a pipe connecting said fuel outlet to the cylinder, and a valve automatically controlling the fuel injection nozzle on the cylinder.

1,663,473. BUILDING. CARL APOUST WINDEKNECHT, Berlin, Germany. Filed Nov. 10, 1926, Serial No. 147,577, and in Germany Oct. 14, 1926. 9 Claims. (Cl. 20—1.)

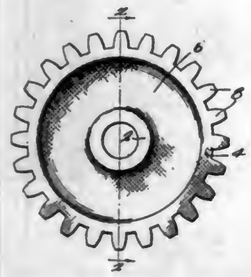


1. In a building or the like having a plurality of fixed and movable wall and roof sections; means for displacing the movable wall sections in a plane parallel with the fixed wall sections; and means for displacing the movable roof section in a plane parallel with the fixed roof sections, whereby the building may be converted into a substantially free open space without disturbing its continuous utilization.

1,663,474. VAT DYESTUFFS OF THE ANTHRAQUINONE SERIES CONTAINING THE TRIAZINE RING AND PROCESS OF MAKING SAME. FRANZ ACKERMANN, Binningen, near Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Sept. 24, 1927, Serial No. 221,858, and in Switzerland Oct. 6, 1926. 3 Claims. (Cl. 260—27.)

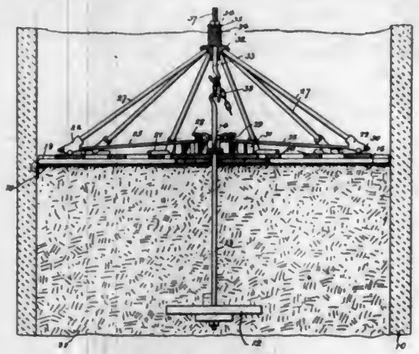
1. A process for the manufacture of vat dyestuffs of the anthraquinone series consisting in treating vat dyestuffs of the anthraquinone series containing triazine rings with aqueous hypochlorite solutions.

1,663,475. DUMP-CAR-DOOR-LOCKING DEVICE. ROY E. CARTZDAFNER, Passaic, N. J. Filed Feb. 25, 1924. Serial No. 694,859. 30 Claims. (Cl. 105—276.)



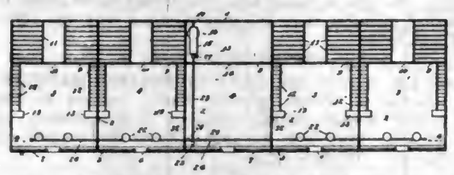
2. In a dump car, the combination of a car body mounted for tilting movement, a door pivoted adjacent its lower edge to one side of the car body, a lock movable independently of the door and positioned on the underside of the car body inwardly from the pivotal connection of the door with the car body, said lock being controlled automatically by the position of the car body when in normal horizontal position for bearing on the door to hold the same in closed position and means controlled by a tilting movement of the car body for shifting the lock into an inoperative position and thus permit the door to swing about its pivotal connection into an open position.

1,663,476. PROCESS OF PRODUCING AROMATIC AMINES. CLARK W. DAVIS, Chester, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 24, 1925. Serial No. 25,684. 3 Claims. (Cl. 260—130.5.)



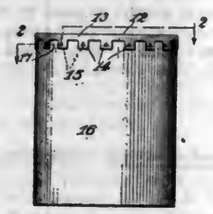
1. A process of producing an aromatic amine which comprises reducing a nitro-aromatic compound with iron and water in the presence of sulphuric acid and a chloride of an alkali-forming metal.

1,663,477. COMPOSITE GEAR AND METHOD OF MAKING SAME. LOUIS T. FREDERICK, Valparaiso, Ind., assignor to Fibroc Insulation Company, Valparaiso, Ind., a Corporation of Indiana. Filed Mar. 2, 1925. Serial No. 12,498. 2 Claims. (Cl. 74—28.)



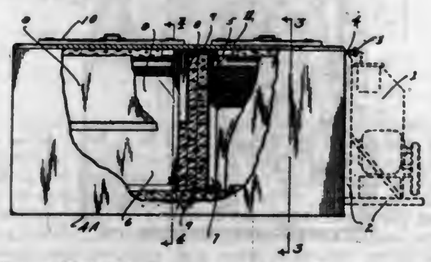
1. A gear blank of the character specified having a thickened rim portion and a thickened hub portion, the web portion being composed of parallel discs of woven fabric extending to the circumference of the blank, and the rim and hub portion at the side of the discs being composed of a mixture of small scraps of fabric, and a binder composed of a phenolic condensation product in hardened form.

1,663,478. SILO SEAL. FRED GÜNTHER, Peru, Ill. Filed Mar. 19, 1927. Serial No. 176,793. 6 Claims. (Cl. 20—1.4.)



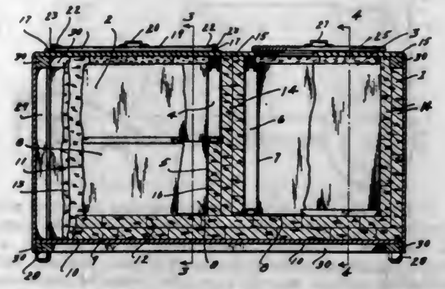
1. A silo seal including a weighted airtight platform adapted to fit within a silo and rest on the ensilage to seal and compress the same, an adjustable guide rod extending through the platform and guiding the vertical movement thereof, a block spring pressed downwardly and mounted adjacent the upper end of the rod, and inclined struts rockably connected to the platform near the edge of the latter and having their inner upper ends arranged under the block to transmit the downward spring pressure of the same to the platform.

1,663,479. EGG FACTORY. OSCAR W. MAPES, Middletown, N. Y. Filed Apr. 27, 1926. Serial No. 104,983. 1 Claim. (Cl. 119—21.)



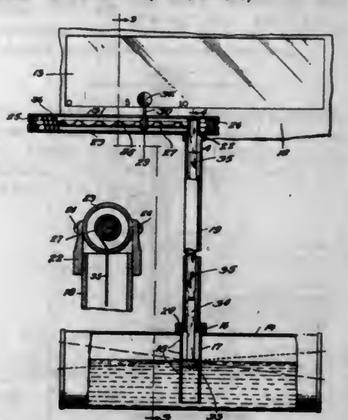
In combination with a building, partitions dividing the building into independent rooms or compartments, drinking pans in certain of the rooms, a water heating supply tank in one of the rooms, means for heating the tank, outlet pipes communicating with the tank, valves in the pipes controlling the flow of water, valved discharge spouts communicating with said pipes and discharging into the pans, flexible devices secured in the compartments, and covers for the pans secured to said flexible devices normally located over the pans but capable of being swung aside to permit access to the valved discharge spouts.

1,663,480. CONTAINER CLOSURE. WILLIAM H. ROSS, Jersey City, N. J. Filed Apr. 22, 1927. Serial No. 185,791. 6 Claims. (Cl. 229—5.7.)



1. In a container closure, in combination, a central member, a flange carried by the central member, a plurality of downwardly extended tongues carried by the outer portion of the flange, a prong extending inwardly from each tongue and a closed ring capable of downward movement over the said tongues such movement forcing the tongues into the sides of a receptacle upon which the device is placed.

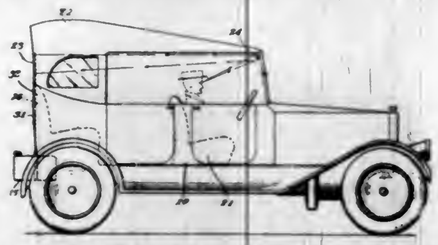
1,663,481. REFRIGERATOR FOR TWO-TEMPERATURE CABINETS. JACOB G. PECK, Portland, Oreg. Filed Aug. 5, 1925. Serial No. 48,376. 6 Claims. (Cl. 62—95.)



1. A refrigerator for a two temperature cabinet, comprising a two compartment, insulated cabinet, an expansion coil running from a refrigerating machine, through each compartment and back to a refrigerating machine, each compartment having a cooling tank with spaced side walls disposed therein and about the expansion coil, one of the cooling medium tanks having a greater amount of surface exposed to the compartment than the other, and one of the cooling medium tanks having a greater amount of expansion coil disposed therein than the other.

1,663,482. TWO-TEMPERATURE REFRIGERATING AND COOLING CABINET. JACOB G. PECK, Portland, Oreg. Filed Aug. 5, 1925. Serial No. 48,377. 2 Claims. (Cl. 217—7.)

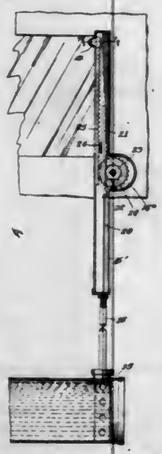
1. A new and improved two temperature refrigerating and cooling cabinet, comprising a frame structure, suitable material to form the exterior covering and floor of said frame structure, two compartments formed in said cabinet, there being an opening thereto through the top of said cabinet; cooling medium tanks about said compartments and forming the walls thereof, pans to form the floors of said compartments, and insulating material between the covering and the sides of the cooling medium tanks, and between the floor of said cabinet and said pans, the tank in one compartment being of greater depth than those of the other compartment whereby to provide different temperatures in the two compartments.



1,663,483. INDICATING MEANS. EARL F. PIERCE, Chicago, Ill.; Central Trust Company of Illinois, administrator of said Earl F. Pierce, deceased, assignor to Florence E. Pierce. Filed Sept. 12, 1924. Serial No. 737,294. 2 Claims. (Cl. 73—82.)

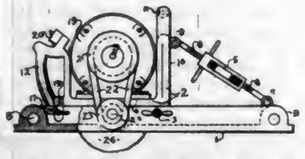
1. The combination with an automobile having a rear window and a rear fuel tank, of means for indicating to the driver of the car the level of fuel in said fuel tank, comprising a threaded rotatable rod extending substantially parallel with one of the horizontal sides of said window, an indicator silhouetted against said window, a

threaded connection between said indicator and said rod, a spring tending to rotate said rod in one direction, a float in said fuel tank, and a connection between said float and threaded rod for rotating said rod in the opposite direction as the level in said fuel tank drops.



1,663,484. LIQUID-LEVEL GAUGE. EARL F. PIERCE, Winnetka, Ill.; Central Trust Company of Illinois, administrator of said Earl F. Pierce, deceased, assignor to Florence E. Pierce. Filed Sept. 26, 1925. Serial No. 58,856. 7 Claims. (Cl. 73—82.)

1. The combination with an automobile having a rear window and a fuel tank at the rear, of movable means in said tank responsive to the depth of fuel therein, an indicating device silhouetted against said window, said indicating devices having a smaller range of movement than said depth-responsive means, and means for connecting said depth responsive means with said indicating devices comprising means located adjacent said window for compensating for the differences in the range of movement of said indicating device and said depth-responsive means.

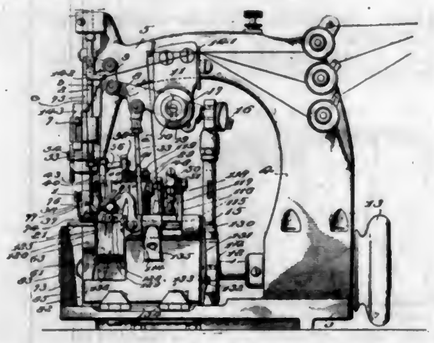


5. The combination with an automotive vehicle comprising a body having a rear window, a fuel tank adjacent the rear end of said body, and a driver's seat, of means in said tank responsive to changes in the level of the fuel therein, and an indicating device located to the rear of the driver's seat and visible in outline by the one occupying said seat and looking through the rear window, said device being operatively connected with said fuel level-responsive means.

1,663,485. LIQUID-LEVEL GAUGE. EARL F. PIERCE, Winnetka, Ill.; Central Trust Company of Illinois, administrator of said Earl F. Pierce, deceased, assignor to Florence E. Pierce. Filed Jan. 15, 1926. Serial No. 81,451. 7 Claims. (Cl. 73—82.)

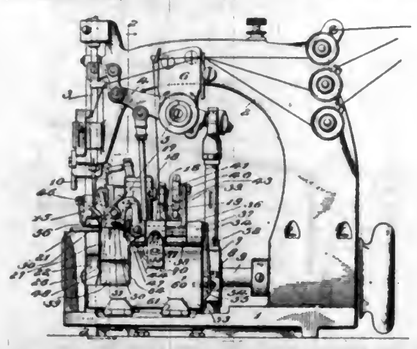
1. The combination with an automobile comprising a chassis, a fuel tank mounted on said chassis adjacent the rear end thereof, a body mounted on said chassis and having a window at the rear end thereof, and means for indicating the level of fuel in said fuel tank comprising an indicator, a guide for confining the movement of said indicator to a path along one of the vertical edges of said window, a float in said tank, and means for connecting said indicator and float so that said indicator moves proportionately to the movement of said float comprising a rack secured to said indicator, a second rack connected with said float, and a gear train connecting said racks, the gear meshing with one of said racks being of smaller diameter than the gear meshing with the other of said racks.

1,663,486. PORTABLE AND CONVERTIBLE MACHINE. HOWARD G. WERTZ, Wichita, Kans., assignor to The Utility Manufacturing Company, a Corporation of Kansas. Filed Apr. 23, 1926. Serial No. 104,108. 2 Claims. (Cl. 143—43.)



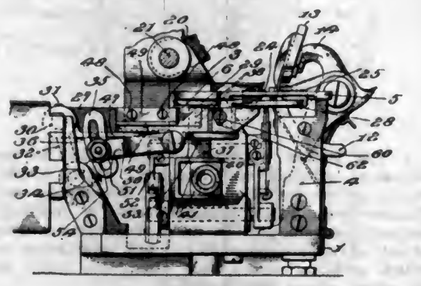
1. In a portable and convertible machine, a right angular frame and a bed pivotally connected, an electric motor and a mandrel carried by the frame, the frame adapted to rock so that either side of the right angle will position parallel with the bed, and means for attaching the frame to the bed rigidly when rocked either way.

1,663,487. BRACE STRUT. EARL F. SMITH and GUY KENNETH WILSON, Muncie, Ind., assignors to Mid-West Metal Products Company, Muncie, Ind., a Corporation. Filed Oct. 22, 1926. Serial No. 143,350. 4 Claims. (Cl. 20—9.)



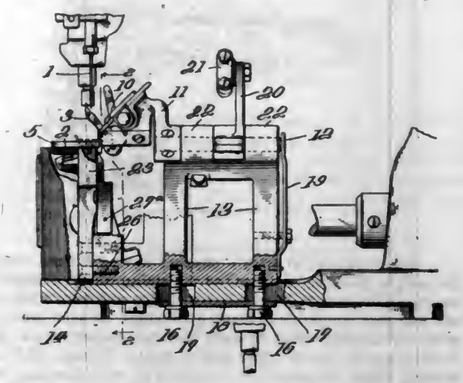
1. A brace strut of the kind described, consisting of a sheet metal bar having its ends bent in opposed directions from the axis of the bar, there being a rib across the line of the bend of each of said ends.

1,663,488. OVEREDGE SEWING MACHINE. JOSEPH BERGER, Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 30, 1924. Serial No. 729,099. 32 Claims. (Cl. 112—162.)



1. In a sewing machine, a cloth plate, a reciprocating needle, an under thread carrying looper cooperating with said needle beneath the cloth plate and movable back and forth in a single plane in rear of the needle, an overedge looper, means for oscillating said looped for moving the point thereof from below the plane of the cloth plate over the cloth plate, and means for shifting the plane of oscillation of the overedge looper whereby the point thereof moves from a position in rear of the under thread looper to a point in front of the needle.

1,663,489. OVEREDGE SEWING MACHINE. JOSEPH BERGER, Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 30, 1924. Serial No. 729,100. 20 Claims. (Cl. 112—122.)

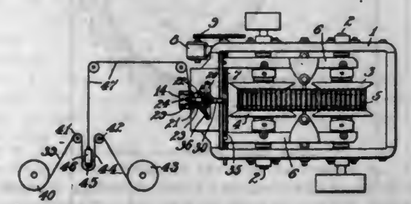


1. A trimming mechanism for sewing machines comprising an upper movable trimming blade and a lower stationary cooperating blade, means for supporting and moving said upper blade from a position well above said stationary blade into cooperative cutting action therewith, and means independent of and movable with said movable blade for maintaining said movable blade in proper alinement with the stationary blade during the entire movement of said movable blade.

1,663,490. FEEDING MECHANISM FOR SEWING MACHINES. JOSEPH BERGER, Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Original application filed July 30, 1924, Serial No. 729,099. Divided and this application filed July 30, 1924. Serial No. 729,101. 6 Claims. (Cl. 112—209.)

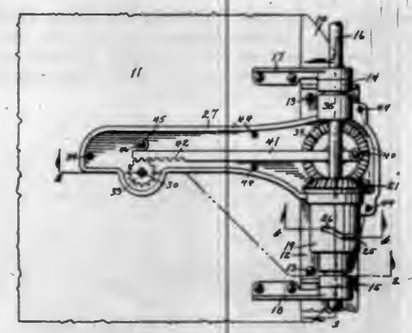
1. A feeding mechanism for sewing machines including in combination, a main feed bar, swinging rock arms for supporting the rear end of said main feed bar, means for raising and lowering said main feed bar, an auxiliary feed bar mounted on said main feed bar and movable up and down therewith, feed dogs carried by the respective feed bars, an oscillating shaft at the rear of the machine supporting said swinging rock arms, a bracket rigidly secured to said shaft and having two separated upwardly extending arms, each of which is provided with a slot, a link having adjustable connection with one of said arms and a direct connection with the main feed bar for moving the same back and forth, and a link connected to the other arm and having a direct connection with the auxiliary feed bar for moving said auxiliary feed bar back and forth.

1,663,491. TRIMMING MECHANISM FOR SEWING MACHINES. JOSEPH BERGER, Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 25, 1926. Serial No. 90,605. 5 Claims. (Cl. 112—126.)



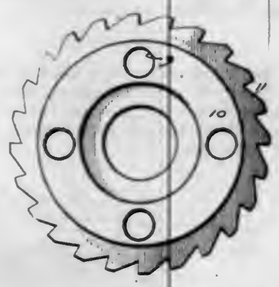
1. In a sewing machine, the combination of a bed plate, a throat plate, stitch forming mechanism including a needle, trimming mechanism including upper and lower trimming members, and means for supporting said trimming members including a bracket on which said members are mounted, means for connecting said bracket to the bed plate so that said bracket can be adjusted for varying the position of the trimming mechanism relative to the needle and means for supporting one end of said throat plate on said bracket.

1,663,492. MUD-LADEN FLUID FOR OIL AND GAS WELLS. LEE CHAMBERLAIN, Los Angeles, Calif., assignor to Chamberlain Co., Inc., a Corporation of California. Filed Aug. 2, 1926. Serial No. 126,747. 1 Claim. (Cl. 255—1.)



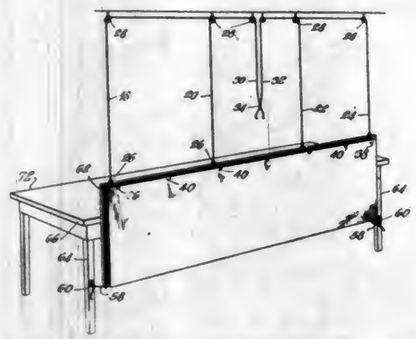
A mud-laden fluid for oil and gas wells comprising finely ground iron filings, borings and scale.

1,663,493. CONTROL FOR VARIABLE-SPEED MECHANISM. HARRY C. CLAY, Columbus, Ind., assignor to Reeves Pulley Company, Columbus, Ind., a Corporation of Indiana. Filed May 23, 1927. Serial No. 193,480. 6 Claims. (Cl. 242—75.)



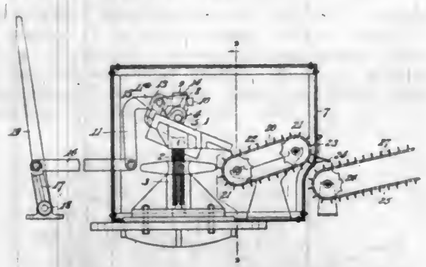
1. The combination with a variable speed mechanism, of an electric motor for controlling the same to cause it to drive at varying speeds, a switch controlling the operation of said motor and means for operating said switch, including a pair of operating arms operated by different agencies, an arm for operating said switch and a differential gear operably connecting said arms.

1,663,494. DRIVING MECHANISM FOR WASHING MACHINES. HARRY J. CRISSM, Burlington, Iowa, assignor to Clarinda Manufacturing Company, Clarinda, Iowa, a Corporation of Iowa. Filed Feb. 26, 1927. Serial No. 171,197. 3 Claims. (Cl. 74—14.)



1. The combination with a support having a fixed member and a movable member, of a driving shaft arranged for rotation on said fixed member, hinge members fixed to the movable support and having bearings on said driving shaft, a housing fixed to said movable support and extending across and at right angles to said driving shaft, a bearing block arranged for rotation in said housing, an agitator shaft arranged for rotation with and for sliding movement relative to said bearing block and extending through said movable support, a bevel gear arranged for rotation in said housing, a second bevel gear feathered on said driving shaft and adapted to be brought into operative engagement with the first mentioned bevel gear, the first mentioned bevel gear having a wrist pin on its face, a rack bar pivoted on said wrist pin, and a pinion on said bearing block meshing with and adapted to be operated by said rack bar, the housing and members connected therewith being movable through an arc with said movable support on the axis of said driving shaft.

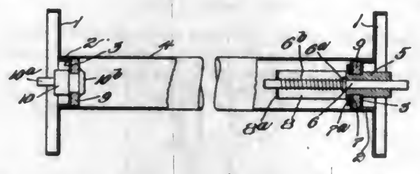
1,663,495. FEED MILL. JAMES A. DAY, Knoxville, Tenn., assignor to O. B. Wise, Knoxville, Tenn. Filed Feb. 26, 1926. Serial No. 90,948. 4 Claims. (Cl. 83—9.)



1. In a grinding mill having a driven shaft, a plurality of supporting elements mounted on the shaft and having alined openings, and a rod extending through the openings, the combination of material contact and grinding disks pivotally and eccentrically mounted upon said rod and having annular series of teeth for engaging the material, each tooth having one end edge arranged substantially radially of the disk and the outer edge of each tooth extending diagonally inwardly, said material contact and grinding disks being urged outwardly by centrifugal force, and spacing members mounted upon said shaft and between said supporting elements for spacing the same and said spacing members being positioned to engage said disks for limiting the pivotal movement of said disks.

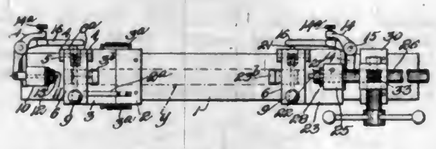
1,663,496. METHOD AND APPARATUS FOR LAYING UP CLOTH. JOSEPH EBENHART, New York, N. Y., assignor of one-half to Harry J. Silverman, New York, N. Y. Filed Jan. 30, 1926. Serial No. 85,067. 5 Claims. (Cl. 270—61.)

1. An apparatus of the class described comprising a frame carrying a plurality of suspension pins and means for elevating and lowering said frame with a parallel motion.



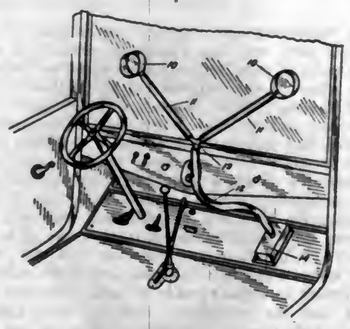
1,663,497. METHOD OF PREVENTING OXIDATION OF METAL PIPE WHILE COOLING. BENJAMIN P. HAZELTINE, Wheeling, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Apr. 7, 1926. Serial No. 100,866. 3 Claims. (Cl. 148—116.)

1. The method of handling metal pipe to prevent excessive oxidation while cooling, which consists in conveying the heated pipe to and through an enclosed chamber from which atmospheric air is excluded, and maintaining said pipe in the non-oxidizing atmosphere of said chamber while cooling it to a point below that at which oxidation occurs, said atmosphere being created by steam within said chamber.



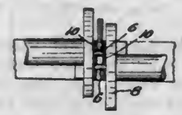
1,663,498. YARN SPOOL. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 15, 1927. Serial No. 168,824. 4 Claims. (Cl. 242—118.)

1. In a yarn spool, the combination with a tubular barrel, an end head having an interior annular hub portion with an inturned centrally perforated flange, an axially disposed longitudinally bored gudgeon having its inner end portion reduced to form a neck fitting into the aperture in said flange, a spring pressed pintle slidable in said bore, an attaching member also surrounding the inner end of the gudgeon and having peripheral



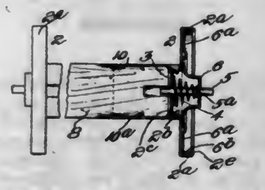
laterally offset wings, a thrust member having at its outer end detachable locking engagement with said wings and having a transverse portion arranged to form a seat for sustaining the inner end of the pintle-pressing spring.

1,663,499. MACHINE FOR AFFIXING FERRULES TO WOODEN ROLLERS OR THE LIKE. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 11, 1927. Serial No. 182,763. 14 Claims. (Cl. 29—84.)



1. In a machine for applying ferrules to wooden rollers, the combination with a supporting bed-plate, separable die-carrying jaws mounted in axial alignment, ferrule-supporting abutments mounted in coaxial alignment with said die-carrying jaws, and means for forcing one abutment and its associated jaws toward the other and thereby force the ferrules over the opposite ends of an interposed roller.

1,663,500. CLEAR-VISION DEVICE FOR AUTOMOBILE WINDSHIELDS. EDWARD A. KROH, Stella, Nebr., assignor of one-half to L. L. Poe, Lincoln, Nebr. Filed Mar. 24, 1927. Serial No. 178,069. 2 Claims. (Cl. 20—40.5.)



1. A clear vision device for automobile windshields including a frame member, means for conducting heated air to the interior of said frame member, and a window in a side of said frame member, said means for conducting heated air being adapted to yieldably hold said frame member in intimate contact with the windshield of an automobile whereby the heated air will be forced out at the edge of said frame member contacting with the windshield.

1,663,501. TUBE FRAME. CHARLES LEA, Milton, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 24, 1926. Serial No. 104,317. 4 Claims. (Cl. 139—10.)

1. In a tube frame for tuft-weaving, the combination with a longitudinal carrier-bar, a plurality of longitudinally arranged spools rotatably journaled above the tube frame with the adjacent journals of adjacent spools disposed in transversely offset planes to permit the journals to lap by each other.

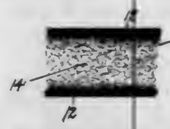
1,663,502. YARN SPOOL FOR TUBE FRAMES. CHARLES LEA, Milton, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 15, 1927. Serial No. 168,822. 5 Claims. (Cl. 242—124.)

1. A yarn spool comprising a substantially cylindrical barrel, an end head having an interior annular flange fitting inside the hollow end portion of said barrel, separate inner and outer bearing members arranged in said end head in axially spaced relation, one of said members being interiorly cupped to increase the axial distance between the bearing members, a bearing pintle slidably supported in axial position by said spaced bearing members, and a spring arranged between the two bearing members acting to yieldingly force the pin to its outer position.

1,663,503. PROCESS OF MAKING STRUCTURAL INSULATING BOARDS OF EXPLODED LIGNO-CELLULOSE FIBER. WILLIAM H. MASON, Laurel, Miss., assignor to Mason Fibre Company, Laurel, Miss., a Corporation of Delaware. Filed June 19, 1925. Serial No. 38,356. 3 Claims. (Cl. 92—1.)

The process of making structural insulating board, which consists in exploding ligno-cellulose material from pressures in excess of 275# per square inch, whereby fibrated material of graduated fineness is obtained well adapted for the production of insulating board, forming into the sheet form in hot water, passing through press rolls and drying.

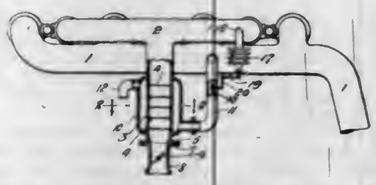
1,663,504. PRESS-DRIED STRUCTURAL INSULATING BOARD AND PROCESS OF MAKING SAME. WILLIAM H. MASON, Laurel, Miss., assignor to Mason Fibre Company, Laurel, Miss., a Corporation of Delaware. Filed Sept. 18, 1925. Serial No. 57,251. 5 Claims. (Cl. 92—8.)



1. An integral, stiff, strong, structural insulating board, made from ligno-cellulose fiber exploded from under high pressure, and containing at least a greater

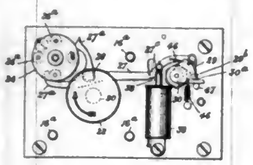
part of its original lignins, dried under heat and pressure, and which, while porous throughout, comprises an inner portion of relatively high porosity, and denser, harder and stronger surface portions of relatively lower porosity enclosing said inner portion.

1,663,505. HARD GRAINLESS FIBER PRODUCTS AND PROCESS OF MAKING SAME. WILLIAM H. MASON, Laurel, Miss., assignor to Mason Fibre Company, Laurel, Miss., a Corporation of Delaware. Filed Sept. 18, 1925. Serial No. 57,252. 26 Claims. (Cl. 92—54.)



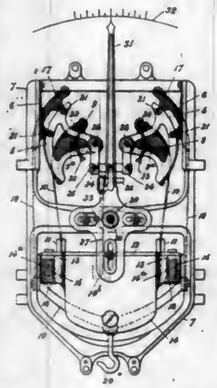
1. An article of manufacture consisting of a coherent, grainless, hard, stiff and strong body of wood or woody material which had been disintegrated into substantially fibrous state, said body being denser than, and comprising practically all the substance of, the original or woody material, and practically completely freed from moisture in making.

1,663,506. INTEGRAL INSULATING BOARD WITH HARD WELDED SURFACES. WILLIAM H. MASON, Laurel, Miss., assignor to Mason Fibre Company, Laurel Miss., a Corporation of Delaware. Filed Mar. 1, 1926. Serial No. 91,447. 7 Claims. (Cl. 92—38.)



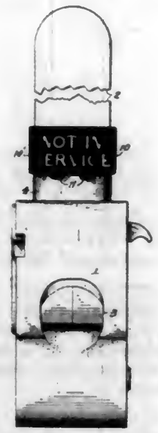
1. An integral fiber product comprising wood or woody material which had been disintegrated into substantially fibrous state and containing practically all the original wood or woody material, said product comprising a dense, non-porous portion of material thickness and high strength in which the fibers are permanently coalesced together under heat and pressure, and an adjacent light porous portion integral with the first-named portion and formed from the same body of fiber.

1,663,507. PROCESS OF PREPARING A DRY GASEOUS FUEL MIXTURE FOR INTERNAL-COMBUSTION ENGINES. CHARLES E. PARSONS, Englewood, N. J., assignor to William P. Deppé, New York, N. Y. Filed Aug. 14, 1926. Serial No. 129,193. 8 Claims. (Cl. 48—180.)



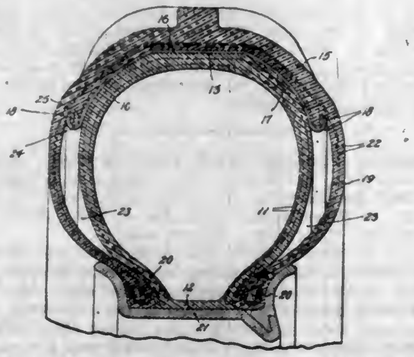
1. In an internal combustion engine, the method of producing a homogenous dry gaseous mixture of liquid fuels and air by equilibrium vaporization during the operation of the engine, which comprises impregnating a moving stream of air with liquid fuel particles in predetermined ratio to form the mixture, successively filming entrained liquid fuel particles in contiguous films transversely of the mixture stream, heating successively formed films while maintaining the fuel vapors in contact therewith until complete vaporization is effected under equilibrium conditions, the amount of heat applied being such that the temperature of the resulting dry gaseous mixture is not less than the temperature for complete equilibrium vaporization of the fuels in the ratio involved.

1,663,508. COIN-FREED DELIVERY MECHANISM. LESLIE CLIFFORD BRADLEY, Birmingham, England, assignor to W. & T. Avery Limited, Birmingham, England. Filed Mar. 18, 1926, Serial No. 95,743, and in Great Britain Mar. 23, 1925. 5 Claims. (Cl. 194—22.)



5. A coin freed delivery mechanism comprising a spring operated shaft for actuating a dispensing means, a spur wheel adapted to be driven from said shaft, an escapement wheel adapted to be driven from said spur wheel, stops arranged at 90 degrees apart on said escapement wheel, an escapement lever adapted to co-operate with said escapement wheel, a coin chute, a trip lever an arm whereof is disposed within said coin chute, means connected with said trip lever for releasing the escapement lever upon the insertion of a coin, and means for denoting the number of packets remaining or extracted from the machine.

1,663,509. WEIGHING APPARATUS. WILLIAM TIMSON, Birmingham, England, assignor to W. & T. Avery, Limited, Birmingham, England. Filed Nov. 22, 1926, Serial No. 150,102, and in Great Britain May 19, 1926. 5 Claims. (Cl. 265—70.)

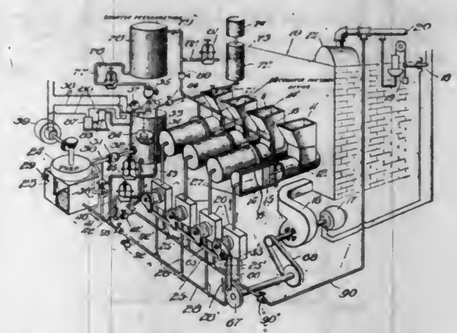


1. An indicating and resistant mechanism for use in connection with weighing apparatus comprising a housing, two pairs of cam-like suspension members disposed on opposite sides of the longitudinal axis of said housing, pairs of flexible ribbons secured at their upper ends to said housing and at their lower ends to the peripheries of the cam-like suspension members, a resistant carrying cam-like member fixed relatively to each pair of cam-like suspension members and having its periphery eccentrically disposed relatively to the peripheries of the cam-like suspension members, a pendulous resistant, a pair of flexible ribbons anchored at their upper ends to the periphery of the resistant carrying cam-like members and at their lower end to said pendulous resistant, a load carrying cam-like member secured relatively to each pair of cam-like suspension members and having its periphery eccentrically disposed relative to the peripheries of the cam-like suspension members, each set of cam-like members being co-axially disposed and arranged on the same side of the vertical plane passing through the common axes, flexible ribbons connected at their upper ends to the load carrying cam-like members, means connected to the lower ends of said last mentioned ribbons for transmitting the pull of the load to said ribbons, an indicating mechanism and means connected with said cam-like members for actuating the said indicating mechanism.

1,663,510. DISPENSING DEVICE. EDWIN G. WESSMAN, Easton, Pa., assignor to Individual Drinking Cup Company, Inc., Easton, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1924. Serial No. 737,863. 12 Claims. (Cl. 312—35.)

1. In a dispensing device, a supporting casing including a socket part, a container having a lower part adapted to detachably seat in said socket part and having an outwardly extending lateral projecting portion, a ring like member adapted to fit over a lower portion of the container and bearing a sign thereupon, said ring like member being adapted to be adjusted relatively to the socket part to position the same with its sign facing to the front of the casing in view or to position the same with is sign out of said position disposed at a different point about the casing, the ring like member having an inwardly extending portion on the lower part thereof adapted to engage between said outwardly projecting portion of the container and the upper portion of the socket part.

1,663,511. AUTOMOBILE TIRE. HIRAM C. ANDERSON, New York, N. Y. Filed May 4, 1926. Serial No. 106,622. 4 Claims. (Cl. 152—18.)



1. The herein described pneumatic tire tread protector adapted to have direct association with the tread portion of said tire, the protector having side portions of flexible but non-elastic structure constituting hangers, the tread portion of the protector including a rigid metallic armor ring having continuous annular side beads whose edges are rolled closely upon themselves and serve to maintain at all times said hangers in spaced relation to the sides of the tire, forming constant lateral air cushions between the hangers and the tire.

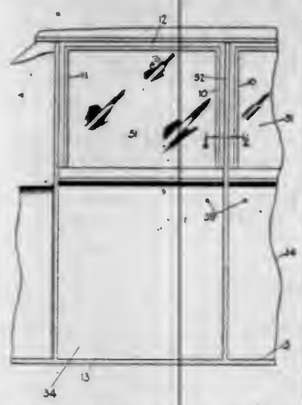
1,663,512. PROPELLER. LOUIS BREGUET, Paris, France, assignor to Societe Anonyme des Ateliers d'Aviation Louis Breguet, Paris, France, a Company of France. Filed Dec. 17, 1927, Serial No. 240,853, and in France Sept. 1, 1926. 5 Claims. (Cl. 170—159.)

1. A propeller blade in which the cubical content of the leading edge portion is of greater specific gravity than that of the remaining portion.

1,663,513. RAM DRIVE FOR UNDERFEED STOKERS. CURTIS L. HOWSE, Detroit, Mich., assignor, by mesne assignments, to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 2, 1922. Serial No. 540,646. 4 Claims. (Cl. 60—52.)

1. In a driving system for stoker rams, the combination with a plurality of rams, of respective reciprocating engines therefor, means including a hydraulic pump and a storage tank to serve all of said rams for developing engine-operating high pressure, high pressure connections between said tank and one end only of each said engine and including for each said engine an automatic controlling valve, each said valve being operable to connect said end only of its engine with the high pressure and alternately to relieve pressure therein, means for operating said valves, settable individually as to periodicity of operation of each said valve, and means independent of said valves for supplying lower pressure to the other end of each engine for effecting its return stroke when the high pressure is relieved as aforesaid.

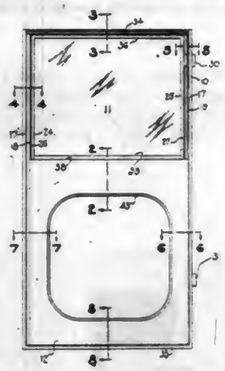
1,663,514. AUTOMOBILE DOOR. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 20, 1921. Serial No. 508,943. 24 Claims. (Cl. 296—44.)



1. A door for automobiles comprising a metallic frame having top and side members, said side members being provided with lateral flanges, and a sheet-metal panel, having a window opening in its upper portion, and having

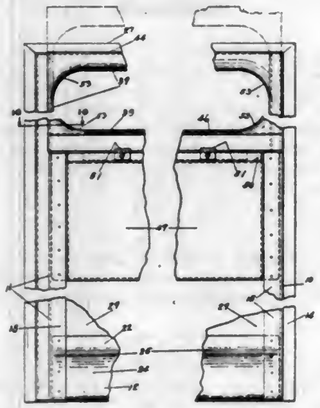
its upper edge bent to form an angle, said panel being applied to said frame and having its side edges bent over said flanges, the angle portion at the upper edge of said panel being spaced from the top member of the frame.

11. A door for vehicle bodies comprising a hinge rail of channel section, a channel-section reinforcing member positioned within the channel of the rail, and a hinge member secured to the reinforcing member and rail.



1,663,515. PRESSED-METAL SEDAN DOOR. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1924. Serial No. 738,783. 21 Claims. (Cl. 296—44.)

10. A top rail structure for the door of closed vehicle bodies comprising a main rail body formed with a shoulder adapted to provide the outer side wall of a glass receiving channel, together with an auxiliary member removably secured to said main body and forming the inner side wall and bottom of the glass receiving channel.

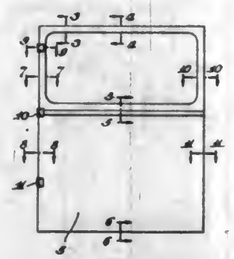


1,663,516. DOOR FOR AUTOMOBILE BODIES. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 17, 1925. Serial No. 50,599. 9 Claims. (Cl. 296—44.)

1. A door rail for closed body vehicles comprising a lower section formed integrally with the inner panel of the door, and having a laterally-extending flange thereon constituting the lower outer over-lap of the door, and an upper section of substantially angle section integrally joined to said lower section, said upper section having

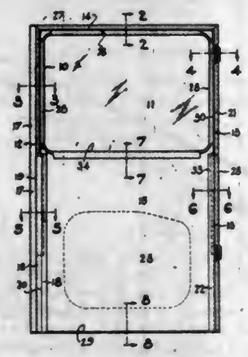
a laterally-extending flange in vertical alignment with said first mentioned laterally-extending flange to form therewith the outer over-lap of the door.

1,663,517. DOOR CONSTRUCTION. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 14, 1925. Serial No. 69,012. 17 Claims. (Cl. 296—44.)



1. In combination, a window frame for closed vehicle bodies, a removable one piece glass retaining frame forming a closed figure, and interengaging means on said frames for effecting an interlocking engagement therebetween by relative movement of the frames in the plane of the window.

1,663,518. PRESSED-METAL VEHICLE DOOR. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1927. Serial No. 159,828. 11 Claims. (Cl. 296—44.)

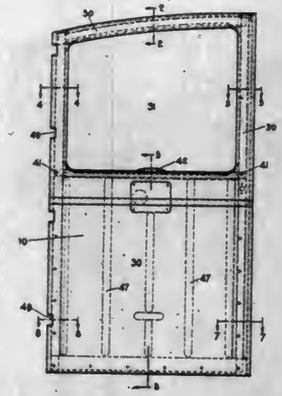


1. In a pressed metal door construction for automobile bodies, a side rail having transversely-extending inward off-sets arranged in spaced vertical relationship and connected together by a portion of the rail which is in the same plane as those portions thereof above and below the offsets whereby a hinge bracket may be arranged interiorly of the rail between the spaced offsets.

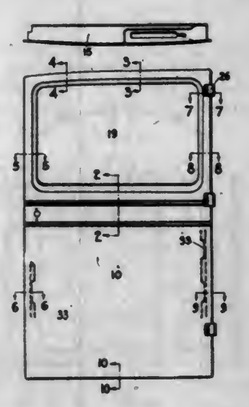
4. In a pressed metal door construction for automobile bodies, side and top rails of substantially Z-shape having longitudinally-extending inward offsets formed therein substantially equal in depth to the width of the inner arm of the rails above the belt line of the door.

6. In a pressed metal door construction for automobile bodies, a substantially Z-shaped top rail having its inner arm upwardly and inwardly flanged adjacent one end thereof, and means cooperating with said upwardly and inwardly flanged portion for slidably housing a door stop mechanism.

1,663,519. DOOR FOR AUTOMOBILE BODIES. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 12, 1926. Serial No. 80,797. 5 Claims. (Cl. 296—44.)



1. In a pressed metal automobile door, in combination, a pair of pressed metal side rails, inwardly-extending integral tabs at the tops of said side rails, and a top rail having its ends seated under and secured to said inwardly-extending tabs.

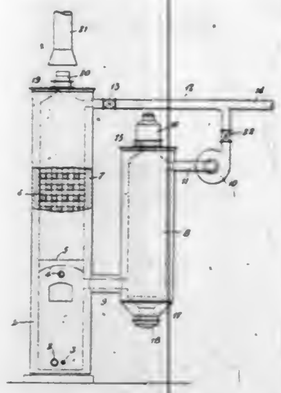


3. A rail for doors of closed vehicle bodies comprising a pressed metal member extending the length of the door and having a transverse web portion forming the jamb face of the door, said web portion being offset intermediate its edges, the offset being substantially less than in its upper portion at the side of the window opening than in the lower portion.

1,663,520. PRESSED-METAL VEHICLE DOOR. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1927. Serial No. 170,146. 7 Claims. (Cl. 296—44.)

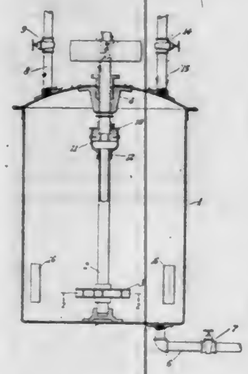
1. In a pressed metal door structure, a pair of vertically extending side rails of substantially outwardly presenting channel formation, the inner walls of said rails being provided with laterally extending flanges lying substantially in the same vertical plane, a pair of members secured to the inner walls of said channels and provided with flanges spaced from but parallelling said first mentioned flanges, said parallelly arranged flanges constituting the side walls of a pair of glass run channels in the lower region of the door below a window opening therein.

1,663,521. PRESSED-METAL VEHICLE DOOR. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 5, 1927. Serial No. 172,937. 6 Claims. (Cl. 296—44.)



1. In an automobile door construction, a jamb rail of substantially double Z cross section extending substantially the full length of the door, the inner branch of said rail above the belt line of the door being folded back upon the web of said rail, a molding member overlying the inner surface of the folded back portion of said rail, and means for detachably securing said mmbr in position.

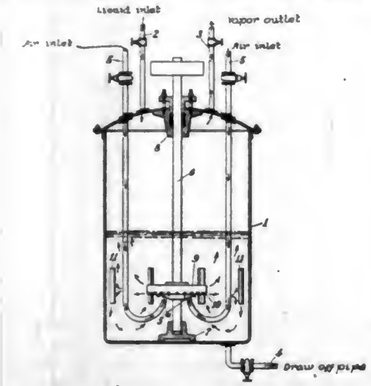
1,663,522. CARBONIZING AND GAS-MAKING APPARATUS. PIERRE PLANTINGA, Cleveland, Ohio; The Cleveland Trust Company executor of said Pierre Plantinga, deceased. Filed Dec. 21, 1922. Serial No. 608,203. 3 Claims. (Cl. 202—4.)



1. A carbonizing and gas-making apparatus comprising a heat-absorbing and transmitting element; heat-generating means including a gas-producer, beneath and connected with said element; a primary-air inlet for the

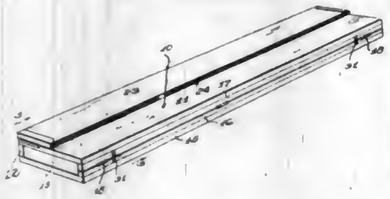
lower part of the producer and separate means for admitting steam to such producer part; a secondary air inlet for the upper part of said producer; a carbonizing

chamber separate from said producer and said element but communicating with both of same; and means for effecting a circulation of gases through said element and carbonizing chamber.



1,663,523. OXIDATION OF HYDROCARBON OILS. EBENEZER EMMET REID, Baltimore, Md., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 5, 1921. Serial No. 482,592. 14 Claims. (Cl. 196—65.)

10. A process of oxidizing mineral oil which comprises injecting finely divided oxygen containing gas into a heated body of the oil below the surface thereof in streams rotating in excess of a thousand revolutions per minute.

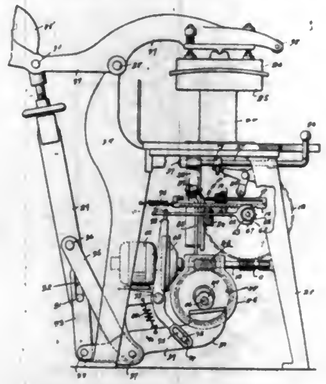


1,663,524. PRODUCTION OF ACIDS. EBENEZER EMMET REID, Baltimore, Md., and CHARLES E. BURKE, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 14, 1925. Serial No. 9,089. 3 Claims. (Cl. 260—116.)

1. The method of producing acids by the oxidation of hydrocarbon oil which comprises stirring and distributing the oil at high speed and at a temperature substantially below 300° C. and meanwhile introducing oxygen-containing gas below the surface of the oil and in close relation to the centre of distribution of the oil to thereby effect high dissemination of the gas, and cause the travelling oil to entrain the gas, thereby effecting intimate mixture of the oil and gas; the stirring being at a speed to pro-

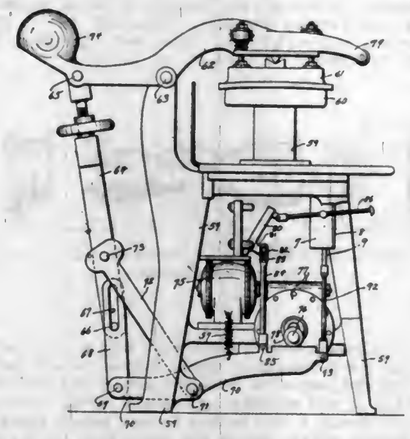
duce bubbles of substantially the size obtainable by introducing the gas with a Witt-type stirrer of 1½ inches diameter rotated at a speed of 2000 to 4000 R. P. M.

1,663,525. COMBINED FOLDING BOX AND PASTE BOARD. JOHN W. ROUNDS, Boscobel, Wis., assignor of one-half to J. W. Anderson, Boscobel, Wis. Filed July 19, 1927. Serial No. 206,928. 1 Claim. (Cl. 304—38.)



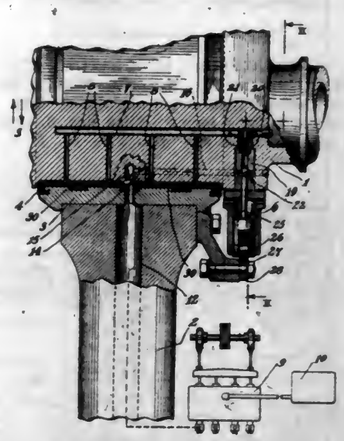
A combined folding box and paste board, comprising a box member including a bottom strip and a side rigidly attached to the bottom strip at the outer edge of the bottom strip and serving to reinforce such edge and render it rigid against vertical flexing, a cover for the box member, a side strip attached to the cover at the inner edge thereof, a second side strip attached to the bottom strip of the box member adjacent to the inner edge of the same, hinges connecting the first and second named side strips so that they are superposed when the cover is in the closed position, said side being of substantially the same width as the combined width of the superposed side strips and extending throughout the entire interior depth of the box member whereby it has the maximum rigidity for the given interior receiving capacity of the box member, said side strips having transverse notches arranged near their ends and extending through their free faces, said notches being adapted to receive horizontal top bars of trestles, said side extending downwardly below the side strips when the device is used as a paste board and serving as guide means for the horizontal bars of the trestles.

1,663,526. PRESS TIMER. HART A. STODDARD, Saugatuck, Conn., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed May 17, 1924. Serial No. 714,130. 15 Claims. (Cl. 68—9.)



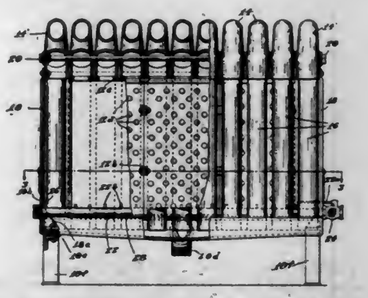
1. A pressing machine comprising in combination, cooperating pressing members between which the work is treated, means for closing the press, motor means to

produce high compression between the pressing members, mechanism causing the press to remain at rest under pressure while permitting the motor to continue in operation, a press opening means, a connection established between the mechanism and the press opening means whereby the press opening means is set in operation when the press goes under high compression, a graduated



member driven by the motor means after the press closes, adjustable means on the graduated member to actuate the press opening means, whereby the press is caused to automatically open at any selected predetermined time, and means cooperating with the graduated member for initiating the operation of the press opening means.

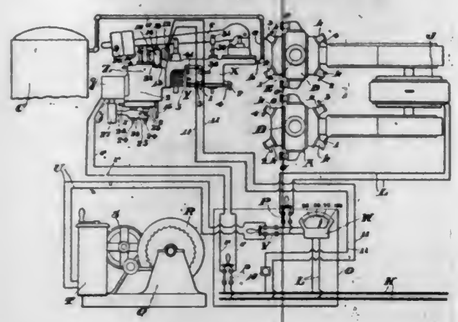
1,663,527. PRESS TIMER. HART A. STODDARD, Saugatuck, Conn., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Feb. 6, 1925. Serial No. 7,255. 10 Claims. (Cl. 68—9.)



1. A pressing machine comprising in combination, cooperating pressing jaws, means for closing the jaws, motor means cooperating with the closing means to produce jaw compression, starting means to initiate the motor means, means to actuate the starting means to stop the motor leaving the press under compression, timer means to automatically start the motor means at the end of a predetermined pressing period to release the compression, and means to again stop the motor means at the end of the releasing operation.

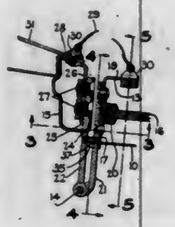
1,663,528. BEARING. ADOLF TACCHELLA, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Co., St. Louis, Mo., a Corporation of Missouri. Filed May 2, 1921. Serial No. 465,975. 9 Claims. (Cl. 184—27.)

1. Lubricating means for a bearing comprising a source of lubricant, a lubricant pump mounted on a moving member of said bearing and therewith moving with respect to said lubricant source, means providing a lubricant passageway continuously connecting said source to the pump, said means including a moving joint to accommodate the movement of the pump with respect to the source, and means for operating the pump to deliver lubricant to the bearing.



1,663,529. RADIATOR. GEORGE S. BARROWS, Providence, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed June 7, 1926. Serial No. 114,160. 5 Claims. (Cl. 126—91.)

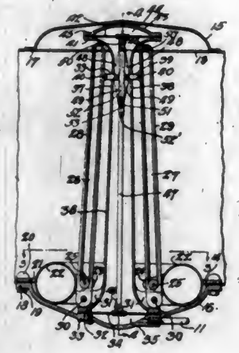
1. A local combustion cast metal radiator comprising a base having a pair of parallel horizontal heat-radiating discharge manifolds, each extending integrally from end to end of the radiator with a row of top openings, a burner extending horizontally between the manifolds and shielded thereby; plates rising from said base, from the sides of said manifolds which are adjacent to each other, extending substantially the length of the base, each with inward exposure, forming a unitary intake and combustion chamber above the burner and each with outward exposure to room atmosphere constituting a heat-radiating shielded surface; tubular headers crossing above said chamber with underneath mid-openings arranged to receive products from the combustion chamber, and with underneath side-openings to discharge same downward



above the manifolds; and pipes extending between the said underneath side-openings of the headers and the top openings of the manifolds, comprising passages for said products and shields for said exposed plates; there being means for discharge from the base manifolds.

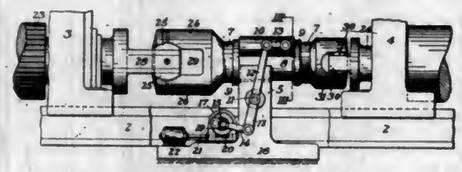
1,663,530. COMPRESSOR REGULATOR AND UNLOADER. CHESTER W. METTLER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 3, 1925. Serial No. 66,492. 6 Claims. (Cl. 230—4.)

1. In an inter-control system, the combination of two power driven devices and pneumatic means for decreasing the power consumption of one of said devices in anticipation of and only during the acceleration period of the other said device.



1,663,531. DOOR MOUNTING. EDWARD J. DEISLEY, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 11, 1924. Serial No. 755,148. 12 Claims. (Cl. 296—44.)

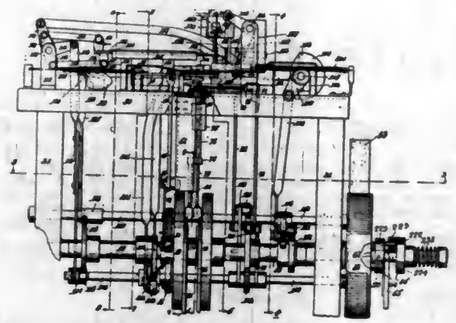
1. A pressed metal door mounting comprising a post having a mounting face provided with an inward offset, a door having a metal mounting rail of simple web section having a plane inner face and a glass run mounted directly on the plane face of said web section, and a hinge interconnecting the post and said mounting rail having one wing secured to the post at said offset and the other wing secured to the exterior face of the web of said mounting rail and entering said offset when the door is closed.



1,663,532. OPERATING MEANS FOR LIQUID-HEIGHT INDICATORS. THOMAS M. EYNON, Philadelphia, Pa. Filed Mar. 19, 1921. Serial No. 453,839. 18 Claims. (Cl. 73—82.)

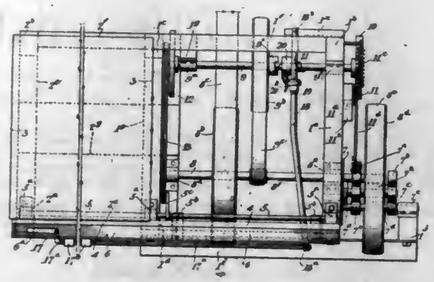
1. In an indicating device for gasoline tanks, a tank, a fluid operated indicator, a diaphragm within the tank, a casing at one side of the diaphragm closing a space adjacent thereto, thus shut off from the remainder of the tank, means for connecting the space with the indicator, a float, slotted arms with which the float engages and connections between the arms and diaphragm including a toggle whereby lifting of the float causes movement of the diaphragm to contract the space and lowering of the float causes movement of the diaphragm to expand the space.

9. In an indicating device for gasoline tanks, a tank, a vertically movable float therein, a plurality of swinging arms each pivoted at one end and engaged by the float to swing toward or away from the float centre with vertical movement of the float, a diaphragm, a fluid indicator, and means controlled by the vertical movement of the float and swinging movement of the said arms to operate the diaphragm with the movement of the float and arms and indicator-actuating means controlled by the movement of the diaphragm.



1,663,533. ROLLING-MILL DRIVING SPINDLE. LANE JOHNSON, Pittsburgh, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1924. Serial No. 737,277. 7 Claims. (Cl. 64—91.)

1. In a rolling mill, in combination with a pinion member and a roll member, a spindle coupled to said pinion and roll and adapted to be shifted axially to uncouple it from one of said members, said spindle having a bearing surface thereon, a fixed bearing for said spindle engaging the bearing surface and of less width than the bearing surface, and means for shifting said spindle axially in said bearing, substantially as described.



1,663,534. FRINGE-TASSELING MACHINE. ROBERT E. WALLISER, Chicago, Ill. Filed Feb. 9, 1926. Serial No. 87,038. 57 Claims. (Cl. 28—2.)

1. A machine of the class described including an open collar for sustaining a heading loop in spread condition with a portion thereof exposed; co-operating mechanical means for automatically passing tassel material through said spread loop; means comprising co-operating fingers arranged to operate upon the tassel material for folding

it over upon the exposed portion of said loop; and instrumentality for securing together the folded over portions of the tassel material, substantially as described.

1,663,535. AUTOMATIC CORE CUTTER AND LAYING-UP MACHINE. HAROLD L. BRANDAU, Muscatine, Iowa, assignor to Huttig Manufacturing Co., Muscatine, Iowa, a Corporation of Iowa. Filed Aug. 29, 1927. Serial No. 216,089. 29 Claims. (Cl. 144—2.)

1. In a core block laying-up machine; a core board; a trough movably mounted adjacent the core board; means for feeding aligned core blocks into the trough; and means for automatically moving the trough when filled to deposit the row of blocks upon the core board.

Patents Nos. 1,663,536 to 1,664,390.

THE OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 368—No. 4. TUESDAY, MARCH 27, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notice.

U. S. PATENT OFFICE, *Washington, D. C., Mar. 16, 1928.*

Richard Raines, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Thomas A. Bowers, 25 Seaview Apartments, Sheepshead Bay, Brooklyn, N. Y., and patent granted December 21, 1926, No. 1,611,677, to Richard Raines, 441 East 182d Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Raines at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Raines, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

AMENDMENT TO RULES OF PRACTICE.

(Order No. 2,984.)

Effective January 1, 1927, Rule 73 is amended by inserting after paragraph 1 a paragraph to read as follows:

"The original numbering of the claims must be preserved throughout the prosecution. When the application is ready for allowance the Examiner will renumber the claims consecutively in such order as requested by the applicant or as indicated when the claims were first presented. Where claims are added by amendment or substituted for canceled claims they must be numbered by the applicant consecutively, beginning with the number next following the highest numbered claim previously in the case. Provided, however, that where a substitute claim either rewritten to include amendments already made, or to take the place of another claim, is presented and the applicant desires it to finally appear in the relative position occupied by the canceled claim, the substitute claim will be given the number it would have if it were an added claim, and the number will be followed by a directing clause as, for example: Claim 16 (to take the place of claim 3), or claim 24 (to follow claim 2). When, by subsequent amendment, still another claim is substituted for a substitute claim already presented, such last presented claim should be given the number following the highest numbered claim previously in the case and this should be followed by such a directing clause as will indicate the desired final position of the claim with respect to the other claims."

November 1, 1926.

THOMAS E. ROBERTSON,
Commissioner.

This amended rule will apply to all amendments filed after January 1, 1927, whether the applications were filed before or after that date.

Applicants and attorneys are requested to assist in carrying out the simplified system contemplated by the rule with the least possible confusion by carefully observing its provisions in amending their cases.

Condition of Applications Under Examination at Close of Business March 16, 1928.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 95,400; Trade-Mark Division, 2,160. Oldest new case, June 8, 1927; oldest amended, June 18, 1927. DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE ROSS.

Decided October 26, 1928.

1. PATENTABILITY—INVENTION—PROCESS OF MANUFACTURING PAINTS.

A process of manufacturing paints for use in the arts by so selecting colors that mixing equal quantities of any two will give a specified other color *Held* noninventive, being a mere carrying forward of the ideas disclosed in the prior art.

2. SAME—COMMERCIAL USE—RELEVANT ONLY WHERE QUESTION OF INVENTION IS DOUBTFUL.

The alleged improvement of the invention from the view of economy and its favorable reception and wide adoption by the trade would be persuasive, if any reasonable doubt existed, but "after a review of the art here cited, there seems to be nothing new in the process."

[Affirmed by Court of Appeals of District of Columbia. See 368 O. G. 710.]

APPEAL from Examiners in Chief.

Application for patent for color substances and process of producing same.

Mr. Edward R. Alexander and *Mr. Ray S. Gehr* for the applicant.

KINNAN, *Acting Commissioner:*

The applicant has appealed from the decision of the Examiners in Chief affirming that of the Primary Examiner denying patentability to claims 1 to 12, inclusive, and also from the decision of the Examiners in Chief denying patentability to claims 13 to 20, inclusive, which were submitted for their consideration.

In view of the state of the art it is not believed there is room for anything like 20 claims in this case. A smaller number could be drawn which would readily cover all that appellant contends is new and patentable.

The appellant has now submitted five claims which he requests be substituted for the claims reviewed by the Examiners in Chief. While it is thought that, ordinarily, an applicant should present the claims in the final form in which he desires them to the Primary Examiner in order that he may pass upon them and the appellate tribunals may have the benefit of his expert judgment, yet, in the instant case, it is believed these five proposed claims should be admitted and considered. The appeal, in consequence, as to the 20 claims is deemed withdrawn.

Claim 1 is fairly representative of the group of five proposed claims and is as follows:

1. The process of manufacturing paints for use in the arts which consists in dividing the colors in use into two groups, one of which comprises the comparatively pure colors so used, while the other comprises the colors so used having lower chrome values, separately mixing the pigments comprising the several colors of the smaller group with liquid vehicle producing paints ready for use, packaging equal measures of the several liquid paints thus manufactured and thereafter mixing the contents of pairs of said packages to produce predetermined members of said larger group.

The references relied upon are: Jennings's "Paint and Color Mixing," fifth edition, 1915, Plate IX, pages 236, 237, publication of Anti-Kalsomine Company, Grand Rapids, Mich. (a copy of this publication is to be found in the Patent Office Library); Leggett, 173,408, February 15, 1876; Jorgensen, 709,328, September 16, 1902.

The claims are directed to a process of stocking and dispensing oil paints so that it becomes necessary for the dealer to carry in stock only a limited number of colors. These stock colors are accompanied by a limited number of ready-mixed paints of primary colors. These stock or primary colors may be used as paint without change. There is, however, a chart furnished with these colors which shows a large number of different secondary colors which may be obtained by mixing equal quantities of two of the stock colors, to the end that the examiner can select from the chart the tint desired and if it is not a stock color it can be obtained by mixing two of the stock colors. Obviously, if still other shades than those found on the chart were desired, the ratio of the final mixture could be altered so that the ratio could be other than equal—might well be two to one, or four to one, and so on indefinitely. Appellant, however, is restricting his process to the production of such colors as may be obtained from mixing equal quantities from two of the primary or stock colors.

There is no allegation that the paints have any novel ingredients, are made in any novel way, or differ from ready-mixed paints of the prior art. Cans of paint mixed ready for use, of many colors, accompanied by a suitable chart on which appear the colors kept in stock, have been on sale and in use many years preceding the filing of appellant's application. It is a matter of common knowledge among painters as well as many users that two cans of such ready-mixed paint may be mixed together in equal proportions, and a third color differing from either of the original colors obtained. Having made such a mixture once, as any painter would well understand he could do, and obtained a certain color, clearly enough he could produce that color again.

[1] The general idea involved in appellant's process is found in the Jennings publication. In such is disclosed the plan of dividing the colors into two groups, one the primary, composed of blue, yellow, red, and white, and the secondary group being composed of 37 other colors or shades obtainable by combining the primary colors as directed on the accompanying chart. At least three of these secondary colors are obtained by mixing *equal* quantities of two primary colors. To so select all the primary colors that each of the secondary colors is made by combining equal quantities of two of the primary colors is a mere carrying forward of the main idea, a mere refinement of the disclosure of Jennings. It can not be seen that such carrying forward of this old idea involves invention. With the calcimine

which Jennings discloses each primary color may be used alone just as with appellant's primary paint colors. Jennings uses a powder, it is true, and mixes it with the liquid—water—when he wishes to use it, as this is the way in which calcimine is used in practice. Appellant, in using a paint, mixes it with the liquid vehicle, oil, at the factory, but these matters are well understood in connection with the different materials. It does not seem there is merit in appellant's claims over the disclosure of Jennings.

Appellant's process is also anticipated by either Leggett or Jorgensen. These patents show the use of oil paints which will readily mix. While Leggett does not use equal proportions, there would be no invention in so selecting the amounts of the primary colors to produce the secondary colors, in view of the suggestion of Jennings. Jorgensen must necessarily use equal portions of the primary group to produce the secondary group. The contentions of appellant that equal quantities of his liquid paints would readily mix, as necessary, finds full confirmation and anticipation in the above references.

[2] Appellant has set forth the importance, from the view of commercial economy, of the method claimed, and its favorable reception and wide adoption by the trade. These facts would be persuasive if any reasonable doubt existed as to the want of novelty in the process; but after a review of the art here cited there seems to be nothing new in the process. It must be presumed appellant's commercial success is mainly due to its large resources, initiative in introducing its process, and the wide existing trade it had already established among retailers of paint.

The appeal as to claims 1 to 20 is dismissed. It is held substitute claims 1 to 5, which have been admitted, are unpatentable.

Court of Appeals of the District of Columbia.

IN RE ROSS.

No. 1,936. Decided December 6, 1927.

PATENTABILITY—INVENTION—METHOD OF MANUFACTURING PAINTS.

A method of manufacturing paints, the conception of which "involves no more than the preparation of a group of primary colors, each of which, when combined with another in equal parts, produces a secondary color," *Held* lacking in invention over the prior art.

[For Commissioner's decision see 368 O. G. 709.]

APPEAL from Patent Office. Affirmed.

Mr. E. R. Alexander and *Mr. Livingston Gifford* for Ross.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.*:

Appeal from a decision of the Commissioner of Patents refusing five claims in appellant's application for patent. We reproduce claim 1 as illustrative of the group:

1. The process of manufacturing paints for use in the arts which consists in dividing the colors in use into two groups, one of which comprises the comparatively pure colors so used while the other comprises the colors so used having lower chrome values, the several colors of the smaller group with liquid vehicle producing paints ready for use, packaging equal measures of the several liquid paints thus manufactured and thereafter mixing the contents of pairs of said packages to produce predetermined members of said larger group.

Stated in simple terms, appellant's conception involves no more than the preparation of a group of primary colors, each of which, when combined with another in equal parts, produces a secondary color. The Examiner was of the view that the idea was not novel and referred to Jenning's "Paint and Color Mixing," fifth edition, 1915, Plate IX, pages 236, 237. At page 236 is the following:

A practical house painter will readily see another advantage, which is that instead of stocking forty different colours he only has to stock four, including the white, as from these he can so readily obtain all the others.

The Examiner also expressed the view that the omission from appellant's secondary chart of all shades or colors which will not be produced by mixing equal quantities of the two stock colors is a mere matter of experimentation.

The Examiners in Chief and the Commissioner in turn considered and rejected appellant's contentions. Being convinced of the correctness of their reasoning and conclusions, we affirm the decision.

Affirmed.

Court of Appeals of the District of Columbia.

SEXTON MANUFACTURING CO. & SCHNEIDER *v.* CHESTERFIELD SHIRT COMPANY.

No. 2,025. Decided February 6, 1928.

1. TRADE-MARKS—MARK CAN NOT BE TRANSFERRED IN GROSS.

The attempted sale of a mark for which a registration had been obtained, but of which the registrant had made no trade-mark use, unaccompanied by the transfer of any business, confers no rights upon the vendee.

2. SAME—PRIORITY.

Evidence *Held* to establish, as between the parties to the interference, that the C. Co. was the first to adopt and use the mark.

APPEAL from Patent Office. Affirmed.

Mr. S. George Tate and *Mr. T. K. Creighton* for Sexton Manufacturing Co.

Mr. Henry G. Hunt for Chesterfield Shirt Company.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.*:

Appeal from concurrent decisions of the Patent Office tribunals in a trade-mark interference proceeding refusing registration to the Sexton Manufacturing Company of the word "Chesterfield," on the ground of prior adoption and use by the appellee of the same mark on the same class of goods.

Upon the declaration of the interference between the Sexton Company and the Chesterfield Company, the Patent Office discovered that the same word had been registered to Schneider, the filing date of whose application was prior to the earliest date claimed by either the Sexton or the Chesterfield companies. On the record, therefore, neither of these companies was entitled to registration. Thereupon, both companies filed evidence tending to establish abandonment by Schneider of the mark. It is in evidence that Schneider attempted to sell his mark to the Chesterfield Company for $1,000, and that, his offer being refused, he sold it to the Sexton Company.

[1] Patent Office tribunals after a review of the evidence have found that Schneider had made no trade-mark use of the word "Chesterfield"; and that the attempted sale of the mark, unaccompanied by any business, conferred no rights upon the Sexton Company. We concur in this ruling. *Rice-Stix Dry Goods Co.* v. *The Schwarzenbach-Huber Co.*, 247 O. G. 966, 47 App. D. C. 249.

[2] It clearly appears, as found by the Patent Office, that, as between the Chesterfield Company and the Sexton Company, the Chesterfield Company was the first to adopt and use this mark.

The decision is affirmed.

Affirmed.

236,647. Glove silk in the piece. R. H. Macy & Co., Inc., New York, N. Y. Registered December 20, 1927. Canceled March 7, 1928.

237,005. Hair Pomades. Abe Ney, doing business as Primp Chemical Company, Atlanta, Ga. Registered January 3, 1928. Canceled March 7, 1928.

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Mar. 13, 1928.*

John E. Whitmore, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Bourjois, Inc., of No. 35 West 34th Street, New York, N. Y., to effect the cancellation of the trade-mark registration of John E. Whitmore, of 355 East Utica Street, Buffalo, N. Y., No. 98,027, dated June 30, 1914, and the notice of such proceeding sent by registered mail to the said John E. Whitmore at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said John E. Whitmore, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 27, 1928.

[VOL. 368. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

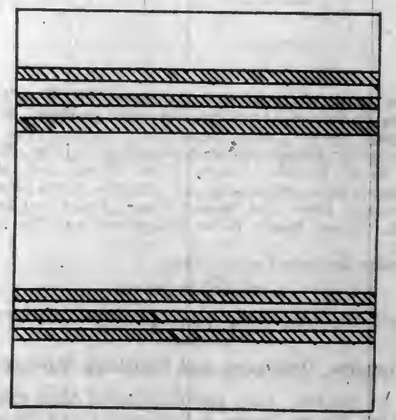
As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 257,526. CELITE PRODUCTS COMPANY, Los Angeles, Calif. Filed Nov. 14, 1927.

SNOW FLOSS



Particular description of goods.—Hydrated Amorphous Silica in Powdered Form.
Claims use since about Feb. 26, 1927.

Ser. No. 257,819. THE SMITH FACING & SUPPLY CO., Cleveland, Ohio. Filed Nov. 19, 1927.

RADIANT FACINGS SINCE 1879

No registration rights are claimed for the word "Facings" apart from the mark as shown in the drawing.
Particular description of goods.—Core Washes, Plumbagos, Core Compounds, Parting Compound, Foundry Molding Coal.
Claims use since 1879.

Ser. No. 259,456. THE NEBRASKA SEED CO., Omaha, Nebr. Filed Dec. 29, 1927.

The drawing is lined to indicate green. The mark consists of three green stripes, one-half inch wide, horizontally displayed on the upper and lower portions of the sack eight inches from the top and bottom and running entirely around the sack. No claim is made to the representation of the sack.

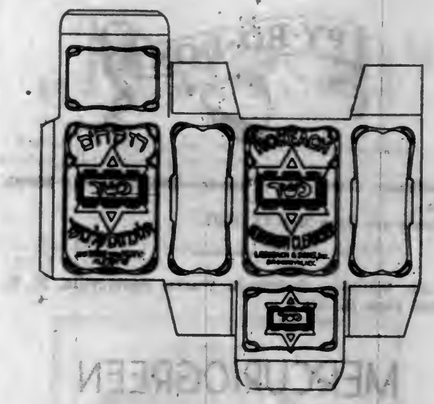
Claims use since about June, 1924.

Ser. No. 259,284. THE GRADY MANUFACTURING COMPANY, Long Island City, N. Y. Filed Dec. 23, 1927.

Particular description of goods.—Metal Polish.

Claims use since about Dec. 1, 1927.



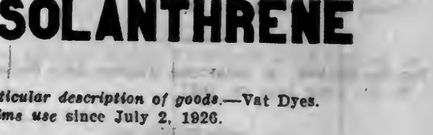
Ser. No. 259,583. RIVERSIDE MANUFACTURING CO., St. Louis, Mo. Filed Dec. 31, 1927.

Particular description of goods.—Neutral Soap Compounds.

Claims use since Jan. 1, 1926.

Ser. No. 260,958. I. ROKEACH & SONS, INC., Brooklyn, N. Y. Filed Jan. 31, 1928.

The translation of the Hebrew words appearing on the drawing are "Rokeach's Kosher Aluminum Cleanser." No claim is made to the representation of the outline of a carton and the words "Kosher Aluminum Cleanser, Brooklyn, N. Y."



Particular description of goods.—Aluminum Cleanser.

Claims use since May 4, 1922.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 237,749. THE NEWPORT COMPANY, Carrollville, Wis. Filed Sept. 25, 1926.

Particular description of goods.—Vat Dyes.

Claims use since July 2, 1926.

Ser. No. 245,012. WILLIAM SCOTT HUNT, Oxford, N. C. Filed Feb. 28, 1927.

The word "Elixir" appearing on the drawing is disclaimed apart from the mark as shown.

Particular description of goods.—Medicinal Preparation for Headache, Colds, and Grippe.

Claims use since June 1, 1926.

Ser. No. 249,865. THE PYRODON CORPORATION, New York, N. Y. Filed June 1, 1927.

PY-RO-DON

Particular description of goods.—Dentifrice and Mouth Wash.
Claims use since May 11, 1927.

Ser. No. 250,585. RALPH B. WAITE, Springville, N. Y. Filed June 15, 1927.

MERCURIOGREEN

Particular description of goods.—Medicament for the Treatment of Gingivitis, Stomatitis, Pyorrhea, Alveolaris, Trench Mouth (Vincent's Infection), Nasal and Throat Infection, Etc.
Claims use since Nov. 15, 1926.

Ser. No. 250,951. ARTHUR JACKSON LENIGER, Danville, Pa. Filed June 9, 1927.

MAC TABLETS

No claim is made to the word "Tablets" apart from the mark shown in the drawing.
Particular description of goods.—Indigestion Tablets.
Claims use since Mar. 8, 1927.

Ser. No. 250,996. E. GRIFFITHS HUGHES, INC., Rochester, N. Y. Filed June 23, 1927.

The conventional lining representing the color blue.
Particular description of goods.—An Aperient and Diuretic in Tablet Form.
Claims use since Jan. 10, 1927.

Ser. No. 251,153. THE SHARPLES SOLVENTS CORPORATION, Philadelphia, Pa. Filed June 25, 1927.

PENT-ACETATE

No claim is made to the exclusive use of the word "Acetate" alone apart from the mark as shown in the drawing.
Particular description of goods.—Amyl Acetate.
Claims use since about Feb. 1, 1927.

Ser. No. 251,500. CHRISTIAN RICHARD AXEL HANSEN, doing business as Renzyme Laboratories Limited, St. Mary's, Ontario, Canada; Toronto, Ontario, Canada; and New York, N. Y. Filed July 5, 1927.

RENZYME

Particular description of goods.—Compound for the Treatment of Indigestion.
Claims use since Jan. 10, 1926.

Ser. No. 253,283. L'OCCYSOL, Grenoble, France. Filed Aug. 10, 1927.

OCCYSOL

Particular description of goods.—A Chemical Product for Destroying Weed or Parasitic Animals.
Claims use since July, 1927.

Ser. No. 255,879. STANLEY WILLIAM TANFIELD, London, England. Filed Oct. 10, 1927.

Particular description of goods.—Laxatives.
Claims use since Aug. 30, 1927.

Ser. No. 255,944. STANLEY WILLIAM TANFIELD, London, England. Filed Oct. 11, 1927.

APPLEDOC

Particular description of goods.—Laxatives.
Claims use since July 25, 1927.

Ser. No. 256,040. GRIGGS, COOPER & CO., St. Paul, Minn. Filed Oct. 13, 1927.

Particular description of goods.—Toilet and Laundry Borax.
Claims use since 1889.

Ser. No. 256,156. DEMETRA D. KALOGERAKOU, Newark, N. J. Filed Oct. 12, 1927.

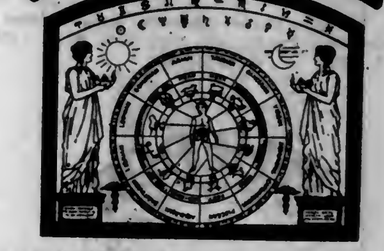
Demitra

The portrait appearing on the drawing is that of applicant.
Particular description of goods.—Medicine for Rheumatism.
Claims use since Mar. 11, 1927.

Ser. No. 256,262. MARTIN REINHARD, doing business as Reinhard & Schmidt, Fabrik chem. pharm. & cosmet. Präparate "Bavaria," Wurzburg, Germany. Filed Oct. 18, 1927.

„Recorsan"

Particular description of goods.—Embrocation for Soothing the Heart, Bath Salts.
Claims use since Feb. 9, 1920.



Ser. No. 258,304. VAUGHAN & MALOOF, Asheville, N. C. Filed Dec. 1, 1927.

The picture is a portrait of Mrs. Solomon Maloof.
Particular description of goods.—Preparation for Use in the External Treatment of Eczema and Other Skin Diseases.
Claims use since Nov. 5, 1927.

Ser. No. 258,358. SYDNEY SMITHLINE, doing business as Esoteric Products Co., New York, N. Y. Filed Dec. 2, 1927.

ESOTERIC

Particular description of goods.—Incense—Namely, Toilet Waters, and Essences Composed of Mixtures of Floral and Other Oils Used for Perfuming Purposes.
Claims use since Dec. 25, 1925.

Ser. No. 258,889. HORACE TANTUM, Nutley, N. J. Filed Dec. 18, 1927.

CAPSOTUM

Particular description of goods.—Mouth Wash Cleansing and Sweetening Powder in Capsule Form.
Claims use since June 10, 1927.

Ser. No. 258,929. EDWARD DOLEZAL, doing business as Ko-Tar Products Company, Cedar Rapids, Iowa. Filed Dec. 12, 1927.

Sani-Cide

Ko-Tar Products Co.

Particular description of goods.—Insecticides.
Claims use since June 1, 1927.

Ser. No. 259,307. ROBERT E. PARRISH, doing business as R. E. Parrish Drug Company, Bennington, Okla. Filed Dec. 23, 1927.

MAGMA-THALEIN

Particular description of goods.—Medicine for the Relief of Dyspepsia, Indigestion, and Stomach Disorders.
Claims use since Sept. 1, 1926.

Ser. No. 259,627. ERNEST ESPOSITO, doing business as Remedor Foot Powder Co., New York, N. Y. Filed Jan. 3, 1928.

REMEDOR
WORLD OF EASE

Particular description of goods.—Powder for Treatment of Foot Ailment.
Claims use since Dec. 1, 1927.

Ser. No. 259,650. JOAN SCHON, New York, N. Y. Filed Jan. 3, 1928.

O-MI-NOZE

Particular description of goods.—Medicinal Oil for the Treatment of Catarrh, Asthma, and La Grippe.
Claims use since Dec. 21, 1927.

Ser. No. 259,829. LEOPOLD WIMMER, doing business as Continental Specialties Manufacturing Company, Muskegon, Mich. Filed Jan. 7, 1928.

RADI-CURE

Particular description of goods.—Automobile Radiator and Boiler Compounds Used as an Antileak Compound.
Claims use since on or about Nov. 1, 1921.

Ser. No. 259,896. SHERMAN L. DAVIS, doing business as Ucoline Products Company, Indianapolis, Ind. Filed Jan. 10, 1928.

Actol

Particular description of goods.—Activated Cod-Liver Oil.
Claims use since about May, 1925.

Ser. No. 259,968. RENWICK T. SENIOR, doing business as Senex Chemical Company, Montgomery, N. Y. Filed Jan. 11, 1928.

Sendal

Particular description of goods.—Perfumes.
Claims use since on or about Oct. 1, 1926.

Ser. No. 260,032. SALOL CHEMICAL CO., Chicago, Ill. Filed Jan. 12, 1928.

Safety Buds

The word "Safety" forms a part of the registration sought only in association with the other features of the mark shown in the drawing.
Particular description of goods.—Vaginal Suppositories.
Claims use since Sept. 1, 1927.

Ser. No. 260,069. LLOYD W. MILTON, doing business as Milton Laboratories, Chicago, Ill. Filed Jan. 13, 1928.

•FIBRE-LIFE•

Particular description of goods.—Compound for Preventing Runs in Silk Hosiery.
Claims use since Nov. 7, 1927.

Ser. No. 260,170. THE FAX LABORATORIES, INC., Dayton, Ohio. Filed Jan. 16, 1928.

FAX

Particular description of goods.—Deodorants, Insecticides, and Disinfectants.
Claims use since Nov. 13, 1927.

Ser. No. 260,230. MICHAEL LISS, doing business as Gum-Num Company, Newark, N. J. Filed Jan. 17, 1928.

GUM NUM

No claim is made to the words "Gum-Num" apart from the mark as shown in the drawing.
Particular description of goods.—Anæsthetics and Antiseptics.
Claims use since Sept. 10, 1927.

Ser. No. 260,260. PATRICK S. CONDON, Brooklyn, N. Y. Filed Jan. 18, 1928.

DUZ-PEP

Particular description of goods.—Chemical Composition for Addition to Gasoline and Other Liquid Fuels for Internal Combustion Engines, Adapted to Increase the Efficiency of the Fuel and to Minimize Carbon Deposits.
Claims use since August, 1925.

Ser. No. 260,281. ELI LILLY AND COMPANY, Indianapolis, Ind. Filed Jan. 18, 1928.

LIVER EXTRACT
No. 343

Applicant claims no exclusive right to the words "Liver Extract" apart from the complete mark shown.
Particular description of goods.—Liver Extracts.
Claims use since Jan. 5, 1928.

Ser. No. 260,282. MARESS COMPANY, Kansas City, Mo. Filed Jan. 18, 1928.

MARESS

Particular description of goods.—Hair Lotion.
Claims use since Dec. 21, 1927.

Ser. No. 260,287. PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Jan. 18, 1928.

Chantice

Particular description of goods.—Cold Cream.
Claims use since Dec. 5, 1927.

Ser. No. 260,293. JOSEPH RUNCI, doing business as Joseph Runci & Sons Co., Roxbury, Mass. Filed Jan. 18, 1928.

Particular description of goods.—Hair Tonic, Toilet Water, Shampoo, Face Cream, Bay Rum, Talcum Powder, Face Powder, Rouge, Lip Stick, Brilliantine, Perfumes, Hairdressing, and Petroleum Jelly.
Claims use since June 14, 1927.

Ser. No. 260,310. BLUD-LIFE COMPANY, Atlanta, Ga. Filed Jan. 19, 1928.

B-L

The drawing is lined for the color red.
Particular description of goods.—A General Tonic, Stomachic, Laxative, and Appetizer.
Claims use since July 1, 1926.

Ser. No. 260,325. I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Frankfort-on-the-Main, Germany. Filed Jan. 19, 1928.

Seretin

Particular description of goods.—Medicines for Worms.
Claims use since about Sept. 1, 1927.

Ser. No. 260,379. DORALDINA, INC., Los Angeles, Calif. Filed Jan. 20, 1928.

Doraldina

Particular description of goods.—Cold Cream, Cleansing Cream, Tissue Cream, Skin Cream, Liquid Skin Tonic, and Face Powder.
Claims use since Oct. 11, 1926.

Ser. No. 260,380. DORALDINA, INC., Los Angeles, Calif. Filed Jan. 20, 1928.

The portrait appearing on the drawing is fanciful and not of any living individual.
Particular description of goods.—Cold Cream, Cleansing Cream, Tissue Cream, Skin Cream, Liquid Skin Tonic, and Face Powder.
Claims use since Oct. 11, 1926.

Ser. No. 260,476. TRANSKUTAN, INC., New York, N. Y. Filed Jan. 21, 1928.

Particular description of goods.—Medicinal Bath Preparation for the Treatment of Muscular and Joint Afflictions Caused by Rheumatism, Arthritis, Gout, or Gonorrhea, Neuralgia, Inflammatory Exudates of the Female Sex Organs, Catarrh, Lumbago, Fibrositis, Sciatica, Severe Colds and Bronchial Congestions, and Other Kindred Conditions.

RINEHEIT

Particular description of goods.—Bricks.
Claims use since July 23, 1927.

Ser. No. 260,492. CLAY PRODUCTS COMPANY, Brazil, Ind. Filed Jan. 23, 1928.

AR-KE-TEXTURES

Particular description of goods.—Glazed and Unglazed Clay Building Tile.
Claims use since Dec. 5, 1927.

Ser. No. 260,562. FIBERFRAKS INCORPORATED, Lockport and New York, N. Y. Filed Jan. 24, 1928.

FIBERFRAKS

Particular description of goods.—Fireboards and Irregular Shapes Pressed from Mixtures of Various Fibers and Bonding Material.
Claims use since Jan. 11, 1928.

Ser. No. 260,711. ROBERT T. BOWMAN, doing business as R. T. Bowman Co., Trenton, N. J. Filed Jan. 27, 1928.

BOWMAN

Particular description of goods.—Portable Buildings.
Claims use since March, 1926.

Ser. No. 260,722. THE FLINTKOTE COMPANY, Boston, Mass. Filed Jan. 27, 1928.

Particular description of goods.—Composition Shingles, Composition Strip Shingles, Asphalt Roll Roofing, Composition Roofing Paper, Roofing Cement, Asphaltic Roofing Compositions and Compounds for Use on Roofs of Composition Shingles and Wood Shingles.
Claims use since Jan. 21, 1926.

Ser. No. 260,724. THE FLINTKOTE COMPANY, Boston, Mass. Filed Jan. 27, 1928.

SKY LINE

Particular description of goods.—Composition Shingles, Composition Strip Shingles, Asphalt Roll Roofing, Composition Roofing Paper, Roofing Cement, Asphaltic Roofing Compositions and Compounds for Use on Roofs of Composition Shingles and Wood Shingles.
Claims use since Dec. 30, 1925.

Ser. No. 260,881. THE DENVER FIRE CLAY COMPANY, Denver, Colo. Filed Jan. 30, 1928.

CALIBEX

Particular description of goods.—High-Temperature Cement or Mortar.
Claims use since Oct. 15, 1927.

CLASS 13.

Hardware and Plumbing and Steam-Fitting Supplies.

Ser. No. 242,848. NORTH AND JUDD MANUFACTURING COMPANY, New Britain, Conn. Filed Jan. 14, 1927.

ANCHOR BRAND

No claim is made to the word "Brand" apart from the mark as shown.
Particular description of goods.—Catches, Handles for Hoods, Grab Handles, Door Handles, Escutcheon Plates, Robe Rails, Upholstery Nails, Turn-Button Curtain Fasteners and Repair Parts Therefor, Windshield-Curtain Hooks, Radiator-Cover Clips, End Clips, Grommets, Finishing Tips, Windshield Clips, Prop Nut Locks, D Rings, Snaps, Finishing Screw Washers, Tension Slides, Chain-Repair Lap Links, Hook Buckles, Web Strap Tips, Match Leather Nails, Shower-Bath Curtain Loops, Assortment of Curtain Repair Parts, Razor-Strop Hardware and Trimmings—Namely, Snaps, Swivel Snaps, Buckles, Swivels, Loops, Combined Snaps and Swivels, Handles, Bolts and Nuts, and Wire Loops.
Claims use since February, 1912.

Ser. No. 242,849. NORTH AND JUDD MANUFACTURING COMPANY, New Britain, Conn. Filed Jan. 14, 1927.

Particular description of goods.—Catches, Handles for Hoods, Grab Handles, Door Handles, Escutcheon Plates, Robe Rails, Upholstery Nails, Turn-Button Curtain Fasteners and Repair Parts Therefor, Windshield-Curtain Hooks, Radiator-Cover Clips, End Clips, Grommets, Finishing Tips, Windshield Clips, Prop Nut Locks, D Rings, Snaps, Finishing Screw Washers, Tension Slides, Chain-Repair Lap Links, Hook Buckles, Web Strap Tips, Match Leather Nails, Shower-Bath Curtain Loops, Assortment of Curtain Repair Parts, Razor-Strop Hardware and Trimmings—Namely, Snaps, Swivel Snaps, Buckles, Swivels, Loops, Combined Snaps and Swivels, Handles, Bolts and Nuts, and Wire Loops.
Claims use since February, 1912.

Ser. No. 243,129. J. H. BALMER CO., Newark, N. J. Filed Jan. 21, 1927.

E-Z Set

No claim is made to the word "Set" apart from the mark shown in the drawing.
Particular description of goods.—Bath-Room Fixtures—Namely, Tumbler Holder, Combination Tumbler and Toothbrush Holder; Combination Cigar, Cigarette, Match, Ash-Tray, and Newspaper Holder; Combined Shelf, Tumbler and Soap Holder; Combined Shelf, Tumbler and Toothbrush Holder; and Shaving-Set Combination—Namely, Units for Holding Safety-Razor Set, Shaving Brush and Shaving Powder, Paste, or Soap.
Claims use since April, 1925.

Ser. No. 252,658. EDWIN O. LAWRENCE, Port Jefferson Station, N. Y. Filed July 28, 1927.

The representation of the outline of the tank and the words "Grease," "Water," and "Solids" are hereby disclaimed apart from the mark as shown.

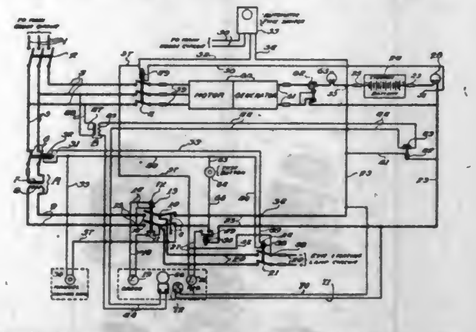
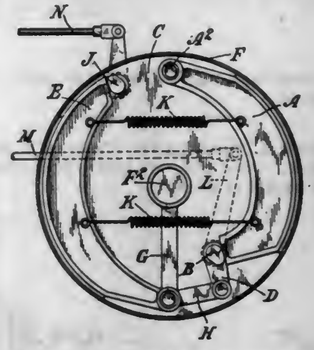
REISSUES

MARCH 27, 1928.



16,916. **GARMENT POCKET.** DAVID TRAXLER, Flint, Mich. Filed Nov. 4, 1926. Serial No. 146,267. Original No. 1,519,385, dated Dec. 16, 1924, Serial No. 590,285, filed Sept. 25, 1922. 7 Claims. (Cl. 2—253.)

1. A multiple pocket structure consisting of three complementary portions overlying each other, the inner and middle portions integrally connected at the bottom of the pocket and stitched to each other at other points so as to form a plurality of pocket compartments, and the third outside portion integral with the inside portion on one vertical edge of the pocket and stitched to the other portions on the remaining edges, thereby forming a large pocket compartment substantially the size of one of the complementary portions.

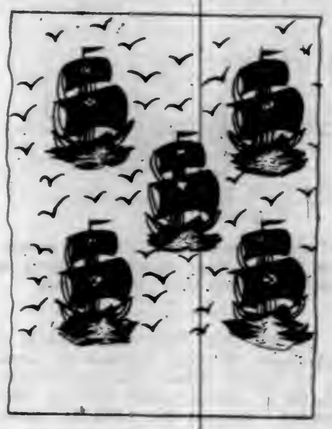


16,917. **EXIT-LIGHTING SYSTEM.** RALPH T. WILLIAMS, Chicago, Ill., assignor to Roth Brothers & Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1928. Serial No. 252,370. Original No. 1,650,676, dated Nov. 29, 1927, Serial No. 152,443, filed Dec. 8, 1926. 9 Claims. (Cl. 171—97.)

1. In an electric lighting system, a lamp circuit, a normally open switch in said circuit, a main circuit, a normally open switch in said main circuit, means controlled by current from said main circuit for connecting said main circuit with said lamp circuit, an auxiliary circuit, automatic means for connecting said auxiliary circuit with said lamp circuit upon failure of said main

circuit to supply current and means operated by current from said auxiliary circuit for closing said main circuit switch and said lamp circuit switch.

16,918. **BRAKE FOR VEHICLES.** LOUIS COATALEN, Wolverhampton, England, assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed July 11, 1927. Serial No. 205,007. Original No. 1,575,191, dated Mar. 2, 1926, Serial No. 680,404, filed Dec. 13, 1923. 82 Claims. (Cl. 188—78.)



1. In a brake for a vehicle, the combination of a drum, a main segmental shoe inside said drum, a servo segmental shoe also inside said drum and on the opposite side of the axis of said drum, a fixed pivot for one end of said main shoe, an operative connection between the other end of said main shoe and the adjacent end of said servo shoe, including a lever and a cam operated thereby said cam engaging said main shoe.

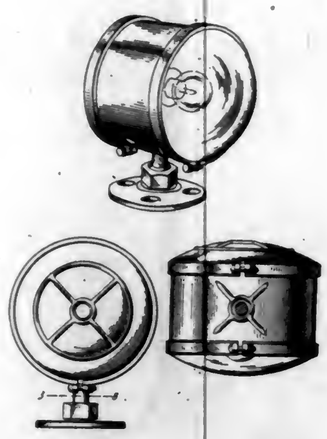
The ornamental design for a lighting bracket, as shown.

74,784. LIGHTING STANDARD. ANDREW DE VRIES, South Bend, Ind., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 29, 1927. Serial No. 23,241. Term of patent 14 years.



The ornamental design for a lighting standard, as shown.

74,785. LIGHTING STANDARD. ANDREW DE VRIES, South Bend, Ind., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 17, 1927. Serial No. 24,520. Term of patent 14 years.

The ornamental design for a lighting standard substantially as shown.

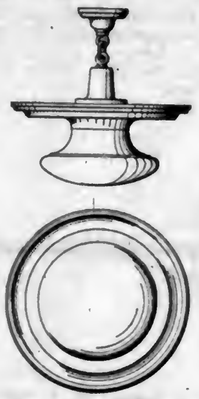
74,786. AUTOMOBILE LAMP. LEO EDELMANN, Chicago, Ill., assignor to E. Edelmann & Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 20, 1925. Serial No. 15,198. Term of patent 3½ years.

The ornamental design for an automobile lamp, as shown.

74,787. CALENDAR. HOWARD L. FISCHER and CHARLES A. WARD, St. Paul, Minn., assignors to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Sept. 21, 1927. Serial No. 23,499. Term of patent 14 years.

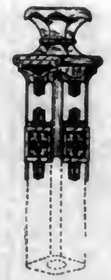
The ornamental design for a calendar as shown.

74,788. COMBINED RADIATOR-CAP ORNAMENT AND TRAFFIC SIGNAL. ROY FISHER, Los Angeles, Calif. Filed Dec. 27, 1927. Serial No. 24,666. Term of patent 14 years.



The ornamental design for a combined radiator cap ornament and traffic signal, substantially as shown.

74,789. SHOE. THOMAS J. FITZ HARRIS, New Rochelle, N. Y., assignor to Franklin Simon & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 7, 1928. Serial No. 24,768. Term of patent 3½ years.

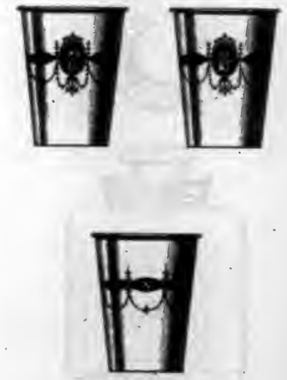


The ornamental design for a shoe, substantially as shown.

74,790. LIGHTING FIXTURE. EDWIN F. GUTH, St. Louis, Mo. Filed July 28, 1926. Serial No. 18,512. Term of patent 14 years.

The ornamental design for a lighting fixture, as shown.

74,791. LAMP SUPPORT. CARL F. HAAS, South Bend, Ind., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 17, 1927. Serial No. 24,519. Term of patent 14 years.

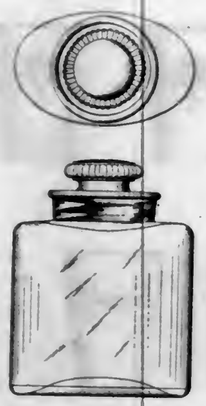


The ornamental design for a lamp support, substantially as shown.

74,792. LOUD SPEAKER. VITALIS HIMMER, Mountain Lakes, N. J. Filed Dec. 24, 1927. Serial No. 24,640. Term of patent 7 years.

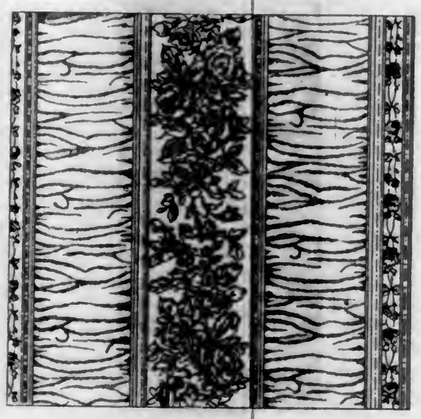
The ornamental design for a loud speaker, as shown.

74,793. PAPER CUP OR SIMILAR ARTICLE. JOSEPH JOHNSON, New York, N. Y., assignor to Individual Drinking Cup Company, Inc., Easton, Pa., a Corporation of Pennsylvania. Filed Dec. 19, 1927. Serial No. 24,545. Term of patent 14 years.



The ornamental design for a paper cup or similar article, as shown.

74,794. COVER PAPER OR SIMILAR MATERIAL. ALFRED LABRAM, Osterley Park, England, assignor to Whiting-Patterson Co., Inc., a Corporation of Pennsylvania. Filed Sept. 15, 1927, Serial No. 23,425, and in Great Britain May 16, 1927. Term of patent 3½ years.



The ornamental design for cover paper or similar material as shown and described.

74,795. BATH-SALT BOTTLE. THOMAS J. LEWIS, New York, N. Y. Filed Dec. 23, 1927. Serial No. 24,600. Term of patent 14 years.

The ornamental design for a bath salt bottle, as shown.

74,796. TEXTILE FABRIC. JOSEPH MACK, New York, N. Y., assignor to Elias Reiss and Company, New York, N. Y., a Corporation of New York. Filed Dec. 5, 1927. Serial No. 24,380. Term of patent 8½ years.

The ornamental design for a textile fabric, as shown.

74,797. TEXTILE FABRIC. JOSEPH MACK, New York, N. Y., assignor to Elias Reiss and Company, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1927. Serial No. 24,466. Term of patent 8½ years.

The ornamental design for a textile fabric, as shown.

74,798. THERMOMETER. RICHARD E. MANN, New Brighton, N. Y. Filed Jan. 18, 1927. Serial No. 20,359. Term of patent 7 years.

The ornamental design for a thermometer as shown.

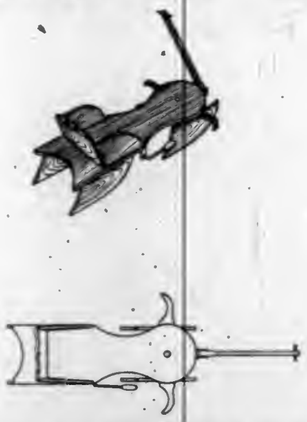
74,799. LACE. ALBERT E. NEWTON, Providence, R. I., assignor to The Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed Jan. 25, 1928. Serial No. 25,029. Term of patent 8½ years.

The ornamental design for lace substantially as shown.

74,800. LACE. ALBERT E. NEWTON, Providence, R. I., assignor to The Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed Jan. 25, 1928. Serial No. 25,080. Term of patent 8½ years.

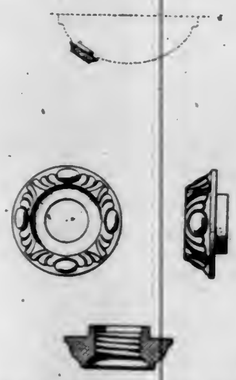
The ornamental design for lace substantially as shown.

74,801. GOBLET OR SIMILAR ARTICLE. CHARLES H. PHILLIPS, Jr., Richmond Hill, N. Y., assignor to Seneca Glass Co., Morgantown, W. Va., a Corporation of West Virginia. Filed Apr. 28, 1927. Serial No. 21,777. Term of patent 7 years.



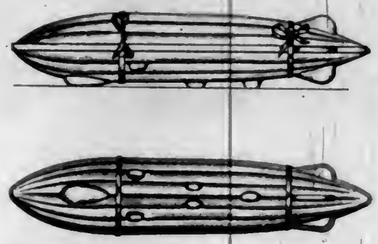
The ornamental design for a goblet or similar article, as shown and described.

74,802. HOLDER FOR A FOUNTAIN PEN OR THE LIKE. HENRY B. QUAIN, San Jose, Calif. Filed Nov. 23, 1927. Serial No. 24,262. Term of patent 14 years.



The ornamental design for a holder for a fountain pen or the like, as shown.

74,803. CHILD'S VEHICLE. EARL REEK, Oakland, Calif. Filed Sept. 24, 1926. Serial No. 19,159. Term of patent 3½ years.



The ornamental design for a child's vehicle, substantially as shown.

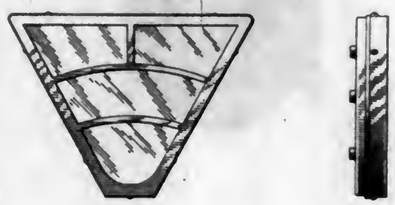
74,804. SIGN-RECEPTACLE RING. MARK N. RUSSELL, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Solvay, N. Y., a Corporation of New York. Filed July 26, 1927. Serial No. 22,884. Term of patent 14 years.

The ornamental design for a sign receptacle ring as shown.

74,805. BOX. AUGUST SCHAEFER, New York, N. Y., assignor of one-half to Adele Baltheiser, New York, N. Y. Filed Dec. 9, 1924. Serial No. 11,626. Term of patent 14 years.

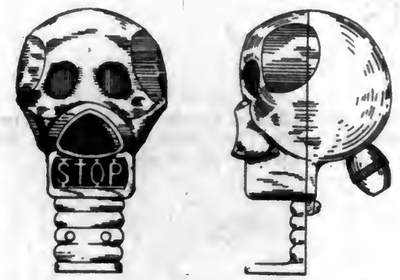
The ornamental design for a box, as shown.

74,806. EMBROIDERED LACE MEDALLION. HENRY SCHWARBER, Weehawken, N. J. Filed Jan. 26, 1928. Serial No. 25,035. Term of patent 3½ years.



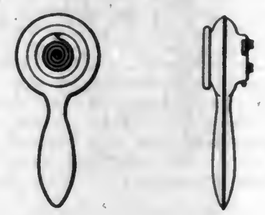
The ornamental design for an embroidered lace medallion, as shown.

74,807. SMOKING STAND. ALBERT A. SMALLHOUSE, Los Angeles, Calif. Filed June 27, 1927. Serial No. 22,570. Term of patent 3½ years.



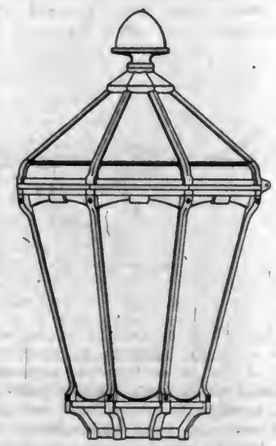
The ornamental design for a smoking stand, as shown and described.

74,808. VEHICLE SIGNAL CASING. GEORGE T. SMITH, Hannibal, Mo. Filed Aug. 4, 1926. Serial No. 18,592. Term of patent 7 years.



The ornamental design for a vehicle signal casing, as shown.

74,809. AUTOMOBILE SIGNAL-LIGHTS CASING. FRANK W. SNEDDEN, Wilkinsburg, Pa. Filed June 27, 1927. Serial No. 22,582. Term of patent 3½ years.

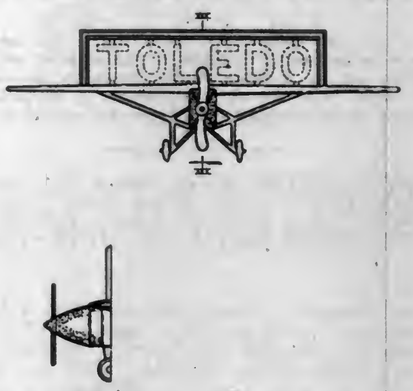


The ornamental design for an automobile signal lights casing, substantially as shown.

74,810. CIGAR AND CIGARETTE LIGHTER. JASON C. STEARNS, Worcester, Mass. Filed Aug. 31, 1927. Serial No. 23,257. Term of patent 14 years.

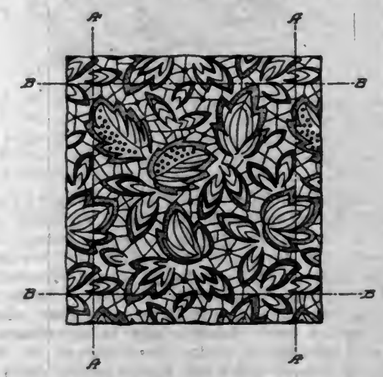
The ornamental design for a cigar and cigarette lighter as shown.

74,811. POST-TOP LANTERN. JOHN R. TOWNSEND, South Bend, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 22, 1925. Serial No. 14,852. Term of patent 14 years.



The ornamental design for a post top lantern as shown.

74,812. ICE-CREAM CONE. RALPH C. TURNER, Philadelphia, Pa., assignor to American Cone & Pretzel Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Nov. 14, 1927. Serial No. 24,121. Term of patent 7 years.



The ornamental design for an ice cream cone as shown.

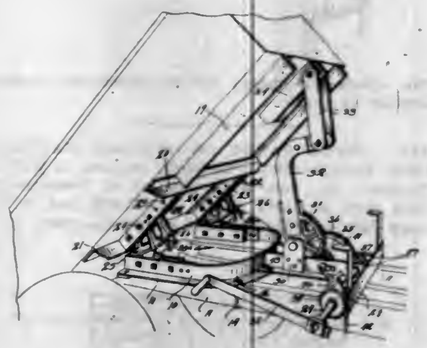
74,813. AUTOMOBILE RADIATOR DECORATION. IRVIN W. VAN GUNTEN, Toledo, Ohio. Filed Sept. 19, 1927. Serial No. 23,458. Term of patent 3½ years.

The ornamental design for an automobile radiator decoration as shown.

74,814. COVER PAPER OR SIMILAR MATERIAL. LOUIS WAGNER, Berlin, Germany, assignor to Whiting-Patterson Co., Inc., a Corporation of Pennsylvania. Filed Sept. 23, 1927, Serial No. 23,523, and in Germany July 5, 1927. Term of patent 3½ years.

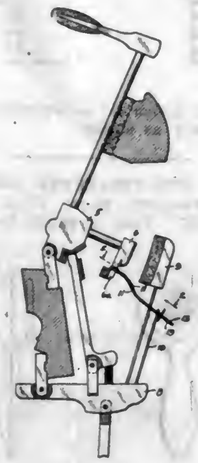
The ornamental design for cover paper or similar material as shown and described.

PATENTS



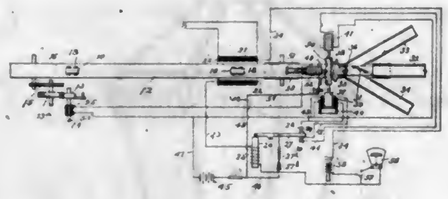
GRANTED MARCH 27, 1928

1,663,536. TEE-FORMING DEVICE. EDWARD LELAND BASS, Chicago, Ill. Filed Mar. 5, 1927. Serial No. 172,945. 4 Claims. (Cl. 273—33.)



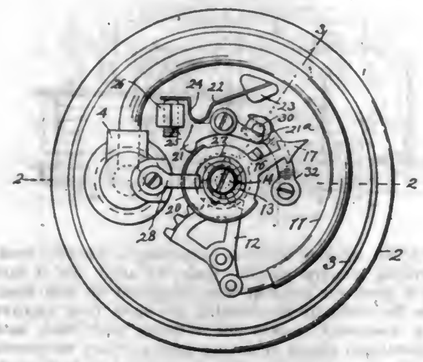
3. In a golf tee mold, an upper body section open at its lower end and of a depth to form a tee of average height, and an extension member detachably secured to the upper body section and forming a continuation thereof for producing a tee of greater than average height.

1,663,537. DUMPING TRUCK. PERRY A. BRICK, Galion, Ohio, assignor to The National Grave Vault Co., Galion, Ohio, a Corporation of Ohio. Filed Mar. 4, 1926. Serial No. 92,368. 1 Claim. (Cl. 298—10.)



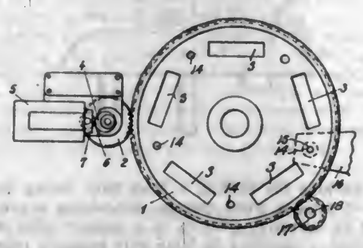
The combination with a truck body having two pairs of longitudinally depending angle irons extending from its bottom and having rockers adjustably engaged with said angle irons for longitudinal adjustment toward or from the rear end of the body, of an approximately U-shaped supporting frame therefor formed of angle iron to provide an outwardly extending base flange adapted to rest upon a truck chassis, clamp bolts engaging the flange and adapted to engage the beams of the truck chassis, the legs of said frame having parallel irons and transverse pins thereby constituting rocker bearings, the rockers being toothed to engage said pins.

1,663,538. BRIDLE FOR PIANO ACTIONS. HIRAM E. CHUTE, Los Angeles, Calif. Filed Aug. 24, 1925. Serial No. 52,237. 2 Claims. (Cl. 84—243.)



1. As a new article of manufacture, a bridle for piano actions formed of a single length of cord looped upon itself, and a flexible tip comprising two sheets of material secured to each other and between which the free ends of the cord are secured.

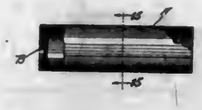
1,663,539. METHOD AND APPARATUS FOR TESTING AND SORTING MATERIALS. JAMES G. BELLINGER, Cleveland, Ohio. Filed Oct. 11, 1919. Serial No. 329,914. 3 Claims. (Cl. 209—72.)



1. The method which consists in successively subjecting pieces to a device sensitive to variations in the permeabilities of the pieces from the permeability of a test or standard piece, and utilizing said device for automatically sorting the pieces into one lot if their permeabilities are equal to or approximate the permeability of the test or standard piece, or into one of a plurality of other lots depending upon the character of the differences between their permeabilities and the permeability of the test piece.

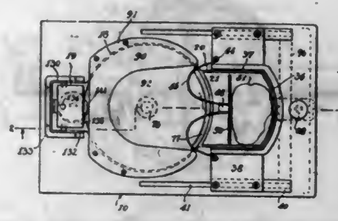
1,663,540. AIR GAUGE. ADELBERT E. BRONSON, Cleveland, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 11, 1923. Serial No. 656,930. 8 Claims. (Cl. 73—109.)

1. An air gauge comprising a thin flat casing having an opening in the bottom wall thereof, a Bourdon tube within the casing having one end fixed and communicating with said opening, an indicator movably mounted within the casing, means connecting the free end of the Bourdon tube with the indicator for actuating the same, a spring pressed brake within the casing for holding the pointer in that position to which it is moved in the operation of the Bourdon tube, and a manually operable plunger mounted in the bottom wall of the casing and engageable with the brake to release the same.



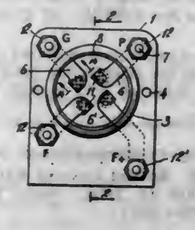
1,663,541. TYPESETTING AND LINE-CASTING MACHINE. WALTER BUSWELL, Bridgeport, Conn., assignor to Standard Compositor Aktiengesellschaft, Berlin, Germany. Filed Jan. 10, 1925, Serial No. 1,598, and in Germany Feb. 14, 1924. 8 Claims. (Cl. 199—47.)

1. In typebar casting machines and the like, a rotatable toothed mold carrying wheel, means to rotate said wheel relative to the casting and ejecting positions, and means to co-operate with the mold carrying wheel operative to forcibly and yieldingly retard the movement of said wheel as it approaches the casting and ejecting positions.



1,663,542. PROCESS OF MAKING CONTAINERS. ROBERT G. CLYNE, St. Louis, Mo. Filed Feb. 4, 1926. Serial No. 86,056. 2 Claims. (Cl. 93—36.)

1. The process of producing an integrally closed-end tubular, longitudinally rigid container, which consists in first saturating a sheet of paper with an adhesive, then tightly coiling the adhesive sheet upon a mandrel and simultaneously compressing the successive coils into a compacted convoluted tubular body, then by spinning



converting a coiled end-portion of the body into an integral end closure therefor, and then swaging said spun-in end-closure.

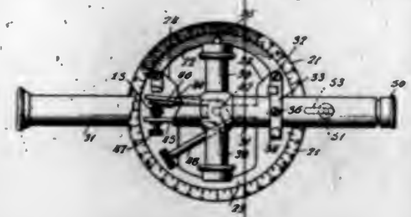
1,663,543. SLICING MACHINE. JAMES W. BUCK, New York, N. Y., assignor of one-half to Charles L. Dean, New York, N. Y. Filed Feb. 27, 1925, Serial No. 12,030. Renewed Aug. 18, 1927. 14 Claims. (Cl. 146—105.)

1. In combination, a meat supporting platform; a reciprocatory hopper over said platform; a rotary disk plate near said platform; a stacker table under the platform; and means for moving the table downward.

1,663,544. TUBE SOCKET. LESLIE D. BURDESSER, New York, N. Y., assignor to Spartan Electric Corporation, a Corporation of New York. Filed Nov. 22, 1924. Serial No. 751,503. 8 Claims. (Cl. 173—328.)

1. A vacuum tube socket comprising a socket base, a tube holder carried by said base, a plurality of binding posts supported by said base and arranged close to said tube holder, and a binding post fixed to said base at a point remote from said holder whereby two straight bus wires can be connected directly to two adjacent binding posts without coming into contact with each other.

1,663,545. POLISH APPLYING AND RUBBING IMPLEMENT. EDWARD ALPHONSE FARISH, Auteuil, France. Filed Feb. 27, 1924, Serial No. 695,404, and in France Mar. 1, 1923. 2 Claims. (Cl. 15—108.)



1. In an implement of the character described, the combination with a flanged supporting plate, of a mounting provided with a rubbing surface and having means

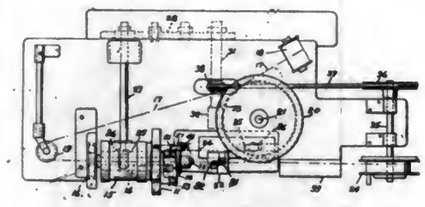
for engagement with the flanges on said plate for retaining said mounting thereon, a collapsible tube for containing polish, means for retaining said tube on said

plate, said mounting having a hole therein leading to the rubbing surface thereof for receiving a portion of said tube, and means for ejecting polish from said tube.

1,663,546. CONVERTIBLE LEVEL AND TRANSIT. JAMES GEIER, Troy, N. Y. Filed Feb. 26, 1926, Serial No. 90,746, and in Canada Feb. 27, 1925. 7 Claims. (Cl. 33—73.)

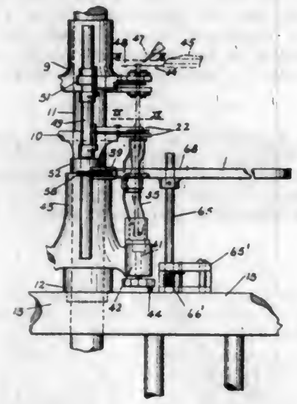
1. A convertible level and transit including a base, a platform rotatable with respect thereto and having a standard, a telescope supported by said standard, a micrometer device carried by said base and including arms arranged on opposite sides of said standard, and means carried by said arms and engageable with said standard for effecting minute adjustments of said platform and telescope relative to said base.

1,663,547. REFRACTORY MATERIAL AND THE ACTIVATION THEREOF. WILLIAM BENJAMIN GERO, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 17, 1923. Serial No. 652,184. 13 Claims. (Cl. 250—27.5.)



1. The method of activating thoriated refractory metal comprising treating the same before drawing to final size in an atmosphere reducing with respect to thoria.

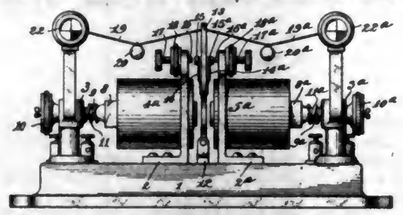
1,663,548. TRUCK CONSTRUCTION FOR ELECTRIC LOCOMOTIVES. ROBERT FRANCIS HALL, Schenectady, N. Y. Filed June 18, 1926. Serial No. 116,797. 6 Claims. (Cl. 105—175.)



1. In a railway vehicle, a body portion, a plurality of trucks on which the body portion is supported, said trucks having swiveled connections with the body portion, means in said swiveled connections for yieldingly resisting swiveling action of the trucks, and a set of guide wheels for each truck, said guide wheels being mounted for lateral swiveling action with relation to the associated trucks and cooperating with the resisting means in the swiveled connections of the trucks to accomplish the guiding action.

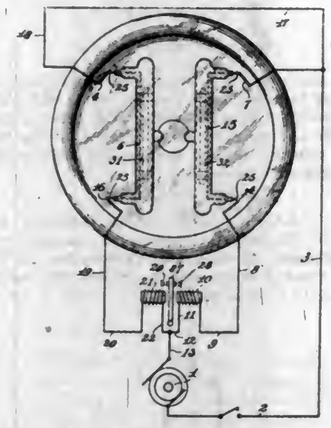
1,663,549. COIL-WINDING MACHINE. JOHN JOSEPH HIGGINS, East Orange, and MILTON ARMSTRONG HOYT, Bloomfield, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 26, 1923. Serial No. 653,847. 11 Claims. (Cl. 153—67.)

4. A coil winding machine comprising a winding head, a traveling mandrel movable upon the axial line of said head, a spool for filament wire supported on said head, means for normally maintaining the spool from relative rotary movement, means for rotating said head, said first-mentioned means operating upno a rotary movement of said head to permit a rotary movement of said spool.



1,663,550. LAMP-STEM HOLDER. JOHN JOSEPH HIGGINS, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 3, 1924. Serial No. 753,550. 7 Claims. (Cl. 176—3.)

7. A machine for holding a lamp part during the insertion of support wires therein, comprising a conveyor disposed in operative relation to a support wire inserting machine, a plurality of lamp part supports rotatably mounted on said conveyor for successive disposition adjacent to said inserting machine, each holder including a plurality of pairs of rollers positioned to align a lamp part upon the axis of rotation of a support, a lever arm associated with each pair of rollers to press the lamp part thereagainst and means for automatically actuating the arms to release said part.

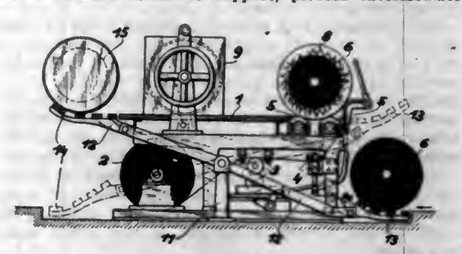


1,663,551. ALTERNATING-CURRENT RELAY. EDWARD L. HOLMES, New York, N. Y., assignor to Holmes Navigating Apparatus Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 24, 1925. Serial No. 4,618. 10 Claims. (Cl. 200—91.)

1. In an alternating current relay, a coil, an armature actuated by said coil, a contact member yieldingly mounted on said armature, a stationary contact member coacting with said first-named contact member and a weighted connection between said armature and an out-

side support for damping the vibrations of said armature and preventing the separation of the contacts when in engagement.

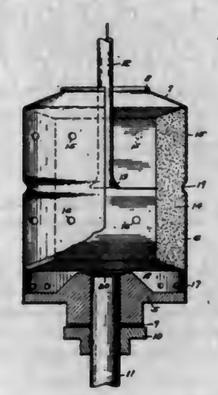
1,663,552. ELECTROLYTIC RHEOSTAT. EDWARD L. HOLMES, New York, N. Y., assignor to Holmes Navigating Apparatus Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 24, 1925. Serial No. 4,619. 20 Claims. (Cl. 201—48.)



2. In a rheostat, an electrolyte, a container for said electrolyte, electric circuits including said electrolyte and a plurality of conductors attached to said container and contacting with said electrolyte and a plurality of conductors movable in said container and contacting with said electrolyte, said conductors being so constructed and arranged that displacement between said container conductors and said movable conductors increases the resistance of one of said container circuits only.

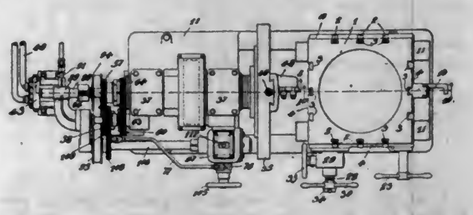
1,663,553. ELECTRON-EMITTING MATERIAL. CHARLES V. IRZDELL, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 24, 1927. Serial No. 170,744. 11 Claims. (Cl. 250—27.5.)

8. A refractory metal body adapted to be activated for electron emission purposes consisting of tungsten containing from 1 to 8% of thorium oxide and from .5 to 4% of cerium oxide based on the thorium oxide content.



1,663,554. PAPER-ROLL WRAPPING MACHINE. GÜNTHER MEYER-JAGENBERG, Dusseldorf, Germany. Filed Apr. 7, 1927, Serial No. 181,697, and in Germany Jan. 19, 1926. 4 Claims. (Cl. 93—2.)

1. In a device of the kind described in combination, elevated means for supporting and rotating a roll about which flexible material is to be wrapped, means arranged at a lower level than said roll supporting means for supporting and guiding wrapping material into contact with said roll about which such material is to be wrapped, and a rockable lever-like support, pivoted intermediate

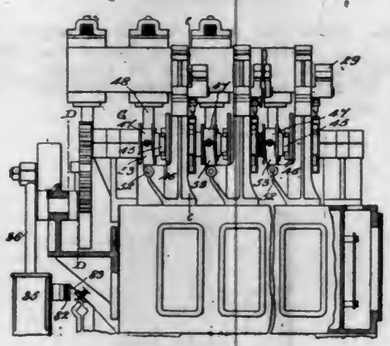


its ends, and adapted for respectively supporting a roll to be wrapped and a roll which has been wrapped at its opposite ends and for respectively raising and lowering the said rolls into and out of cooperative relationship with respect to the elevated supporting means.

1,663,555. SPINNING POT. CHARLES C. JESSEN, Clifton, N. J., assignor to Napon Rayon Corporation, Clifton, N. J., a Corporation of Delaware. Filed Apr. 9, 1927. Serial No. 182,379. 7 Claims. (Cl. 118—56.)

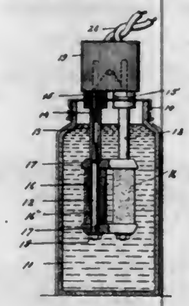
1. A centrifuge of the character described having liquid escape openings formed therein near the bottom, of means carried by the centrifuge for preventing the cake formed in said centrifuge from moving downwardly.

1,663,556. METAL-CUTTING MACHINE. FRANK S. JONES, Philadelphia, Pa. Filed May 6, 1925. Serial No. 28,297. 18 Claims. (Cl. 82—2.)



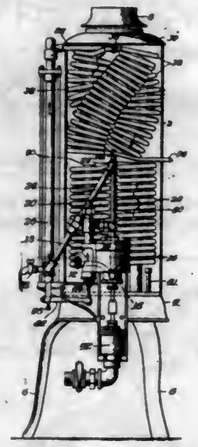
1. In a metal cutting machine having a bed, a facing head rotatable in the bed and a tool holder movable on the head; a work carrier including a saddle mounted on the bed, a journal formed on the saddle, a table ro-

tatably mounted on the saddle, a bearing formed in the table and engaging the journal, a flange formed on the table and bearing on the saddle, a plural faced chuck fixed on the table, and means for moving the work carrier toward and from the head.



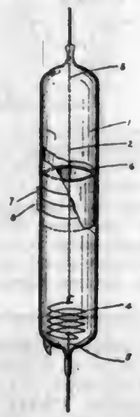
15. A metal cutting machine including a bed; a chuck movable on the bed; a hollow spindle rotatable in the bed; a facing head fixed to the spindle; a tool holder movable on the head; a hollow shaft rotatable in the spindle and operatively connected with the spindle for moving the tool holder; a telescoping shaft within the hollow shaft and fastened to rotate with the spindle; variable speed driving mechanism for rotating the spindle; a screw on the telescoping shaft; a nut fixed to the hollow shaft for moving the screw lengthwise, and means operatively connected with the screw for changing the speed of the driving mechanism as the screw moves lengthwise.

1,663,557. VALVE-OPERATING MECHANISM. JAMES S. KENNEDY, Yonkers, N. Y., assignor to The Bartlett Hayward Company, a Corporation of Maryland. Filed Feb. 15, 1923. Serial No. 619,258. 9 Claims. (Cl. 137—144.)



1. In combination with a group of control valves, mechanism for positively operating the same in two directions and operative connections between said valves and said mechanism adapted to permit manual operation of any valve unimpeded by said mechanism.

1,663,558. ELECTRIC HEATER. NICHOLAS LAWNER, Brooklyn, N. Y., assignor to American Sundries Co., Inc., a Corporation of New York. Filed May 20, 1927. Serial No. 192,837. 5 Claims. (Cl. 219—40.)



1. In an electric heater, spaced parallel electric conductors and electrodes rotatably mounted on said conductors and so shaped in relation to their axes that by rotation of said electrodes the opposite acting surfaces thereof are brought closer to or farther away from one another thereby reducing or enlarging the gap.

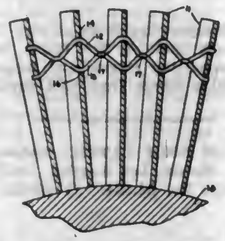
1,663,559. AUTOMATIC WATER HEATER. HARRY J. LYONS, Geneva, Ill., assignor to Geneva Heater Company, Geneva, Ill., a Corporation of Illinois. Filed July 28, 1924. Serial No. 728,529. 14 Claims. (Cl. 236—20.)

1. In a water heater, primary and secondary heating coils, means to effect heat transfer with said coils, and means in series with and between the primary and secondary coils and operable by a variation of the temperature of a primary coil for varying the heating effect of said heat transfer means.

1,663,560. FILAMENT FOR INCANDESCENT LAMPS. GEORGE W. MEISTER, Irvington, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 20, 1926. Serial No. 89,623. 7 Claims. (Cl. 176—132.)

3. A filament for an incandescent lamp consisting of a solid solution of tungsten and molybdenum, said molybdenum being present in relatively small proportions whereby said filament has a lower vapor pressure than ordinary tungsten at the same temperature.

1,663,561. ELECTRON-DISCHARGE DEVICE. GEORGE DEAN O'NEILL, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 3, 1927. Serial No. 172,569. 9 Claims. (Cl. 250—27.5.)

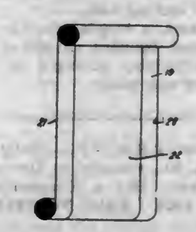


1. A clean-up material for common gases comprising a refractory metal having incorporated therein, a quantity of aluminum.

1,663,562. HEATING COIL FOR HOT-WATER SYSTEMS. JOHN J. PARKINSON, Chicago, Ill. Filed Aug. 9, 1923. Serial No. 656,516. 1 Claim. (Cl. 257—254.)

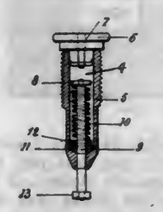
In combination with a tube adapted to be disposed in the water in a boiler and having a partition therein dividing the tube into water traversing compartments arranged in series, a fitting connected to said tube and having a cold water inlet, and a hot water outlet, a partition in said fitting separating the cold water inlet from the hot water outlet, said partition being slightly spaced from the front edge of the partition in said tube to prevent the trapping of air in said tube.

1,663,563. TURBINE-BLADE LASHING. JAMES L. RAY, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 12, 1925. Serial No. 56,039. 8 Claims. (Cl. 253—77.)



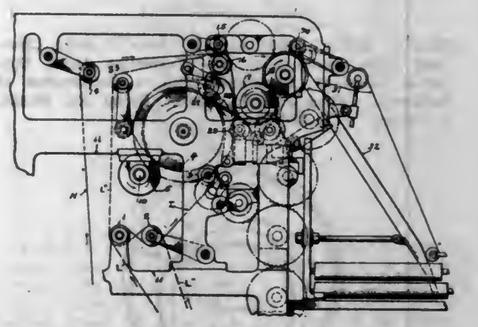
1. Lashing means for turbine blades comprising cooperating lashing members secured at two points to a blade and joined together intermediate adjacent blades in a row.

1,663,564. REFRACTORY METAL FILAMENT. MALCOLM N. RICH, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Oct. 30, 1925. Serial No. 65,881. 9 Claims. (Cl. 176—132.)



6. The method of treating refractory metal filaments which consists in cleansing the surface thereof and eliminating hydrogen therefrom subsequent to the swaging operation, reducing the wire to filamentary size and prior to reduction of the filament to its final size, retreating the same to eliminate impurities which have been introduced during the reducing process.

1,663,565. ROOFING MATERIAL. THOMAS ROBINSON, Babylon, N. Y., assignor to Anaconda Sales Company, a Corporation of Delaware. Filed Aug. 15, 1923. Serial No. 657,472. 2 Claims. (Cl. 154—51.)

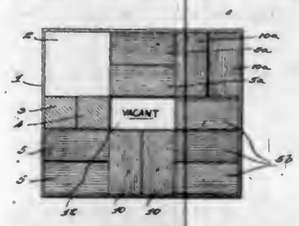


1. A roofing material suitable for flashings, valleys, and the like, which comprises a strip of relatively thin, fibrous, waterproof material readily flexible longitudinally and transversely, and a band of weather-resisting metal narrower than the strip applied to one face thereof so as to leave uncovered selvages of substantial width, the metal band being of insufficient mechanical strength to permit its use alone, and being readily flexible so that the strip is stiffened only to a slight extent by its application.

1,663,566. THERMOSTAT. GEORGES GASTON ROYER, Paris, France. Original application filed May 8, 1925, Serial No. 28,871. Divided and this application filed Feb. 6, 1926, Serial No. 86,440, and in Canada May 12, 1925. 5 Claims. (Cl. 297—6.)

1. A thermostat comprising a fluid container, a pressure responsive rod extending through the wall of said container, a packing ring surrounding said rod adjacent said wall and means disposed on said rod for compressing said packing ring in proportion to the increase in pressure developed in said container.

1,663,567. ASSOCIATING MECHANISM. LOUIS A. SCHMIDT, Brooklyn, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 12, 1927. Serial No. 183,151. 2 Claims. (Cl. 270—42.)

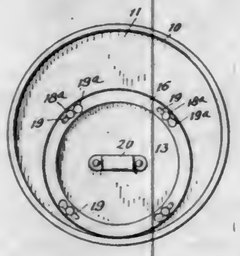


1. The combination of means for forwarding a high speed web, means for forwarding a web at a lower speed, a pair of cooperating cutting cylinders for severing a sheet from the low speed web, a second pair of cutting and associating cylinders to which the high speed web and low speed sheet are forwarded for cutting a sheet from the high speed web, sheet holding means carried by the outer of the last pair of cylinders for positively holding the sheet and web during the last cutting operation, and a folding delivery to which the associated sheets are delivered directly by the sheet holding means.

1,663,568. PUZZLE. JOHN M. SCHNEIDER, Detroit, Mich. Filed Mar. 21, 1927. Serial No. 176,939. 2 Claims. (Cl. 273—132.)

1. A sliding block puzzle comprising a flat container arranged to contain three separate rows of blocks (the rows considered as running longitudinally to the line of vision), each row being two units wide and five units

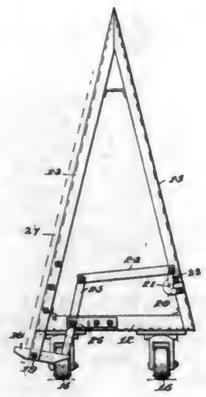
high, there being fitted into the container two single-unit blocks, eleven two-unit blocks, and one four-unit block, leaving a two-unit empty space, all the two-unit blocks being the same shape and size, whereby the first row to the left can contain two transversely lying two-unit blocks, followed by two one-unit blocks, and finally a four-unit block; the second row can contain two longitudinally lying (with the line of vision) two-unit



blocks, a vacant space, and two transversely extending two-unit blocks, while the final row can contain three transversely lying two-unit blocks and finally, two longitudinally lying two-unit blocks, and the intended goal can be sliding the blocks to obtain a block position which is exactly the block position that would be obtained by turning the box as a whole through a half turn.

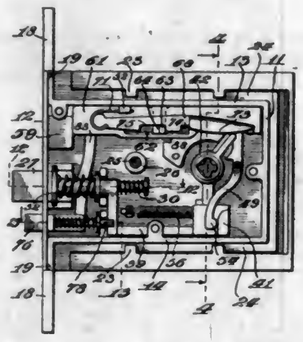
1,663,569. PREPARATION OF CAMPHENE. WILHELM SCHULENBURG, Frankfort-on-the-Main, Germany, assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Feb. 26, 1927, Serial No. 171,373, and in Germany Feb. 27, 1926. 4 Claims. (Cl. 260—167.)

1. The method for the preparation of camphene from pinene hydrochloride through the splitting out of hydrochloric acid, by means of alkali metal monoxide.



1,663,570. METAL CONTAINER. JOHN P. SENZ, Cleveland, Ohio, assignor to The Perfection Metal Container Company, Cleveland, Ohio, a Corporation of Delaware. Filed Jan. 11, 1926. Serial No. 80,436. 4 Claims. (Cl. 220—55.)

1. A container having a head with an opening for a cover and having upstanding locking pins, and a cover having slots to receive the pins and having cam portions co-operating with the pins so as to lock and tighten the cover when the latter is turned so as to move the slotted portions relative to the pins.

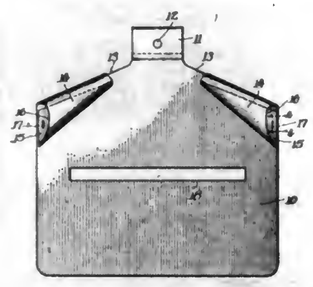


1,663,571. TRUCK. FRANK RUSSELL SHEDD, Center Rutland, Vt., assignor to Vermont Marble Company, a Corporation of Vermont. Filed Apr. 6, 1927. Serial No. 181,477. 2 Claims. (Cl. 280—49.)

1. A truck consisting of an endwise triangular four-wheeled frame-work comprising sets of inclined uprights and a broad base, cross bars connecting said uprights together near said base, lower longitudinal bars connecting said uprights to said cross-bars, and an upper longitudinal bar connecting said uprights together near their tops, one set of said uprights having depending

extensions, a slab-supporting lever pivoted to one of said extensions at each end of the truck, holding levers engaging said supporting levers, and means for releasing the said holding levers from said supporting levers.

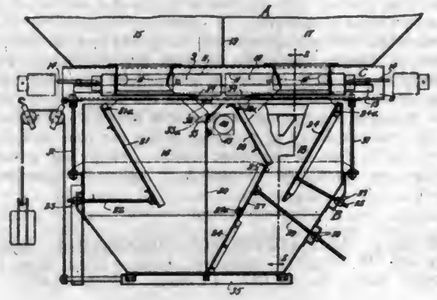
1,663,572. NOTCH BOLT LATCH. THOMAS F. STUART and HENRY A. MOORE, Los Angeles, Calif. Filed Nov. 12, 1925. Serial No. 68,564. 11 Claims. (Cl. 292—33.)



1. In a door latch, a housing, a latching bolt arranged for operation therein, a locking bolt arranged for operation within said housing, a pair of independently operable knobs associated with said latch, means associated with each knob for retracting said latching bolt and means associated with one knob for projecting and retracting the locking bolt.

10. In a door latch, a housing for the locking mechanism, which housing includes an end plate and auxiliary end plates adjustably arranged on the upper and lower edges of said end plate.

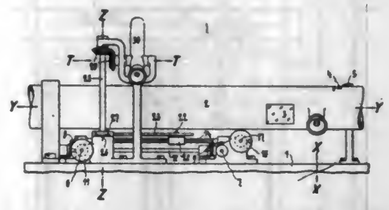
1,663,573. GARMENT-HOLDING FORM. CHARLES H. THARP, Chicago, Ill., assignor to Montgomery Ward & Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 18, 1924. Serial No. 732,597. 2 Claims. (Cl. 223—66.)



1. In a garment holding form of the class described, a body portion, an arched shoulder supporting pad folded to overlie the body portion, a fastening flap connected to the shoulder supporting pad and folded at an angle

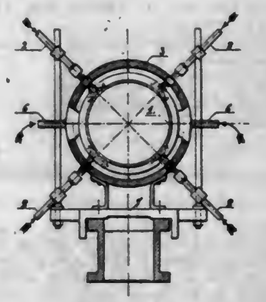
thereto to lie in contact with the body portion, the outer end of the fastening flap being exposed at the front beyond the outer end of the shoulder supporting

pad, and fastening means applied to the exposed end of the fastening flap and the body portion to hold the shoulder supporting pad in arched relation to the body.



1,663,574. APPARATUS FOR HANDLING BULK MATERIALS. WILLIAM M. VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Dec. 1, 1924. Serial No. 753,014. 14 Claims. (Cl. 265—27.)

1. A batcher device comprising in combination, a bin divided into compartments for coarse and fine aggregate, a hopper therebelow divided into compartments by a partition each compartment of the hopper being in registry with a compartment of the bin, means for altering the effective volumetric capacity of the hopper compartments, gate means for controlling the discharge from the bin compartments to the hopper compartments and means for discharging the contents of said hopper.



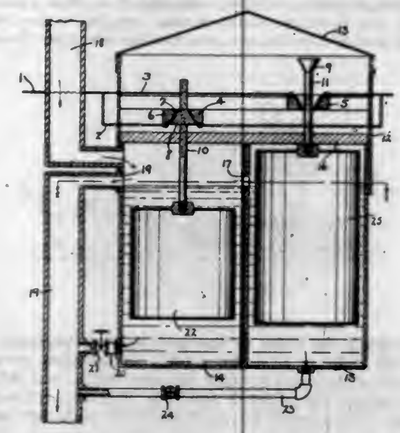
1,663,575. ANTIAIRCRAFT FIRE-CONTROL APPARATUS. SAMUEL JOHANNES VAN DEN BERGH, the Hague, Netherlands, assignor to the Firm: N. V. Nederlandsche Instrumenten Compagnie, the Hague, Netherlands. Filed July 19, 1926, Serial No. 123,516, and in Germany July 25, 1925. 2 Claims. (Cl. 33—67.)

1. In an antiaircraft fire control apparatus a telemeter and a sighting telescope, these two instruments being adjustable in elevation and azimuth, a carriage guide, a sliding carriage displaceable along this carriage guide, a second carriage guide fixed on the said sliding carriage and being perpendicular to the first carriage guide, a second sliding carriage displaceable along the second carriage guide, means for displacing the two sliding carriages in the carriage guides, a ruler, rotatable in a plane parallel to the two carriage guides, means adapted to keep the second sliding carriage in contact with this ruler, means

for coupling the ruler to the said sighting telescope, so that the sighting telescope rotates in elevation with a rotation of the ruler through the same angle, and means for coupling the sighting telescope and the telemeter, so that both always laterally rotate through the same angle.

1,663,576. APPARATUS FOR HOT WORKING METAL. WACLAW VON KOSSOWSKI, Warsaw, Poland. Filed Nov. 8, 1924, Serial No. 748,794, and in Poland July 12, 1924. 1 Claim. (Cl. 153—73.)

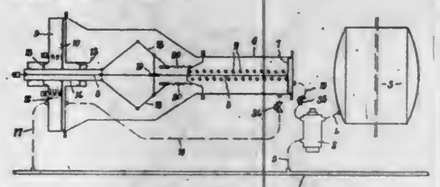
Apparatus for hot-working metal comprising an annular casing, means for injecting a burning mixture of gas and air into said casing substantially in radial direction and means connected with said casing and adjoining said injecting means for forming a radial veil of air adapted to screen off the heat emitted by said burning mixture.



1,663,577. FIRE-RESISTING COMPOSITION. JOSEPH RIGBY WATSON, Berkeley, Calif. Filed Mar. 23, 1925. Serial No. 17,795. 4 Claims. (Cl. 134—44.)

4. A fire resisting composition containing the following ingredients in approximately the proportions stated: linseed oil, ½ gallon; alum, 2 pounds; asbestine, 2 pounds; carbon tetrachloride, 1 quart; and from 1 to 2 ounces of sulphuric acid for each gallon of the composition.

1,663,578. AUTOMATIC SWITCH FOR OIL-WELL MOTORS. WILLIAM WERNER, Mexia, Tex. Filed Apr. 6, 1926, Serial No. 100,096. Renewed May 9, 1927. 8 Claims. (Cl. 103—12.)

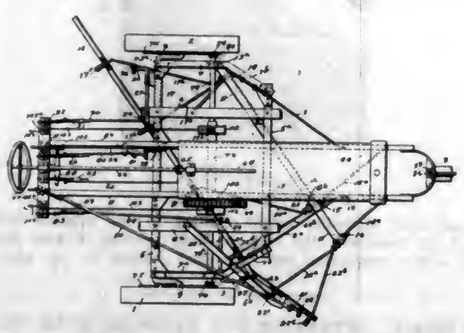


1. In a device of the character described, an electric circuit including a conductor having two branches, a switch in each of said branches, comprising two spaced

plates, a rod of electrically insulating material, a contact member on said rod shaped to fit between said plates, float chambers, floats therein connected with said rods,

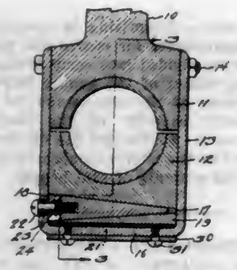
said chambers having inlets and outlets for liquid arranged to open or close said switches controlled by the amount of liquid delivered to said chambers.

1,663,579. BRAKE SYSTEM ACTUATED BY FLUID PRESSURE. ANDERS ANDERBERG and ERIK ANDERS ANDERBERG, Malmo, Sweden. Filed Aug. 18, 1926, Serial No. 130,036, and in Sweden Aug. 19, 1925. 19 Claims. (Cl. 303—6.)



3. A fluid actuated brake system having two operating devices of different types, in which one of the said operating devices consists of a brake having quick action and relatively small brake power while the other operating device consists of an air brake having small movement and, in relation to the first named device, great and successively controllable brake power, the said two operating devices acting upon a common rod by means of a mechanism automatically establishing a releasable connection between said rod and the brake of large braking power when the piston of said latter brake moves in one direction and automatically releasing the connection when said piston moves in the opposite direction.

1,663,580. CONTRIVANCE FOR FASTENING WOODWORK. BRUNO SEVERIN ANDERSIN, Helsingfors, Finland. Filed Dec. 1, 1926, Serial No. 152,044, and in Finland Nov. 12, 1925. 6 Claims. (Cl. 20—92.)



1. A fastener for fastening together two pieces of wood comprising a substantially flat member adapted to be inserted into a groove cut into the joining faces of the pieces of wood to be fastened together, and having tongues projecting from the plane of said member and adapted to bite into the wood upon a turning of said member in said groove.

1,663,581. ROAD SCRAPER. JOHN B. BARTHOLOMEW, Peoria, Ill., assignor to Avery Company, Peoria, Ill., a Corporation of Illinois. Filed July 9, 1921. Serial No. 483,478. 6 Claims. (Cl. 37—163.)

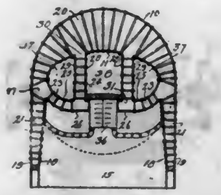
1. In an automotive road scraper machine, the combination of a frame having a longitudinally elongated element in the central vertical longitudinal planes of the machine and an elongated transverse element extending beyond the sides of said longitudinal element, traction wheels supporting said transverse frame element, wheeled guiding means constituting an additional support for the forward end of the longitudinally elongated element of the frame, a scraper suspended beneath the frame and extending transversely thereof in an inclined direction, the ends of the scraper extending across the longitudinal vertical planes of the traction wheels with one end in advance of the traction wheel at that side of the machine and the other end in rear of the other traction wheel, and power devices on the frame connected to drive the traction wheels.

1,663,582. SELF-ADJUSTING CONNECTING ROD. HOMER W. BONNEY, Kingsley, Iowa. Filed Nov. 1, 1926. Serial No. 145,611. 4 Claims. (Cl. 308—68.)

1. A self-adjusting connecting rod for automobiles, comprising a rod having an integral bearing member, a pair of arms secured to said rod and extending beyond said bearing member, an element connecting said arms to form therewith a closed loop projecting beyond the bearing member, a fixed wedge mounted against said element, a movable cap freely received within said loop and coacting

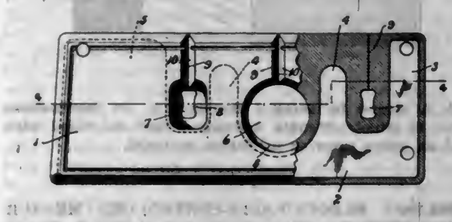
with the fixed bearing member, a movable wedge slidable longitudinally between the fixed wedge and the movable cap, a spring compressed between the thick end of the movable wedge and one of the arms, said last mentioned arm being provided with an elongated slot extending longitudinally thereof, a screw adjustably threaded into the thick end of the movable wedge and extending through said slot and a retaining cap, U-shaped in cross section, secured to said element and partially covering the loop on either side of the arms so as to inclose said wedges and a portion of the movable cap.

1,663,583. RADIORECEIVER. GEORGE F. BOREMAN, Salt Lake City, Utah. Filed Dec. 4, 1924. Serial No. 753,844. 2 Claims. (Cl. 179—117.)



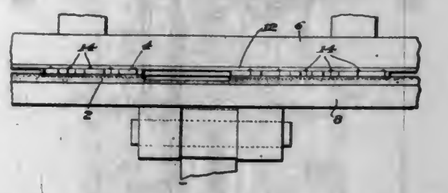
1. A receiver comprising one or more flat steel magnets of the horseshoe type, having one end portion bifurcated and bent to form two parallel spaced apart poles; and other similarly shaped magnets secured thereto with the bifurcated portions opposed in direction; an electromagnet mounted between the prongs of said bifurcated portions; a poised core mounted therein; a diaphragm substantially parallel with the planes of the first mentioned magnets and operatively connected with the poised core of the electromagnet.

1,663,584. BRUSH. GEORGE C. CLEAVES, Wollaston, Mass., assignor, by mesne assignments, to William H. Doble, Quincy, Mass. Refiled for (abandoned) application Serial No. 405,807, filed Aug. 25, 1920. This application filed Mar. 24, 1925. Serial No. 18,072. 3 Claims. (Cl. 15—181.)



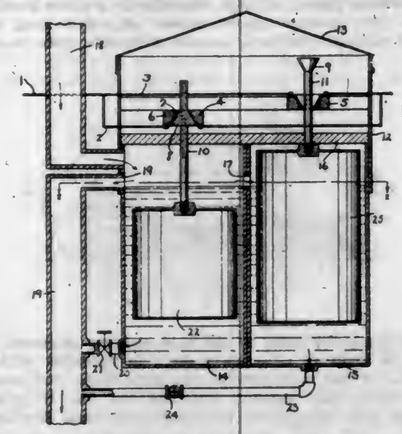
1. A woven web for use in the manufacture of brushes comprising a weft a plurality of separate individual bundles of bristles arranged with the butt ends of the bristles lying in substantially one plane, and comprising as warp a plurality and an odd number of binding strands woven around said bundles near the butt ends of the bristles, each of said bundles of bristles containing a relatively large number of substantially straight bristles flexible throughout their length, of relatively small sectional dimension and extending substantially parallel to one another and at substantially right angles to the binding warp, and each of the warp members extending around and engaging the same side of alternate bundles and the opposite side of an intermediate bundle.

1,663,585. LOCOMOTIVE BOILER. MICHAEL M. CROWLEY, Sioux City, Iowa. Filed Mar. 4, 1927. Serial No. 172,640. 9 Claims. (Cl. 122—68.)



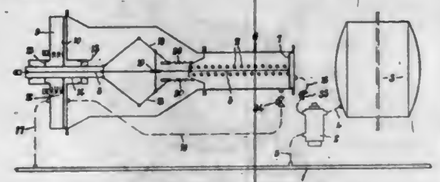
1. In a locomotive boiler having a crown, belly, and legs, a pair of water boxes connected, at their forward ends, to the belly, and, at their sides, to the legs, said water boxes being spaced apart and inclined rearwardly, upwardly, and laterally away from the center of the firebox, and a pair of vertically disposed longitudinally extending imperforate water channels connecting the inner sides of the boxes with the space above the crown.

1,663,586. TOE-BOARD PLATE. JAMES FRANCIS DUFFY, Holland, Mich., assignor to Duffy Manufacturing Company, Holland, Mich., a Corporation of Michigan. Filed Feb. 9, 1927. Serial No. 166,862. 9 Claims. (Cl. 74—81.)



2. An article of the class described, comprising a plate of flexible material having openings therethrough between the edges of the article and having slits through said flexible material from one edge thereof to said openings, and a reinforcing and stiffening plate connected with the same around said openings and between the slits in said flexible material.

1,663,587. PROCESS OF MANUFACTURING RUBBER ARTICLES. ERNEST W. DUNBAR, Hudson, Mass., assignor to Cambridge Rubber Co., Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 17, 1926. Serial No. 95,264. 12 Claims. (Cl. 18—53.)

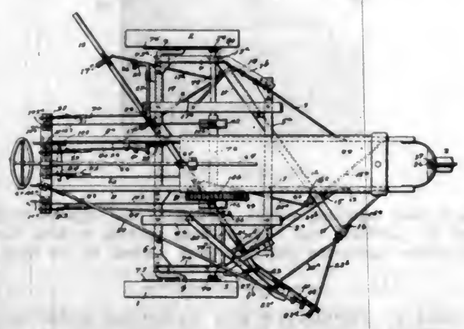


11. That improvement in the process of making rubber articles which consists in providing an unvulcanized rubber blank of suitable shape, providing a die of suitable design, heating one of said parts, pressing said die into said blank while the heated part is still hot, immediately thereafter chilling the blank so impressed, separating the blank from the die, and subsequently vulcanizing the blank so treated.

plates, a rod of electrically insulating material, a contact member on said rod shaped to fit between said plates, float chambers, floats therein connected with said rods,

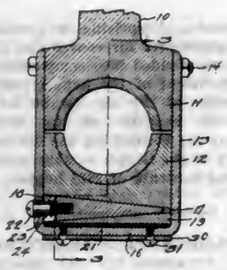
said chambers having inlets and outlets for liquid arranged to open or close said switches controlled by the amount of liquid delivered to said chambers.

1,663,579. BRAKE SYSTEM ACTUATED BY FLUID PRESSURE. ANDERS ANDERBERG and ERIK ANDERS ANDERBERG, Malmo, Sweden. Filed Aug. 18, 1926, Serial No. 130,036, and in Sweden Aug. 19, 1925. 19 Claims. (Cl. 303—6.)



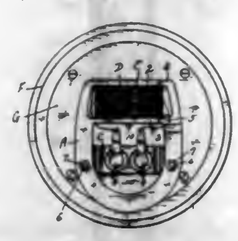
3. A fluid actuated brake system having two operating devices of different types, in which one of the said operating devices consists of a brake having quick action and relatively small brake power while the other operating device consists of an air brake having small movement and, in relation to the first named device, great and successively controllable brake power, the said two operating devices acting upon a common rod by means of a mechanism automatically establishing a releasable connection between said rod and the brake of large braking power when the piston of said latter brake moves in one direction and automatically releasing the connection when said piston moves in the opposite direction.

1,663,580. CONTRIVANCE FOR FASTENING WOODWORK. BRUNO SEVERIN ANDERSIN, Helsingfors, Finland. Filed Dec. 1, 1926, Serial No. 152,044, and in Finland Nov. 12, 1925. 6 Claims. (Cl. 20—92.)



1. A fastener for fastening together two pieces of wood comprising a substantially flat member adapted to be inserted into a groove cut into the joining faces of the pieces of wood to be fastened together, and having tongues projecting from the plane of said member and adapted to bite into the wood upon a turning of said member in said groove.

1,663,581. ROAD SCRAPER. JOHN B. BARTHOLOMEW, Peoria, Ill., assignor to Avery Company, Peoria, Ill., a Corporation of Illinois. Filed July 9, 1921. Serial No. 483,478. 6 Claims. (Cl. 37—163.)

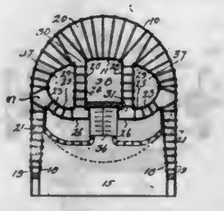


1. In an automotive road scraper machine, the combination of a frame having a longitudinally elongated element in the central vertical longitudinal planes of the machine and an elongated transverse element extending beyond the sides of said longitudinal element, traction wheels supporting said transverse frame element, wheeled guiding means constituting an additional support for the forward end of the longitudinally elongated element of the frame, a scraper suspended beneath the frame and extending transversely thereof in an inclined direction, the ends of the scraper extending across the longitudinal vertical planes of the traction wheels with one end in advance of the traction wheel at that side of the machine and the other end in rear of the other traction wheel, and power devices on the frame connected to drive the traction wheels.

1,663,582. SELF-ADJUSTING CONNECTING ROD. HOMER W. BONNEY, Kingsley, Iowa. Filed Nov. 1, 1926. Serial No. 145,611. 4 Claims. (Cl. 308—68.)

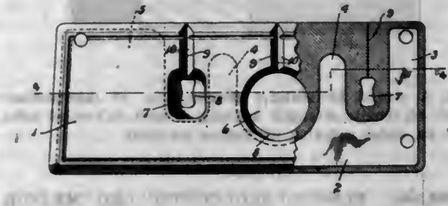
1. A self-adjusting connecting rod for automobiles, comprising a rod having an integral bearing member, a pair of arms secured to said rod and extending beyond said bearing member, an element connecting said arms to form therewith a closed loop projecting beyond the bearing member, a fixed wedge mounted against said element, a movable cap freely received within said loop and coacting with the fixed bearing member, a movable wedge slidable longitudinally between the fixed wedge and the movable cap, a spring compressed between the thick end of the movable wedge and one of the arms, said last mentioned arm being provided with an elongated slot extending longitudinally thereof, a screw adjustably threaded into the thick end of the movable wedge and extending through said slot and a retaining cap, U-shaped in cross section, secured to said element and partially covering the loop on either side of the arms so as to inclose said wedges and a portion of the movable cap.

1,663,583. RADIORECEIVER. GEORGE F. BORKMAN, Salt Lake City, Utah. Filed Dec. 4, 1924. Serial No. 753,844. 2 Claims. (Cl. 179—117.)



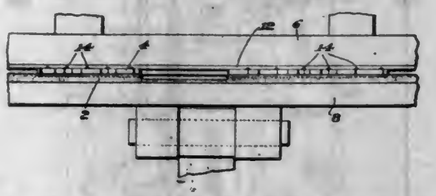
1. A receiver comprising one or more flat steel magnets of the horseshoe type, having one end portion bifurcated and bent to form two parallel spaced apart poles; and other similarly shaped magnets secured thereto with the bifurcated portions opposed in direction; an electromagnet mounted between the prongs of said bifurcated portions; a poised core mounted therein; a diaphragm substantially parallel with the planes of the first mentioned magnets and operatively connected with the poised core of the electromagnet.

1,663,584. BRUSH. GEORGE C. CLEAVES, Wollaston, Mass., assignor, by mesne assignments, to William H. Doble, Quincy, Mass. Reflled for (abandoned) application Serial No. 405,807, filed Aug. 25, 1920. This application filed Mar. 24, 1925. Serial No. 18,072. 3 Claims. (Cl. 15—181.)



1. A woven web for use in the manufacture of brushes comprising a weft a plurality of separate individual bundles of bristles arranged with the butt ends of the bristles lying in substantially one plane, and comprising as warp a plurality and an odd number of binding strands woven around said bundles near the butt ends of the bristles, each of said bundles of bristles containing a relatively large number of substantially straight bristles flexible throughout their length, of relatively small sectional dimension and extending substantially parallel to one another and at substantially right angles to the binding warp, and each of the warp members extending around and engaging the same side of alternate bundles and the opposite side of an intermediate bundle.

1,663,585. LOCOMOTIVE BOILER. MICHAEL M. CROWLEY, Sioux City, Iowa. Filed Mar. 4, 1927. Serial No. 172,640. 9 Claims. (Cl. 122—68.)

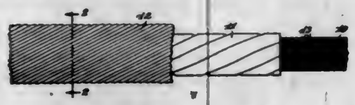


1. In a locomotive boiler having a crown, belly, and legs, a pair of water boxes connected, at their forward ends, to the belly, and, at their sides, to the legs, said water boxes being spaced apart and inclined rearwardly, upwardly, and laterally away from the center of the firebox, and a pair of vertically disposed longitudinally extending imperforate water channels connecting the inner sides of the boxes with the space above the crown.

1,663,586. TOE-BOARD PLATE. JAMES FRANCIS DUFFY, Holland, Mich., assignor to Duffy Manufacturing Company, Holland, Mich., a Corporation of Michigan. Filed Feb. 9, 1927. Serial No. 166,862. 9 Claims. (Cl. 74—81.)

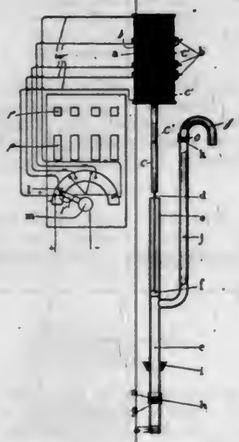
2. An article of the class described, comprising a plate of flexible material having openings therethrough between the edges of the article and having slits through said flexible material from one edge thereof to said openings, and a reinforcing and stiffening plate connected with the same around said openings and between the slits in said flexible material.

1,663,587. PROCESS OF MANUFACTURING RUBBER ARTICLES. ERNEST W. DUNBAR, Hudson, Mass., assignor to Cambridge Rubber Co., Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 17, 1926. Serial No. 95,264. 12 Claims. (Cl. 18—53.)



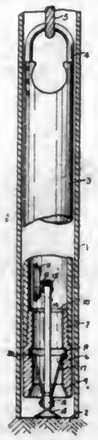
11. That improvement in the process of making rubber articles which consists in providing an unvulcanized rubber blank of suitable shape, providing a die of suitable design, heating one of said parts, pressing said die into said blank while the heated part is still hot, immediately thereafter chilling the blank so impressed, separating the blank from the die, and subsequently vulcanizing the blank so treated.

1,663,588. MARKING MACHINE. PERLEY R. GLASS, Wayland, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 20, 1923. Serial No. 17,120. 12 Claims. (Cl. 101—110.)



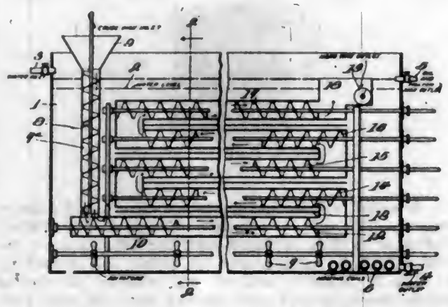
1. In a machine of the character described, an adjustable marker, a pivoted locking device arranged in one position to prevent adjustment of the marker, a rotatable setting device for adjusting the marker in engagement therewith, and means for connecting the setting device to the locking device arranged to release the locking device upon lateral displacement of the setting device without disturbing the engagement between the setting device and the marker.

1,663,589. ROPE. THOMAS GOBB, Brooklyn, N. Y. Filed Sept. 25, 1926. Serial No. 137,671. 8 Claims. (Cl. 117—59.)



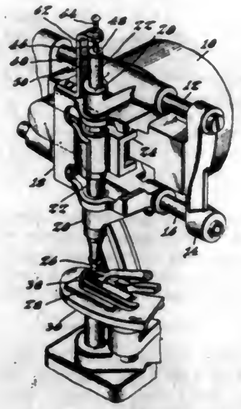
1. A strand including a fibrous core, an intermediate layer of tensile strength helically wound flat-rolled wire, and an outer covering of fibrous material.

1,663,590. ELECTRICALLY-CONTROLLED MEASURING DEVICE. GEORGES GOURDON, Malakoff, France. Filed Sept. 21, 1925, Serial No. 57,714, and in France Sept. 23, 1924. 7 Claims. (Cl. 221—103.)



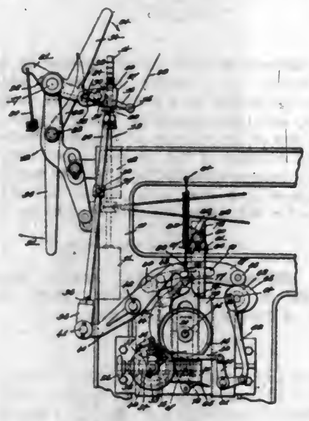
1. In a liquid-dispensing apparatus, a tubular element; a piston movable therein; and an electromagnetic controller embodying a plurality of independent solenoid coils, a core common to all the coils and connected to the stem of the piston to enable movement of the two as a unit, and means for selectively energizing the solenoid coils to vary the length of stroke of the core and its connected piston.

1,663,591. DUMP BUCKET AND BAILER. ELLSWORTH GRAY, Houston, Tex., assignor to Gray Tool Company, Houston, Tex., a Corporation of Texas. Filed July 30, 1927. Serial No. 209,543. 4 Claims. (Cl. 166—19.)



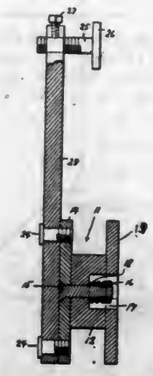
1. In a device of the character described, a bucket open at its lower end, a valve seat in said bucket, a valve stem, a valve free to move upwardly away from said seat, except for a loosely pivoted connection between said valve and the upper end of said stem, said stem projecting from said bucket to contact with the bottom of the well and raise said valve upwardly away from said seat.

1,663,592. PROCESS OF AND APPARATUS FOR RECOVERING PARAFFIN. WILLIAM A. GRUSE, Wilkinsburg, and WARREN F. FARAGHER, Pittsburgh, Pa., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Oct. 28, 1924. Serial No. 746,374. 3 Claims. (Cl. 196—20.)



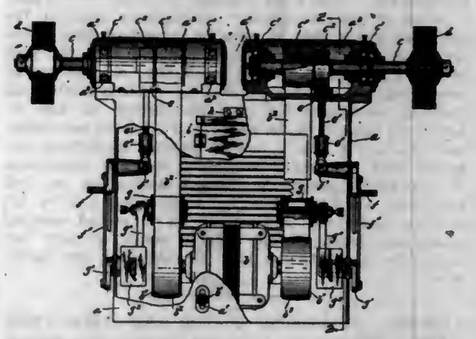
1. In a continuous method of recovering hard paraffin wax from solidified slack wax, the process which comprises continuously conveying such a solidified wax through a body of water of adjusted temperature and during its progress repeatedly cutting the wax in such a manner as to expose all surfaces to the water and allow oil to separate therefrom and to rise through the water.

1,663,593. FASTENER-INSERTING MACHINE. HUGH R. HAMILTON, Webster, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 20, 1926. Serial No. 123,788. 8 Claims. (Cl. 218—15.)



1. A fastener-inserting machine having a combined punching and fastener-setting tool, means for introducing a fastener into a hole punched in the work by said tool cooperating with the tool to clench the fastener in the work, an ejector within the said tool, means tending to retract the ejector, and means for causing the ejector to eject from the tool chips punched from the work.

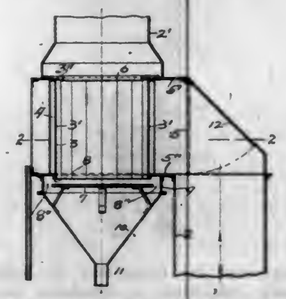
1,663,594. BOBBIN WINDER. FRANK E. HARDING, Lawrence, Mass., assignor to Arlington Mills, Lawrence, Mass., a Corporation of Massachusetts. Filed May 17, 1927. Serial No. 192,063. 4 Claims. (Cl. 242—43.7.)



1. A bobbin winder having, in combination, bobbin spindles, a faller wire, a traverse cam, a pick cam, connections between the faller wire and the two cams to traverse the faller wire over the bobbin, a notch member provided with a notch, a part of said connections having a portion to enter said notch, said notch member acting to prevent the transmission of motion from the cams to the faller wire, and said notch member being so located as to be struck and moved by the traverse cam to cause the connections to be actuated by the cams.

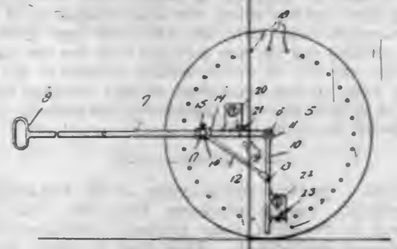
1,663,595. MAGNETO-COIL-ALIGNING TOOL. CLARENCE FREDERIC HARPER, Harper, Tex. Filed Dec. 6, 1926. Serial No. 152,997. 2 Claims. (Cl. 33—180.)

1. An implement for facilitating the adjustment of magneto coils, comprising a cylindrical body member having means at one end whereby it may be detachably connected to the crank-shaft side of a fly wheel with the axis of the member in alignment with that of the wheel, the side of the wheel having secured thereto magneto parts comprising the circular series of permanent magnets and their clamp plates, a disc member, means for rotatably mounting the disc member at the free end of the body member with the axes of the two members in alignment, an arm removably mounted at one end on said disc member and extending radially therefrom, said arm having threaded through its free end a gage screw extending parallel to the axis of the members so that it may be adjusted to contact with the magnet clamp plates on the wheel, the axial dimensions of the said members being such that, after said gage screw is thus adjusted and the arm detached from the disc member, the arm may be correspondingly secured to the fly-wheel flange of the crank-shaft so that its gage screw may be utilized in axially positioning the magneto coils distributed about the shaft.



1,663,596. DRIVE MECHANISM FOR POLISHING LATHES. GEORGE HAUMANN, Painesville, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 2, 1925. Serial No. 12,522. 11 Claims. (Cl. 192—11.)

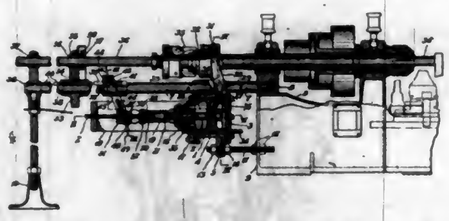
6. In an appliance of the class described, the combination with a housing, a motor secured in the lower portion of the housing, a driven shaft, a journal frame and terminal journals securely mounted in said frame and rotatably mounting said shaft; the journal frame



being positioned above the motor and secured to the housing, a belt operatively connecting the driven shaft and the motor, and means for tightening and for relaxing said belt, substantially as set forth.

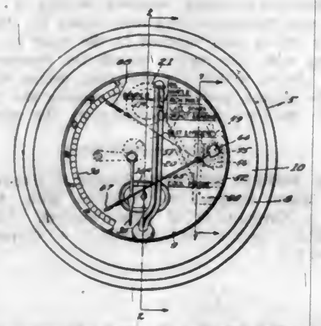
1,663,597. GAS-CLEANING APPARATUS. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed May 4, 1925. Serial No. 27,837. 7 Claims. (Cl. 183—85.)

1. The improvement herein described comprising a casing presenting a bottom, a top and sides, in combination with a tuyère ring comprising operatively overlapping substantially tangential blades, and opening through the top and bottom of said casing, a disc centrally positioned at the bottom of said ring and dust receiving means below said disc and depending from the bottom of said casing.



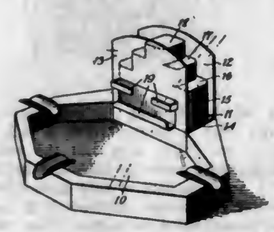
1,663,598. MEASURING APPARATUS. OSCAR V. HOLMQUIST, St. James, Minn. Filed Feb. 25, 1927. Serial No. 170,865. 2 Claims. (Cl. 33—141.)

1. An apparatus of the class described, including, in combination, a disk, a peg adjacent the center of the disk, a series of pegs in annular arrangement adjacent the periphery of the disk, an axle pin extending through the center of the disk, handle bars engaged with the ends of the axle pin, a counter mechanism on one handle bar, a toothed member operatively connected with the counting mechanism for operation thereof, an arm rotatable on one end of the axle pin, a counting mechanism mounted on the arm, a toothed member operatively connected with the second mentioned counting mechanism for operation thereof, the toothed member on the first mentioned counting mechanism being actuatable by the first peg, and the toothed member on the second counting mechanism being operable by the series of pegs, and means for adjusting the arms in respect to the handle bars.



1,663,599. AUTOMATIC CHUCK AND WIRE FEED. EARL J. HORNBERGER, Cleveland Heights, Ohio, assignor to John G. Oliver, doing business as Bardon and Oliver, Cleveland, Ohio. Filed July 6, 1926. Serial No. 120,755. 13 Claims. (Cl. 29—62.)

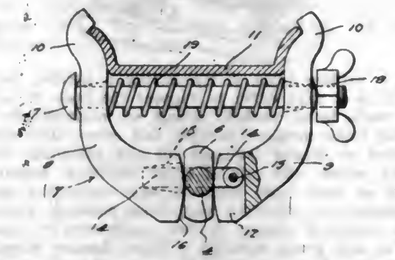
1. Fluid pressure operated stock feeding and chucking apparatus comprising chuck operating means, stock feeding means, a source of supply of fluid under pressure, a cylinder, a piston adapted to reciprocate in said cylinder, positive motion mechanical connections operated by said piston and connected to said chuck operating means,



lost motion mechanical connections between said piston and said stock feeding means whereby said stock feeding means is operated only during a part of the movement of said piston, and a valve adapted to control the action of said fluid under pressure on said piston.

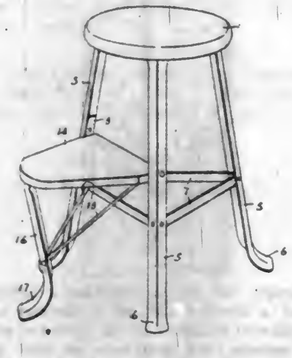
1,663,600. INDICATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. STEPHEN JENCICK, Chagrin Falls, Ohio. Filed Mar. 30, 1921. Serial No. 456,909. 14 Claims. (Cl. 265—45.)

1. The combination with the oil circulating system of a motor vehicle, of a single instrument adapted for location on the vehicle in a position visible to the driver in his seat, such instrument including means for indicating the flow of oil through said system, means for indicating the pressure of the oil, means for indicating its temperature, means whereby the aforesaid means also indicates approaching low level of oil in said system, and means for indicating the specific gravity of the oil.



1,663,601. SMOKER'S STAND. AUGUST KAPPENBERG, New York, N. Y. Filed July 21, 1926. Serial No. 124,010. 4 Claims. (Cl. 131—51.)

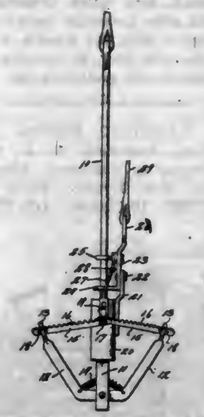
4. A smoker's stand, including a clip for supporting packaged elongated articles, and means in said clip for



engaging through the lower end of the package and with the lower ends of the articles for disposing the upper ends of the articles in tiers and in different planes to facilitate their withdrawal from the package.

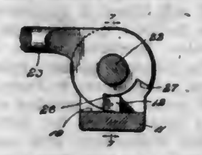
1,663,602. CLAMP. JOSEPH ALBERT MARNELL, Flint, Mich. Filed Aug. 22, 1927. Serial No. 214,639. 1 Claim. (Cl. 144—289.)

As a new product of manufacture, a clamp comprising a pair of substantially duplicate jaws having their outer end portions shaped to engage the side flanges of a tire rim, the inner ends of said jaws being located in close proximity for connection with each other, one of said ends being bifurcated, the other end being formed with a socket, a pin pivoted between the furcations having its free end removably received in said socket, the intermediate portion of said jaws being formed with bolt holes, a bolt extending through said holes and having the screw threaded end equipped with a thumb nut, and a coil spring surrounding the intermediate portion of said bolt and bearing at its opposite ends against said jaws.



1,663,603. STOOL. WILLIAM MAUDE, Fergus, Ontario, Canada. Filed Jan. 24, 1925. Serial No. 4,500, and in Canada Dec. 26, 1924. 8 Claims. (Cl. 228—30.)

3. In a stool, two front legs and a rear leg triangularly disposed having a seat supported thereon, a step pivoted on the two front legs, a support member rigidly secured to said step adjacent to the forward edge thereof and adapted to bear against said rear leg and support said step when the step is swung under said seat.



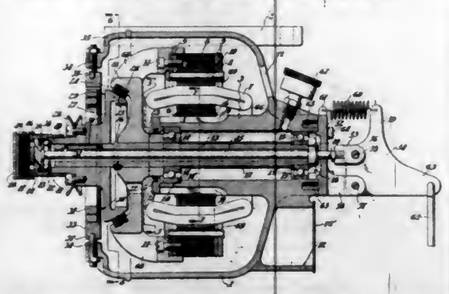
1,663,604. CHIMNEY CLEANER. JOHN MOEN, Fosston, Minn. Filed Apr. 5, 1927. Serial No. 181,222. 5 Claims. (Cl. 15—248.)

1. A flue cleaning implement including a shank, a plurality of scrapers pivotally connected to each other to define an approximate rectangle when expanded, a slide on the shank, links pivotally connected to the slide and to the scrapers at two opposite corners of the

rectangular figure defined thereby, and links connecting the remaining opposite corners of the figure defined by the scrapers and the lower end of the shank.

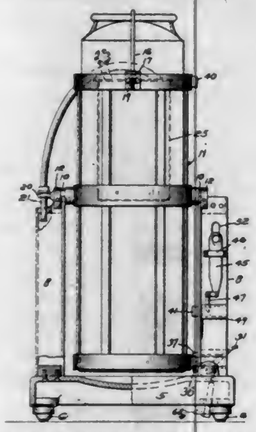
1,663,605. JOINT MEMBER FOR PIN STEMS. EUGENE MOREHOUSE, Providence, R. I., assignor to B. A. Ballou & Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed Oct. 7, 1925. Serial No. 61,100. 4 Claims. (Cl. 24—160.)

1. A joint member for pin stems formed of spaced ear portions connected by and bent up from an integral base bridge, and a pair of stop lugs formed integral with the inner face of the ear portions adjacent the bridge and extending inwardly toward each other.



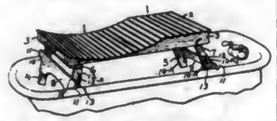
1,663,606. DETACHABLE HANDLE FOR LUBRICATING APPARATUS. HOWARD J. MURPHY, Reading, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 18, 1924. Serial No. 750,604. 5 Claims. (Cl. 74—38.)

1. A supplemental handle for a lubricant-expelling gun including quick detachable means comprising a portion



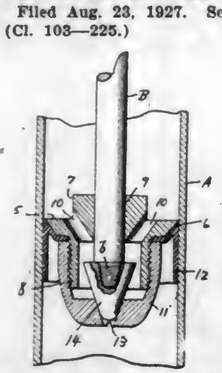
for engagement with the handle and a portion for engagement with the stem of the gun between the handle and barrel thereof, said quick detachable means also including a hand grip generally parallel with the portion for engagement with the handle whereby the stem and handle of the gun may be continuously rotated in a direction to retract the piston of the gun.

1,663,607. ELECTRIC POWER TRANSMITTER. JAMES M. NAUL, Plainfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 21, 1924 Serial No. 751,299. 10 Claims. (Cl. 172—36.)



1. A unitary electric under driver for machine tables comprising a hollow cylindrical frame having external attaching means and a tubular portion projecting into said frame from one end thereof, a brake carried at the other end of said frame, a stationary motor-member mounted on said internal tubular frame portion, a rotary motor member journaled within said frame coaxially with said internal tubular frame portion and having a driving clutch face, a driven clutch-member coaxial with said rotary motor member and cooperatively related with said brake, means for shifting said driven clutch member into engagement with said driving member, and a belt-pulley on said driven clutch-member.

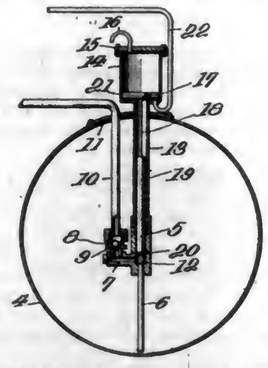
1,663,608. FIRE-FIGHTING APPARATUS. WALTER M. NEWTON, Dover, Del., assignor of one-half to John W. Argo, Dover, Del. Filed Mar. 16, 1926. Serial No. 95,095. 7 Claims. (Cl. 248—52.)



1. A fire fighting apparatus comprising a mobile base, standards mounted on the base, a basket having trunnions connected to the standards, a latch for engaging said basket to hold the same against movement, a manually actuated member connected to said base and forming a means whereby the latch may be retracted, and floor engaging means connected to said manually actuated member and actuated thereby to engage the floor for securing the base in position.

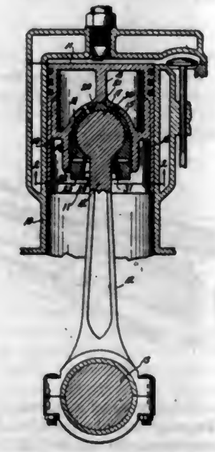
1,663,609. BATHING TABLE FOR INFANTS. LLOYD PEABODY, Decatur, Ill. Filed Oct. 9, 1926. Serial No. 140,549. 1 Claim. (Cl. 45—51.)

In a bathing table, a top having a portion thereof formed in a fixed curve to support the body of an infant while being washed, a pair of longitudinally extending frame members forming said curve, slats fixedly mounted at spaced intervals on and extending transversely across said pair of frame members, supporting means on said frame members, said supporting means comprising two pairs of supporting members arranged to be swingably secured at their upper ends to opposite ends of said frame members, a brace member integrally mounted on and extending transversely across each of said pairs of supporting members, said brace members being formed at their opposite extremities into projecting wings to fit upon the longitudinal edges of an ordinary bath tub, adjustable means on two or each of said supporting members for increasing the width of the bath table at its base to meet the requirements of wider bath tubs, said means comprising slidable members operating by means of bolts extending laterally through said supporting members and slidably engaging elongated slots in said slidable members, stop means for said supporting members comprising a cross strip mounted on the under surface and at the opposite extremities of said frame members.



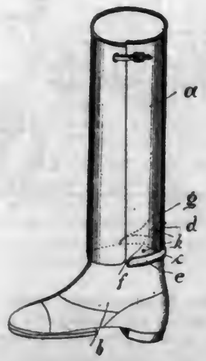
1,663,610. PUMP PLUNGER. JAMES E. PHELPS, Lisbon, Iowa. Filed Aug. 23, 1927. Serial No. 214,876 1 Claim. (Cl. 103—225.)

In a plunger for pumps including a cylinder, and a plunger rod, a circular plate of a diameter slightly less than the internal diameter of the cylinder within which it is to operate, the periphery of said plate being beveled, a collar depending from the bottom surface of said plate within the periphery thereof, a bowl adapted to be detachably rigidly associated with said collar, a leather adapted to be arranged at its inner edge between the upper end of the bowl and the bottom surface of said plate, said leather thence extended upwardly along the beveled edge of the plate and downwardly for having close engagement with the interior of the cylinder, the bottom wall of said bowl being provided with an air exhausting opening while said plate is provided with air intake openings terminating at their inner ends within said collar, said plate being further provided with a central opening through which the plunger rod is slidable, and a valve head arranged upon



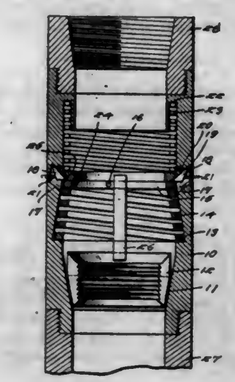
the lower end of the rod and adapted to engage within the opening of the bowl during the downstroke of said plunger for preventing the air from passing therethrough, said valve head adapted to be raised from the bowl opening during the upstroke of the plunger to permit the air to pass through the plunger into the bottom of the cylinder.

1,663,611. FUEL-FEEDING MEANS FOR CHARGE-FORMING DEVICES. ALBERT G. REDMOND, Indianapolis, Ind., assignor to Jacob Richard Francis, Flint, Mich. Filed Jan. 8, 1923. Serial No. 610,470. 8 Claims. (Cl. 158—36.)



1. The combination with an internal combustion engine having a charge forming device and a main fuel supply located in a plane below said charge forming device, of a pump disposed in said fuel supply tank, a pipe leading from said pump to the charge forming device, said pump having a reciprocating piston, an air pump driven by the internal combustion engine, an air cylinder provided with a piston disposed above the fuel pump and having a connection with the piston thereof and means for delivering air to said air cylinder below said piston for intermittently raising said pump piston to allow said pump piston to drop by gravity for maintaining fuel in the fuel pipe leading to the charge forming device under pressure.

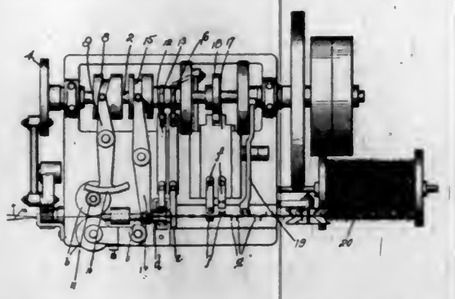
1,663,612. UNIVERSAL JOINT FOR PISTONS. ALLAN E. REID, Boston, Mass. Filed Apr. 8, 1926. Serial No. 100,544. 2 Claims. (Cl. 74—108.)



1. In a piston, a connecting rod bearing comprising an interiorly-threaded cylindrical socket having a spherical bearing surface at one end thereof, a multi-section bearing bushing threaded into said socket and having a spherical bearing surface supplemental to said first mentioned bearing surface, a multi-section lock bushing threaded into said socket adjacent said bearing bushing, a multi-section spring lock washer between said bushings, each of said washer sections having a compressible portion therein and a peripheral ear, and axial slots in the interior wall of said socket adapted to receive said ears.

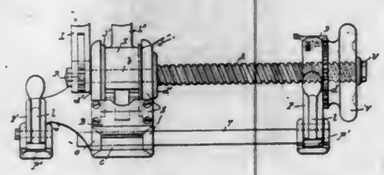
1,663,613. COMBINED GAITER AND BOOT PROTECTOR. WILHELM REINHARDT, Melsungen, Germany. Filed May 26, 1927, Serial No. 194,425, and in Germany Dec. 8, 1926. 3 Claims. (Cl. 36—2.)

1. A leather gaiter comprising an elastic lining on the inner surface of its lower rear portion movable with regard to the boot.



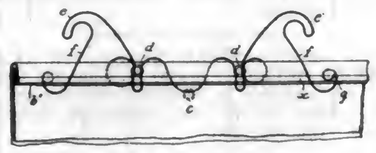
1,663,614. OVERSHOT. DOUGLAS H. ROWLAND, Shawnee, Okla. Filed Mar. 15, 1927. Serial No. 175,596. 2 Claims. (Cl. 294—102.)

1. In an overshot, a shell embodying the usual slip seat, slips coacting therewith, a ring connected with the slips, a spring constantly urging said ring downwardly, a second spring seated at its lower end upon a shoulder formed in the shell and its upper end having a ring engaging the first named ring, the last named spring being of greater strength than the first named spring whereby said rings normally tend to move upwardly to a position wherein the slips may spread and release a gripped article and latches carried by the shell and engaging the last named ring to



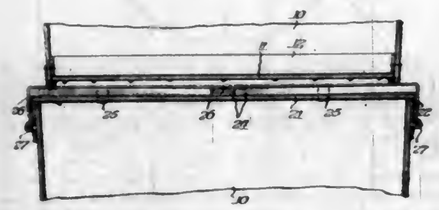
hold the spring pressed in the position permitting downward movement of the slips to a point where they are disposed slightly above the lower limit of their movement, the first named ring upon downward movement of the slips shifting said latches to inoperative position to release the last named ring, the first named ring having a beveled outer face camming the latches to inoperative position during downward movement of the first named ring.

1,663,615. APPARATUS FOR MANUFACTURING BARBED WIRE. OTTO SCHMID, Reutlingen, Wurttemberg, Germany. Filed Dec. 6, 1923, Serial No. 679,016, and in Germany July 9, 1923. 9 Claims. (Cl. 140—58.)



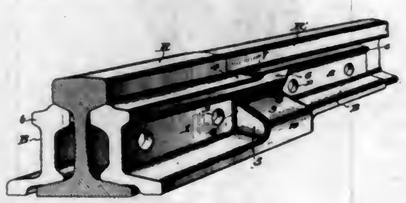
1. Apparatus for manufacturing single strand barbed wire, comprising means for holding the wires against rotation, means for feeding the wires through the guide to a working point, said means being constructed to press the wires against one another, thereby to secure uniform speed of feed regardless of differences in thickness of the wires, securing means adjacent the working point on the opposite side from said holding means to prevent the wires from turning, a twisting device at the working point for twisting both wires simultaneously to form spaced twisted parts with parallel wire portions therebetween, cutting tools positioned beyond the twisting device and arranged to seize but one of the wires between adjacent twisted portions, cooperating edges on the tools for cutting through the seized wire, and shoulders on the tools for bending the cut ends to form outstanding barbs.

1,663,616. DEVICE FOR STRETCHING AND FASTENING HOOPS FOR BOXES AND THE LIKE. SERAPHIN SICARD, Paris, France, assignor of fifty per cent to M. André Rebichon, Paris, France. Filed Nov. 9, 1925, Serial No. 68,036, and in France Nov. 22, 1924. 4 Claims. (Cl. 81—9.1.)



1. A device for stretching and fastening hoops for boxes and the like, comprising a stretching device, a fastening device, a single rotatable shaft on which said devices are mounted, a ratchet on the shaft, means cooperating with the ratchet whereby the shaft may be rotated for the tensioning operation, and means whereby the stretching device may be freed from cooperation with the shaft to permit relatively free movement of said stretching device axially of the shaft following the operation of such device.

1,663,617. LOOSE-LEAF-SUSPENDING FILE. GEORG STEINMETZ, Charlottenburg, Germany. Filed May 27, 1926, Serial No. 112,076, and in Germany Oct. 19, 1925. 7 Claims. (Cl. 129—16.7.)

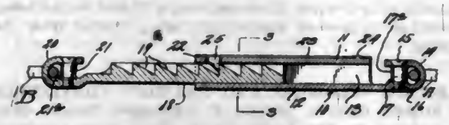


1. In a loose-leaf vertical file for suspending folded-over sheets, a back plate, a bent-over top ledge forming part of the back plate, a cover plate, clamping means to press one of the said plates against the other, and suspension means to suspend the device cooperating with at least one of the said plates.

1,663,618. RECEPTACLE. PAUL STRANGE, Neenah, Wis., assignor to John Strange Pail Company, Menasha, Wis., a Corporation of Wisconsin. Filed Apr. 9, 1924. Serial No. 705,321. 5 Claims. (Cl. 229—5.5.)

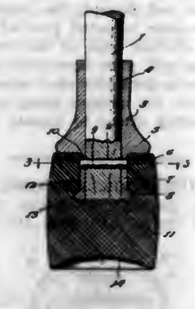
4. In a receptacle, the combination with a wall portion and a bottom closure, of a retaining ring enveloping the margin of the wall portion below the bottom closure, said retaining ring having a constraining flange encompassing the wall portion over the margin of the bottom closure, a binding flange traversing the lower margin of the wall portion, and a supporting flange disposed within the wall portion to furnish support for the bottom closure, said binding flange being transversely corrugated.

1,663,619. REENFORCED STEP RAIL JOINT. VICTOR C. ARMSTRONG, Hackensack, N. J., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Oct. 8, 1926. Serial No. 140,333. 15 Claims. (Cl. 238—167.)



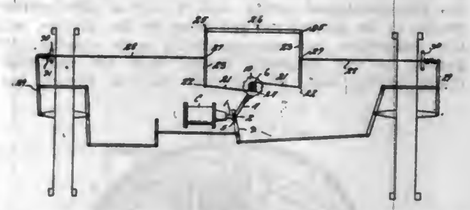
13. A reenforced-head type of step rail joint bar shaped from the same body of metal throughout and provided with a medial reenforcement projecting solely from the outerside of the bar and integrated with the head reenforcement.

1,663,620. SPINNING-RING HOLDER. BENJAMIN L. BLOOM, Scranton, Pa., assignor to Collins Supply and Equipment Company, Scranton, Pa. Filed June 6, 1927. Serial No. 196,831. 2 Claims. (Cl. 118—59.)



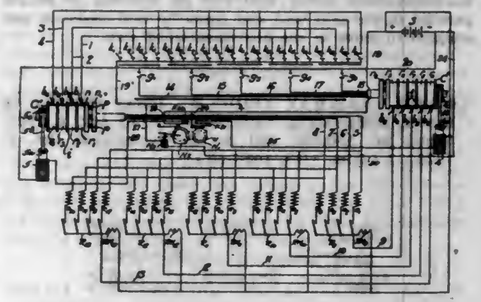
1. A spinning ring holder having upstanding portions to receive a spinning ring between them, said portions having inwardly struck lugs to support the ring.

1,663,621. CHAIN TIGHTENER AND HOLDER. GEORGE JAMES BOWMAN, Bartle, Calif. Filed Mar. 1, 1927. Serial No. 171,844. 3 Claims. (Cl. 24—206.)



1. A chain tightener and holder of the character described including a hollow, open-ended keeper, the bottom wall of the keeper being extended at one end to form a hook, a coacting member sliding through the keeper and formed with ratchet teeth, the extremity of the member being bent rearward to form a hook, and a flat spring mounted upon the one wall of the keeper and having a detent tooth passing through the said wall of the keeper and coacting with the teeth of said sliding member, the said wall of the keeper being recessed to receive said spring and one wall of the recess being cut away to permit the insertion of an implement whereby the spring may be raised.

1,663,622. TIP FOR CRUTCHES AND CANES. FLOYD C. ATKINSON, Western Port, Md. Filed July 19, 1926. Serial No. 123,551. 2 Claims. (Cl. 135—53.)

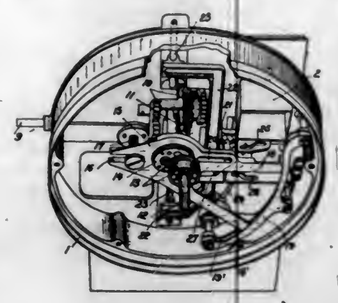


1. A tip for crutches and the like comprising a ferrule having a bore to accommodate the end of the crutch staff, a pin engaged transversely of the staff and ferrule, the ferrule having a circumscribing shoulder having a flat under face, the portion of the ferrule below the shoulder being cylindrical and being provided at its lower end with a circumscribing anchoring bead, and a cushioning member having a socket accommodating the said portion of the ferrule below the shoulder, the upper end of the said cushioning member abutting the under face of the shoulder and the wall of the socket in the cushioning member having a recess accommodating the anchoring bead, said pin being retained against endwise movement by the side walls of the socket.

1,663,623. SLACK ADJUSTER. JAMES W. CLARK, Monmouth, Ill. Filed Dec. 30, 1926. Serial No. 158,011. 5 Claims. (Cl. 188—198.)

1. The combination with the push rod, a dead lever of an air brake equipment, and a swinging lever operatively connected to the rod, of means for operatively connecting said swinging lever with the dead lever, including a capstan, a flexible member winding on the capstan, the normal travel of the push rod operating the swinging lever independently of the capstan, means carried by the swinging lever and coacting with the capstan operating upon undue travel of the push rod and swinging lever for imparting rotation to the capstan, and means for holding the capstan against retrograde rotation.

1,663,624. ELECTRIC APPARATUS. ARVID GERHARD DAMM, Ronninge, Sweden. Filed Aug. 31, 1925, Serial No. 53,628, and in Sweden June 27, 1924. 2 Claims. (Cl. 35—13.)



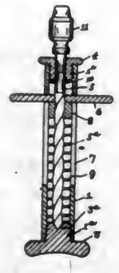
2. In an electric ciphering apparatus, a source of current, a sender key board divided into groups of keys, a recording device whose recording elements are divided into similar groups, a ciphering cylinder between the key-board and recording device, contacts in said cylinder each connected to a key of each group of keys, stationary contacts cooperating with the cylinder contacts and each connected to a recording element of each group of recording elements, a second cylinder having contacts each arranged for connection to an entire group of recording elements, a group connector for each group of recording elements electrically connected to one pole of the source of current and to a contact on said second cylinder, stationary contacts cooperating with the contacts on said second cylinder, a group of contacts each corresponding to a group of keys and operated by any key of the corresponding group, each of said latter contacts connected to the other pole of the current source and to the stationary contacts for said second cylinder.

1,663,625. FILM-DRIVING MECHANISM FOR CINEMATOGRAPHIC VIEW-TAKING APPARATUS. ANDRÉ LÉON VICTOR CLÉMENT DEBRIE, Paris, France. Filed June 13, 1927, Serial No. 198,670, and in France July 22, 1926. 3 Claims. (Cl. 88—18.4.)

1. A film driving mechanism in cinematographic view taking machines comprising a casing, a guiding rod

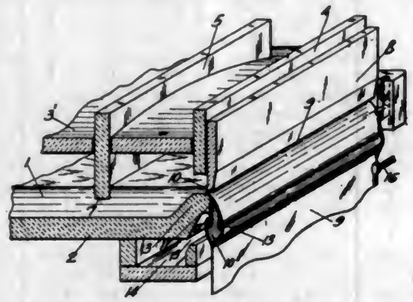
parallel to the wall of the casing opposite to the film, a carriage slidably borne by said rod and adapted to pivot round same whilst remaining near parallelism with the abovementioned casing wall, a slotted part perpendicular to the guiding rod and borne by the carriage, said slot comprising two communicating parts substantially parallel to and unequally distant from the abovementioned casing wall, film driving clutches aligned per-

pendicularly to the guiding rod and borne by said carriage, an eccentric driven by the general control of the machine and adapted to drive the carriage to and fro along the guiding rod, means whereby the eccentric is prevented from moving out of a plane parallel to the abovementioned casing wall and an incurved projection parallel to the said wall and borne by said eccentric and adapted to move in the abovementioned slot.



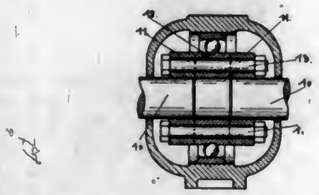
1,663,626. RAILWAY VEHICLE. JOHAN HENDRIK DE IONGH, Hilligersberg, Netherlands. Filed Apr. 1, 1927, Serial No. 180,305, and in the Netherlands Oct. 7, 1926. 1 Claim. (Cl. 105—66.)

A railway vehicle having two radial axles which are controlled by a laterally movable axle located between them characterized by this, that the pivot of the radial axle is located externally of this axle at some distance therefrom towards the laterally movable axle and the radial axles are surrounded by housing over which run rollers having springs suspended thereon, such springs being movable in the longitudinal direction of the carriage and connected with the carriage body.



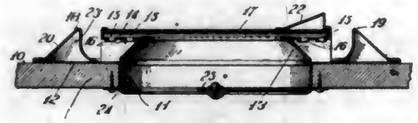
1,663,627. APPLIANCE ADAPTED TO REVOLVE BRUSHES, GRIND IN VALVES, AND OTHER PURPOSES. HERBERT DOBSON, Portsmouth, England. Filed Feb. 9, 1927, Serial No. 167,054, and in Great Britain Feb. 11, 1926. 2 Claims. (Cl. 74—14.)

1. An apparatus for imparting a rotary motion comprising a hollow casing, a removable plug at the base, a second removable plug at the upper end, a central orifice in the latter, a spindle passing through said orifice, a recess provided in the said lower removable plug, the lower end of said spindle adapted to fit therein, a spiral groove formed on the greater part of the spindle within said casing, a propellant engaging with said spiral groove, elongated apertures in said casing, the wings of said propellant projecting therethrough being held against rotation, said propellant moving axially imparting rotary motion to said spindle in one direction, a helical spring interposed between said propellant and lower plug respectively within said casing imparting rotary motion to the



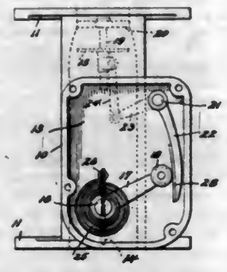
spindle in a reverse direction, and a thrust collar being provided to prevent said spindle being ejected from the casing.

1,663,628. FLOWING AND DRAWING CONTINUOUS SHEET GLASS. ENOCH T. FERNGREN, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 20, 1922. Serial No. 595,741. 13 Claims. (Cl. 49—17.)



3. An apparatus for continuously producing sheet glass, comprising a receptacle for the molten glass having an overflow lip at one end thereof, the overflow lip comprising a separate member mounted parallel to and slightly spaced from the overflow edge of the receptacle, so that the flowing glass will pass both over and under this member and unite to form the sheet source at the outer edge of the member, the member being formed with horizontal glass retarding ledges to impede the free flow of the glass.

1,663,629. ANTIFRICTION BEARING. HANS FRITZSCHING, Vienna, Austria. Filed Apr. 28, 1926. Serial No. 105,157. 1 Claim. (Cl. 308—189.)

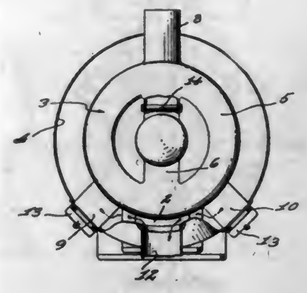


Bearing-unit, consisting of an anti-friction bearing and a special housing, the bearing-unit being disposed between the two shafts to be supported and connected within a clearance so wide as to permit the bearing-unit to be inserted or to be taken from its support only by a movement perpendicular to the direction of said shafts and without any lateral or other movements of said shafts.

1,663,630. VEHICLE VENTILATOR. WILLIAM S. HAMM, Hubbard Woods, Ill., assignor to The Adlake Company, a Corporation of Illinois. Filed Oct. 26, 1925. Serial No. 64,721. 17 Claims. (Cl. 98—20.)

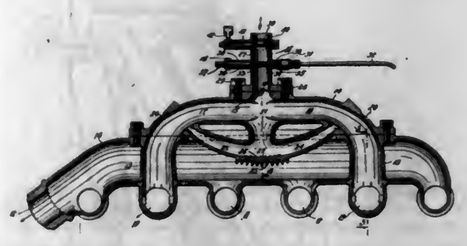
13. A ventilator for vehicles comprising a laterally open casing and provided with an internal partition forming a flue passage communicating with the body to be ventilated and opening downwardly into the body of the casing and means for preventing the entrance of wind currents at the lateral openings of the casing.

1,663,631. GOVERNOR. ROBERT G. HANDY and ARTHUR A. BULL, Detroit, Mich., assignors to Handy Governor Corporation, Detroit, Mich., a Corporation of Michigan. Filed May 8, 1922. Serial No. 559,436. 8 Claims. (Cl. 137—152.)



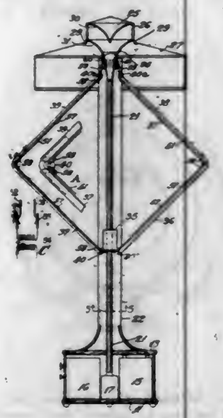
1. In a suction responsive governor, an intake conduit member having a portion of gradually decreasing cross section, a disc slidably mounted in said conduit portion, and controlling means for said disc including a spring acting in opposition to the suction and cam mechanism modifying the action of said spring, said cam mechanism including a pivoted member having a cam surface, and link work positively connecting said disc to said pivoted member, for the purpose described.

1,663,632. COMB. GEORGE W. HYDORN, Los Angeles, Calif. Filed June 23, 1926. Serial No. 117,894. 3 Claims. (Cl. 132—11.)



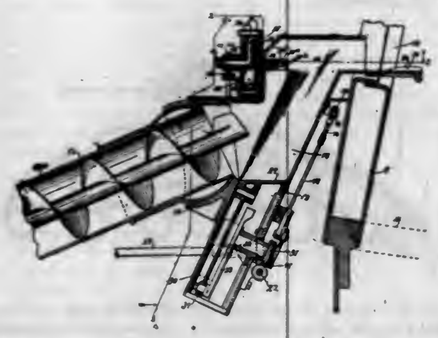
1. A comb of the character set forth having a central thickened portion the top of which is of approximately the same width as the bottom and said central portion being of sufficient length to provide a finger rest for the forefinger of the user; and rows of teeth adjacent said central portion.

1,663,633. WARM-AIR FURNACE. RICHARD M. JUDD, ERNEST C. TAYLOR, and RALPH S. MCNANEY, Dowagiac, Mich., assignors to Premier Warm Air Company, Dowagiac, Mich., a Corporation of Michigan. Filed May 23, 1927. Serial No. 193,684. 1 Claim. (Cl. 126—102.)



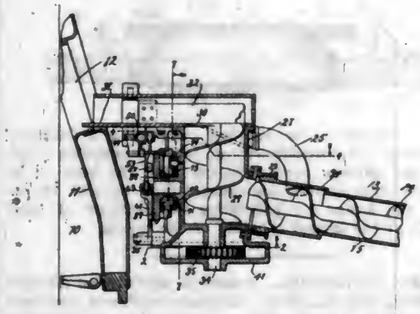
In a warm air furnace, the combination with a combustion chamber having a lateral fuel passage extending toward the front of the furnace, of a radiator having an annular channel connecting with said combustion chamber and provided with a pair of spaced clean out passages extended laterally therefrom above said fuel passage at each side thereof in close proximity thereto, a front furnace wall having its upper portion extending between said clean out passages and spaced from the front portion of said radiator, an outer casing surrounding said combustion chamber and forming therewith an air passage and a riser extending directly from the front of the furnace between said clean out passages, the arrangement being such that warm air rising within the outer casing will be directed between the fuel and clean out passages into said riser.

1,663,634. COMBINATION EXHAUST AND INTAKE MANIFOLD. WILLIAM E. KEMP, New York, N. Y. Filed June 22, 1921. Serial No. 479,560. 5 Claims. (Cl. 125—122.)



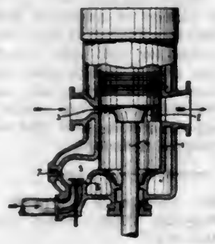
1. In a device of the character described, the combination with the exhaust-manifold of an internal combustion engine, of a branched intake-manifold having a duct extending into said exhaust-manifold and tapped into each branch of said intake-manifold, said intake-manifold being provided with an inlet at the point of junction of the branches thereof situated to permit of an initial vertical downward flow of the combustible charges therein, and a passage in said intake-manifold wholly disposed below said branches in alignment with said inlet and leading downwards to said duct.

1,663,635. RADIO APPARATUS. MATTHEW H. LOUGHRIDGE, Bogota, N. J., and JOHN S. HOLLIDAY, New York, N. Y.; J. Margaret Holliday administratrix of said John S. Holliday, deceased. Filed Dec. 30, 1921. Serial No. 525,917. 21 Claims. (Cl. 250—33.)



19. An aerial system comprising a foldable frame, a plurality of turns of wire attached thereto, and means for maintaining said turns substantially taut through the operations of folding and unfolding.

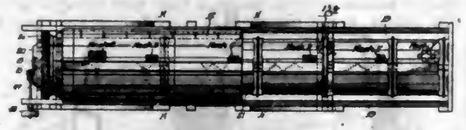
1,663,636. STOKER. NATHAN M. LOWER and PAUL A. KETCHPEL, Pittsburgh, Pa., assignors to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Aug. 9, 1923. Serial No. 656,481. 15 Claims. (Cl. 110—101.)



1. In a locomotive stoker, in combination, a delivery casing adapted for the discharge of fuel into a fire-box, means for introducing fuel into the casing through its lower wall, and means for discharging a blast against the fuel for discharging the same from the casing.

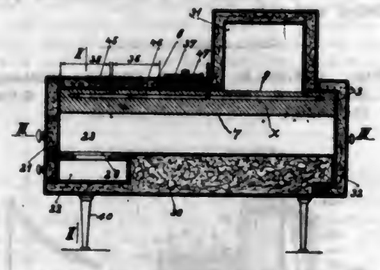
1,663,637. STOKER. NATHAN M. LOWER, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Sept. 27, 1924. Serial No. 740,167. 16 Claims. (Cl. 110—101.)

9. In a stoker, a pair of swinging vanes, means for alternately operating said vanes, a variable speed elevator for delivering fuel in the path of said vanes, and means for operating said elevator and vanes in timed relation.



1,663,638. SCAVENGING DEVICE FOR DOUBLE-ACTING TWO-STROKE INTERNAL-COMBUSTION ENGINES. GERARD JOHAN LUGT, Amsterdam, Netherlands, assignor to Naamlooze Vennootschap Nederlandsche Fabriek van Werktuigen en Spoorwegmaterieel genaamd "Werkspoor," Amsterdam, Netherlands, a Dutch Company. Filed Oct. 18, 1924, Serial No. 744,472, and in the Netherlands Feb. 13, 1924. 2 Claims. (Cl. 123—61.)

1. In a double-acting two-stroke internal combustion engine, the combination with the engine cylinder having in the middle region of its wall scavenging air ports and outlet ports, and a piston in said cylinder, of a separate combustion chamber laterally projecting from said cylinder at the cross-head end thereof, and a scavenging air-valve opening into said chamber for admitting additional scavenging air, said outlet ports being longitudinally positioned to permit flow of scavenging air therethrough from both the scavenging air ports and the scavenging air-valve opening.

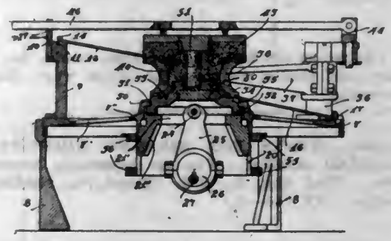


1,663,639. FRUIT GRADER. JOHN J. NEVILLS, Sacramento, Calif., assignor to Libby, McNeill & Libby, Chicago, Ill., a Corporation of Maine. Filed July 12, 1924. Serial No. 725,540. 3 Claims. (Cl. 209—291.)

1. In a grader, in combination, a pair of concentric members of polygonal contour, one of which envelops the other throughout a portion of the length of said other adjacent to the inlet end thereof, said concentric members of polygonal contour comprising screen members of different mesh, the mesh of the screens of said inner concentric member being progressively greater from the inlet end thereof to the outlet end thereof, the mesh of the screens of the outer concentric member being less than the smallest mesh of the screens of the inner con-

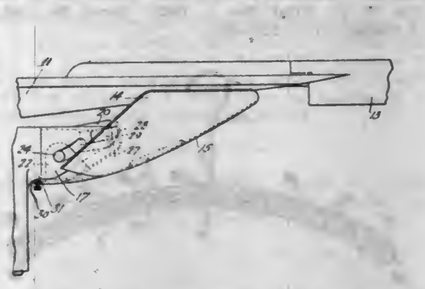
centric member and increasing progressively from the inlet end to the outlet end thereof, whereby members of intermediate sizes are sorted out relatively soon after insertion into said inner concentric member.

1,663,640. HEATING DEVICE. ALEXANDER PAIS, Bucharest, Rumania, assignor to Theodor Popescu, Alexander Pais, and Constantin Pais, Bucharest, Rumania. Filed Oct. 3, 1925, Serial No. 60,361, and in Austria Aug. 8, 1925. 7 Claims. (Cl. 257—1.)



1. A heating device comprising a heat conducting block, a source of heat for heating said block and provided internally with a plurality of interconnected passages charged once and for all with a temperature equalizing medium, the metal block being completely enveloped in heat insulating material excepting at those parts of its surface which cooperate with the heat source and those parts of its surface which serve to deliver up heat.

1,663,641. EXERCISER AND BLOOD CIRCULATOR. GEORGE S. SMALLWOOD, Freeport, N. Y. Filed Jan. 27, 1927. Serial No. 163,878. 4 Claims. (Cl. 272—80.)

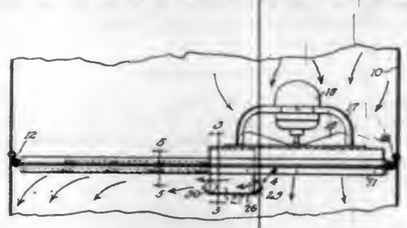


1. An exerciser comprising a pair of endless elastic bands of substantially equal length adapted to extend from the shoulders to the feet of the user uninterruptedly and loosely, the bands being shorter between the shoulder and foot-receiving portions than the length of the user from shoulders to feet when standing erect for stretching the bands and creating strain upon the body when the user stands erect, and means to retain the bands in position upon the body.

1,663,642. PERMANENT MOLD. JOHN SPOUSTA, River Rouge, Mich., assignor to Whitehead & Kales Company, River Rouge, Mich., a Corporation of Michigan. Filed June 10, 1926. Serial No. 114,905. 12 Claims. (Cl. 22—128.)

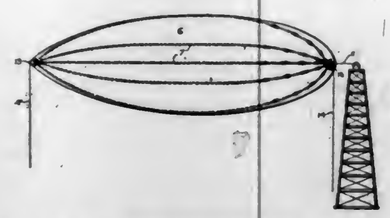
1. A mold of the class described comprising, a cope forming portion; a table; a base forming member for said mold movable relatively to said table into and out of engagement with an opening formed in said table; retaining members mounted on said table; a pair of swingably mounted side wall forming members for said mold adapted for movement into operative and inoperative position without disturbing members supported by said retaining members.

1,663,643. SLICE DEFLECTOR FOR SLICING MACHINES. HENRY THOMAS, London, England, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Oct. 14, 1926, Serial No. 141,434, and in Great Britain Mar. 13, 1926. 13 Claims. (Cl. 146—102.)



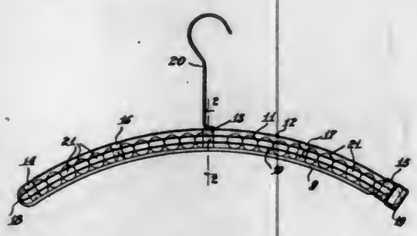
1. The combination with a slicing knife, of a deflector for directing slices away from the face of the knife, and a locking means operable by movement of the deflector in the direction of movement of slices severed by said knife for locking said deflector in position adjacent the face of the knife.

1,663,644. AIR-CIRCULATING DEVICE FOR WARM-AIR FURNACES. LEWIS C. WEAVER, Chicago, and WALTER H. RIETZ, Ravinia, Ill., assignors to Ilg Electric Ventilating Company, Chicago, Ill., a Corporation of Louisiana. Filed Jan. 9, 1928. Serial No. 245,391. 9 Claims. (Cl. 126—99.)



1. In an air circulating device for furnaces, the combination of a panel mounted in the air intake conduit

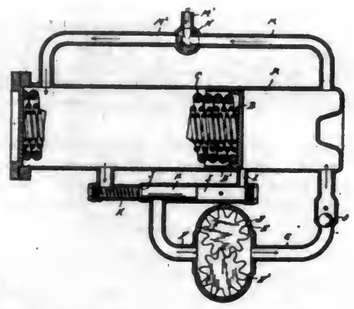
of a furnace, said panel having a fan opening, a fan mounted on said panel, a shutter so mounted in said conduit as to swing to open position when the fan is



idle, and means for deflecting a portion of the fan blast against said shutter to close the latter when the fan is operating.

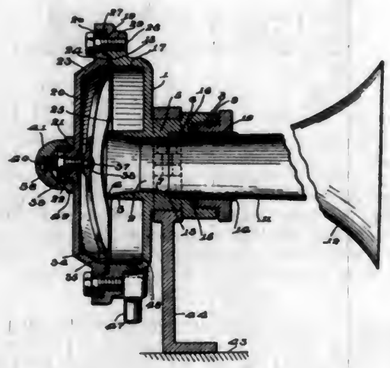
1,663,645. MEANS FOR MOORING AIRSHIPS TO MOORING MASTS. WILLIAM AUBERLIN, Northfield, Ohio. Filed Aug. 1, 1927. Serial No. 209,830. 5 Claims. (Cl. 244—2.)

1. An air-ship provided with guides extending from nose to stern, and cables in said guides, said cables being adapted for connection to a mooring mast or the like.



1,663,646. GARMENT HANGER. RUBIN BASS, Brooklyn, N. Y. Filed Nov. 4, 1926. Serial No. 146,202. 4 Claims. (Cl. 223—64.)

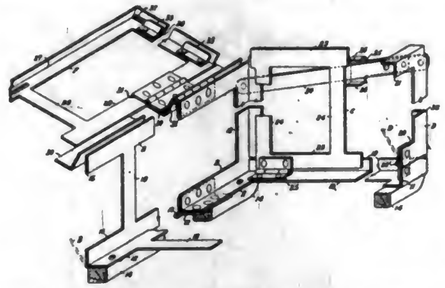
1. A garment hanger comprising a plurality of longitudinally extending strips forming a track-way for moth balls, the bottom strip being of greater cross section than the others and rings connecting the strips to form trusses.



1,663,647. ENERGY-STORAGE UNIT. ALANSON P. BRUSH, Detroit, Mich. Filed Feb. 7, 1927. Serial No. 166,566. 5 Claims. (Cl. 103—140.)

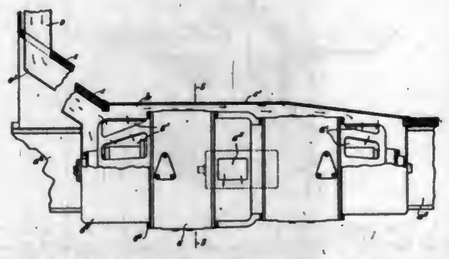
1. The combination with a fluid storage cylinder, a piston therein and resilient means forming a progressively increasing resistance to the movement of said piston in one direction in said cylinder, of mechanically driven fluid displacement means having its discharge connected to said cylinder at the end toward which the piston is urged by said resilient means, the inlet to said displacement means being connected to said cylinder on the opposite side of the piston, a valve for controlling

the inlet conduit and means automatically operated upon movement of said piston to a predetermined position for closing said valve.



1,663,648. WHISTLE. CLARK COOPER, Philadelphia, Pa. Filed Oct. 4, 1927. Serial No. 223,930. 6 Claims. (Cl. 116—142.)

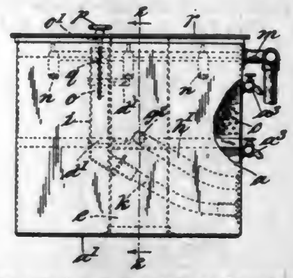
5. A whistle, comprising a two-piece casing, one of which has an annular shoulder surrounded by a flange and the other of which has an annular flange in uniform relation with said shoulder within said first flange, a diaphragm having its periphery supported between said shoulder and cooperating second flange, said casing having an outlet surrounded by a flange normally bearing against the central region of said diaphragm, a plate having air-equalizing passageways and cooperating in such manner with said diaphragm between the margin and the central region of the latter to press said diaphragm positively against said outlet flange, and a gasket secured at its outer margin between said diaphragm and second flange and extending radially inwardly between and separating said diaphragm from direct contact with said plate.



1,663,649. COLLAPSIBLE CONTAINER. HENRY O. ELKINS, Bath, N. Y. Filed Oct. 12, 1923, Serial No. 668,070. Renewed Feb. 1, 1928. 7 Claims. (Cl. 220—6.)

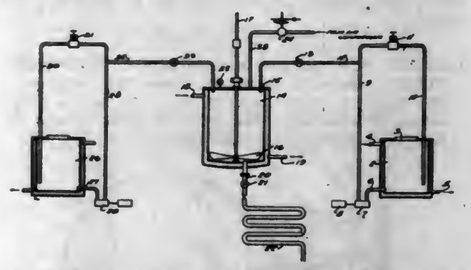
1. A collapsible container including, in combination, body sections including bottom, end and side sections articulated for extension to form enclosing walls or to be collapsed, bracing links connected to opposed body sections and other opposed body sections being adapted to brace the container to sustain it in extended position, a cover section having hinged connection to said body and adapted to swing into a position to overlie the upper edges of said body sections so as to transmit loads thereto and to entirely uncover the space within the

container, said hinged connection also permitting the cover section when collapsed to assume a position substantially parallel with the body sections and face to face with certain of the said sections, and retaining members on said cover section adapted when the cover is closed to cooperate with said sustaining sections to retain them in sustaining position.



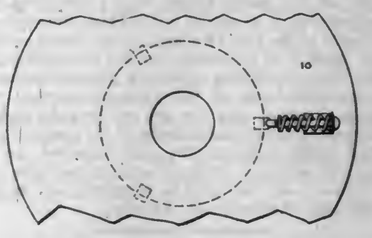
1,663,650. VENTILATING SYSTEM. CHARLES FROESCH, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 24, 1927. Serial No. 177,877. 2 Claims. (Cl. 98—2.)

1. In a vehicle, side frame members and flooring carried therewith, a driving unit between the members and below the flooring, a duct, means cooperating with the flooring for forming an enclosure for a portion of the unit and means to cause the duct to carry ventilating air from the exterior of the vehicle and above the frame members to the enclosure, whereby the ventilation of the unit by means of such air is effected.



1,663,651. DEVICE FOR SEPARATING LIQUIDS OF DIFFERENT SPECIFIC GRAVITIES. EDWARD WILLIAM GREEN, London, England. Filed June 8, 1926, Serial No. 114,422, and in Great Britain June 24, 1925. 1 Claim. (Cl. 210—51.)

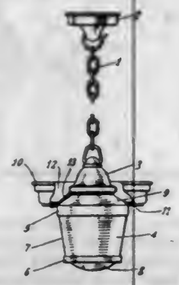
An improved device for separating liquids of different specific gravities having in combination a tank, perforated distributing troughs or channels for introducing the admixed liquids into the liquids in the tank at a low velocity and without shock, an open ended trunk the lower end of which is in communication with the liquid of heavy specific gravity collected in the lower part of the tank, a partition in said trunk having an upper edge arranged to act as a discharge weir for the liquid of heavy specific gravity, a conduit for conveying the liquid of heavy specific gravity discharged over the weir to the exterior of the tank, a vertically displaceable trunk the upper end of which is arranged to act as a discharge weir for the liquid of lighter specific gravity, a flexible conduit for conveying the liquid of lighter specific gravity from the last named



trunk to the exterior of the tank, and mechanical means for raising and lowering the last named trunk relative to the first named trunk, the said trunks being located centrally in said tank so as to reduce effects due to tilting of the tank as much as possible.

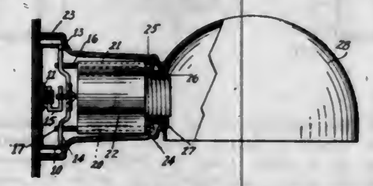
1,663,652. BITUMINOUS EMULSION. HENRY R. GUNDLACH, Baltimore, Md., assignor to Thomas Oil By-Products Company, a Corporation of New Jersey. Filed Apr. 25, 1923. Serial No. 634,641. 3 Claims. (Cl. 134—1.)

1. In the manufacture of bituminous emulsions, the step of mixing a melted bitumen and a colloidal suspension in a closed vessel in which the pressure is maintained above atmospheric and above the pressure of saturated steam at a temperature corresponding to the temperature of the resulting mixture.



1,663,653. LIGHTING FIXTURE. EDWIN F. GUTH, St. Louis, Mo. Filed May 22, 1922. Serial No. 562,676. 1 Claim. (Cl. 240—128.)

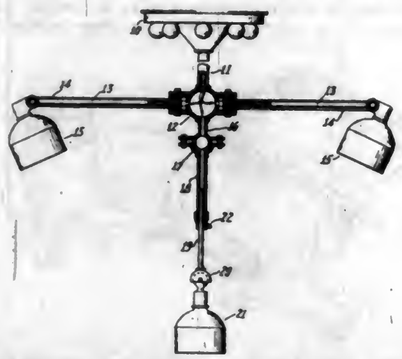
In a device of the character described, the combination, with a reflector and a bowl having a lip formed thereon, of a plurality of fixed lugs secured to the reflector to engage the lip of said bowl there being an opening in said reflector, a spring-actuated shaft mounted on the upper side of the reflector, the end of said



shaft extending downwardly and inwardly through said opening forming a retaining clip, having a spring mounted to hold said clip normally in engagement with said lip.

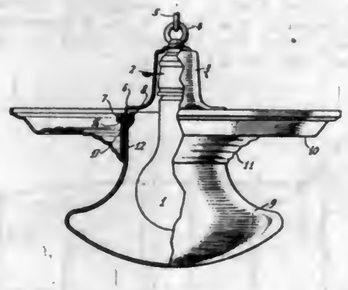
1,663,654. LIGHTING FIXTURE. EDWIN F. GUTH, St. Louis, Mo. Filed July 13, 1925. Serial No. 43,092. 3 Claims. (Cl. 240—78.)

1. A lighting fixture, comprising a hanger, an enclosed cylindrical globe having parallel ribs at the top and bottom, and downwardly and inwardly tapering side walls, and an inwardly extending truncated conoidal portion which extends from the upper rib to the hanger, a canopy reflector, having a substantially horizontal reflecting surface which reflects the light rays to the working plane, there being a central opening in said reflector through which said conoidal portion extends, to illuminate the ceiling.



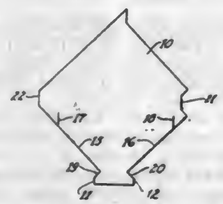
1,663,655. SUPPORTING MEANS FOR LIGHTING FIXTURES. OSCAR D. GUTH, St. Louis, Mo., assignor to The Edwin F. Guth Company, St. Louis, Mo., a Corporation of Missouri. Filed July 15, 1925. Serial No. 43,736. 3 Claims. (Cl. 240—73.)

1. A support for lighting fixtures, comprising a U shaped metal strap to engage the stud of a junction box, with a screw-threaded orifice in the outer member thereof; a metal bridge with offset ends, there being screw-threaded orifices in each of said ends; a knock-out plug in the center of said bridge, having screw-threaded orifices therein; a set-screw to engage the screw-threaded orifice of the bridge and the screw-threaded orifice of the outer member of the metal hickey strap; elongated headed screws adapted to be seated in the screw-threaded orifices in the ends of the metal bridge; a lamp socket with longitudinal grooves to be engaged by the aforesaid elongated screws; a canopy having oppositely disposed keyhole slots to receive the heads of the elongated screws; a glass shade to be seated over the end of the light socket, the lip thereof engaging the outer end of the canopy; a screw-threaded collar to engage the screw-threaded end of the socket, and having a flange to engage the inner surface of the glass shade and hold it in position on the canopy, substantially as shown and described.



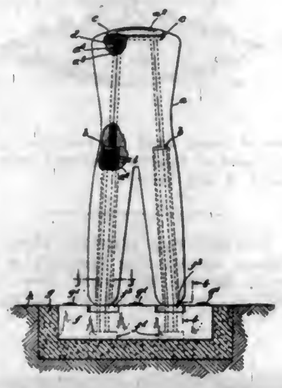
1,663,656. LIGHTING FIXTURE FOR SURGICAL OPERATING ROOM. EDWIN F. GUTH, St. Louis, Mo. Filed Sept. 19, 1925. Serial No. 57,268. 5 Claims. (Cl. 240—3.)

1. A lighting fixture comprising a plurality of arms extending from a central support; a concentrating reflector at the end of each arm, a light source within each reflector; means to rigidly support the reflectors from their respective arms; an adjustable telescoping support



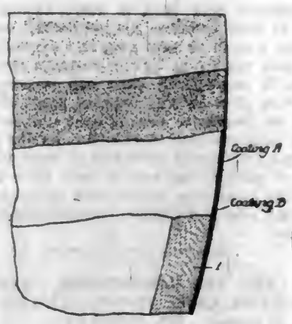
depending from the central support; a ball joint at the base of the telescoping support; a concentrating reflector depending from said ball joint and a light source within the reflector.

1,663,657. LIGHTING FIXTURE. EDWIN F. GUTH, St. Louis, Mo. Filed Feb. 17, 1926. Serial No. 88,758. 5 Claims. (Cl. 240—78.)



1. The combination in a lighting fixture of a fitter, a globe having a convex lower and a concave upper portion terminating in a neck, a lamp bulb in said globe, a socket mounted in said fitter, a reflector canopy mounted in juxtaposition to the neck of said globe, and means to adjust said reflector canopy vertically.

1,663,658. SHINGLE. NORMAN P. HARSHBERGER, Chicago, Ill. Filed Oct. 9, 1924. Serial No. 742,544. 11 Claims. (Cl. 108—8.)



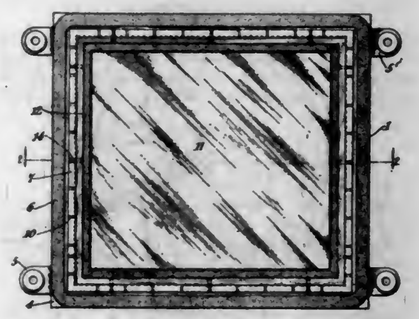
1. A shingle having its opposite edges parallel and its adjacent edges perpendicular to each other, and lugs extending outwardly from two adjacent sides at one corner of the shingle; another corner of the shingle having a recess formed therein.

1,663,659. TACKLING DUMMY. HENRY RIDGEWAY HART, Montclair, and KEENE FITZPATRICK, Princeton, N. J.; said Fitzpatrick assignor to said Hart. Filed Aug. 26, 1925. Serial No. 52,484. 6 Claims. (Cl. 273—55.)

1. In a device of the character described, the combination with a base, of a dummy and a resilient connection having a flexible core between the base and dummy.

1,663,660. REFRACTORY ARTICLE AND METHOD OF MAKING SAME. ADOLPH F. HOTTINGER, Chicago, Ill., assignor to Chicago Crucible Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1924. Serial No. 754,478. 6 Claims. (Cl. 91—72.)

1. A crucible containing carbonaceous material, clay and flux, and having a coating thereon, said coating having a constituent composition fusible at approximately the ignition temperature of said carbonaceous material and also having a constituent composition fusible at approximately the vitrifying temperature of said clay.

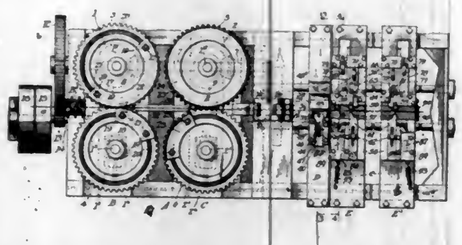


1,663,661. INDICATING MEANS. BENJAMIN F. HUTCHES, Jr., Allendale, N. J. Filed Nov. 16, 1926. Serial No. 148,633. 4 Claims. (Cl. 116—133.)

4. In a time indicating device, a casing, a clock dial mounted in the casing for visual observation, hour and minute hands mounted concentrically in the casing centrally of the dial for movement relative thereto, gearing for operatively connecting and rotating the one hand from the rotation of the other hand, a stem mounted in the casing to have axial and rotative movement and having a part extending to the exterior of the casing with means thereon for imparting axial and rotary movement thereto, and means to lock the axially movable stem in position with the gear thereon out of mesh with the pinion of the hand operating gearing comprising a rod mounted in the casing for rotation on an axis transverse to the axis of the stem with one end of the rod bent

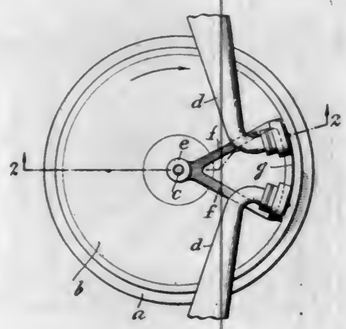
laterally and adapted to be moved into and out of the path of the axial movement of the stem by the rotation of the rod, and the opposite end of the rod arranged in line with an opening in the casing and having a slot therein for the engagement of a key inserted in the casing opening to rotate the rod.

1,663,662. PHOTOGRAPHIC PRINTING FRAME. HARRY C. JONES, Larchmont, N. Y., assignor to Lithoprinter Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 29, 1923. Serial No. 615,487. 9 Claims. (Cl. 95—76.)



1. In apparatus of the character described, the combination of a frame for receiving and holding a negative to be printed from onto a sensitized surface, said frame supporting and securing the negative from lateral movement relative thereto so that the frame with the negative secured thereon may be moved together with respect to the sensitized surface, means for sealing the frame to the sensitized surface, transparent enveloping means extending over the frame opening at the rear of the negative and sealed to the frame and adapted through pneumatic pressure to press the negative into contact with the sensitized surface, and means of communication for exhausting the air from the space between the enveloping means and the sensitized surface.

1,663,663. WIREWORKING MACHINE. JOHN F. KAMEN, River Forest, Ill. Filed July 11, 1923. Serial No. 650,791. 10 Claims. (Cl. 140—71.)

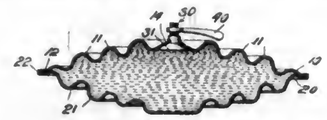


1. In a wire working machine for the purpose specified, the combination of wire feeding means and wire crimping means, both of said wire feeding means and wire crimp-

ing means consisting of heads arranged in pairs, shafts to which said heads are secured, respectively, said feeding heads comprising opposed circular tread portions adapted to frictionally engage the wire to be fed, and said crimping heads comprising opposed circular portions between which the wire is adapted to pass, and co-acting crimping teeth thereon, a tread portion of a feeding head

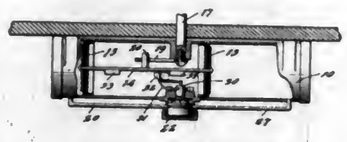
and a crimping portion of a crimping head forming a segment of a circle and being supported so as to be angularly adjustable, the relation being such that said feeding means and crimping means will engage the wire separately, a driven shaft, and driving connection between said driven shaft and the shafts of said feeding means and crimping means whereby both will be driven continuously.

1,663,664. PHONOGRAPH. HEINRICH J. KÜCHENMEISTER, Berlin, Germany. Filed May 12, 1924, Serial No. 712,770, and in Germany May 12, 1923. 4 Claims. (Cl. 274—9.)



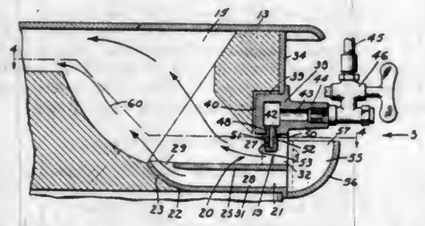
1. A stylus setting device for a sound record disc comprising a vertically extending member for attachment to a center pin of a phonograph turn table, and a laterally projecting arm having a curved outer edge adapted to receive and guide the stylus in a selected phonic groove of the record disc.

1,663,665. FIRE EXTINGUISHER, CONTAINER FOR FIRE-EXTINGUISHING LIQUIDS AND OTHER FLUIDS, AND METHOD FOR MAKING THE SAME. ALFRED L. LOOMIS, Tuxedo Park, N. Y., assignor to Robert W. Byerly, New York, N. Y. Filed Nov. 26, 1921. Serial No. 517,970. 10 Claims. (Cl. 299—90.)



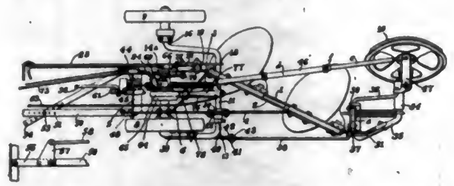
1. In a fire extinguisher, a closed container having a resilient wall normally forced against the opposite wall of the container by its inherent resiliency.

10. A fire extinguisher, comprising a corrugated metal container of variable volume containing a body of fire extinguishing liquid and having a resilient wall tending to move inwardly under its inherent resiliency to enclose the body of liquid continuously under pressure, a nozzle mounted directly on the container and communicating with the interior of said container, and a valve control-



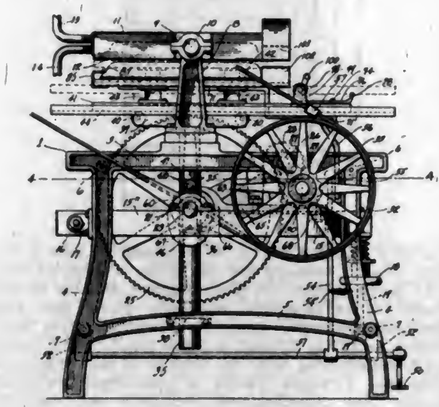
ling the flow of liquid from the container to the nozzle so that the liquid is forcibly projected from the nozzle on the opening of said valve.

1,663,666. WINDSHIELD WIPER. JACOB MOSKOVITZ, Middle Village, and WILLIAM PERETZ, New York, N. Y., assignors to Maxwell Eisenstein, New York, N. Y. Filed Oct. 30, 1925. Serial No. 65,766. 1 Claim. (Cl. 121—164.)



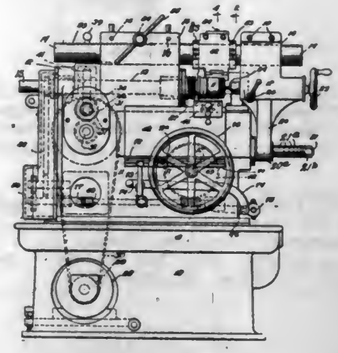
A windshield wiper comprising a cylinder, a double headed piston mounted for reciprocation within said cylinder, a vane connecting said piston heads rigidly in spaced relation, a pair of lugs projecting laterally from one side of said vane and in spaced relation longitudinally of the vane, a wiper arm extending through said cylinder and in operative connection with said vane on the side thereof opposite said lugs, a valve casing formed on one wall of said cylinder, an oscillatory valve plug in said casing, a stem on said plug and extending into said cylinder, said valve plug having passages formed therein, a partition in said plug dividing said passages, said valve casing having diametrically opposed ports in communication with the respective ends of said cylinder and one of said valve passages, said valve casing having a port intermediate said first named ports and in communication with a source of suction and one of said valve passages, an arm on said valve stem within said cylinder, a terminal shoe on said arm and disposed between said lugs on the piston vane.

1,663,667. OIL AND GAS BURNER. MARTIN MADSEN, Monterey Park, Calif. Filed Feb. 25, 1926. Serial No. 90,466. 5 Claims. (Cl. 158—1.5.)



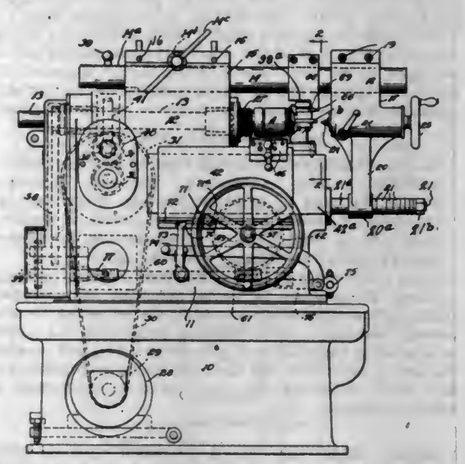
1. In a burner, the combination of: walls forming a combustion chamber, and a mouth connecting said combustion chamber to the exterior; a body situated in said mouth, and extending a considerable distance into said combustion chamber, said body dividing said mouth into a primary draft passage communicating directly with the forward portion of said combustion chamber, and a secondary draft passage communicating directly with said combustion chamber rearwardly of said primary passage; a body disposed above said mouth; and a nozzle carried by said last-named body, said nozzle projecting into said primary passage for supplying fuel thereto.

1,663,668. ORCHARD PLOW. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed June 9, 1922. Serial No. 567,161. 18 Claims. (Cl. 97—73.)



15. In a wheeled plow, a frame comprising laterally spaced side members, a transversely disposed crank axle pivotally mounted on said frame and having a spindle extending inward under one of the side members thereof, a front furrow wheel, a land wheel mounted on said axle, clutch mechanism mounted on said spindle between the side members of the frame, means operable to actuate said clutch mechanism by the rotation of the land wheel, and devices actuated by said clutch mechanism for rocking said axle to lift the frame.

1,663,669. IRONING MACHINE. CARL A. PETERSON, Alderwood Manor, Wash. Filed Dec. 23, 1925. Serial No. 77,193. 4 Claims. (Cl. 68—9.)



1. In a device of the character described, a frame structure, a heated ironer supported horizontally by the frame, a vertical post supported reciprocally in the frame, centrally beneath the iron, a frame mounted on top of the post comprising a horizontal guideway and rollers therein, an ironing board having a base plate slidable along the guideway on said rollers to position the board directly beneath or at one end of the iron, a horizontal drive shaft, cams on the shaft, rollers on the post engaged by the cams to cause the post to be raised and lowered to actuate the board against and from the ironer, driving mechanism for the shaft including a belt operable over driving and idler wheels, a belt shifter, manually operable means for shifting the belt onto the driving wheel and automatically operable means for shifting it to the idler wheel when the post has been actuated to its upper or to its lower limit of travel.

1,663,670. LATHE. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Sundstrand Machine Tool Co., Rockford, Ill., a Corporation of Illinois. Filed July 7, 1923. Serial No. 650,173. 11 Claims. (Cl. 82—2.)

1. A lathe having an overarm, a tool-supporting arm mounted upon the overarm, and means for swinging the arm to move the tool carrier including a block having an inclined groove, and a shoe slidable in said groove.

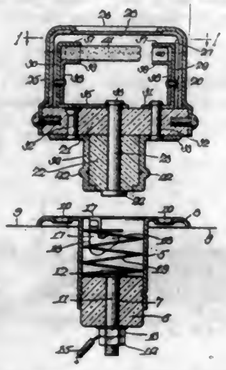
1,663,671. LATHE. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Sundstrand Machine Tool Co., Rockford, Ill., a Corporation of Illinois. Filed July 7, 1923. Serial No. 650,174. 12 Claims. (Cl. 82—2.)

1. A lathe having a carriage, a bracket on the carriage, a bell crank lever pivotally mounted on the carriage and having one arm extending in opposed relation to the bracket, and another arm adapted to support a tool at its free end, means providing a template with which the free end of said tool-carrying arm is adapted to coact, and spring means interposed between said bracket and the first mentioned arm.

1,663,672. MIRROR BRACKET. JULES A. THERASSE, Marion, Ind., assignor to Irvington Auto Products Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 11, 1925. Serial No. 49,670. 4 Claims. (Cl. 45—97.)

4. A one piece mirror bracket formed of bendable and twistable metal, the said bracket having a tongue, means on said tongue for holding a mirror, and means on said tongue for anchoring the same to a supporting surface.

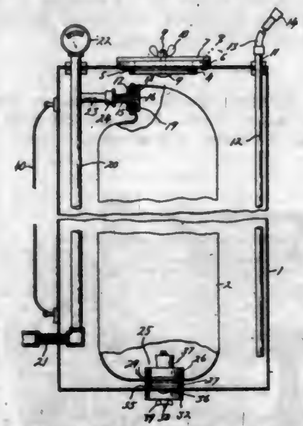
1,663,673. CURTAIN FASTENER. JOHN VODICKA, Chicago, Ill., assignor, by mesne assignments, to Cinch Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 10, 1924. Serial No. 698,016. 4 Claims. (Cl. 24—216.)



1. In a curtain fastener of the class described, a snap member comprising a plate having a post-hole therein, the plate being slitted substantially diametrically with respect thereto on opposite sides of the post-hole and struck up so that a portion of the edge of the post-hole is out of the plane of the plate, and a spring tongue supported by said plate beneath the struck up portion, the end of said spring tongue extending into the area of the post-hole.

1,663,674. LIMITING DEVICE FOR ELECTRIC REGULATORS. ARLE YTTERBERG, Furuhall, Ludvika, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Corporation of Sweden. Filed Apr. 6, 1926, Serial No. 100,048, and in Sweden Apr. 11, 1925. 5 Claims. (Cl. 171—229.)

1. In electric regulators, a movable member carrying contacts, electromagnetic means actuating said member, other electromagnetic means resiliently connected to said movable member, a stop normally preventing the action of said other means on said movable member, and equalizing means associated with said connection and permitting said other electromagnetic means to be in equilibrium in several positions.



1,663,675. ELECTRIC CIGAR LIGHTER. JOSEPH RENÉ AYOTTE, Chicago, Ill., assignor of one-half to Frank P. Hoy, Chicago, Ill. Filed Apr. 24, 1926. Serial No. 104,327. 2 Claims. (Cl. 219—32.)

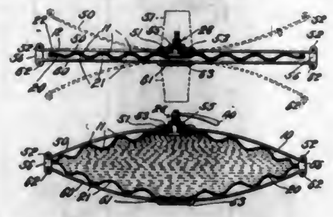
1. The combination with a socket having a terminal therein and spring means for normally preventing contact with said terminal, of an electrical heating unit comprising an insulating base having a reduced portion and a terminal extending therethrough, an electrical conducting collar portion on said reduced portion for engaging said socket, a pair of supports having jaw members thereon mounted on said base, one of said supports being secured to said base by and having electrical conducting relation with said last mentioned terminal and the other of said supports being secured to said base by and having elec-

trical conducting relation with the securing means for said collar portion, and a heating element mounted between said jaw members and in electrical contact therewith.

1,663,676. SPRAYING DEVICE. HENRY C. BAUMGARDNER, Ann Arbor, Mich. Filed July 6, 1926. Serial No. 120,785. 10 Claims. (Cl. 299—92.)

1. In a spraying device, the combination with a normally closed receptacle for containing a spraying fluid and a discharge pipe in a communication with the interior thereof, of an expansible receptacle within said first-mentioned receptacle, a pipe for conducting fluid under pressure extending through said first-mentioned receptacle and communicating with the interior of said expansible receptacle, a fitting having a passageway extending through said first-mentioned receptacle and communicating with the interior of said expansible receptacle, a valve within said expansible receptacle for closing said passageway, and means operable from outside said first-mentioned receptacle for actuating said valve.

1,663,677. FIRE EXTINGUISHER AND CONTAINER FOR FIRE-EXTINGUISHING LIQUIDS AND OTHER FLUIDS. ROBERT W. BYERLY, New York, N. Y. Filed Dec. 1, 1921. Serial No. 519,172. 11 Claims. (Cl. 299—90.)



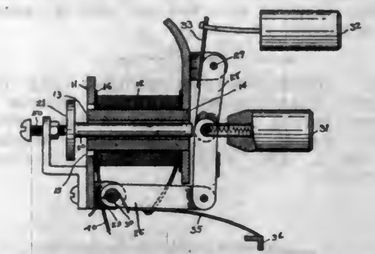
1. A fire extinguisher, comprising a closed container having opposite walls of stiff resilient material, each of said walls being extensible and contractable and one of

said walls having a normal inward curvature, and a body of fire extinguishing liquid in said container serving to hold said inwardly curved wall in a form less

curved than its normal form and to hold the opposite wall in a form more curved than its normal form and retained under pressure by the resiliency of said walls.

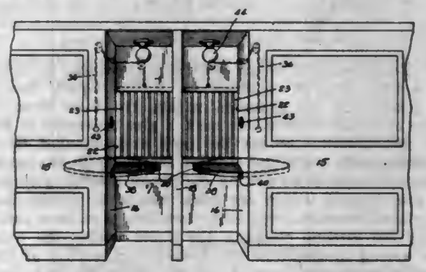
1,663,678. FIRE EXTINGUISHER. ROBERT W. BYERLY, New York, N. Y. Filed Feb. 23, 1922. Serial No. 538,485. 15 Claims. (Cl. 299—90.)

1. A fire extinguisher, comprising a metal container of variable volume having a continuous self-sustaining wall adapted to confine a body of liquid, and a spring secured to said container and urging its wall inwardly to maintain a body of liquid in the container constantly under pressure.



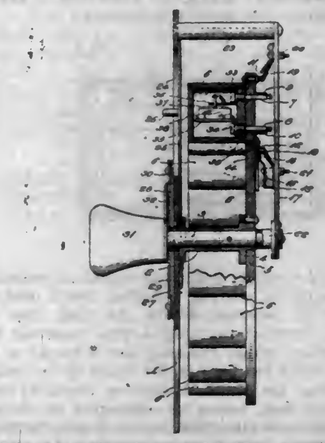
1,663,679. TOY BOMB. FRED J. CARPENTER, St. Louis, Mo. Filed Dec. 24, 1926. Serial No. 156,827. 2 Claims. (Cl. 46—46.)

2. An article of the class described comprising a receptacle having a discharge opening, a liftable cover for said opening, a movable intermediate partition dividing said receptacle into upper and lower compartments, the former being adapted to contain a quantity of dischargeable material, a charge of explosive material positioned in said lower compartment, a pair of wads for cushioning said explosive material and adapted to reinforce the lower portion of said receptacle and a fuse leading through the lower portion of said receptacle and into said explosive material.



1,663,680. ELECTRIC SWITCH. NOIBERTO GUY COPLEY, Detroit, Mich., assignor to Sunny Line Appliances, Incorporated, Detroit, Mich., a Corporation of Delaware. Filed June 27, 1925. Serial No. 39,988. 1 Claim. (Cl. 200—94.)

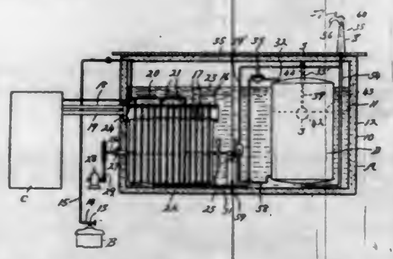
A switch consisting of an insulating base having mounted thereon a bracket carrying a coil of insulated wire connected at one end to a lead-in wire and at its other end to a spring contact finger pivotally mounted on said bracket, said coil having a hollow cylindrical core, toggle mechanism on said bracket for moving the finger into contact with a fixed contact also mounted on the base, the toggle being constructed to move over center when contact is made, and an armature guided in the said hol-



low core adapted to operate as a plunger to move back the toggle and break the circuit when excess current flows through the coil.

1,663,681. TELLER'S CAGE. EARL E. CRONENWETH, Glendale, Calif. Filed Mar. 17, 1926. Serial No. 95,276. 3 Claims. (Cl. 20—1.01.)

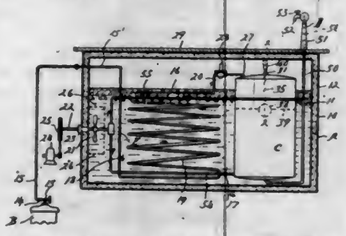
1. In combination, a teller's cage having a laterally disposed window not accessible to a teller, and a table beneath the window arranged with portions disposed in the cage and at the outer side of the window, and the table being rotatable in two directions relatively to the window to permit reversing the positions of the portions with respect to the sides of the window.



1,663,682. PIEZO-ELECTRIC-CRYSTAL APPARATUS. ALFRED CROSSLEY and CORRIE F. RUDOLPH, Washington, D. C., assignors to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 26, 1926. Serial No. 97,716. 12 Claims. (Cl. 111—327.)

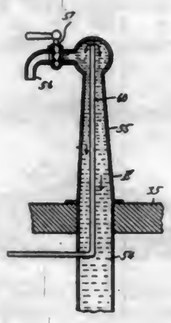
9. A piezo electric crystal holder comprising a threaded base member, a pair of plug contacts extending outwardly

from within said base member, a shelf-like member secured to one of said contacts and a metallic arm secured to the other of said contacts, a contacting plate guided by said metallic arm and a piezo electric cryatal mounted between said contacting plate and said shelf-like member for free mechanical vibration.



1,663,683. APPARATUS FOR COOLING AND DISPENSING CARBONATED LIQUIDS. WILLIAM E. DOUGHTY, Detroit, Mich., assignor to James Vernor Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 1, 1926. Serial No. 85,344. 12 Claims. (Cl. 225—21.)

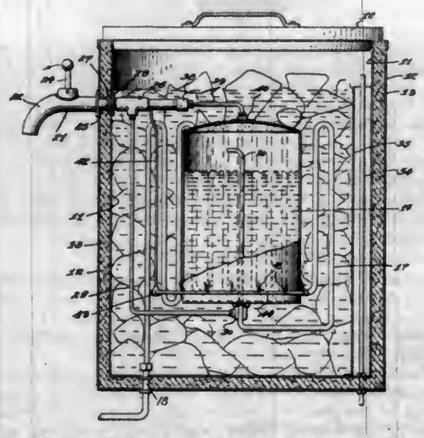
1. A carbonated beverage dispensing apparatus comprising a tank adapted to contain a cooling liquid, means for conducting the beverage within the tank from a source of supply without the tank, a pipe connected to receive the beverage within the tank and arranged in a circuitous path below the level of the liquid in the tank, mechanical means for cooling the liquid, a settling chamber also located within the tank, means for conducting the cooled beverage from said circuitous pipe to a point within the settling chamber, the liquid within the tank also serving to maintain the desired temperature of the beverage therewithin and means for circulating the cooling liquid in the tank around the said pipe and settling chamber.



9. In a beverage dispensing apparatus, a tank adapted to contain a cooling medium, mechanical means for cooling the said cooling medium, including a cooling unit arranged within the said tank, and a beverage conductor arranged within the said tank and surrounding the said cooling unit.

1,663,684. APPARATUS FOR DISPENSING CARBONATED BEVERAGES. WILLIAM E. DOUGHTY, Detroit, Mich., assignor to James Vernor Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 1, 1926. Serial No. 85,345. 6 Claims. (Cl. 225—21.)

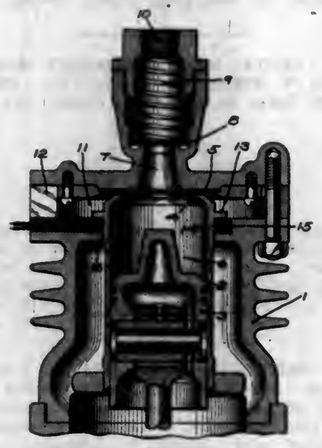
1. A carbonated beverage dispensing apparatus comprising a tank adapted to contain a cooling liquid, means for conducting the beverage within the tank from a source of supply without the tank, a pipe connected to receive the beverage within the tank and arranged in a circuitous path below the level of the liquid in the tank, means for cooling the liquid, a settling chamber also located within the tank, means for conducting the cooled beverage from the said circuitous pipe to a point within the settling chamber, a draft apparatus located without the chamber, means for conducting the beverage from the settling chamber to the draft apparatus, means for circulating the beverage between the draft apparatus and the said chamber, said last named means including a pump, a rotatable shaft for actuating said pump, and means also actuated by said shaft for establishing a circulation of the said liquid within the tank.



1,663,685. APPARATUS FOR DISPENSING LIQUIDS. WILLIAM E. DOUGHTY, Detroit, Mich., assignor to James Vernor Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 1, 1926. Serial No. 85,347. 15 Claims. (Cl. 225—21.)

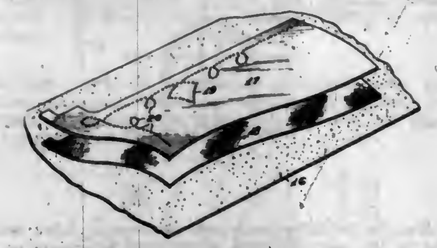
1. A liquid dispensing device comprising a draft arm, a dispensing nozzle, said draft arm forming a conduit for the passage of the liquid from a supply under pressure, a valve controlling the passage of the liquid from the draft arm to the nozzle, and means for circulating a cooling liquid between a source of supply and through said draft arm.

15. The combination in a beverage dispensing apparatus, of a conduit adapted to contain a beverage to be dispensed, and means for discharging beverage of a lower temperature into said conduit into contact with the beverage to be dispensed therefrom.



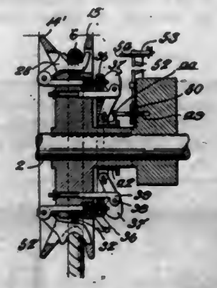
1,663,686. METHOD AND APPARATUS FOR DISPENSING CARBONATED BEVERAGES. WILLIAM E. DOUGHTY, Detroit, Mich., assignor to James Vernor Company, Detroit, Mich., a Corporation of Michigan. Filed June 1, 1926. Serial No. 113,056. 20 Claims. (Cl. 225—40.)

14. The method of cooling a carbonated beverage which consists in conducting the beverage through a cooling liquid, and discharging a gas into the cooling liquid adjacent the beverage conducting means to agitate the cooling liquid.



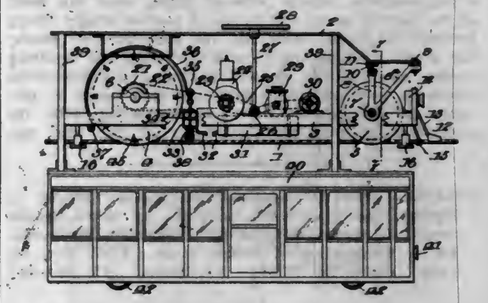
15. In a carbonated beverage dispensing apparatus, a tank adapted to contain a cooling medium, means for conducting a beverage within said tank, and means for discharging a portion of the gas from said beverage below a portion of the said beverage conducting means for agitating the said cooling medium around the beverage conducting means.

1,663,687. COMPRESSOR-UNLOADING DEVICE. SIDNEY G. DOWN, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 1, 1927. Serial No. 195,623. 8 Claims. (Cl. 230—24.)



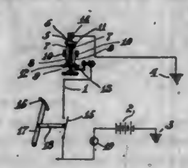
6. In a fluid compressor, the combination with a cylinder casing having a movable sleeve and a piston in said sleeve, said sleeve being moved by friction with the piston, of an electro-magnet for controlling the movement of said sleeve, and a switch device for controlling the circuit of said electro-magnet.

1,663,688. EMBOSSING PLATE AND METHOD OF PRODUCING THE SAME. CHARLES E. EDWARDS, Manchester, N. H. Original application filed Dec. 15, 1926. Serial No. 155,068. Divided and this application filed June 21, 1927. Serial No. 200,421. 9 Claims. (Cl. 101—28.)



1. An embossing plate for use in marking upper shoe sections, said plate having a plurality of tapered bosses stamped therefrom, one side of each boss having a greater area than its opposite side, the greater area sides being arranged alternately with relation to the lesser area sides.

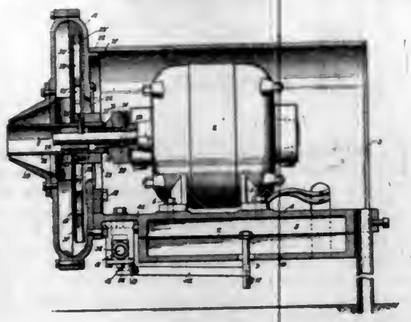
1,663,689. GRIP WHEEL. OSCAR A. ELLIS, San Francisco, Calif. Filed June 27, 1921. Serial No. 480,820. 8 Claims. (Cl. 64—40.)



1. A grip wheel comprising a pair of peripheral flanges forming between them a groove adapted to receive a rope in intimate contact therewith and a series of grip members mounted to swing about radially fixed pivot pins carried by said wheel and located adjacent to but both laterally of and radially inward of said groove, each of said members having a portion located at the bottom of said groove and extending under the rope, and when swung on its pivot, serving to grip the rope between itself and one of said peripheral flanges.

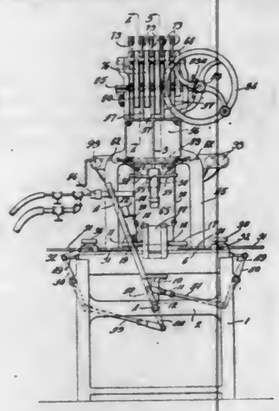
1,663,690. ELEVATED SUSPENDED RAILWAY. OSCAR A. ELLIS, San Francisco, Calif. Filed May 17, 1922, Serial No. 561,780. Renewed June 22, 1926. 7 Claims. Cl. 104—95.)

1. The combination with a vehicle having a traction wheel having a tread portion adapted to run upon a rail and with which the rail has a tangential engagement, of grip members carried by the wheel and independent of said tread portion and constructed to engage the rail only during the moment of such tangential engagement.



1,663,691. VEHICLE SIGNAL. RUSSELL M. EVERETT, Bloomfield, N. J. Filed July 12, 1922. Serial No. 574,441. 7 Claims. (Cl. 177—337.)

1. The combination with a vehicle signal, of signal controls normally set one to give a signal and another to prevent a signal, means common to both said con-



trols connecting them to the signal, means for causing a vehicle control to operate the signal control normally preventing a signal to give a signal, and means for causing speed of the vehicle to operate the other said signal control to prevent a signal above a predetermined speed.

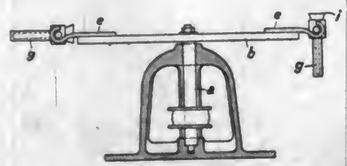
1,663,692. OIL BURNER. RICHARD R. EZDORF, Baltimore, Md., assignor to Fuelo Corporation, Washington, D. C., a Corporation of Delaware. Filed Aug. 19, 1926. Serial No. 130,310. 4 Claims. (Cl. 158—77.)

1. In an oil burner, in combination, a fan housing, having a rotatable fan therein, an oil discharging cup within the fan housing, said cup and fan being operatively connected with the shaft of an electric motor, a stationary oil receiving device mounted on the motor shaft, a port connected with the oil receiving device, a non-rotatable tubular element fitting over the shaft of the electric motor and having a portion snugly fitting between the motor shaft and the stationary oil receiving device and secured to said stationary oil receiving device, said tubular element having a circumferential recess in communication with the said ports, a plurality of longitudinal ports communicating with the circumferential port for discharging oil into said cup.

1,663,693. PISTON-CASTING MACHINE. FRANK L. FELTES, Cleveland, Ohio, assignor, by mesne assignments, to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 30, 1925. Serial No. 72,276. 17 Claims. (Cl. 22—93.)

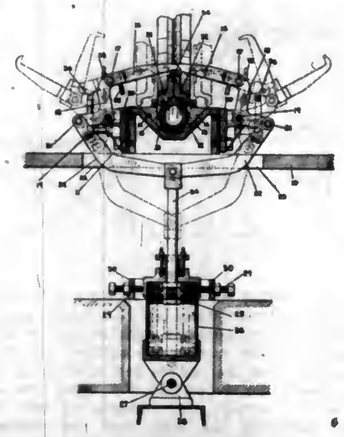
1. In a piston casting machine, a frame, a mold having core openings therein, and a plurality of core parts operatively associated with said mold for movement in succession in said core opening.

1,663,694. HANDLE GRIP. EDWARD FETTER, Baltimore, Md. Filed July 22, 1925. Serial No. 45,150. 3 Claims. (Cl. 273—81.)



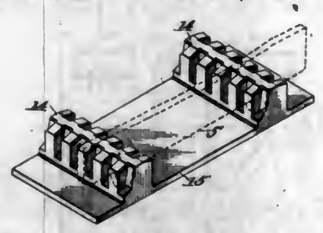
3. A handle having a grip of rubber with a roughened surface and a fabric covering vulcanized to the surface and assuming the roughened contour thereof.

1,663,695. DENTAL TRAY AND INSERT THEREFOR. FREDERIC W. FOSTER, Jr., Denver, Colo. Filed July 25, 1922. Serial No. 577,295. 2 Claims. (Cl. 32—6.)



1. An insert for dental trays comprising a liner shaped to fit a tray and having a lip adapted to spring over the edge of a tray to insure retention on the tray.

1,663,696. TUBE FILLER. ALBERT FRAASS, Hagen, Germany, assignor to The Electric Storage Battery Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Feb. 16, 1927, Serial No. 168,712, and in Germany May 27, 1926. 1 Claim. (Cl. 226—19.)

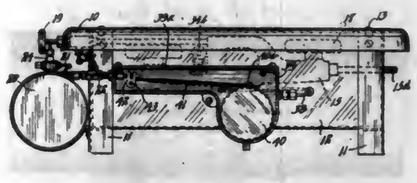


Machine for introducing and compressing filling material in the electrode tubes of electrical accumulators by means of centrifugal force consisting of interchangeable and easily detached pivotally suspended containers adapted to receive tubes to be charged with filling material, a funnel-like element on each container adapted to receive the material to be forced into the tubes, and means for moving these containers in a circle and at an appropriate speed.

1,663,697. BEAD-RING REMOVER FOR USE IN TIRE FACTORIES. FRED GOODALL, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 24, 1925. Serial No. 25,473. 11 Claims. (Cl. 18—2.)

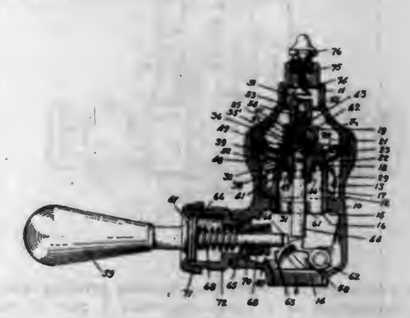
8. Apparatus for separating molding elements from the sides of vulcanized tires, said apparatus comprising means for supporting and embracing a tire to hold it against axial displacement and spreading, and means for engaging a ring on said tire and separating it axially from the tire.

1,663,698. SPACING AND SUPPORTING BRIDGE FOR STORAGE-BATTERY PLATES. WALTER E. GOESLING, Indianapolis, Ind., assignor, by mesne assignments, to Prest-O-Lite Storage Battery Corporation, a Corporation of Indiana. Filed Sept. 5, 1923. Serial No. 661,105. 10 Claims. (Cl. 136—79.)



1. A plate spacing and supporting bridge for storage batteries, provided with a plate-supporting surface and a plurality of recesses at each side of said surface adapted to hold the plates in spaced relation at their bottoms.

1,663,699. SPLINT CATCHER. ARTHUR HANSEN and LEIF GAARDER, Skotselven, Norway. Filed Feb. 16, 1925, Serial No. 9,720, and in Norway Feb. 22, 1924. 1 Claim. (Cl. 92—29.)

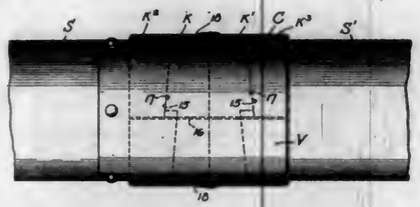


A splint catcher for purifying wood pulp and the like, comprising, an endless conveyor belt formed by a plurality of equidistant parallel rods, links interconnecting the rods at both ends, and sleeves on the rods and between the interconnecting links.

1,663,700. STOVE WITH FLOAT-OPERATED SHUT-OFF VALVE. HANS C. HANSON, Albert Lea, Minn. Filed Apr. 4, 1927. Serial No. 180,780. 8 Claims. (Cl. 158—53.)

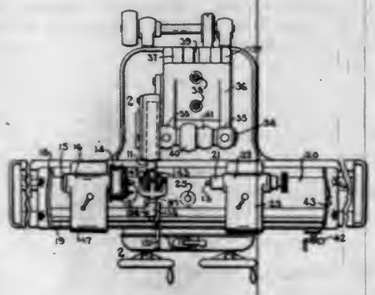
1. A stove adapted to use liquid vaporizing fuel having in combination, a fuel tank, a burner, a mixing chamber for supplying a combustible mixture to said burner, a member supplying fuel to said mixing chamber and burner, a manually operated valve regulating the supply of fuel to said member, an auxiliary starting burner of the retort type, means for supplying fuel thereto, a manually operated valve controlling the supply of fuel to said auxiliary burner, and automatic means operated by liquid fuel for shutting off the supply of fuel from said fuel tank if either of said manually operated valves are left open with its respective burner not ignited.

1,663,701. FLUSH VALVE. EDWARD G. HEDGES, Newark, N. J. Filed Dec. 10, 1924. Serial No. 754,010. 5 Claims. (Cl. 137—93.)



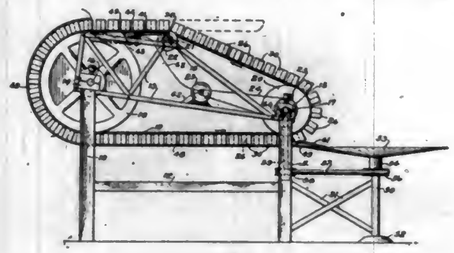
4. A flush valve comprising a hollow body, a diaphragm for separating said hollow body into a supply chamber, a compression chamber and a discharge chamber, a seat for said valve, a relief valve box secured to said diaphragm, said box being so designed to serve as an air snifter, bleeder conduit and to remove a limited quantity of water from said compression chamber, a relief valve within said relief valve box, and means for operating said valve and for lifting said diaphragm from said seat.

1,663,702. PIPE COUPLING. WILLIAM D. HIMES, Los Angeles, Calif., assignor to Los Angeles Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Mar. 10, 1924. Serial No. 698,170. 2 Claims. (Cl. 285—198.)



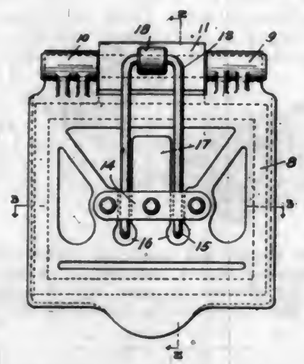
1. A method of constructing pipe couplings which comprises the shaping of the edges of the confronting ends of two pipe sections to form complemental cam edges, bending the confronting pipe ends rearwardly in reverse directions upon the respective pipe sections to dispose the cam edges exteriorly of and contiguous to the pipe sections, shaping the outer edges of a split collar to form

complemental cam edges, bending the cam edges inwardly of the collar so as to lie within and contiguous to the collar, and permanently securing the ends of the collar together subsequent to its application to the pipe ends



so that the cam edges of the pipe sections are received between the cam edges of the collar in a manner to coact with the latter when the collar is rotated on the pipe sections for the purpose described.

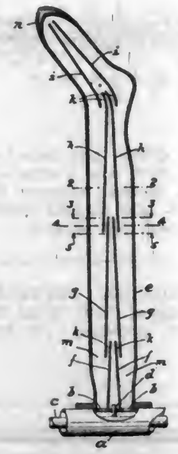
1,663,703. MECHANISM FOR TRUING AND DRESSING GRINDING WHEELS. FERDINAND J. HOHNHORST and FERDINAND J. KROEGER, Covington, Ky. Filed Feb. 16, 1925. Serial No. 9,412. 1 Claim. (Cl. 125—37.)



In mechanism for truing and dressing grinding wheels, the combination of a head comprising a pair of outer fork-arms and an intermediate fork-arm complemental to said respective outer fork-arms and forming a pair of yokes having an integral intermediate fork-arm which is common to both said yokes, an axle for each of said yokes, each of said outer fork-arms comprising a supporting portion at its outer end, a releasable cap for each of said supporting portions, said intermediate fork-arm comprising an intermediate duplex supporting portion at its outer end, a releasable intermediate duplex cap for said intermediate duplex supporting portion, said axles located in non-parallel endwise relation, the outer ends of said axles located in said first-named supporting portions and clamped in place by said first-named releasable caps, and the inner ends of both said axles located in said intermediate duplex supporting portion and clamped in place by said duplex cap, each of said axles provided with shoulders at its respective ends coacting respectively with said outer supporting portions and said intermediate duplex supporting portion for endwise positioning of said axles, and the proximate ends of said axles provided with parallel abutting end faces having opposite inclinations from the same sides of said respective axles and of the same degree to the longitudinal axes of said respective axles and coacting with each other for resisting rotations of both said axles, and abrading wheels rotatable about said respective axles.

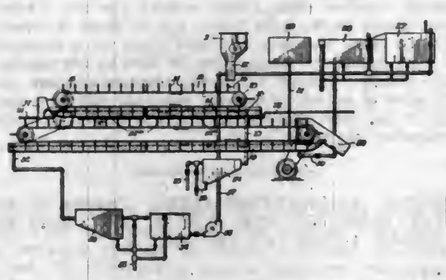
1,663,704. EGG CANDLER. WILLIAM L. HOLZMANN, North Freedom, Wis. Filed Oct. 12, 1925. Serial No. 62,046. 7 Claims. (Cl. 99—6.)

1. An egg candling machine comprising a frame structure, an endless belt carried by the frame, means for driving the belt forwardly, an agitator belt mounted in the frame, means for turning the agitator belt in a reverse direction from the endless belt whereby to agitate the eggs, means for supporting the upper run of the agitator belt, a movable tray operable by said driving means for receiving the eggs from the endless belt whereby to retard the forward movement of the eggs, and lights in the frame, said endless belt having a plurality of open ended compartments thereon adapted to movably hold the eggs, said compartments being adapted to pass over the lights subsequent to agitation by the agitator belt.



1,663,705. JOURNAL-BOX LID. LEIGH W. HOSTETTLER, Tarentum, Pa., assignor to Allegheny Steel Company, Brackenridge, Pa., a Corporation of Pennsylvania. Filed June 9, 1924. Serial No. 718,739. 3 Claims. (Cl. 308—47.)

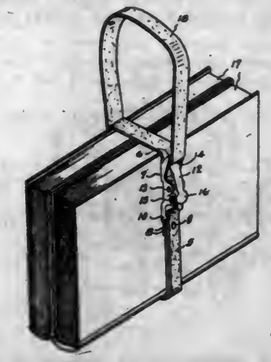
1. The combination with a journal box of a lid hinged thereto, and provided with depressions in the surface thereof, a spring having depression engaging projections mounted on said lid and provided with a roller bearing member for cooperating with said box so as to maintain said lid in either open or closed position and a strap member engaging said spring for securing the same to said lid.



1,663,706. HOSIERY-DRYING FORM. HAROLD E. HOUSEMAN, Edge Moor, Del. Filed Nov. 6, 1926. Serial No. 146,682. 13 Claims. (Cl. 223—17.)

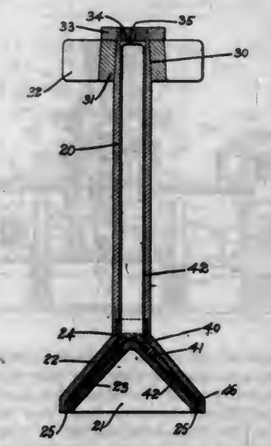
1. A hollow drying form comprising a shell adapted to the shape of the article intended to be dried, and channels arranged in a series extending from the base of the form toward and terminating short of its closed end and through which heating fluid is adapted to successively pass, the approximating ends of two adjacent

channels overlapping and being spaced apart to allow the heating fluid to escape into the interior of the form outside the channels and at points relatively distant from opposite ends of the form.



1,663,707. PROCESSING OF MEATS. ISAAC N. JORDAN, Chicago, Ill., assignor to Armour & Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 17, 1925. Serial No. 56,914. 6 Claims. (Cl. 99—11.)

5. The method of preparing corned beef which consists in cooking pieces of fresh meat for a period of between fifteen and thirty minutes while in motion in a counter current of hot water and thereafter subjecting the cooked meat for a like period of time while in motion to a counter current of hot pickle comprising a brine solution of sodium nitrite.

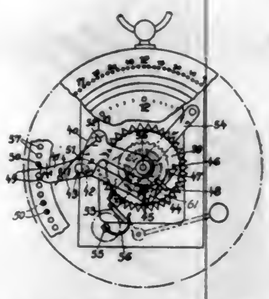


1,663,708. BOOK STRAP. HENRY C. KEELER, Ritzel, Wash., assignor to Alva C. Clark, Seattle, Wash. Filed Jan. 22, 1927. Serial No. 162,783. 3 Claims. (Cl. 224—55.)

1. A book strap, embodying a buckle, a strap member having its two ends fixedly connected with one end of said buckle and having its medial portion slidable through the other end of said buckle, said strap forming a loop of double thickness, a keeper slidable on said strap,

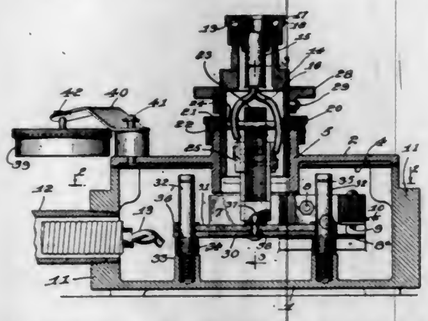
and a releasable spring pressed tongue in said buckle normally holding said strap against sliding movement in one direction through said buckle.

1,663,709. COOLING DEVICE FOR VALVES AND THE LIKE. CHARLES F. KETTERING, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 10, 1918, Serial No. 211,156. Renewed Aug. 16, 1927. 15 Claims. (Cl. 123—177.)



1. In a device of the kind described including a hollow portion, a body of working mercury within said hollow portion, and a heat transferring body upon the interior walls of said hollow portion.

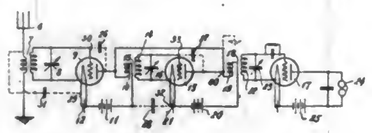
1,663,710. ALARM CLOCK. KARL KOPATSCHEK, Berlin-Wilmersdorf, Germany. Filed Jan. 21, 1926, Serial No. 82,836, and in Germany Feb. 2, 1925. 3 Claims. (Cl. 161—6.)



1. An alarm clock comprising an alarm mechanism and a spindle carrying an hour hand, a T-shaped arm secured to said spindle, a double bent lever pivotally and shiftably connected to the head of said T-shaped arm by a pin and slot connection, a toothed wheel rotatably mounted on said spindle, means provided at the surface of said wheel engaging with the free end of the double bent

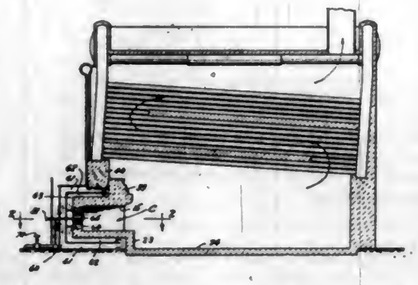
lever and a triangular hole in the bend of said lever, a spring connected to the T-shaped head of said arm and acting upon the adjacent end of the double bent lever, a pin adapted to be positioned in the path of said double bent lever to cause the same to impart a movement of rotation to said toothed wheel and thereby releasing the

alarm, and a resilient driver actuated by the alarm mechanism and cooperating with the teeth of said wheel for stopping the alarm after a predetermined period of operation and for moving the double bent lever out of engagement with the pin a few seconds after the signal begins to ring and for at once bringing said double bent lever again in a position ready for giving another signal.



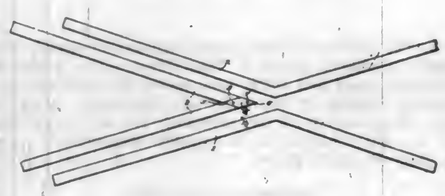
1,663,711. ELECTRICAL APPARATUS. JEROME M. LALEB, Burlingame, Calif., assignor to Chas. Cory & Son, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 23, 1925. Serial No. 17,680. 2 Claims. (Cl. 173—330.)

1. Apparatus of the class described, including a terminal box and a connecting plug, the plug having a cross head for connecting with the terminals, and the box an opening shaped to fit the cross head and with its axis at an angle to the position assumbed by the plug when making connection, the box having a threaded nipple encircling the opening through which nipple the cross head must pass to enter the opening, and a collar on the plug for threadedly engaging the nipple to make a fluid tight connection, said collar abutting the end of the nipple before the cross head clears the opening and retaining the cross head in the opening until threaded down upon the nipple.



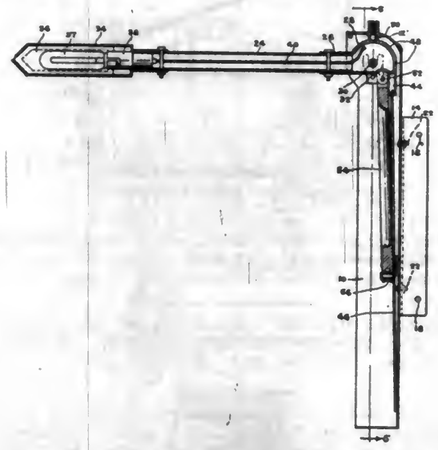
1,663,712. WAVE SIGNALING SYSTEM. MARIUS LATOUR, San Sebastian, Spain, assignor to Latour Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Apr. 8, 1926. Serial No. 100,549. 7 Claims. (Cl. 179—171.)

1. An electric circuit arrangement for neutralizing capacity coupling between the input circuit and the output circuit of an electron tube due to capacity between the grid and plate electrodes, comprising a coil connected between one of these electrodes and the filament system, and a second coil and a neutralizing capacity effectively connected in series between the other of these electrodes



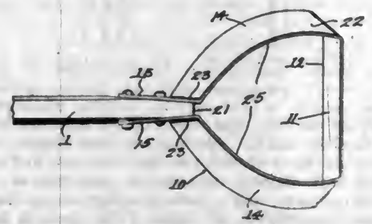
and the filament system, said second coil being closely coupled with the first, said neutralizing capacity comprising solely an inherent capacity effectively existing between means in said filament system and auxiliary means associated with said circuits.

1,663,713. FLUID-FUEL FURNACE. HERBERT V. LEAHY, Los Angeles, Calif. Filed Nov. 6, 1923. Serial No. 673,222. 3 Claims. (Cl. 158—4.)



1. A furnace comprising a combustion chamber, a main frame exteriorly of the combustion chamber, a subsidiary frame on the main frame between the latter and the combustion chamber, baffle plates between the two frames, cover plates on the main frame, one of which is formed with air ports, the cover and baffle plates being arranged to form double air chambers at all sides of the combustion chamber through which air admitted through the air ports is caused to describe recurrent paths at each side of the combustion chamber and to finally enter the combustion chamber.

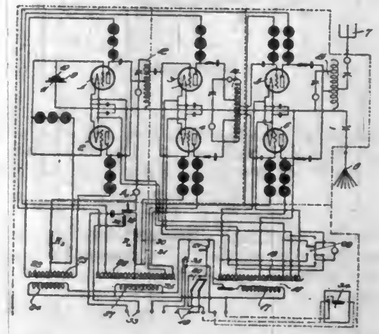
1,663,714. RAILWAY-FROG POINT. CHESTER M. LEFEW, Huddy, Ky. Filed Sept. 12, 1927. Serial No. 219,040. 1 Claim. (Cl. 246—460.)



In a wear compensating insert for railway track frog points, wherein the said point is formed with a V-shaped socket therein, a diamond-shaped insert adapted for reversible association with respect to the socketed end of the frog point.

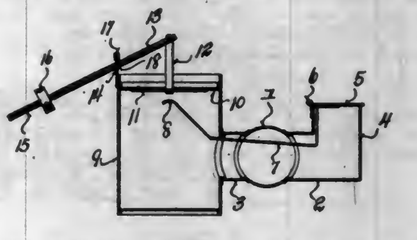
1,663,715. SIGNAL FOR AUTOMOBILES. SEBASTIAN MACK, Minneapolis, Minn., assignor to Maggie Mack, Minneapolis, Minn. Filed Sept. 18, 1926. Serial No. 136,385. 1 Claim. (Cl. 116—52.)

A signal for automobiles comprising a right angle strip one of whose angle members is adapted to be secured to the front face of a corner post of the automobile and the other of whose angle members contains horizontal slots, a support adjustably attached to said angle strip by means of said slots, a signal arm pivoted to said support and adapted to lie adjacent and parallel to the latter, and connections extending from said arm to the inside of the automobile whereby said arm may be swung into outward position.



1,663,716. GARDEN HOE. WILLIAM PERRY MCMILLAN, Punta Gorda, Fla. Filed Aug. 27, 1925. Serial No. 52,918. 1 Claim. (Cl. 97—68.)

A hoe comprising a handle, the inner end of which is oblique, and a soil-engaging member including a flat cross bar having a working edge which is straight from end to end, the soil-engaging member including side pieces joined to the ends of the cross bar and provided with arms attached to opposite sides of the handle, the side pieces being bent obliquely at said oblique end of the handle, where the side pieces are connected to the arms, and being thence bowed laterally and outwardly, so that the axis of the handle intersects the aforesaid working edge of the cross bar.

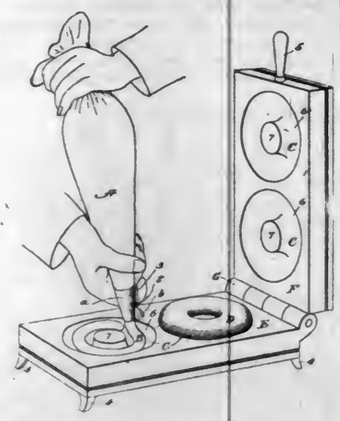


1,663,717. SIGNAL-TRANSMISSION SYSTEM. RAYMOND B. MEYER and LEO C. YOUNG, Washington, D. C., assignors to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 15, 1926. Serial No. 155,072. 4 Claims. (Cl. 250—19.)

1. A high frequency signal transmitter comprising a plurality of electron tubes each having grid, filament and plate electrodes, said tubes being connected for the generation of oscillations, the multiplication of the frequency of said oscillations and the increase in amplitude of the oscillations at multiplied frequency, a power source of alternating current, a transformer having primary and secondary windings with the primary winding thereof connected to said source and the secondary winding thereof arranged to impress high potential upon the plate circuits of said frequency multiplying tubes, a connection between a mid-point on said secondary winding to

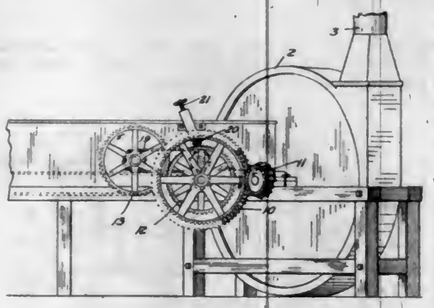
the filament electrodes of said frequency multiplying tubes, a high resistance interposed in said connection, a contact device located in series with said high resistance, a connection between the mid-point of said secondary winding and the grid electrodes of said frequency multiplying tubes for establishing a negative potential on the grid electrodes of said frequency multiplying tubes, said negative potential increasing upon the opening of said contact device.

1,663,718. AUTOMATIC DAMPER. CARL MIEHLKE, Hartford, Wis. Filed Feb. 14, 1927. Serial No. 168,004. 8 Claims. (Cl. 236—45.)



3. The combination of a smoke pipe having a vertical chamber communicating therewith and opening through its upper end, a downwardly opening valve closing the upper open end of said vertical chamber, mechanism urging said valve towards closed position, and a second valve opening into said smoke pipe and normally remaining closed, said second valve having mechanism arranged in the path of movement of said downwardly opening valve and actuated by the downward motion of said first mentioned valve to open said second valve.

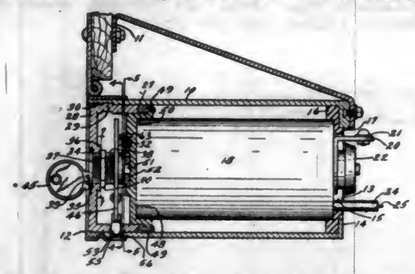
1,663,719. PROCESS OF MAKING DOUGHNUTS AND OTHER FOOD PRODUCTS. JOSEPH MORLEY, Los Angeles, Calif., assignor of five-sixteenths to Rudolph A. Dallugge, Los Angeles, Calif. Filed Dec. 26, 1922. Serial No. 608,960. 1 Claim. (Cl. 107—54.)



The herein described process of making doughnuts which consists in first providing a doughnut stock, adding a quantity of fatty matter to the stock, working the mass to thoroughly distribute the fatty matter throughout same, shaping the mass, enclosing the shaped mass within baking irons, heating the irons, to cause the

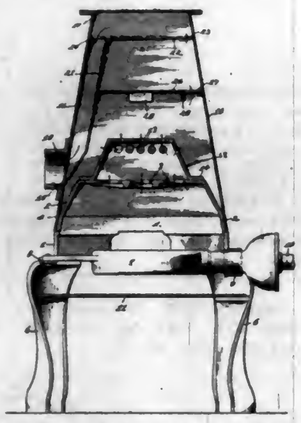
fatty matter contained in the doughnut stock to be expressed therefrom and to assume the form of a hot frying film of fat between the mass and said irons, said heating

also being effective to cause the doughnut stock to be baked with a thin crust at its surface, and then removing the baked product from the irons.



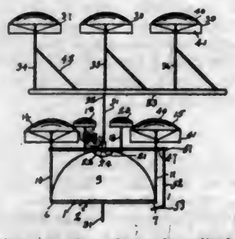
1,663,720. ENSILAGE CUTTER. JAMES H. MOTT, Willmar, Minn. Filed Oct. 16, 1919. Serial No. 330,945. 4 Claims. (Cl. 146—109.)

1. A device of the class described comprising a blower casing, a cutter arranged within an opening of the casing, a feed table leading to said opening and cutter, a pair of feed rolls, upper and lower, for delivering upon said table, a pair of pivoted links, rotatably journaling the upper feed roll, a compression plate yieldably supported above the table and attached by resilient flexible members with said links, and adapted to form with the table a feed-throat, and means for delivering stock between the rolls at that side opposite the table.



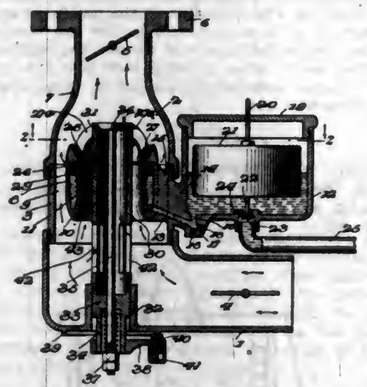
1,663,721. CONTROL MEANS. HOWARD J. MURRAY, New York, N. Y., assignor to H. A. Douglas, Bronson, Mich. Filed Mar. 7, 1927. Serial No. 173,361. 50 Claims. (Cl. 175—361.)

1. In a power plant for an automotive vehicle, a unit comprising: an element essential for the operation of said power plant; control means settable into condition at least restricting the functioning of said element; lock means for preventing unauthorized actuation of said control means from said condition; and means for preventing unauthorized access to said control means without disassembly of said unit, and for preventing unauthorized disassembly of said unit without destruction



of at least an essential part of said element, comprising a theft-resisting casing enclosing said control means and at least the adjacent portion of said element.

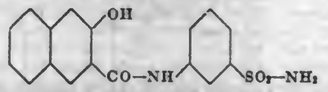
1,663,722. HEATER. EDWARD NAUER, San Francisco, Calif. Filed Dec. 12, 1927. Serial No. 239,469. 8 Claims. (Cl. 126—85.)



1. A heater comprising a base arranged to be supported over a fuel burner, said base having openings in the top thereof; a heat diffusing member mounted upon the top of the base and covering the openings therein, said member having openings in the upper portion thereof; an outer shell fitted over the base and enclosing the heat diffusing member; a vent formed in the back of the shell; and a baffle mounted within the shell in spaced relation to the back of the shell to form a vent passage from the top of the shell to the vent.

1,663,723. AERIAL DEVICE. JOSEPH OSTAND, Cincinnati, Ohio. Filed Apr. 18, 1927. Serial No. 184,579. 10 Claims. (Cl. 244—21.)

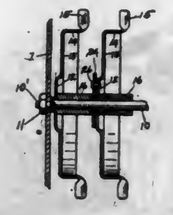
1. In a device of the class described, a frame, a parachute having its lower edge attached to said frame, a plurality of kites attached to said frame, and a plurality of kites attached to said parachute.



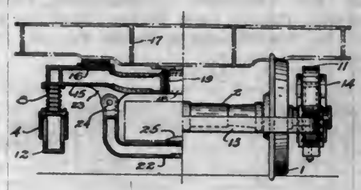
1,663,724. CARBURETOR. CHARLES EDWARD PALMER, Marshfield, Oreg., assignor to John Ozek, Marshfield, Oreg. Filed Feb. 16, 1924, Serial No. 693,320. Renewed Feb. 15, 1928. 4 Claims. (Cl. 261—57.)

1. In a carburetor, a body member, an annular channel member forming a fuel chamber within the body member and spaced from said body member to form an air passage, the central portion of the channel member being hollow providing a central air passage, the upper end of the channel member being open to provide a valve seat, an annular valve mounted on the seat and controlling the flow of fuel from the chamber, a primary air conduit connected to the body member below the channel member, means on the valve for causing the fuel to be forced in opposite directions into the central air passage and into the passage between the channel member and the body of the carburetor, an auxiliary air conduit projecting through the channel member and spaced from the inner walls of said member, the upper end of the auxiliary conduit being open and provided with a valve seat, a spring pressed valve mounted on said last mentioned seat, the lower portion of the auxiliary conduit below the channel member being provided with a slot to admit air from the primary air conduit to the auxiliary air conduit, and a source of fuel in communication with the channel member.

1,663,725. MANUFACTURE OF SULPHONAMIDES OF 2.3-HYDROXYNAPHTHOIC ARLIDES. JOSEPH BARON PATMAN and HARRY WIGNALL, Blackley, Manchester, England, assignors to British Dyestuffs Corporation Limited, Blackley, Manchester, England. Filed Sept. 15, 1927, Serial No. 219,807, and in Great Britain Sept. 20, 1926. 10 Claims. (Cl. 260—158.)



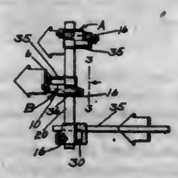
10. As a new product 2:3-hydroxynaphthoic *m*-amidosulphonanilide, having the formula—



which is a pale yellow crystalline powder, melting at 278° C., insoluble in water, soluble in solutions of sodium hydroxide or carbonate, soluble also in nitrobenzen, from which it may be crystallized, and hydrolysed when boiled with caustic alkali giving ammonia and 2:3-hydroxynaphthoic *m*-sulphonanilide.

1,663,726. ADDING MACHINE. JOHN PFEIFER, Springfield, Ohio. Filed Dec. 8, 1924. Serial No. 745,455. 2 Claims. (Cl. 235—80.)

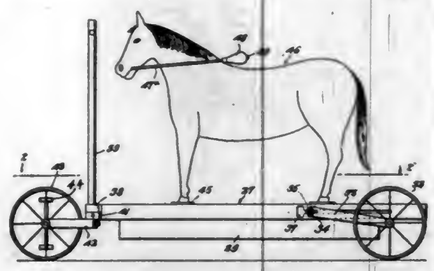
2. In an adding machine, an adding wheel constructed from a piece of sheet metal shaped to form a web having an integral laterally projecting flange to form a rim, said flange being cut and bent to provide integral fingers which extend outwardly in a radial direction from said rim, each of said fingers being also bent in an angular direction so as to present a flat face to the finger of the operator in turning the wheel.



1,663,727. BOOSTER-MOTOR TRUCK. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Mar. 23, 1926. Serial No. 96,731. 20 Claims. (Cl. 105—138.)

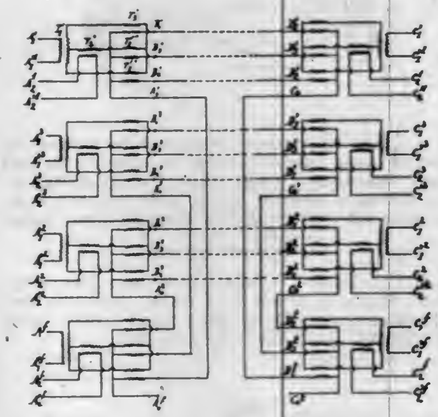
1. A railway truck frame having a bolster member and a booster motor support carried by said bolster, said support comprising a single spherical-shape bearing beneath the space occupied by the motor adapted to accommodate universal tilting of a motor mounted thereon.

1,663,728. CLAMP. SPENCER H. PHELPS, Evansville, Ind., assignor to Blount Plow Works, Evansville, Ind., a Corporation of Indiana. Filed Apr. 25, 1927. Serial No. 186,386. 6 Claims. (Cl. 97—198.1.)



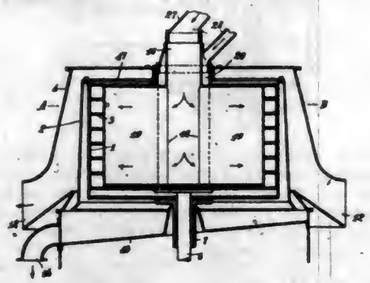
1. A block having openings at an angle to one another, and wedge elements slidable in the block, one for each opening and adapted to bindingly engage an element traversing a corresponding opening, said wedge elements extending in the same direction.

1,663,729. TOY. VIDO P. RAGENOVIC, Portland, Oreg. Filed Apr. 29, 1926. Serial No. 105,478. 2 Claims. (Cl. 208—42.)



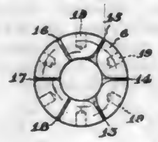
1. In a structure of the class described, a platform, rear wheels at the rear end of the platform, supporting arms associated with said wheels, said supporting arms having slidable connection with the platform, retaining means carried by the slidable ends of said arms,

and cooperable with said platform, whereby to permit the arms to be lowered or raised to dispose this end of the platform in an elevated or a lowered position, a front



steering wheel, a standard connected thereto, said platform being adjustably connected with the standard at its forward end.

1,663,730. ELECTRIC CONNECTION. CAMILLE LOUIS MARIE RAVUT, Paris, France, assignor to Société Industrielle des Téléphones (Constructions Électriques, Caoutchouc, Câbles), Paris, France. Filed July 8, 1924, Serial No. 724,870, and in France Feb. 28, 1924. 2 Claims. (Cl. 179—15.)



1. A system of long distance telephonic or other electric communication comprising three insulated wires having an identical construction and insulation, juxtaposed and twisted in helical form around a common geometric axis, in such manner that the centers of the three conductors upon a plane perpendicular to the twisting axis occupy the three vertices of an equilateral triangle, thus forming what is called a three-wire set, another three-wire set analogous to the first one, a third three-wire set analogous to the others, the common winding of the three three-wire sets being juxtaposed and twisted in helical form around a common geometric axis in such manner that the traces of the axes of the three-wire sets upon a plane perpendicular to the common twisting axis occupy the three vertices of an equilateral triangle, three transformers at each end of each three-wire set, two independent sources of current, a transformer connected to the two poles of the first independent source of current, the primaries of the three first transformers being connected respectively with the wires of the three-wire set and disposed on the star system about a central point connected to a special wire, the secondaries of the three first transformers being disposed on the star system about an insulated point, said secondaries being connected respectively with the ends and the middle point of the secondary of the fourth transformer and the series intercalation of the secondary of the second independent source upon the connecting wire extending at the middle point of the transformer which is connected to the two terminals of the first independent source of current, the application to the three special wires provided each in a three-wire set of a terminal arrangement similar to those applied to each three-wire set.

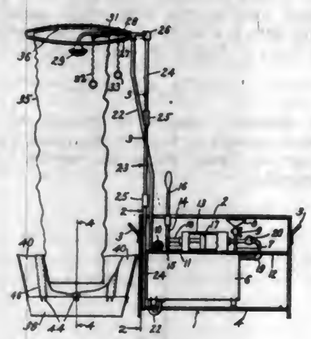
1,663,731. CENTRIFUGAL MACHINE. VICTOR REICH, Vienna, Austria. Filed May 4, 1926, Serial No 106,735, and in Austria May 19, 1925. 9 Claims. (Cl 127—19.)

1. A centrifugal machine including a cell drum, a feeding device for the material to be centrifuged, a perforated drum surrounding said cell drum and covering the cells at the circumference, a non-perforated wall surrounding the perforated drum and connected to it so as to leave an annular space therebetween, the perforated drum and the wall having openings for delivering the solid material, means for rotating the two drums at a different velocity, the liquid passing through the meshes of the perforated drum against the non-perforated wall which catches it and guides it outward and the solid material passing through said openings.

1,663,732. DIE HEAD. ISIDORE J. REMARK, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 30, 1927. Serial No. 187,734. 6 Claims. (Cl. 18—13.)

1. A die for covering strip material embodying an annular die block having entrance and exit apertures formed therein.

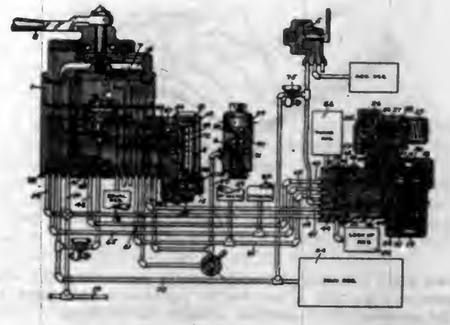
1,663,733. METHOD OF MAKING LACQUERS. KURT SCHMIDINGER, Neukolln, Germany. Filed July 1, 1925, Serial No. 40,960, and in Germany May 13, 1925. 1 Claim. (Cl. 134—26.)



Method of making lacquer consisting in dissolving resin in benzol, saponifying the dissolved resin by the use of heated alcoholic potash, separating the obtained soap solution from the unsaponifiable constituents dissolved in the first solvent, and obtaining said unsaponified constituents by evaporating the solvent.

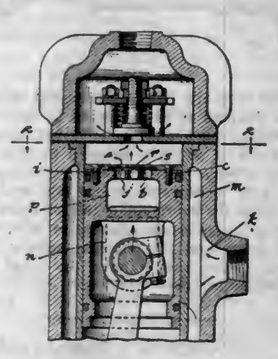
1,663,734. APPARATUS FOR TREATING GASES. EUGEN STRÖDER, Leverkusen, near Cologne, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Feb. 29, 1924, Serial No. 696,040, and in Germany Apr. 6, 1923. 8 Claims. (Cl. 261—92.)

1. Apparatus of the class described, comprising a housing, a liquid container within the housing, a spraying device consisting of two shafts carrying disks spaced in parallel relation and partly immersed in the liquid of the container, means for passing gas through the housing above the disks parallel to the shafts and means constructed and arranged to prevent the return of liquid acted upon by the gas to the container.



1,663,735. PORTABLE BATH APPARATUS. LUCIEN J. B. TALBOT and VITAL A. LECUIVRE, Woonsocket, R. I. Filed July 21, 1926. Serial No. 123,887. 1 Claim. (Cl. 4—151.)

In a portable and demountable bath structure, a frame provided with separate compartments and having a space therein for storing the demountable elements, a tank carried by the frame and secured in one of the said compartments, a pump carried by the frame and located in another of said compartments and permanently connected with said tank for placing the tank under pressure, a demountable spray, a flexible pipe connecting said tank and spray, a demountable support carried by said frame and supporting the spray when in operative position, said spray and support being demountable to permit their being stored within the frame when not in use.

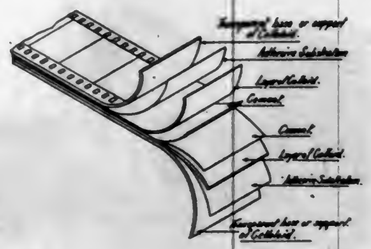


1,663,736. FLUID-PRESSURE-BRAKE DEVICE. THOMAS H. THOMAS, Edgewood, and EARLE S. COOK, Wilmerding, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 14, 1926. Serial No. 109,044. 14 Claims. (Cl. 303—18.)

6. In a fluid pressure brake, the combination with a brake pipe, of means for effecting a reduction in brake pipe pressure, a timing reservoir, a source of fluid under pressure, a valve device operated by fluid vented from the brake pipe for supplying fluid from said source to said reservoir, a valve device subject to the pressure of fluid in said reservoir and operated upon a predetermined reduction in pressure in said reservoir for effecting

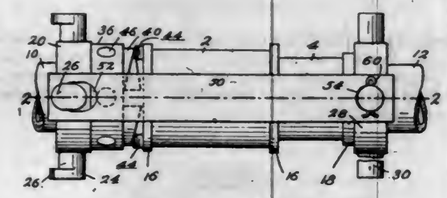
a second reduction in brake pipe pressure, the first mentioned brake device being operated upon cessation of the first venting of fluid from the brake pipe for venting fluid from said reservoir.

1,663,737. COMPRESSOR VALVE. HARRY E. THOMPSON, Detroit, Mich., assignor to Universal Cooler Corporation, Detroit, Mich., a Corporation of Michigan. Filed Apr. 26, 1926. Serial No. 104,601. 12 Claims. (Cl. 230—221.)



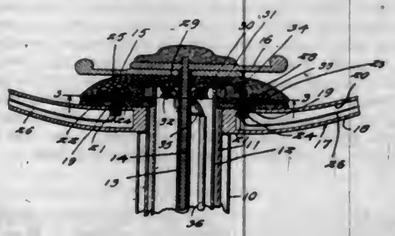
1. A compressor valve having in combination a pair of members fitted together and shaped so as to provide a chamber, one of said members having a port in communication with the chamber, a free floating valve operating in this chamber which in one position covers the port, and in another position is removed from the port to permit the flow of fluid therethrough, the other of said members being of solid construction and provided with a cut-away portion which is positioned to one side of the free floating valve to thus provide an outlet for the fluid.

1,663,738. CONSTRUCTION AND MANUFACTURE OF CINEMATOGRAPH POSITIVE FILMS. JOHN EDWARD THORNTON, West Hampstead, London, England. Filed Dec. 15, 1924, Serial No. 756,168, and in Great Britain Jan. 9, 1924. 9 Claims. (Cl. 88—19.5.)



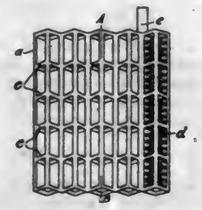
1. A method or process of producing a cinematograph positive film which consists in printing upon and finishing two thin films, each of approximately half standard

thickness, preparing the printed-colloid faces of both films to receive a cement, applying to the prepared printed-colloid-faces a fusible cement, temporarily joining the



two films together and subsequently converting the temporary joint into a non-fusible permanent face joint by the application of heat and pressure to the films.

1,663,739. PIPE COUPLING. CHARLES R. TILLOTSON, Clay Center, Kans. Filed Mar. 29, 1926. Serial No. 98,061. 2 Claims. (Cl. 285—181.)



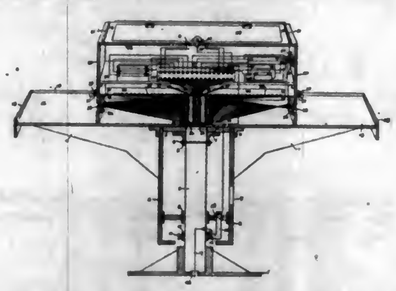
1. In a pipe coupling, two interengaging telescopic tubular members adapted to be connected at their outer ends to pipe sections, yokes slidably mounted upon said pipe sections and one of which is adapted to abut one end of the adjacent tubular member, lugs projecting from said yokes, arms with openings to receive said lugs, lips on the lugs of one yoke for overlapping the adjacent portions of said arms, and wedge means adapted to be driven between one of said yokes and the adjacent tubular member for forcing them apaprt and drawing the other yoke firmly against the adjacent tubular member.

1,663,740. AUTOMOBILE SIGNAL-CONTROLLING MECHANISM. HOWARD C. VARNER and JACOB M. KOCH, St. Joseph, Mo. Filed Oct. 23, 1926. Serial No. 143,758. 2 Claims. (Cl. 173—324.)

1. In signal operating mechanism for automobiles and the like, in combination with steering mechanism including a housing and outer rotatable and inner stationary tubes mounted within the housing, a steering wheel secured to the outer rotatable tube, a disk superimposed upon the steering wheel and having engagements therewith preventing relative rotation thereof, said disk having an opening for the passage of the inner stationary tube, a second disk secured to the stationary tube and having its face confronting the first named disk, brushes carried by the first named disk, contact rings upon the second named disk which said brushes coact and binding posts upon the lower face of the second named disk and extending within the stationary tube, the binding posts being electrically connected with the contact rings of the second disk.

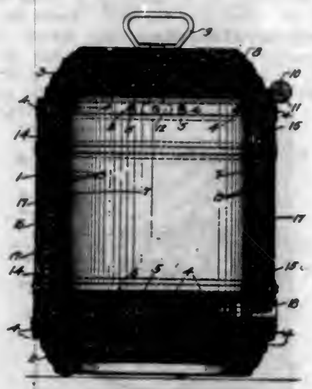
1,663,741. SECONDARY BATTERY. JOHN VAUGHAN-SHERRIN, Ruckinge, England. Filed Aug. 4, 1926, Serial No. 127,024, and in Great Britain Aug. 13, 1925. 5 Claims. (Cl. 136—36.)

1. A plate for secondary batteries or accumulators comprising a grid or frame composed of a number of compartments each charged with active material having incorporated with it a resilient expansible conductor, each conductor being a length of wire wound in a sinuous manner.



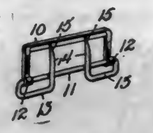
1,663,742. PENCIL. EDWIN W. WILSON, Chicago, Ill., assignor of one-half to Frank T. Boydston, Chicago, Ill. Filed Apr. 21, 1926. Serial No. 103,466. 6 Claims. (Cl. 120—17.)

3. In a pencil of the class described including a body providing a holder, a retaining pawl member supported concentrically thereof, and provided with a retaining pawl, a feed pawl member slidably mounted in said retaining pawl member and provided with a slot through which the retaining pawl extends, a tubular member having ratchet teeth on opposite sides provided with a longitudinal slot intermediate its length, a spring tension



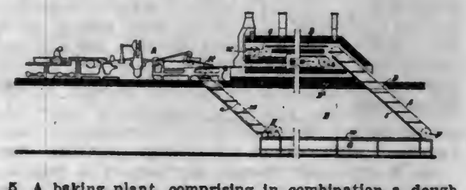
provided at one end of said feed pawl member, a lead carrier mounted co-axially of said tubular member, an enlarged portion on said lead carrier abutting the free end of said slidably mounted feed pawl member.

1,663,743. RADIO OR RADIOPHONE RECEIVING SET DEMONSTRATOR. ARCHIE R. WOLFE, Summit, N. J. Filed Feb. 28, 1926. Serial No. 90,224. 4 Claims. (Cl. 250—14.)



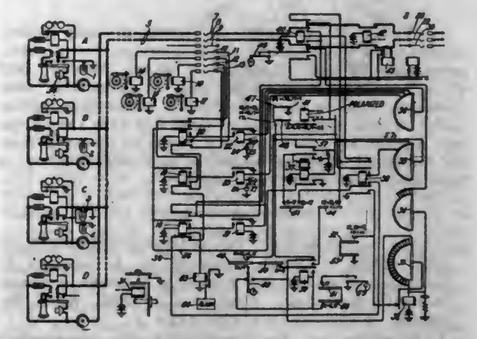
1. In a stand for the demonstration of radio sets and the like, a base and an upright pedestal, a cylindrical body rotatably mounted upon the bearings upon the pedestal, a platform rigidly affixed to the cylindrical body, a cabinet mounted upon the platform with its sides at a distance within the periphery of the platform, the platform forming a shelf around the cabinet, compartments within the cabinet for the storage of batteries, a plurality of series of binding posts upon the cabinet, a loop jack within the cabinet, a loud speaker jack within the cabinet, a ground connection within the pedestal and a means for connecting the loop jack to one series of binding posts, for connecting the loud speaker jack to another series of binding posts, for connecting the ground connection to another series of binding posts, for connecting the batteries to another series of binding posts.

1,663,744. PORTABLE ELECTRIC COOKER. HENRY A. ZIOLA, Toledo, Ohio, assignor to The Swartzbaugh Manufacturing Company, Toledo, Ohio, a Corporation. Filed Nov. 20, 1925. Serial No. 70,400. 6 Claims. (Cl. 53—11.)



3. A cooker casing and well assembly comprising a casing body, a top section for said body, a bottom section for said body, interlocking tongue and recesses between the top and bottom section and the body, and a well closed at its bottom and supported by the top section in a position spaced from the bottom of the body.

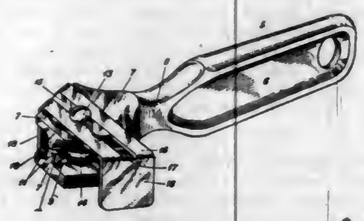
1,663,745. BUCKLE. CARL E. ANDERSON, East Orange, N. J., assignor to Eastern Tool & Mfg. Co., Bloomfield, N. J. Filed Mar. 15, 1926. Serial No. 94,638. 1 Claim. (Cl. 24—188.)



A buckle comprising a U-shaped frame with knuckles at the ends thereof, a wire bar passing through the knuckles and formed into return bends beyond the knuckles and extending parallel with the wire bar toward the centre of the buckle and below the wire bar, the said return bends terminating in tongues extending across and in contact with the wire bar and having pointed ends in contact with the cross bar of the frame.

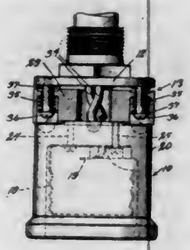
1,663,746. BAKING OVEN. GEORGE RALPH BAKER and CLAUDE DUMBLETON, London, England, assignors to Baker-Perkins Company Incorporated, White Plains, N. Y., a Corporation of New York. Filed Oct. 17, 1925, Serial No. 62,999, and in Great Britain Nov. 14, 1924. 7 Claims. (Cl. 107—57.)

5. A baking plant, comprising in combination a dough separating machine, an oven having its inlet in line with said machine, a heat-insulating partition below said oven having openings for the passage of a conveyor, a cooling chamber below the said partition and containing an elongated table, and a single endless conveyor adapted to travel in a closed path from the separating machine through said oven inlet, into and through the oven, then downwardly through said partition openings into and through said cooling chamber and over the table therein, and then upwardly back through said partition to said separating machine.



1,663,747. TELEPHONE-EXCHANGE SYSTEM. HENRY M. BASCOM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 5, 1927. Serial No. 210,926. 7 Claims. (Cl. 179—9.)

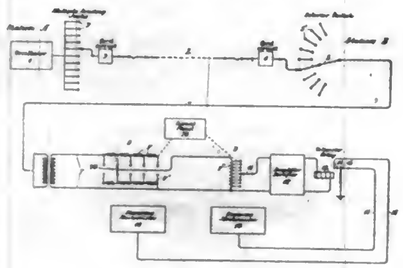
1. In combination, a line having a plurality of stations thereon, devices at said stations, each device arranged to allow current of a given polarity to flow and to prevent



the flow of current of opposite polarity, means to apply sources of potential of different polarity to the line, and testing means responsive to the flow of current from said sources to discriminate one station from another.

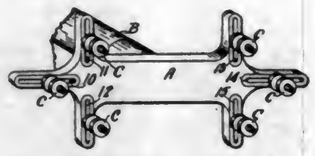
1,663,748. BRAID STRIPPER FOR INSULATED WIRES. HUGH D. BENDER, Brooklyn, and ROBERT JOHN KENT, Jamaica, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 10, 1925. Serial No. 61,767. 22 Claims. (Cl. 81—9.5.)

1. A braid stripper for insulated wires comprising a handle having a pair of grooves of different dimensions associated therewith, each groove being adapted to receive a pair of wires of different diameters, and a circular cutting blade extending into each groove for operating upon the insulation of said wires in their travel through both grooves.



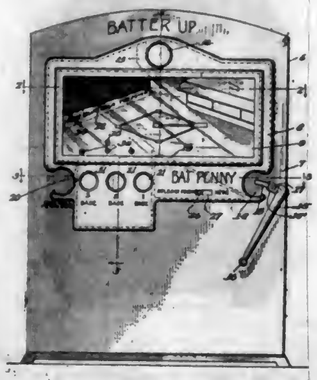
1,663,749. ELECTRICAL CONNECTER DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 10, 1922, Serial No. 535,492. Renewed Sept. 4, 1925. 8 Claims. (Cl. 240—90.)

1. A supporting member, a cylindrical lamp socket member, and a cylindrical shock-absorbing device interposed between said support and socket member, said shock-absorbing device comprising a cylindrical base having a recess in its upper face, a compression spring seated in said recess acting to push said base away from said support, said base having a recess in its lower face, and compression spring seated in said recess, acting to force said base toward said support.



1,663,750. AUTOMATIC TRANSMISSION-MEASURING SET. FRED H. BEST, Westfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 9, 1925. Serial No. 29,188. 3 Claims. (Cl. 179—175.)

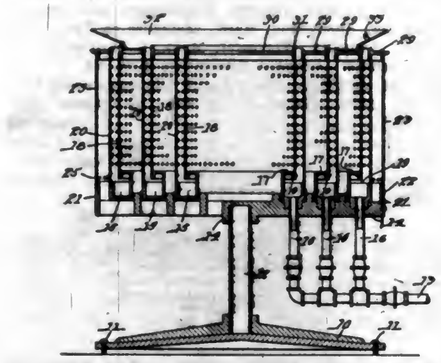
1. A testing set for determining the transmission characteristics of a line comprising a circuit to which voltage from said line is to be applied, a responsive device in said circuit, means controlled thereby for automatically introducing steps of loss in said circuit and for subsequently introducing steps of gain in said circuit until the attenuation of said circuit counteracts



the attenuation of said line, and means controlled by said last mentioned means for indicating the amount of said steps of loss and gain introduced.

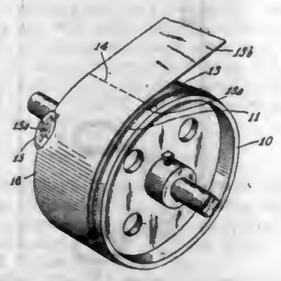
1,663,751. COIL-WINDING MEANS. ALVIN J. FATHAUER, Cleveland, Ohio. Filed Feb. 23, 1926. Serial No. 90,003. 18 Claims. (Cl. 140—92.2.)

1. A spool of the character described, including, a stem having a parallel sided groove having a lead, a washer adapted to be attached to and removed from said stem, and a pin in said washer and adapted to engage the sides of said groove to locate and to retain said washer on said stem.



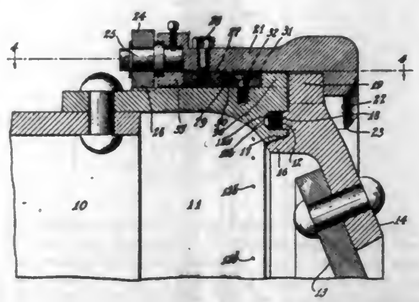
1,663,752. AMUSEMENT DEVICE. CHARLES FLEISCHER, Brooklyn, N. Y., assignor to John F. Meyer, Chicago, Ill. Filed May 23, 1927. Serial No. 193,464. 8 Claims. (Cl. 273—138.)

1. In an amusement device of the character described, a cabinet, a front plate, a face plate integrally connected to said front plate and having openings therein,



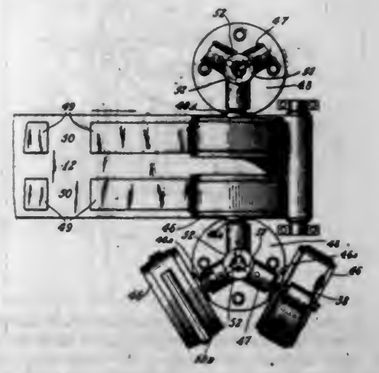
a back plate attached to said front plate and forming a compartment, a baffle for deflecting a token inserted in one of said openings in a predetermined direction, an inclined member mounted in said compartment, means for causing said token to ride over said inclined member and fall into the compartment behind one of said openings, a slotted rod for holding said tokens, flanges formed on said face plate between some of said openings to form passages leading therefrom, and for supporting said rod, a receptacle cooperating with said passages, and means including said rod for causing said token to fall through said slots in the rod and into said receptacle.

1,663,753. OIL BURNER. JOSEPH E. FOWLER, Worcester, Mass. Filed Oct. 28, 1926. Serial No. 144,871. 1 Claim. (Cl. 158—87.)



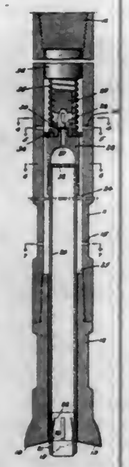
In an oil burner, the combination of an oil ring having an outer wall provided with a shoulder thereon and an inner wall extending higher than the outer wall and extending outwardly toward the outer wall and then downwardly and provided with a shoulder in its outer surface, whereby the space for the discharge of oil or flame is located at an inclination between the downwardly extending flange and the top of the outer wall, and a pair of perforated walls supported by said shoulders for receiving the flame and products of combustion.

1,663,754. TUBE AND METHOD OF MAKING SAME. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 3, 1925. Serial No. 47,690. 4 Claims. (Cl. 154—14.)



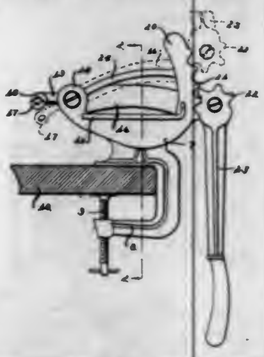
1. The method of making an annular tube which comprises helically winding in a plurality of plies a continuous strip of tube-forming material to provide an annular structure with stepped margins, and joining said margins to each other in interfitted relation.

1,663,755. DOOR STRUCTURE FOR PRESSURE TANKS. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 28, 1926. Serial No. 118,932. 4 Claims. (Cl. 220—55.)



1. A door structure for pressure tanks, the said structure comprising a door frame, a door adapted to seat in the door frame, one of the said parts being formed with an annular gasket-receiving recess and the other being formed with an annular gasket-compressing flange adapted to fit snugly into the recess, a compression gasket in the recess, and means engaging the door at a multiplicity of positions about its periphery and constrained to act simultaneously at such positions for drawing the door bodily toward the door frame, without relative rotation or angular movement of the door and frame to compress the gasket, the door and the frame being formed with complemental, conical, guiding surfaces.

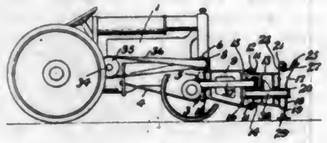
1,663,756. TUBE-MAKING APPARATUS. JOHN O. GOODWIN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 21, 1925. Serial No. 51,580. 6 Claims. (Cl. 154—7.)



1. Apparatus for making inner tubes for tires, the said apparatus comprising a substantially cylindrical form of a diameter such as to receive as a winding thereon a strip of tube-forming stock to be formed as an inner tube by the joining of its margins in a longitudinal seam, a support for the strip of stock, the said support having an upwardly facing surface of such extent as at the same time to support in spread condition thereon, against gravity, substantially the entire strip, and means for effecting such relative movement of the support and the form as to cause the strip to be wound upon the form by relative running of the form upon the support.

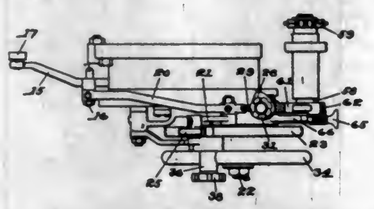
1,663,757. STANDARD TOOL CORE DRILL. REID B. GRAINGER, Redondo Beach, Calif., assignor to Elliott Core Drilling Company, a Corporation of California. Filed Oct. 5, 1927. Serial No. 224,234. 6 Claims. (Cl. 255—72.)

1. In a reciprocating core drill, the combination of: an inner barrel; an outer barrel reciprocably mounted on the inner barrel; means for limiting the movement of the outer barrel on the inner barrel; resilient means on the inner barrel; a weight member supported on said resilient means and a head on said outer barrel arranged to engage said weight by impact.



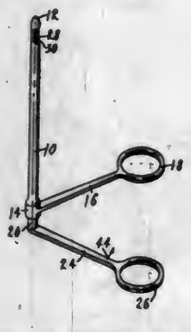
1,663,758. OYSTER OPENER. PETER GWISDALLA, Detroit, Mich. Filed Apr. 11, 1927. Serial No. 182,584. 5 Claims. (Cl. 17—9.)

1. An oyster opener of the class described, comprising: a supporting member; a cutting member movably mounted on said supporting member; an engagement member fixedly mounted on said supporting member for engaging between the shells of an oyster; a movable engaging member for engaging between the shells of an oyster; and common means for moving said cutting member relatively to said supporting member and said engagement members relatively to each other.



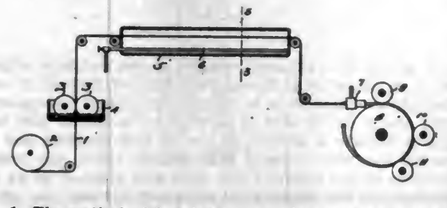
1,663,759. PAVEMENT GRINDER. JACOB C. HAM, Grand Rapids, Mich. Filed Dec. 29, 1924. Serial No. 758,751. 3 Claims. (Cl. 51—177.)

1. In combination, a support adapted to be attached to and extend in front of the front axle of a tractor or the like, a vertical shaft rotatably mounted at the front end of the support, a disk located below the lower end of the shaft, a universal joint connection between the shaft and disk, said disk having a plurality of relatively wide slots cut therein, the lengths of which



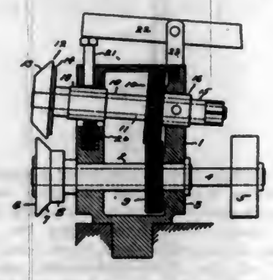
are perpendicular to radii of the disk, and a plurality of star wheel dressing elements located side by side and rotatably mounted in each slot, substantially as described.

1,663,760. GRINDING MACHINE. JAMES N. HEALD, Worcester, ALBERT TURNER, Shrewsbury, and GEORGE C. KIMMEL, Springfield, Mass., assignors to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Original application filed Oct. 7, 1922, Serial No. 593,113. Divided and this application filed Feb. 12, 1926. Serial No. 87,798. 3 Claims. (Cl. 51—165.)



1. In a grinding machine, wheel feeding mechanism comprising a ratchet-wheel and pawl, the latter being movable on its operative stroke always to the same point, an irregular but peripherally smooth cam without jogs or breaks in its surface for limiting the return or inoperative stroke of said pawl, and indicating means associated with said cam for procuring its adjustment for the desired number of ratchet-wheel teeth to be passed over by said pawl on its inoperative stroke, the cam being turnable in either direction of rotation to the desired adjustment, by reason of its smooth surface, without the necessity of otherwise moving the parts for which it acts as a stop.

1,663,761. SURGICAL INSTRUMENT. GEORGE A. JOHNSON, Pomeroy, Iowa. Filed Feb. 7, 1927. Serial No. 166,488. 5 Claims. (Cl. 128—304.)

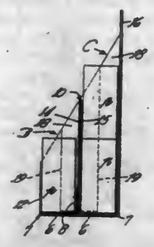


1. An instrument for shearing and receiving objects comprising a tube, a shaft therein, a notch cut in said tube, the bottom of said notch extending less than half way through the tube whereby cutting edges having an acute angle are formed, a pocket in said shaft adjacent said notch whereby movement of said shaft relative to said tube will cause a shearing action between said pocket and said notch.

1,663,762. METHOD OF FORMING HAT-PACKING RINGS. WILLIAM C. JOHNSON, Bethel, Conn., assignor to The Clark Box Company, Danbury, Conn., a Corporation of Connecticut. Filed July 19, 1927. Serial No. 206,820. 3 Claims. (Cl. 18—56.)

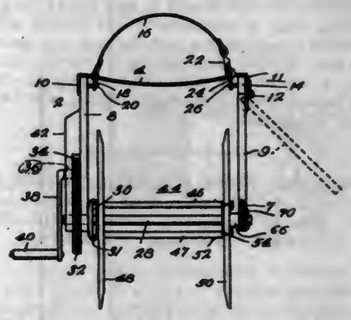
1. The method of forming hat packing rings with curled edges which consists in moistening the edges only of a continuous flat cardboard strip with liquid, then subjecting the entire surface of the strip to the action of a hot vapor, and finally curling the edges and curving the strip with the curled edges into annular shape.

1,663,763. METHOD OF AND MACHINE FOR CURLING HAT STAYS. WILLIAM C. JOHNSON, Bethel, Conn., assignor to The Clark Box Company, Danbury, Conn., a Corporation of Connecticut. Filed July 19, 1927. Serial No. 206,821. 5 Claims. (Cl. 18—10.)



1. A machine for curling hat stays comprising a frame, a shaft rotatably supported in bearings fixed in the frame and carrying a gear and a tapering roll, a shaft rotatably supported in bearings pivoted in the frame and carrying a gear and a tapering roll, said gears intermeshing and said rolls tapering reversely, means for swinging the pivotally supported shaft and moving the roll which it carries toward and from the other roll, and a curler attached to the frame and located to curve the edge of a stay back of the opening between the peripheries of the rolls.

1,663,764. PROCESS OF MAKING ROSIN SOAP. CARL C. KESLER, Pittsburgh, Pa., assignor to Pine Institute of America, Incorporated, Jacksonville, Fla., a Corporation of Delaware. Filed July 30, 1925. Serial No. 47,123. 2 Claims. (Cl. 87—16.)



1. The method herein described of producing rosin soap which consists in converting the major part of the acid component of a quantity of rosin into alkali acid salt, removing from such salt the resene component of the rosin, and using the remaining salt as an ingredient in the soap-making operation.

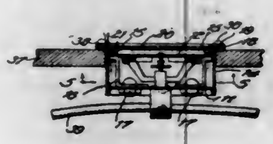
1,663,765. DISPLAY BOX. RUSSELL A. LAMBERT, Springfield, Mass. Filed July 9, 1924. Serial No. 724,990. 2 Claims. (Cl. 206—44.)

1. A combined shipping and display box comprising a tubular box body formed of cardboard and having front and rear walls, side walls and end walls, said end walls being swingingly connected to the front wall and provided with flaps for insertion in the box body adjacent the rear wall, said box body being cut across the front wall and the side walls with the cut terminating in the side walls at opposite ends of the median line on the back wall whereby said box may be folded over on the median line of the back wall to form two display sections with the sections of the back wall contiguous and the flaps of the end walls adjacent each other, the ends of the box body disposed in the same horizontal plane to form a broad base for the box when used for display purposes and means for holding the two sections of the box in display position, said means comprising a flap on an end wall inserted between the flap of the other end wall and the other section of the rear wall.

1,663,766. WIRE REEL. GEORGE W. LANDIS, Stilwell, Kans. Filed Feb. 23, 1927. Serial No. 170,263. 4 Claims. (Cl. 242—96.)

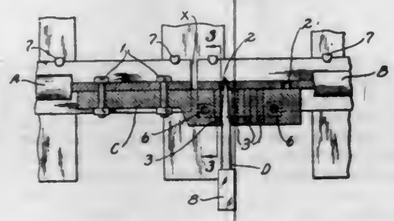
1. A device of the character described consisting of a frame adapted to be worn upon the body, a shaft journaled in said frame, a reel mounted upon said shaft and including cross members at each end, a clutch upon said shaft provided with fingers for engaging the edges of one of said cross members and rotating said reel, and manually controlled means for driving said shaft.

1,663,767. WASHING-MACHINE WRINGER. ARTHUR CALDER LYONS, Brantford, Ontario, Canada. Filed June 13, 1924, Serial No. 719,835, and in Canada Nov. 14, 1923. 4 Claims. (Cl. 68—82.)



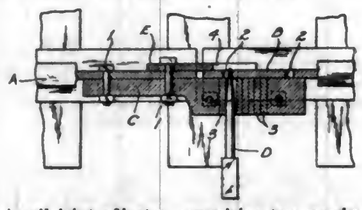
1. A wringer, comprising a frame consisting of a lower member and an upper member, said upper member being held in pivotal relation with said lower member, rollers suitably journaled in said lower member, a flat spring adjustably fitted in said upper member, the ends of said

spring imparting pressure on the ends of said rollers, said upper member being adapted to be swung about its pivot to either side of a plane passing through the wringer



rolls to disengage and release the downward pressure on the ends of the said rollers, as and for the purpose specified.

1,663,768. ELECTRICAL MEASURING INSTRUMENT. JOHN H. MILLER, Oak Park, Ill., assignor to Jewell Electrical Instrument Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 25, 1922. Serial No. 546,924. 2 Claims. (Cl. 171—95.)

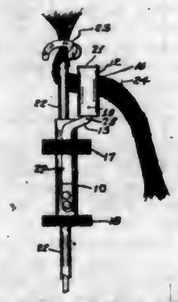


1. In an electrical measuring instrument, a substantially cylindrical casing having an annular supporting flange extending at right angles to its axis, a facing ring turned over said flange and projecting into said casing, a transparent circular closure in said casing lying against said facing ring, a substantially cup shaped metal dial plate fitting in said casing with its open end against said transparent closure, and having a curved slot for a pointer, a cup shaped back plate closing the rear end of said casing, and a yoke rigidly joining said back plate and said dial plate.

1,663,769. RAIL-JOINT ADJUSTER. JOHN H. MORGAN, East St. Louis, Ill., assignor of one-half to Samuel C. Jump, East St. Louis, Ill. Filed Mar. 10, 1927. Serial No. 174,206. 11 Claims. (Cl. 254—43.)

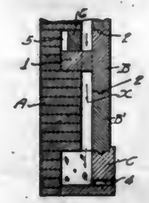
1. A rail joint adjuster, comprising a member adapted to be connected to one rail in such a position that a portion of said member extends alongside of the other rail, and a tapered device that is adapted to be forced into engagement with surfaces on said other rail and on said member located below the tread surface of the head of the rail and disposed so as to produce relative longitudinal movement between said other rail and member.

1,663,770. RAIL-JOINT ADJUSTER. JOHN H. MORGAN, East St. Louis, Ill., assignor of one-half to Samuel C. Jump, East St. Louis, Ill. Filed Nov. 28, 1927. Serial No. 236,325. 6 Claims. (Cl. 254—43.)



1. A rail joint adjuster, comprising two members adapted to be connected to the opposite sides of the web of one rail and arranged so as to embrace the web of the opposed rail, and a device that is adapted to be forced into engagement with a surface on one of said members and a surface on said opposed rail located below the tread surfaces of the heads of the rails and disposed so as to produce relative longitudinal movement between the rails.

1,663,771. HAIR CURLER. CHARLES NESSLER, New York, N. Y. Filed Feb. 2, 1927. Serial No. 165,833. 10 Claims. (Cl. 132—33.)

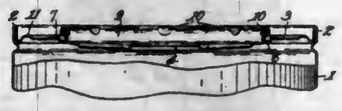


1. A hair curling device comprising a tubular curling-rod, an endwise movable rod extending through said tubular rod and provided with a protruding hook-member having an ecentrically pivoted finger for closing the mouth of said hook-member, said finger being engaged by said tubular rod and moved thereby into closed position when said movable rod is moved inwardly into the tubular-rod.

1,663,772. HAIR-WINDING MEANS. CHARLES NESSLER, New York, N. Y. Filed Feb. 2, 1927. Serial No. 165,833. 9 Claims. (Cl. 132—33.)

1. In a device for curling hair, a curling rod, a winding device including a tube section adapted to be removably received on the rod, a pair of fingers resiliently supported on the tube section, and projecting beyond the same parallel with and spaced from said rod, and means for adjustably moving the fingers into gripping relation to a strand of hair, said winding device being adapted to be rotated about the rod to wind the strand thereon.

1,663,773. FURNACE WALL. GEORGE M. PARKER, St. Louis, Mo. Filed June 5, 1925. Serial No. 35,150. 6 Claims. (Cl. 72—102.)

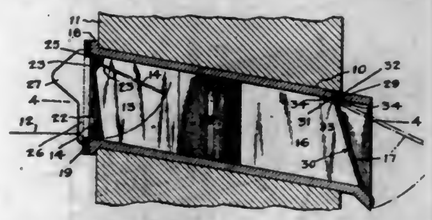


1. A furnace wall, comprising a permanent portion provided with pockets, a renewable portion made up of a plurality of large, flat tile arranged edgewise and spaced away from said permanent portion so as to form an air circulating passageway between said tile and permanent portion, integral, rearwardly-projecting, reduced shanks on some of said tile provided with flanged head pieces, and elements in the permanent portion of the wall constructed so as to form undercut recesses below the pockets in said permanent portion and adapted to interlock with the head pieces on said shanks when said head pieces are introduced into said pockets and moved downwardly.

1,663,774. LINOLEUM-COVERED BASEBOARD. CLARENCE L. PETERSEN, Richmond, Calif. Filed Apr. 20, 1927. Serial No. 185,193. 2 Claims. (Cl. 20—74.)

1. A house element comprising a base board having a curved face adapted to receive the turned up edges of a linoleum strip, a bead on top of said base board, a groove formed in the underside of said bead adapted to receive the edge of said linoleum, and a linoleum strip having its upper edge in the groove and cemented to said curved face.

1,663,775. HEAD FOR SHIPPING DRUMS. CHARLES H. ROLLASON, Wheeling, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Apr. 16, 1927. Serial No. 184,256. 5 Claims. (Cl. 220—59.)



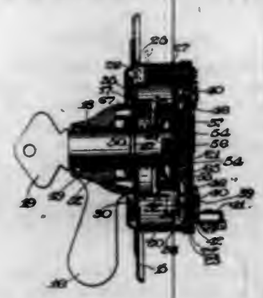
2. A sheet metal container having a head formed with a central circular opening defined by an upstanding flange, said head having therein a downwardly pressed bead of which the inner wall is extended to form said flange, said flange having its terminal edge portion turned outwardly into overhanging relation to said bead to form a seat for a gasket, said head also having therein an upwardly pressed bead disposed in closely encircling relation to the downwardly pressed bead, a slip cover having an upright annular flange for seating within the embrace of said head flange and provided with a terminal edge portion turned outwardly into overhanging relation to said gasket seat, and tongues formed on said head flange adapted to be turned inwardly into seated relation to said terminal edge portion of the cover flange, the reversely disposed beads cooperating to render that portion of the head adjacent to the cover readily resilient for absorbing impacts and preventing rupture of the joint between the head flange and the cover.

1,663,776. SELF-REVERSING SLICING MACHINE. HERMAN ROSSOW, Melvindale, Mich. Filed Mar. 19, 1927. Serial No. 176,628. 5 Claims. (Cl. 146—168.)

1. A cutting machine of the class described comprising: a bed; a cutting element projecting transversely of said bed and rockingly mounted, said cutting element, upon rocking in either direction, a predetermined distance, projecting one or the other of its edges above the surface of said bed; an arm projecting downwardly from said cutting element; an engagement member at opposite ends of said bed; means for connecting said engagement members; and means on said connecting means for engaging said arm and rocking said cutting element on its mountings upon movement of either of said engagement members in either direction.

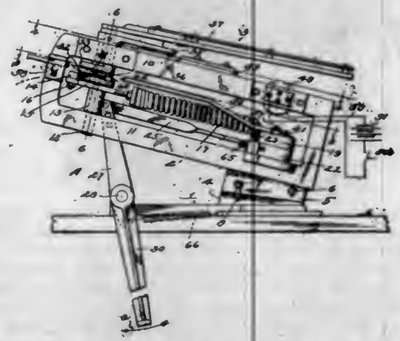
1,663,777. SCUPPER. EDWIN SARGENT, North Arlington, N. J. Filed July 1, 1926. Serial No. 119,845. 5 Claims. (Cl. 182—26.)

1. In a scupper, the combination of a hollow casing, adapted to be located in a wall at the floor level for draining water from the floor; a frame removably secured at the inner end of said casing; a series of bars across said frame, said bars having protuberances thereon to prevent any object being placed against the inner end of the casing and closing it off; and a valve pivotally mounted on said frame, said valve being adapted to substantially close the inner end of the casing.



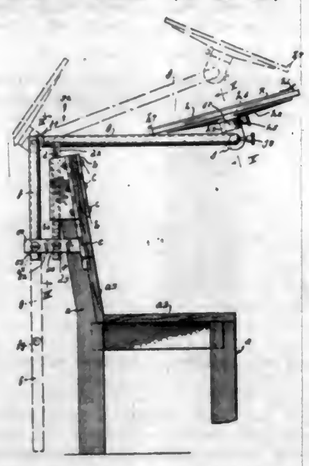
1,663,778. HAIR CLEANER. MAX H. SEEGER, Inglewood, Calif. Filed May 28, 1927. Serial No. 195,025. 3 Claims. (Cl. 132—11.)

1. The method of forming a hair cleaner consisting of twisting wires together to form a strand and simultaneously weaving short lengths of fibrous string into the



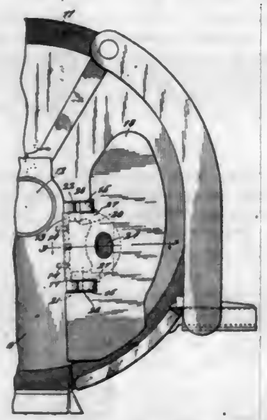
strand so that there is a short string secured in each twist of the strand, then bending the strand to form integrally connected teeth of a comb or brush, then severing proper lengths of integrally connected teeth, and then securing the severed lengths of teeth in a backing of a comb or brush.

1,663,779. SWITCH. EDGAR M. SORENG, Milwaukee, Wis., assignor, by mesne assignments, to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 2, 1920. Serial No. 414,207. 15 Claims. (Cl. 200—6.)



5. In a switch, a rotary shaft member, a rotatably mounted springpressed sheet metal dished contact disk surrounding the shaft and insulated therefrom, a spring pressed insulating disk carried by the shaft and located within the dished portion of the contact disk, a contact member thereon, contacts engaged by the contact member and the contact disk, and separate means for turning the shaft and the contact disk.

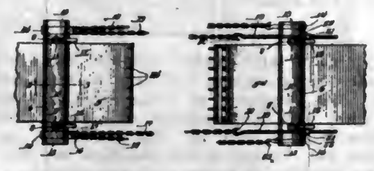
1,663,780. TARGET-THROWING TRAP. WILLIAM I. SPANGLER, Tarlton, Ohio, assignor to The Chamberlin Cartridge and Target Co., Cleveland, Ohio, a Corporation of Ohio. Filed July 8, 1925. Serial No. 42,136. 11 Claims. (Cl. 124—6.)



1. In a target trap, the combination of a shaft, a throwing arm connected with said shaft, a crank connected with said shaft, a spring connected at one end to said crank, a movable support for the opposite end of said spring, a rock shaft at the target, a one-way connection between said rock shaft and the said support whereby the support may be moved by said rock shaft thereby to place the spring under throwing tension, means, releasable by the return movement of said throwing arm, for holding the said support in its spring-tensioning position, and adjustable means for engaging the said support after the release thereof, thereby to limit the movement of said support toward said crank and to retain a material part of the throwing tension in said spring.

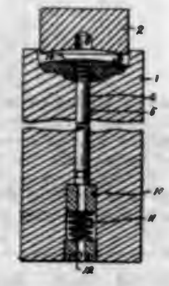
1,663,781. SCORING APPARATUS. WILLIAM W. SPARGO, Pontiac, Mich. Filed Aug. 24, 1925. Serial No. 52,139. 4 Claims. (Cl. 45—82.)

1. In an apparatus of the kind described, the combination of a bench having a back with a vertical slot formed therein from its upper edge, a casting engaging each edge of said slot to strengthen the same and extending backward therefrom, said castings being provided with opposite vertical slots back of said bench, a block engaging and adapted to slide in said vertical slots, a part secured to said bench beneath the slot in the back thereof and extending backward therefrom and having a vertical aperture therethrough, a rod passing through and adapted to reciprocate in said aperture, said part being so located that said rod shall be parallel and back of said block, a second rod jointed at its inner end to the upper end of the first named rod and adapted to enter laterally into the slot in the back of the bench, and an adjustable table on the outer end of said second rod.



1,663,782. SLICE-DEFLECTOR FOR SLICING MACHINES. HENRY THOMAS, East Ham, London, England, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Sept. 16, 1927. Serial No. 219,829. 12 Claims. (Cl. 146—102.)

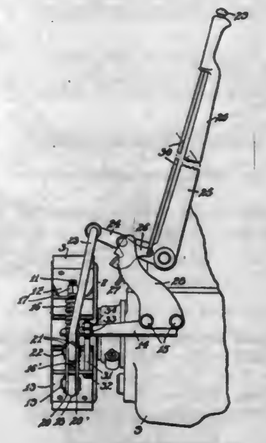
1. In a slicing machine, a guard plate for the slicing knife, a support for said guard plate comprising pivot members movable transversely of the axis thereof, and



means co-operating with said pivot members for holding said members against pivotal movement when said guard plate is in its operative position, said pivot members being movable to a position in which they are free to rotate about their axis to permit said guard plate to swing away from the slicing knife.

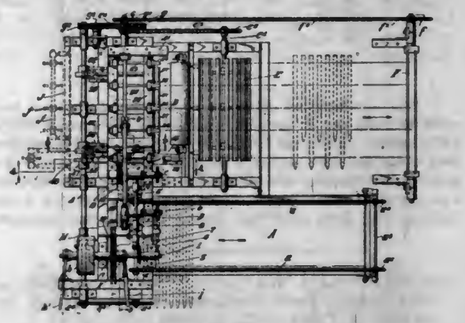
1,663,783. BELT STRETCHER. EDWIN VOLLRATH, Easton, Pa. Filed Jan. 31, 1927. Serial No. 164,785. 5 Claims. (Cl. 254—54.)

1. In a belt stretcher of the character described, the combination with clamps and means for applying them to the respective belt ends, of means for drawing said clamps together by successive steps, and means independent of said drawing means for holding said clamps in successive positions of approach.



1,663,784. METHOD OF MAKING TWO-PIECE VALVES. WILLIAM H. WASHBURNE, Chicago, Ill., assignor, by mesne assignments, to Motor Valves, Inc., Woodstock, Ill., a Corporation of Delaware. Filed Mar. 10, 1924, Serial No. 698,145. Renewed Sept. 10, 1927. 5 Claims. (Cl. 29—156.7.)

1. The method of making a two-piece valve which consists in forging a blank to give it the shape of a valve head having a central hole therethrough slightly larger in diameter than a stem to which the head is to be applied, and then forging the head upon a stem in such a manner that the material of the head is closed upon the stem without exerting any forging pressure on the stem in the direction of its length.

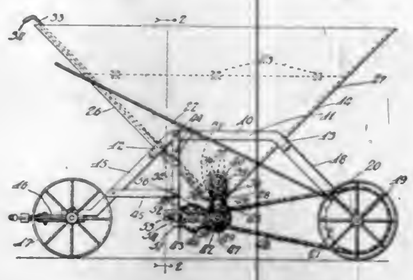


1,663,785. AUTOMOBILE BRAKE. SAMUEL O. WHITE and ROBERT SPRATT PLEXICO, Muncie, Ind., assignors to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Filed Apr. 28, 1926. Serial No. 105,123. 8 Claims. (Cl. 188—77.)

1. The combination with a transmission casing and shaft, of a brake drum on said shaft, a brake band for said drum mounted on the end of said casing, a compression bolt having one end connected to one end of said band, a cam lever fulcruming on the opposite end of said band and pivotally connected to the opposite end of said bolt and operating in the plane of said band, a guide bracket for the bolt secured on one side of the transmission casing, expansion springs for the band surrounding said bolt and interposed between the bracket and the opposite ends of the band, a bell crank brake lever pivoted on the transmission casing on the same side of the axis of the band as that of the ends of the band and operating in a plane at right angles to the plane of the drum, one arm of said brake lever extending

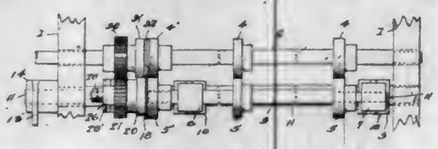
toward the brake band and to a point substantially above the compression bolt, and a thrust rod pivotally connected at one end to said arm and at the opposite end to said cam lever.

1,663,786. FENCE-MAKING MACHINE. DOUGLAS A. WILSON, Peoria, Ill., assignor to Rowe Manufacturing Company, Galesburg, Ill., a Corporation of Illinois. Filed Dec. 20, 1926. Serial No. 155,817. 16 Claims. (Cl. 140—30.)



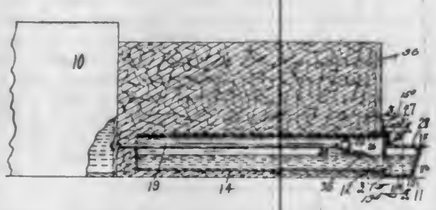
1. In a fence machine, twisters for twisting cable strands to secure alternate long and short wood slats, means to rotate the twisters, means to rotate the marginal twister for the top marginal cable strand at an increased speed over the remaining twisters, and retention means to engage the top marginal cable strand between the upper ends of the longer slats to accomplish the twisting of such strand at the same time as the securing of a short slat to the other strand.

1,663,787. LIME-SPREADING MACHINE. ERNST ZACHRISON, Chicago, Ill. Filed June 11, 1924. Serial No. 719,230. 1 Claim. (Cl. 275—2.)



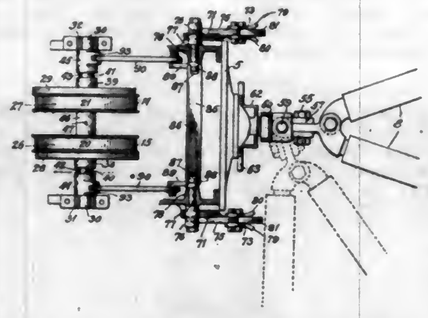
A lime spreading machine comprising a frame mounted on carrying wheels, a hopper mounted on said frame having a transverse opening in the center thereof, said hopper having its bottom inclined toward the cen-

ter thereof for conveying the lime to said opening, a roller positioned wholly within said hopper and adapted to be moved in a direction parallel to said bottom member adjacent said opening for pulverizing the lumps of lime and for feeding the lime through said opening,



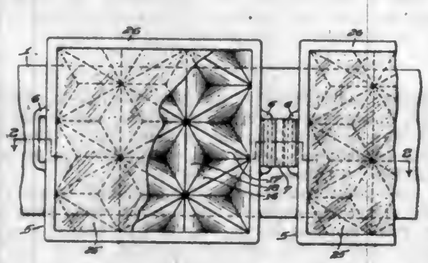
oppositely disposed brushes positioned adjacent to and parallel with said roller and outside said hopper for distributing the lime discharged by said roller, and an adjustable bottom member positioned inside of said hopper for regulating the size of said opening.

1,663,788. ROTARY CUTTER. ANTHONY ZIMNIEWICZ, New York, N. Y., assignor, by mesne assignments, to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1924. Serial No. 756,110. 3 Claims. (Cl. 164—61.)



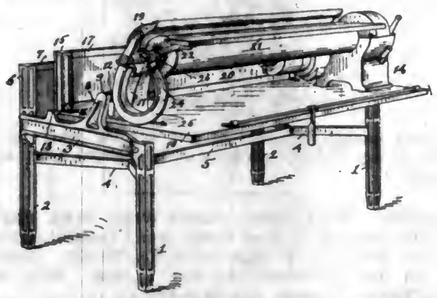
1. The combination with an operating shaft and feed rolls thereon, of a support and adjustable yokes thereon, a shaft journaled in said yokes and complementary feed rolls on said shaft, a rotary cutter, a bracket for said cutter having an adjustable hub on said support, and resilient means connected to said support for maintaining said feed rolls and cutter in operative position.

1,663,789. STOCK WATERER. OSCAR O. ANDERSON, Sioux Rapids, Iowa. Filed Dec. 6, 1926. Serial No. 152,861. 1 Claim. (Cl. 119—73.)



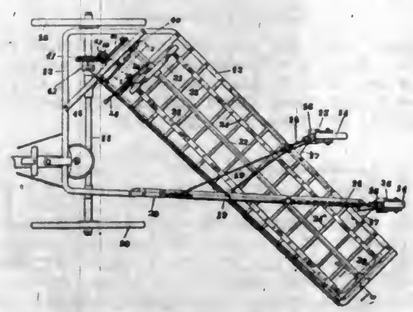
In a waterer of the class described, a trough having an opening at its rear end, a tubular compartment connected with the rear end of the trough in communication therewith and extending a substantial distance therefrom for adapting it to be embedded in manure, an intake pipe extended into said compartment at the end farthest from the trough and extending to position adjacent to and accessible from the trough, a valve for controlling discharge from the end of said pipe adjacent to the trough, a float in the compartment operatively connected with said valve, a plate detachably mounted at the front end of said compartment and projecting downwardly to form a partition between the trough and compartment terminating above the bottom of the trough, a trough cover hinged to said plate, and means for detachably mounting the plate for permitting its ready removal for affording convenient access to the valve and float.

1,663,790. AUTOMATIC CRAMP PREVENTIVE. WILLIAM I. BALLENTINE and PAUL R. THOMPSON, La Porte, Ind., assignors to Advance-Rumely Company, La Porte, Ind., a Corporation of Indiana. Original application filed June 16, 1923, Serial No. 645,751. Divided and this application filed June 25, 1923. Serial No. 647,610. 12 Claims. (Cl. 180—17.)



1. In a tractor having driving mechanism and control means therefor, comprising a rein operated control element having a projection, a hitch operated member having a projection co-operable with the projection on the control element for effecting a stop control of the driving mechanism when the hitch operated member is operated by a driven implement when moving toward a cramped position.

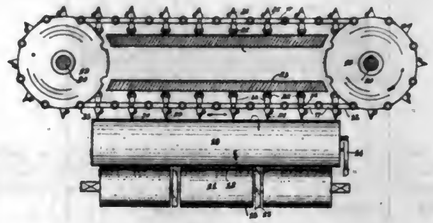
1,663,791. REFLECTOR BELT. EDMUND R. BOOTS, East Orange, N. J., and SVEN AUGUST ESKILSON, Stockholm, Sweden, assignors to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 8, 1924. Serial No. 697,731. 2 Claims. (Cl. 88—1.)



1. A belt comprising in combination a plurality of groups of reflectors, frame members for supporting the respective groups, means for flexibly connecting the said groups together, and light diffusing plates located over the said respective groups.

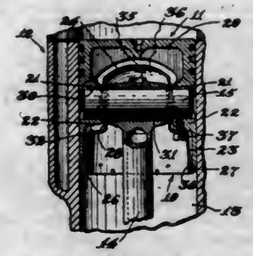
1,663,792. COMBINED TABLE AND IRONING-MACHINE SUPPORT. FRANCIS M. CASE, Cleveland Heights, Ohio, assignor to Barton R. Deming, Cleveland, Ohio. Filed Oct. 26, 1925. Serial No. 64,754. 19 Claims. (Cl. 45—17.)

12. A combined table and ironing machine support comprising a supporting frame having supporting legs at the corners thereof, a reversible table top pivotally mounted on the frame for movement from one horizontal position to a reversed position, about a longitudinal axis intermediate the front and rear of the frame, said supporting legs being located within the confines of the edges of the top when the top is in one of said horizontal positions.



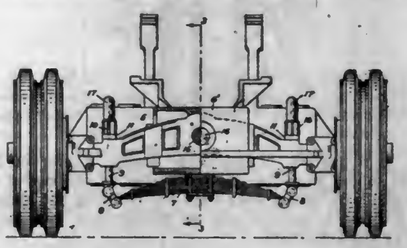
1,663,793. SIDE-DELIVERY RAKE. LEON R. CLAUSEN, Moline, Ill., assignor to The Dain Manufacturing Company of Iowa, Ottumwa, Iowa, a Corporation of Iowa. Filed July 10, 1919. Serial No. 309,906. 16 Claims. (Cl. 56—377.)

1. In a side-delivery rotary rake, the combination of a wheeled support comprising a rotatable axle, a diagonally-extending frame having its forward end portion pivotally connected with said wheeled support, a rotatable reel carried by said frame and comprising a shaft journaled in the frame, the outer end of said shaft being journaled loosely in a bearing to permit the other end of the shaft to have a limited vertical adjustment, a sprocket wheel fast on said shaft, a second sprocket wheel rotatably mounted on the frame in advance of the first-named sprocket, an endless chain passing over said sprockets, means for driving said sprockets and chain from the rotatable axle, and means for vertically adjusting the inner end of said reel-shaft, said adjusting means comprising a toothed member on the reel-shaft and turnable relatively thereto and a fixed rack with which said toothed member meshes.



1,663,794. ROSSER. CHARLES ERNEST CLOWES, Fredericton, New Brunswick, Canada. Filed Feb. 24, 1927. Serial No. 170,570. 8 Claims. (Cl. 144—208.)

1. In a rossing machine, sprockets disposed in spaced relation, a travelling belt therefor, a scraper rigidly projecting from each link thereof presenting a continuous series of working edges along one side of the belt between the sprockets for engagement axially with a side of the stick, rollers, one borne by each link in the

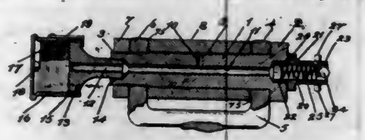


thrust line of the scraper, and a rail extending parallel to the line of motion presenting a thrust sustaining surface for the rollers.

1,663,795. OIL-SPLASH LINING FOR PISTONS. RICHARD COLE, Burbank, Calif. Filed May 24, 1922. Serial No. 563,323. 6 Claims. (Cl. 74—108.)

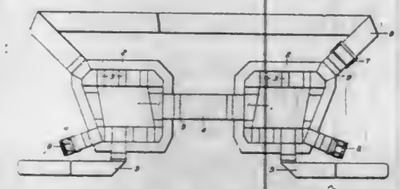
2. In combination with an internal combustion engine piston provided with a wrist pin, means comprising a lining adapted to prevent oil from splashing internally of said piston, and ducts formed in said lining, to extend outwardly around the lower edge of the piston to allow air to circulate therein and oil to drain therefrom.

1,663,796. MOUNT FOR GUNS. THOMAS A. CONLON, Silver Spring, Md. Filed Feb. 10, 1926. Serial No. 87,458. 7 Claims. (Cl. 89—40.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)



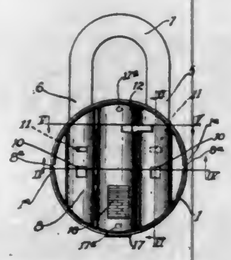
5. A gun mount including a carriage, an axle, jacks mounted in the axle and a resilient connection between the carriage and jacks.

1,663,797. LUBRICATING MEANS. JOHN L. CREVELING, Oracle, Ariz., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 15, 1920. Serial No. 430,943. 8 Claims. (Cl. 308—120.)



8. Lubricating apparatus of the class described comprising an element having a bearing surface, a passage

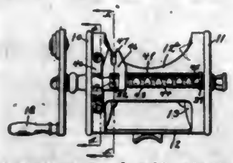
having an opening through said surface and other openings beyond said bearing surface, external storage means attached to said element and communicating with one



of said other openings, and means for making a quick detachable connection with a source of lubricant supply separately attached to said element and communicating with a second of said other openings.

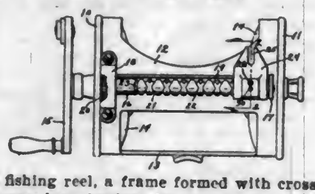
1,663,798. POLYGONAL DEVICE FOR ABDOMINAL RUPTURE. LUELLA HAYMOND, Salt Lake City, Utah. Filed Mar. 14, 1927. Serial No. 175,352. 1 Claim. (Cl. 128—96.)

In an abdominal support for hernia; a flexible device comprising a seven sided frame with necessary apertures to admit adjustable straps attached thereto; a compress held in a central position by said straps, and means for fastening the support around the body and to the legs of the wearer.



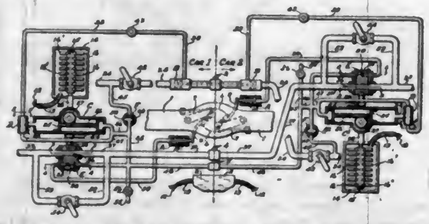
1,663,799. CYLINDER PADLOCK. JOHN JUNKUNC, Chicago, Ill. Filed Jan. 17, 1927. Serial No. 161,482. 4 Claims. (Cl. 70—108.)

4. In a padlock, a cylindrical casing, a pair of lock plates spaced from the top and bottom of the casing and provided with cooperating ways for receiving the arms of the hasp of a padlock, and an intermediate way for receiving the key barrel.



1,663,800. FREE-SPOOL LEVEL-WIND FISH REEL. JOE KAUTZKY, Jr., Fort Dodge, Iowa. Filed July 19, 1924, Serial No. 727,075. Renewed Mar. 23, 1927. 7 Claims. (Cl. 242—84.4.)

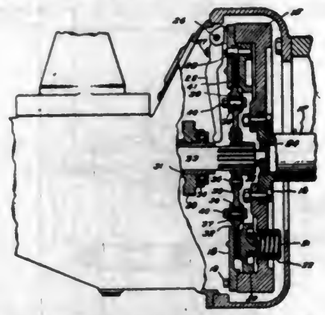
1. In a fishing reel, a frame, a winding shaft journaled therein, a crank on said shaft, a winding gear fixed to said shaft, a member mounted for rotation in said frame, means connecting said rotary member with said winding gear whereby said member may be rotated in one direction when said crank is turned manually, a friction spring engaging said winding gear, means to limit rotation of said spring with said gear in both directions, and a retractile spring connected with said friction spring and with said frame and acting to produce



a snap reverse movement of said winding gear and of said rotary member when force is released from said crank.

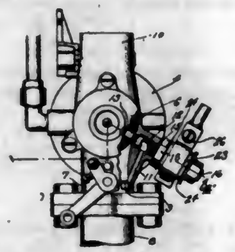
1,663,801. FREE-SPOOL LEVEL-WIND FISH REEL. JOE KAUTZKY, Jr., Fort Dodge, Iowa. Original application filed July 19, 1924, Serial No. 727,075. Divided and this application filed May 1, 1926. Serial No. 105,980. 8 Claims. (Cl. 242—84.4.)

1. In a fishing reel, a frame formed with cross-bars, the forward cross-bar having its upper margin concaved substantially throughout its length, whereby an unguided line engaging said bar at any point substantially removed from its center tends to travel toward the longitudinal center of the frame.



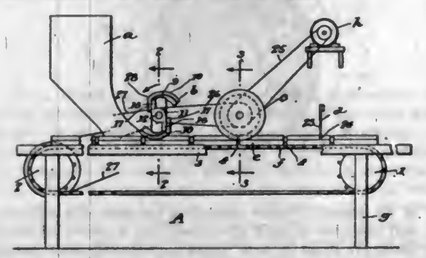
1,663,802. CAR, AIR, AND ELECTRIC COUPLER SYSTEM. ERNST A. LARSSON, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Apr. 12, 1927. Serial No. 183,145. 23 Claims. (Cl. 213—76.)

1. In a car, air and electric coupling system, electric circuits, a switch in said circuits, air-brake lines, a valve in each of the lines, a car coupler, a pneumatic uncoupling device for the car coupler, a pneumatically operated device to move the switch to its open position and simultaneously one of the said valves to its closed position, piping connecting the last said actuating device and one of the air-brake lines, a controlling valve in said piping, piping connected to the uncoupling device under control of the said controlling valve and means interposed in the last said piping to control the flow of air therein such that the air to the said uncoupling device is permitted to flow thereto when the switch moves to its open position.



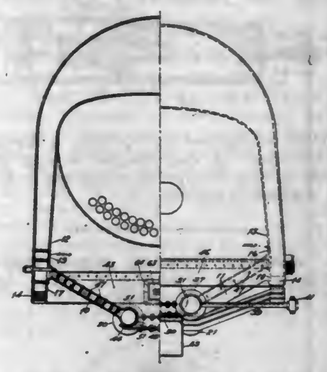
1,663,803. CLUTCH CONSTRUCTION. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Nov. 1, 1926. Serial No. 145,500. 11 Claims. (Cl. 192—68.)

2. A clutch driven member comprising an outer portion having a generally circular inner edge and an inner portion having a generally circular outer edge lying inwardly of and adjacent to said inner edge, resilient blocks interposed between said edges to effect a cushioned drive



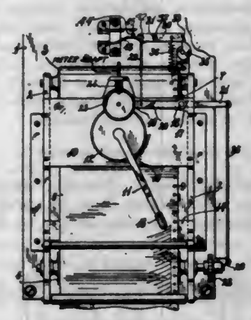
between said portions, and means slidably engaging said portions for preventing axial displacement of one of said portions relative to the other thereof.

1,663,804. CARBURETOR ATTACHMENT. MITCHELL MACKIE, Waukesha, Wis., assignor to Mitchell Mackie Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 19, 1922. Serial No. 562,195. 4 Claims. (Cl. 261—12.)



1. The combination with a carburetor having a fuel mixture passage adapted for connection with an engine intake manifold, a throttle valve in the passage for controlling the volume of air and fuel supplied the engine and a by-pass formed in the wall of the fuel mixture passage and leading direct from the fuel supply to the fuel mixture passage near the engine side of the throttle valve, of means for heating only the fuel passing through the by-pass and including an electrical heating member.

1,663,805. DEVICE FOR FORMING SLABS. GEORGE C. MARTIN, Los Angeles, Calif. Filed Oct. 11, 1926. Serial No. 140,812. 4 Claims. (Cl. 25—43.)

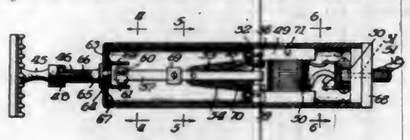


1. In a device of the character disclosed, a conveyer, a packer head comprising two oppositely disposed spiral packer blades, and means for moving said conveyer and rotating said packer head whereby any material upon said conveyer will be acted upon by said packer head to compress said material and shape the same.

1,663,806. BOILER. JESSE C. MARTIN, Jr., San Francisco, Calif., assignor to John Morris, Los Angeles, Calif. Filed Nov. 19, 1926. Serial No. 149,365. 13 Claims. (Cl. 122—58.)

1. In a locomotive fire tube boiler including a barrel and a firebox having water legs, a water bottom for said firebox carried by the side sheets thereof and communicating with said water legs and a water passage from the barrel to said bottom providing for the flow of water from the barrel through said bottom into said legs.

1,663,807. CHART-RECORDING METER. FRANZ MAURER, Zug, Canton of Zug, Switzerland, assignor to the Firm Landis & Gyr A.-G., Zug, Switzerland. Filed June 16, 1922, Serial No. 568,822, and in Switzerland June 20, 1921. 3 Claims. (Cl. 234—5.5.)



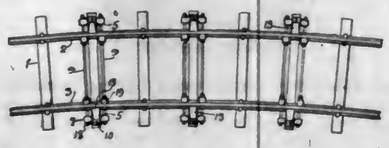
1. An electricity meter, chart feeding mechanism, a recording means, means for connecting and disconnecting the said meter and said recording means and including a spindle, a clockwork, an electric motor to rewind the clockwork, a contact device in circuit with said motor, and a controlling device comprising two levers arranged side by side, and a cam driven by the clockwork and on which one end of each of said levers is arranged for operation, one of said levers being provided at its opposite extremity with a fixed pivot, and the other lever being linked to the first named lever and being also arranged to actuate said contact device for controlling the electric motor and being connected to said spindle.

1,663,808. [WITHDRAWN.]

1,663,809. ELECTRIC SAFETY RAZOR. SAMPSON W. MOON, Chicago, Ill. Filed Apr. 3, 1925. Serial No. 20,343. 2 Claims. (Cl. 30—12.)

1. In an electric safety razor, a hollow grip having an end wall, an abutment member disposed within said grip

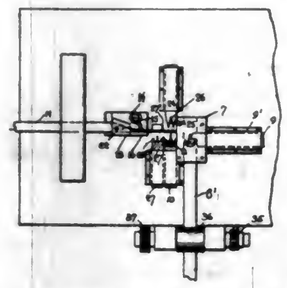
in proximity to said end wall, a tool post having a shoulder thereon rigidly and directly attached to said abutment member, said end wall being clamped between



said abutment member and said shoulder, a shaving blade head on said post, an electromagnet in said grip, and an armature for said electromagnet mounted to strike said abutment member on actuation.

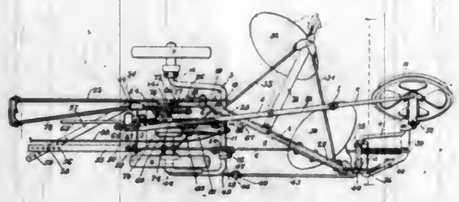
1,663,810. **ELECTRIC HEATER.** STERNE MORSE, Cleveland Heights, Ohio. Filed Feb. 6, 1926. Serial No. 86,413. 14 Claims. (Cl. 219—37.)

1. In an electrical heating unit adapted to maintain substantially constant temperatures, in combination, a plurality of electrically conductive resistor bodies, confining means disposed in electrical insulating and heat receiving relation to said resistor bodies and adapted to place said bodies under a predetermined initial pressure, said confining means being adapted to vary the pressure between said resistor bodies inversely with the variation in temperature of said confining means.



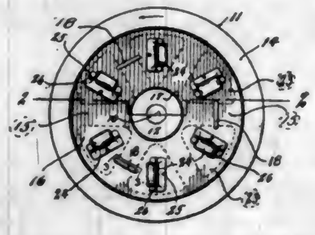
1,663,811. **RAILWAY-RAIL BRACE.** JOHN G. MUELLER, Dayton, Ohio. Filed May 10, 1926, Serial No. 107,924. Renewed Aug. 22, 1927. 12 Claims. (Cl. 238—53.)

1. In a railway rail brace, the combination with threaded tie rods, of base plates adapted to be mounted on said tie rods on the outside of the track rails, a brace member proper separate from said base plate and extending between each base plate and adjacent rail, and adjustable means to position said brace members with respect to rails of different sizes and to maintain them at an incline rigidly in engagement with said base plate and rails to prevent the latter from spreading.



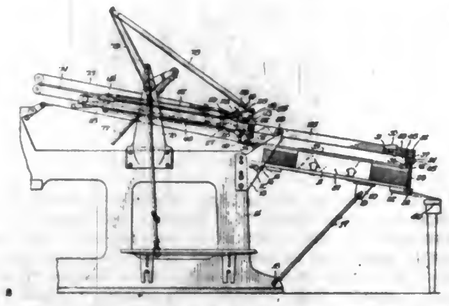
1,663,812. **MACHINE FOR PUNCHING STAPLES AND PROVIDING THE SAME WITH WOOD-FIBER INSULATION.** GEORGE A. PARKER, Brockton, Mass. Filed Aug. 3, 1926. Serial No. 126,872. 5 Claims. (Cl. 59—72.)

1. In a machine for manufacturing staples with a fiber insulation, means for feeding a metal strip, means for punching staples successively therefrom, means for feeding a wood fiber strip, means for feeding the staples into alignment with successive end portions of the wood



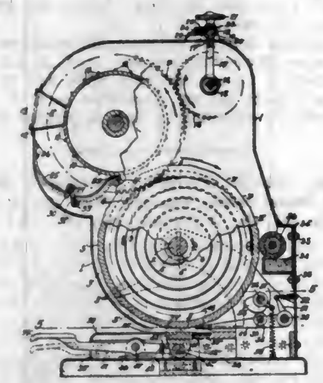
fiber strip, and means for driving the staples successively through successive end portions of the wood fiber strip and thereafter severing said end portions.

1,663,813. **RIDGER.** WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed June 9, 1922. Serial No. 567,160. 2 Claims. (Cl. 97—53.)



1. In a gang plow, including a wheel-supported diagonal plow beam and two plowing disks, the combination therewith of an arm rigidly supported on the beam and extending furrowwardly, braces secured to said arm adjacent the outer end thereof and to the beam, and means to secure one of said disks to the outer end of the arm furrowwardly of the other disk to operate toward the other disk and in an opposite direction to the operation thereof.

1,663,814. **FLYWHEEL.** JACOB RANZ, St. Louis, Mo. Filed Sept. 10, 1926. Serial No. 134,643. 5 Claims. (Cl. 74—6.)



1. A fly wheel, a plate extending between the hub portion and the rim of said fly wheel, and a series of hand-hold members fixed to said plate and spaced equi-distant about the axis of said wheel, each of said hand-hold members being formed with a shoulder portion presented rearwardly with respect to the direction of rotation of said fly wheel and having its forward and end faces inclined downwardly and forwardly and terminating in marginal flanges adapted to be secured to said plate.

1,663,815. **DELIVERY MECHANISM FOR PRINTING PRESSES.** FRANK E. RICH, Chicago, and FRED C. BURDICK, La Grange, Ill., assignors to The Miehle Printing Press and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 2, 1925. Serial No. 60,031. 9 Claims. (Cl. 271—84.)

1. In combination with a press or the like, a reciprocating delivery frame, means to deliver sheets to the reciprocating frame, stop means carried by the frame and adapted to retain sheets thereon, means adapted to move the stop means to release the sheets at a predetermined point in the operation, and means adapted selectively to prevent release by the stop means.

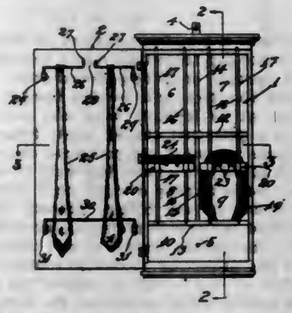
1,663,816. **APPARATUS DESTINED TO PROTECT CHECKS AND SIMILAR DOCUMENTS.** ALBERTO BONAVIA Y RIPOLL and ARTURO BONAVIA Y RIPOLL, Habana, Cuba. Filed July 28, 1926, Serial No. 125,501, and in Cuba July 12, 1926. 1 Claim. (Cl. 101—19.)

In a check printing machine, the combination of a series of printing wheels each of which is provided with a series of characters, a series of indicating wheels, each of which is provided with a series of indicating characters and engages one of said printing wheels, a movable setting wheel for successively bringing each printing character into printing position and simultaneously bringing a corresponding indicating character into an indicating position, a member for imprinting said printing characters on a check, means for engaging each of said indicating wheels to retain said printing wheels in set position, spring means for returning said printing wheels to zero position, and means for simultaneously releasing all of said retaining means, whereby said printing wheels are returned to zero position.

1,663,817. **PROCESS FOR THE MANUFACTURE OF FARNESOL.** LEOPOLD RUZICKA, Zurich, Switzerland, assignor to M. Naef & Co., Geneva, Switzerland, a Corporation of Switzerland. Filed Mar. 19, 1924, Serial No. 700,440, and in Switzerland Mar. 22, 1923. 2 Claims. (Cl. 260—153.)

1. A process for the manufacture of farnesol consisting in causing acetic acid anhydride to react upon nerolidol.

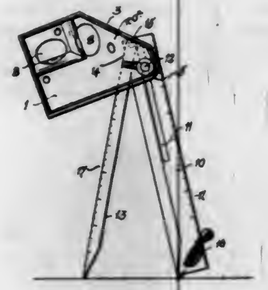
1,663,818. **PROCESS FOR THE MANUFACTURE OF FARNESOL.** LEOPOLD RUZICKA, Geneva, Switzerland, assignor to M. Naef and Cie., Geneva, Switzerland, a Company of Switzerland. Original application filed Mar. 19, 1924, Serial No. 700,440, and in Switzerland Mar. 22, 1923. Divided and this application filed Oct. 2, 1925. Serial No. 60,117. 1 Claim. (Cl. 260—153.)



A process for the manufacture of farnesol consisting in causing glacial acetic acid to react upon nerolidol.

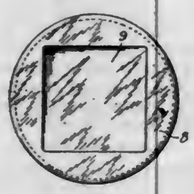
1,663,819. **SHADE.** WILLIS S. SHAFT, Faribault, Minn. Filed Nov. 14, 1923. Serial No. 674,761. 2 Claims. (Cl. 156—16.)

1. A shade structure comprising a foldable shade, control cords therefor, a single channel iron adapted to be positioned at the top of a window frame in an inverted position with its open side toward the shade and of a length approximately equal to the width of the window frame, and sets of guide rollers supported by the flanges of said channel iron in spaced relation with each other and the side wall of the channel iron to confine said control cords which pass over said rollers.



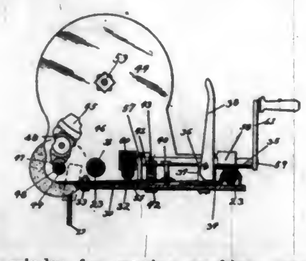
1,663,820. **CABINET.** JAMES F. SYKES, Pittsburgh, Pa. Filed Sept. 10, 1926. Serial No. 134,612. 1 Claim. (Cl. 312—172.)

In a cabinet, a box-portion and a door therefor; said box-portion comprising a plurality of compartments for



storing collars; a pair of vertical rods disposed in spaced parallel relation in each of said compartments and adapted to hold collars therein; a collar-support comprising a frame having two resilient side-members each provided with a sleeve-portion adapted for frictional engagement on said rods for the purpose of maintaining said collar-support at any selected height.

1,663,821. COMBINATION TOOL. UNO E. TUOMI, Dallas, Tex. Continuation of application Serial No. 52,450, filed Aug. 25, 1925. This application filed Sept. 4, 1926. Serial No. 133,650. 4 Claims. (Cl. 33—98.)

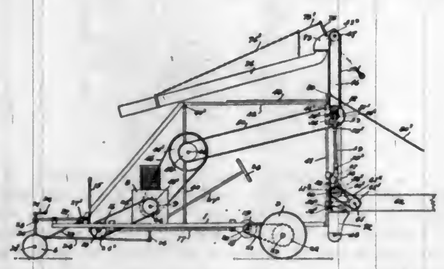


4. A tool of the character described, comprising a plate having a slot along one edge, a two-part blade pivoted in the slot, said blade having a perforation in its free end, and a pin removably mounted in said perforation.

1,663,822. FRUIT JAR OR CONTAINER. WILLIAM G. WALKER, Minneapolis, Minn. Filed Aug. 26, 1925. Serial No. 52,586. 1 Claim. (Cl. 215—1.)

In combination, a receptacle adapted to have a member applied to the top thereof by rotary motion, a polygonal shaped portion projecting downwardly from the bottom of said receptacle and forming therewith a right angle shoulder at its juncture with said bottom and a holder having a polygonal shaped recess formed therein of such shape as to receive the polygonal shaped portion on the bottom of said receptacle, the walls of said holder adjacent said recess forming a right angle shoulder with the upper surface of said holder, whereby as said receptacle is placed so the said projecting portion fits within said recess the bottom surface of said receptacle outwardly from said projecting portion will bear directly on the top surface of said holder to support the receptacle and act as a base of resistance against the bottom of said jar while said projecting portion and said recess will cooperate to hold said receptacle from turning movement.

1,663,823. LAWN-MOWER GRINDER. PHILIP A. ANDERSON, Atlantic, Iowa. Filed May 8, 1925. Serial No. 28,858. 3 Claims. (Cl. 51—249.)

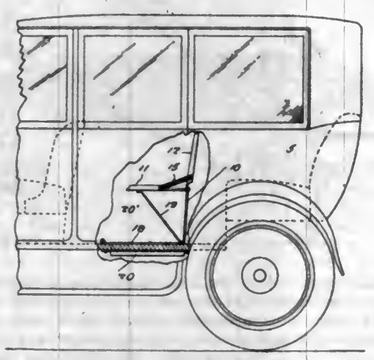


1. In a grinder for mowing machines comprising a supporting frame, means for securing said frame to a lawn mower having a rotatively mounted cutter bar, a pair of guide bars in said frame arranged parallel with the axis of said cutter bar and in fixed relation therewith, a grinder frame pivotally and slidably mounted on one of said guide bars, a grinder mounted in said frame, said grinder being so located that when the said frame is adjusted about its pivot the grinder will be moved toward and from said cutter bar, a plate having one edge pivotally mounted to the inner edge of said grinder frame, a bearing plate slidably mounted on the other of said guide bars, means carried by said bearing plate for moving said first plate toward and from said second guide bar, the outer edge of said grinder frame being provided with a set screw designed to engage said first plate for adjusting said grinder frame relative to said first plate, and a spring for yieldably holding the outer end of said grinder frame inwardly toward said first plate.

1,663,824. ROAD-MAKING MATERIAL. HECTOR AMPHION BATTALIOU, Cape Town, Cape Province, South Africa. Filed Jan. 14, 1924. Serial No. 686,201. 5 Claims. (Cl. 94—19.)

1. A binding material for macadam, comprising a mixture of approximately 37 per cent sand, 35 per cent calcium carbonate, 15 per cent iron oxide, and 12 per cent aluminum silicate, all the ingredients being in the form of particles not exceeding ¼ inch in greatest dimension.

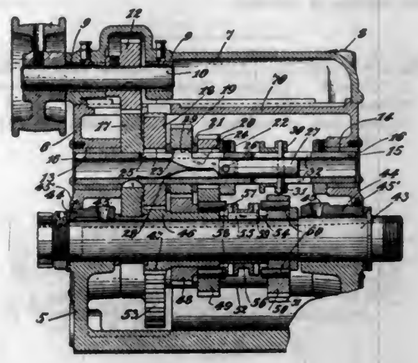
1,663,825. GRAIN LOADER. WILLIAM C. BENJAMIN, Unity, Saskatchewan, Canada. Filed Jan. 3, 1927. Serial No. 158,708. 4 Claims. (Cl. 198—72.)



1. In a grain loader, in combination, a portable frame, an upright driven grain elevator carried by the frame, a rearwardly extending adjustable grain driven conveyor delivering grain to the lower end of the elevator, a driven grain pick up conveyor carried by the rear end of the latter conveyor and delivering to the same and a pivoted discharge spout suspended from and receiving grain from the upper end of the elevator.

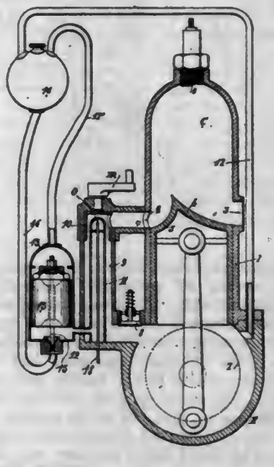
1,663,826. TOOL HANDLE. EMANUEL ROY BIER, Winnipeg, Manitoba, Canada. Filed Nov. 5, 1926. Serial No. 146,463. 3 Claims. (Cl. 32—10.)

1. A tool handle embodying a bulbous portion having a major and a minor axis and tapering towards the ends and adapted to fit the tightly closed hand and a neck portion interposed between the bulbous portion and the tool and adapted to be tightly gripped between the thumb and forefinger, said neck portion having a major and a minor axis and with the major axis disposed at right angles to the major axis of the bulbous portion.



1,663,827. FOLDING-SEAT CONSTRUCTION FOR AUTOMOBILE BODIES. FRANK BUNEVAC, St. Louis, Mo. Filed Jan. 4, 1927. Serial No. 158,896. 1 Claim. (Cl. 155—32.)

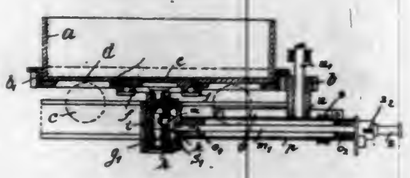
In a seating arrangement for an automobile wherein the floor board thereof is provided with an opening, a folding seat unit including a seat board, a back rest, and a supporting standard, said standard being hingedly secured at its lower end within the opening and said seat board and back rest being hinged to the upper end of the standard, a lid for closing the opening when the seat is disposed therein or raised therefrom, said lid hinged to the floor board adjacent the end of the opening remote from the hinged point of the standard; and a brace bar associated with the lid for engagement beneath the seat for supporting the same in rigidly set up condition, said brace bar hinged to the free end of the lid and adapted in one position to rest under the seat board for the support of the board and in another position to be folded under the lid and be received in said opening.



1,663,828. LATHE HEADSTOCK. HUBERT DALTON, Stamford, Conn. Filed June 5, 1925. Serial No. 35,043. 2 Claims. (Cl. 82—29.)

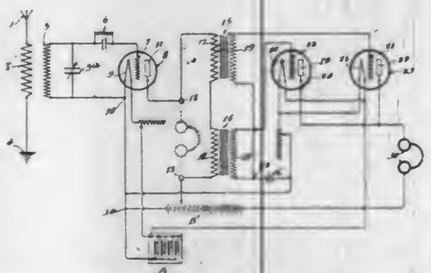
1. In a lathe head stock, a housing, a head stock spindle mounted in said housing and having drive gearing thereon, a countershaft mounted in the housing, selective speed change gearing on said countershaft engaged with the gearing on said spindle, an additional gear fixed to the countershaft, said housing including an upper removable section, drive means mounted in said removable housing section and having a gear engaged with the fixed gear on the countershaft, an additional shaft mounted in

said housing, a pair of gears loosely mounted thereon, one of said gears being engaged with the fixed gear on the countershaft, said top section of the housing with said drive means adapted to be removed and an electric motor substituted therefor, the motor shaft being provided with a gear adapted for engagement with the other of said last named gears.



1,663,829. TWO-STROKE INTERNAL-COMBUSTION ENGINE. EMILE DUTEL, St.-Laurent du Var, and JEAN MARC PERDONCINI, Nizza, France. Filed Mar. 30, 1925, Serial No. 19,344, and in France Apr. 7, 1924. 2 Claims. (Cl. 123—73.)

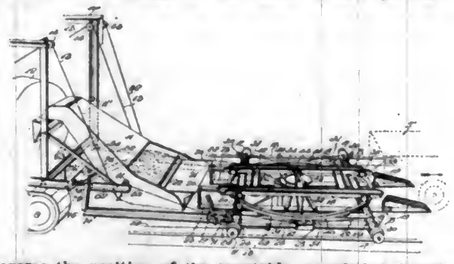
1. A two-stroke internal combustion engine of the type set forth, in which the air is compressed in the crank case during the working stroke and, at the end of this stroke at the moment of the admission, passes from the crank case into the explosion chamber of the cylinder, comprising an air inlet automatic valve disposed to let enter the atmospheric air into the crank case during the return stroke, a fuel conduit leading from the fuel tank to the bottom of the float chamber, a conduit for equalizing the pressure between the fuel tank and the float



chamber, a conduit for equalizing the pressure between the crank case and the fuel tank, both said conduits for equalizing the pressures between the fuel tank and the float chamber and between the crank case and the fuel tank respectively being distinctly separate from each other, whereby the equilibrium between said fuel tank and said float chamber is obtained.

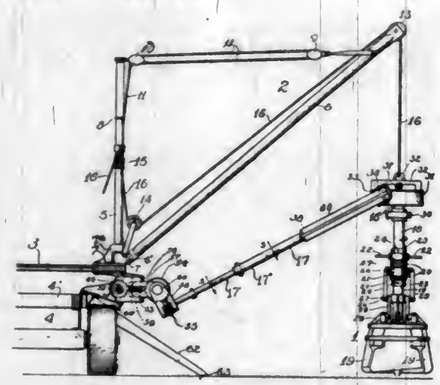
1,663,830. DISCHARGING CLOSURE FOR MIXING MACHINES. LUDWIG EIRICH and JOSEPH EIRICH, Hardheim, Germany. Filed July 8, 1926, Serial No. 121,181, and in Germany Nov. 13, 1924. 7 Claims. (Cl. 259—30.)

5. The combination with a rotatable receptacle of a rotatably mounted closure therefor, rotatable with the receptacle means to withdraw the closure from the receptacle and means to move the closure out of the path of the material issuing from the receptacle.



1,663,831. APPARATUS FOR PRODUCING SOUND. FRITZ W. FALCK, Los Angeles, Calif., assignor of one-half to David M. Palmer, Los Angeles, Calif. Filed Feb. 18, 1924. Serial No. 693,646. 1 Claim. (Cl. 179—171.)

In a wireless receiving circuit, the combination with a detecting circuit, of an audio frequency amplifying circuit comprising audio frequency transformers having their primaries disposed in series in an output portion of said detector circuit and having their secondaries connected to the grids of separate audions, said transformers being inadequate to separately handle the current without distortion, the plates of said audions being directly connected together so that the plates operate at the same potential and provide a unit output circuit for said audio frequency amplifying circuit, whereby the load on each transformer is reduced to prevent distortion from saturation of the cores thereof.



1,663,832. TURNTABLE EQUIPMENT FOR PAVING AND ANALOGOUS MACHINES. BENJAMIN H. FLYNN, Newkirk, Okla. Filed July 8, 1926. Serial No. 121,203. 23 Claims. (Cl. 214—17.)

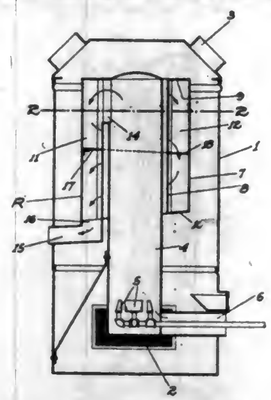
1. In combination with a cement mixing machine; a truck turntable adjacent said machine upon which to forwardly drive a loaded truck, and means operatively connecting said turntable with a movable portion of said machine for utilizing the movement of said portion to

reverse the position of the turntable, permitting dumping of the truck at the most advantageous position and allowing forward driving of said truck from the turntable.

1,663,833. EARTH-BORING MACHINE. GILBERT GENUNG, Chicago, Ill., assignor to John M. Humiston, Berwyn, Ill. Filed Feb. 27, 1925. Serial No. 12,094. 5 Claims. (Cl. 255—19.)

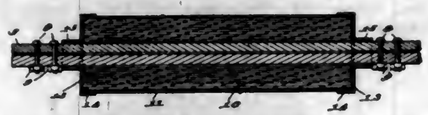
1. An earth boring machine comprising a mobile support, a derrick mounted thereon, an auger carried by said derrick and a combination power drive and torque reactor shaft operably connecting said auger and support, said shaft being telescopically extensible and provided with anti-friction bearings for the extension joint.

1,663,834. FOUNTAIN-PEN-SHAPED PISTOL. BYRON C. GOSS, Cleveland, Ohio. Filed June 15, 1926. Serial No. 116,204. 3 Claims. (Cl. 42—1.)



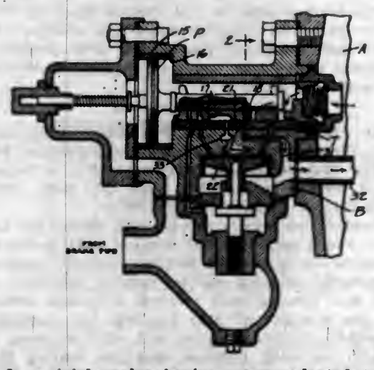
1. A fountain pen shaped pistol, comprising a fountain pen shaped barrel, a fountain pen shaped stock, co-operating cone-shaped engaging elements on said barrel and stock with a pin on the barrel and a co-operating re-entrant slot on the stock, said stock containing a spring controlled trigger, and means to retain said trigger in a retracted position.

1,663,835. GAS FURNACE. GEORGE S. HALL, Chico, Calif. Filed Sept. 22, 1926. Serial No. 136,954. 5 Claims. (Cl. 126—116.)



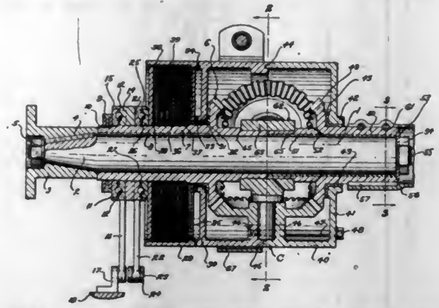
1. In a gas furnace, a radiator comprising a vertical member having spaced walls closed at top and bottom and arranged to form a continuous chamber surrounding a hollow area, a gas intake passage adjacent the upper

end of the radiator on one side thereof, a baffle across the chamber intermediate the top and bottom thereof and having an opening therethrough at the side of the



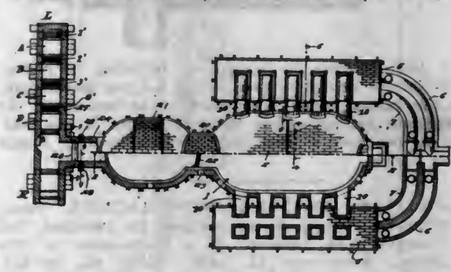
chamber opposite to the gas intake, said baffle having a downward slant toward the opening, and a gas outlet leading from the bottom of the radiator, said bottom having a downward slope toward the outlet.

1,663,836. CARPET ROLLER. NATHANIEL HALL, Annapolis, Md. Filed June 11, 1926. Serial No. 115,227. 1 Claim. (Cl. 242—68.)



In combination, a longitudinally split pole having its sections hingedly connected with bolts removably extending through each end thereof for securing the sections in closed position, said pole constituting a roller about which to support a quantity of fabric in roller position, a pair of plates arranged on the pole provided with inwardly extending flanges adapted to overlap the edges of the fabric and a pair of split collars mounted on the pole outwardly of said plates having shoulders formed thereon providing clamping means for securing the collars in adjusted position on the pole.

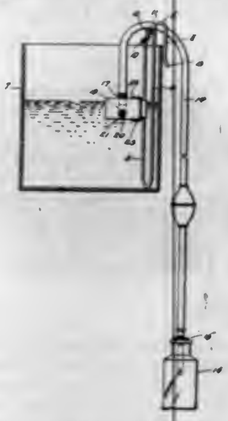
1,663,837. TRIPLE VALVE. HENRY HANSEN, Bisbee, Ariz. Filed Jan. 18, 1927. Serial No. 161,895. 4 Claims. (Cl. 303—65.)



3. In a triple valve having means adapted to admit fluid pressure to a brake cylinder when the valve is in service application position, means adapted for admitting fluid pressure to an auxiliary reservoir for recharging the latter when the valve is in full release and charging position and means adapted for trapping fluid-pressure in the brake cylinder when the valve is in full release and charging position and for exhausting it from the brake cylinder only when the valve is in retarded release position.

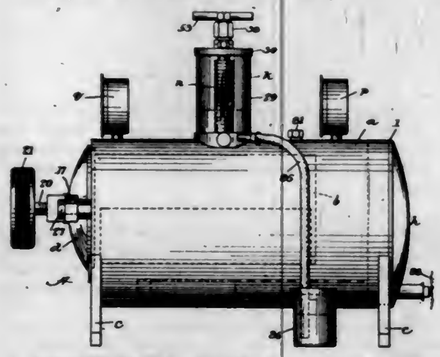
1,663,838. TRANSMISSION MECHANISM. KENNETH R. HARMON, Norfolk, Va. Filed May 3, 1927. Serial No. 188,535. 1 Claim. (Cl. 74—34.)

In a device of the class described, a tubular casing comprising longitudinally separable sections, one section having an end wall, and the other section being provided intermediate its ends with a partition, reversing mechanism including a beveled pinion having a hub the outer end of which is journaled in the partition, and a beveled pinion having a hub the outer end of which is journaled in the end wall, a beveled gear meshing with the pinions; a spider including an arm whereon the gear is journaled, the arm being carried by a collar receiving the inner ends of the hubs of the pinions rotatably, the outer end of the arm being mounted between the sections of the casing, and means for holding the sections of the casing together releasably on the arm; a shaft in the hubs, the hub of the first-specified pinion being secured to the shaft, and the hub of the second-specified pinion being rotatable with respect to the shaft, a clutch for which the partition forms an abutment, the clutch connecting the casing with the hub of the first-specified pinion, the clutch being housed within the casing on one side of the partition, and the reversing mechanism being housed within the casing on the other side of the partition, means for forcing the clutch into abutting relation to the partition, thereby to operate the clutch, and means under the control of an operator for restraining the rotation of the casing when the clutch is in inoperative position.



1,663,839. GLASS FURNACE. THOMAS B. HART, Libow, W. Va., assignor of one-half to Blackford Window Glass Company, Vincennes, Ind., a Corporation. Filed Nov. 6, 1925. Serial No. 67,265. 31 Claims. (Cl. 49—54.)

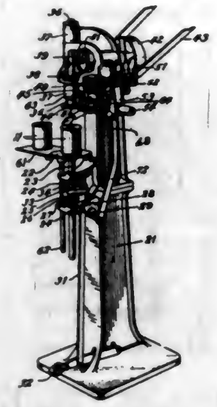
1. In a glass furnace, a melting furnace, a drawing tank in communication therewith divided into a series of alternating reheating chambers and drawing wells and



a separate and distinct heating means for each of said wells constructed to supply heat thereto proportionate to the depreciation of the glass flowing through the tank, to retain said glass in a uniform texture throughout the various wells in the process of drawing.

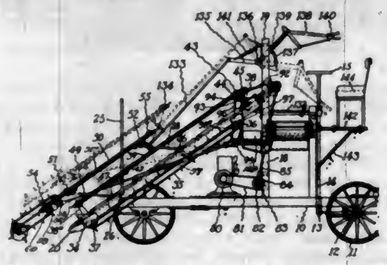
1,663,840. SIPHON. FRANK J. HAVELICK, Billings, Mont., assignor to Sara M. Havelick, Billings, Mont. Filed Apr. 21, 1927. Serial No. 185,592. 6 Claims. (Cl. 137—20.)

1. A siphon comprising a float to rest on the liquid to be siphoned, a flexible siphon tube connected with said float, an anti-friction tube guide over which to pass the tube, and means for holding said tube guide in position at the upper end of the receptacle from which the liquid is to be siphoned.



1,663,841. STERILIZER. GEORGE M. HOLLENBACK, Los Angeles, Calif., assignor of one-half to David W. McLean, Los Angeles, Calif. Filed June 1, 1925. Serial No. 34,025. 3 Claims. (Cl. 167—3.)

1. Improvements in sterilizers, including a casing, a diaphragm carried by such casing, heating means within the casing, means controlled by movement of the diaphragm for controlling the temperature of the heating means, and a sterilizing chamber member within such casing.

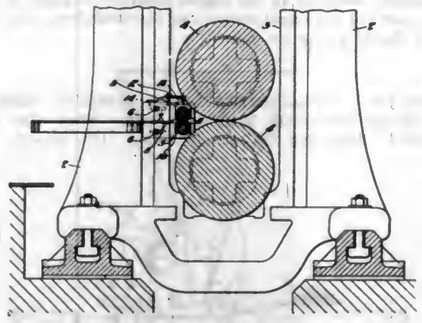


1,663,842. DOUBLE-SEAMING MACHINE. FELIX HUNTAR, Hillside, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 11, 1924. Serial No. 731,251. 14 Claims. (Cl. 113—23.)

1. In an apparatus for double seaming can ends to can bodies, the combination of, clamping devices for clamping a can body and end applied thereto, means for rotating said clamped body and end, first and second operation seaming rolls, and a manually operable worm gear device for slowly moving said first and second

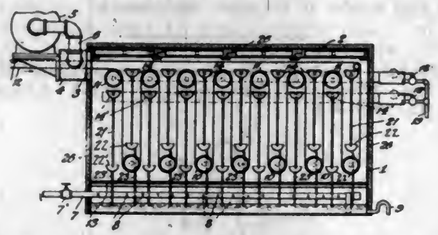
operation seaming rolls successively into seaming position, said manually operable device being connected to said seaming rolls and insuring sufficient duration of operation of each roll at the maximum speed at which said device may be manually operated.

1,663,843. THREE-ROW CORN HUSKER. PHILIP IMIO, Minier, Ill. Filed Mar. 18, 1921. Serial No. 453,341. 7 Claims. (Cl. 56—106.)



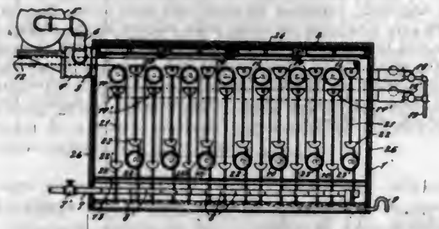
1. In a three row corn harvester, three individual ear snapping mechanisms including thereon frame portions, snapping rolls, conveyors adjacent said rolls, stalk supporting chain members mounted above said rolls, stalk raising mechanism, including means permitting its adjustment as a unit with relation to said snapping rolls, supporting means for the various snapping mechanisms, a transverse conveyor member, a husking mechanism on said transverse conveyor, a base portion for the snapping mechanism, and load carrying wheels supporting said base portion.

1,663,844. ROLLING-MILL APPLIANCE. WILLIAM A. IRVIN, Pittsburgh, Pa., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 28, 1925. Serial No. 59,111. 1 Claim. (Cl. 80—43.)



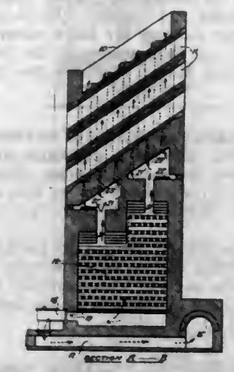
The combination with a roll housing having the usual windows, and a pair of metal working rolls mounted in said housing, of a pair of bearing brackets removably and adjustably mounted one on each of the outer side faces of said housing, said brackets extending inwardly beyond the windows of said housing, the portions of said brackets extending beyond said windows being provided with vertically disposed openings, bearing blocks mounted in said openings, a pair of idler pinch rollers of equal length with said metal working rolls and arranged parallel with said working rolls and journaled

in said bearing blocks, said pinch rollers being positioned within the confines of said roll housing and in close proximity to the bite of said metal working rolls,



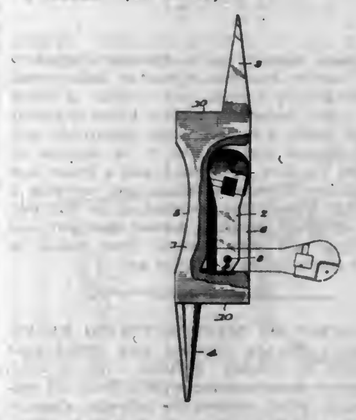
leaf springs secured to said brackets and having one end arranged to exert a tension on one of said pinch rolls to force said roll toward the other roll, and means for adjusting the tension of said springs.

1,663,845. PROCESS FOR TREATING PRINTED OR DYED FABRICS. RAYMOND W. JACOBY, Forest Hills, N. Y., assignor to The Deltex Co., a Corporation of Massachusetts. Filed May 3, 1926. Serial No. 106,394. 5 Claims. (Cl. 8—5.)



1. In the process of aging or reducing printed or dyed fabric, the step which comprises causing the excess heat of chemical reactions to be absorbed by supplying moisture in the immediate vicinity of the points where said reactions take place, so that its evaporation will absorb the excess heat thereof and maintain the heat carrying medium as a saturated vapor.

1,663,846. APPARATUS FOR TREATING PRINTED OR DYED FABRICS. RAYMOND W. JACOBY, Providence, R. I., assignor to The Deltex Company, a Corporation of Massachusetts. Original application filed May 3, 1926, Serial No. 106,394. Divided and this application filed Aug. 13, 1927. Serial No. 212,822. 5 Claims. (Cl. 8—15.)



5. Improvements in apparatus for treating fabrics, which comprises, a casing forming a substantially closed chamber, means for passing the fabric therethrough in successive runs, a trough located in the space between the runs of said fabric, a sheet of capillary material entering said trough for conducting the liquid contained therein downward and distributing the same uniformly in said space, and a receptacle located below said sheet for receiving and conducting away the excess liquid discharged from said sheet.

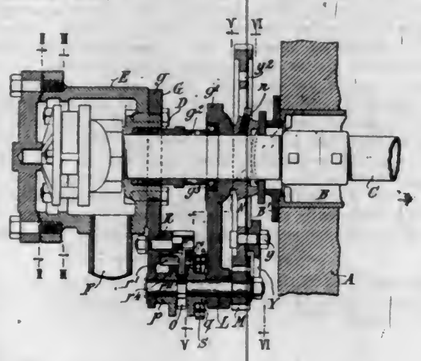
1,663,847. GAS RETORT. HEINRICH KOPPERS, Essen-Ruhr, Germany, assignor to The Koppers Development Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 31, 1921, Serial No. 497,363, and in Germany Mar. 6, 1918. 7 Claims. (Cl. 202—9.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a gas retort construction, in combination: a plurality of retort chambers assembled in a joint envelope; heating flues surrounding said retort chambers, said flues being operatively disposed into reversibly-operable inflow and outflow groups; reversibly-operable regenerators operatively disposed into interchangeable outflow and inflow groups the reversal being laterally to said retort, the inflow-operating group embodying gas and air regenerators; a front and a back pair of distributing chambers communicably connected with said gas regenerator and each one of said pair with one of two series of inflow-operating flues; and a front and a back single distributing chamber interposed between the two aforesaid distributing chambers and communicably connected with both the air regenerator and with the two series of inflow-operating flues; substantially as specified.

1,663,848. COMBINATION TOOL. MIKE KOSKE, McCloud, Calif. Filed Nov. 30, 1925. Serial No. 72,273. 2 Claims. (Cl. 7—17.)

1. A combination tool comprising an elongated body portion forming a hand grip provided with flat end faces, and tool elements projecting longitudinally of and from

each end of the hand grip and disposed with their longitudinal axes in parallel offset relation, said tool elements at their base portions being of less area than the flat end faces of the hand grip for providing driving butts at each end of the hand grip arranged in longitudinal alignment with the tool element carried by the opposite end of the hand grip.



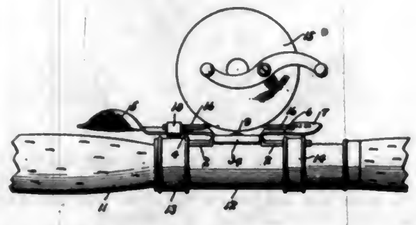
1,663,849. PROCESS FOR DYEING FUR PELTS. GEORGE J. LAEMMLE, New Rochelle, N. Y., assignor to Barnet Leather Company, Inc., New York, N. Y., a Corporation of Delaware. Filed July 27, 1927. Serial No. 208,898. 11 Claims. (Cl. 8—5.)

1. A process for coloring fur pelts comprising applying color matter on the surface of the hair through foraminous material having relatively fine passages.

1,663,850. PROCESS FOR STENCIL DYEING DESIGNS ON FUR PELTS. GEORGE J. LAEMMLE, New Rochelle, N. Y., assignor to Barnet Leather Company, Inc., New York, N. Y., a Corporation of Delaware. Filed July 27, 1927. Serial No. 208,899. 16 Claims. (Cl. 8—5.)

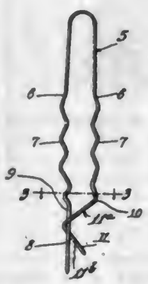
1. A process for making designs on fur pelts comprising applying coloring matter to the surface of the hair through foraminous material with relatively fine passages therethrough, outlined in the form of the design.

1,663,851. BOILER SOOT CLEANER. FREDERICK W. LINAKER and THEODORE M. BRUBACK, Du Bois, Pa. Filed Sept. 25, 1923. Serial No. 664,688. 4 Claims. (Cl. 122—392.)



1. A soot cleaner comprising an element adapted to project jets of cleaning fluid into a bank of boiler tubes, means for intermittently turning said element in either direction, said means comprising ratchet levers co-axially pivoted carrying pawls, a ratchet wheel operatively connected to said element and adapted to be engaged by either pawl when its lever is actuated, and a frame supporting said ratchet levers and wheel, and carrying a stop, each of said levers being provided at its hub portion with two shoulders integrally formed therewith and adapted to engage said stop whereby their motion in either direction is limited to a definite arc.

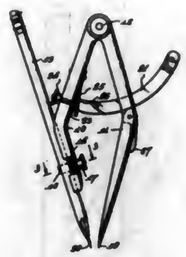
1,663,852. PROCESS OF MANUFACTURING STUFFING. GEORGE J. MILLER, Douglas, Ariz. Filed June 14, 1927. Serial No. 198,865. 5 Claims. (Cl. 18—52.)



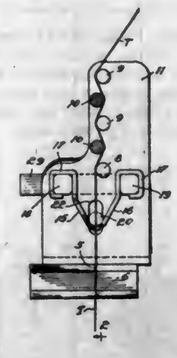
1. The process of manufacturing stuffing from old rubber tires and scrap, which involves the following steps:—soaking the rubber material in kerosene oil until it softens sufficiently to grind easily; grinding the softened mass to a desirable size; treating the ground material to a bath of kerosene oil, maintained at a temperature not to exceed 200° C. for a period of time varying from a few minutes to several hourse until the rubber becomes permanently softened to the degree required to adapt it for its destined purposes; separating the mass from the oil; and finally drying the mass.

1,663,853. ATTACHMENT FOR FISHING REELS. GEORGE NEWVILLE, Muskegon, Mich. Filed May 23, 1927. Serial No. 193,502. 5 Claims. (Cl. 43—22.)

1. A device of the class described comprising, an elongated base, an elongated member of metal lying substantially parallel to and above the base, means for pivotally connecting said members between their ends, means for limiting the pivotal movement of said member with respect to the base and means for detachably connecting a reel to said member in the upper side thereof.



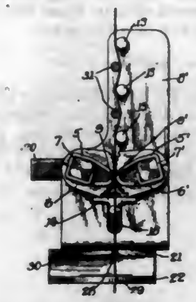
1,663,854. HAIRPIN. FREDERICK P. NIEF, Union City, N. J. Filed Apr. 2, 1926. Serial No. 99,279. 1 Claim. (Cl. 132—50.)



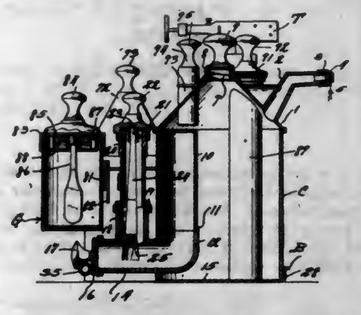
A hair pin embodying a section of wire bent upon itself to provide a pair of spaced legs, said legs being provided in their intermediate portions with crimps, the forward end of one leg being straight and the forward end of the opposite leg being bent into a V-shaped portion including angularly arranged forward and rear arms, the forward arm diverging fowardly with respect to the straight end and the rear arm converging forwardly with respect to the straight end, the straight end extending forwardly to a substantial distance beyond the forwardly diverging arm, said V-shaped portion being adapted to receive the straight end therein.

1,663,855. DIVIDERS. JOHN LAWRENCE O'CONNOR, Portland, Me. Filed Oct. 8, 1926. Serial No. 140,302. 3 Claims. (Cl. 33—149.)

1. A pair of dividers including pivotally connected legs of different lengths, the free end of each leg being angularly offset with respect to the pivoted end thereof, and the longer leg being pointed, means for clamping a marking implement against the outer face of the free end of the shorter leg, said leg section having a groove in its outer face to receive the marking implement, said clamping means including a ring encircling the marking implement and a screw working through said shorter leg for adjusting the ring laterally to move the marking implement against the bottom of the groove.



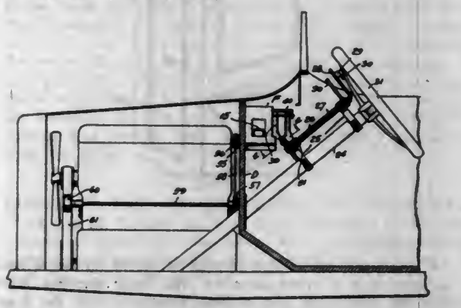
1,663,856. YARN CLEARER OR THE LIKE. BURT A. PETERSON, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Jan. 13, 1923. Serial No. 612,428. 20 Claims. (Cl. 28—66.)



1. A yarn clearer having, in combination, plates 11 and 12, parallel rock shafts journaled in said plates and projecting at one side of said plates, yarn-clearing blades on said projecting shaft portions, a stop finger supported at one end in one of said plates and extending through the other plate so as to be movable relative thereto and projecting between said blades, means for holding said stop finger in adjusted position, and means for holding the blades against the stop finger.

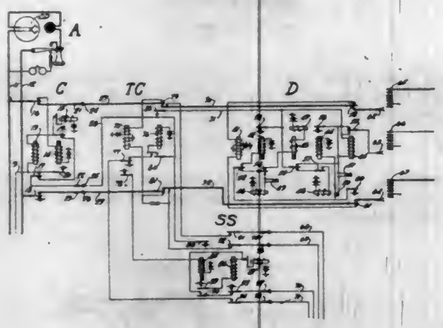
1,663,857. YARN CLEARER OR THE LIKE. BURT A. PETERSON, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Dec. 31, 1923, Serial No. 683,564. Renewed June 6, 1927. 14 Claims. (Cl. 28—64.)

1. A yarn clearer or the like comprising, in combination, a frame, a pair of rock shafts mounted in the frame in spaced paralel relation, a pair of yarn clearing members mounted on said shafts, means operatively connecting said shafts together for operation in unison, means tending to turn said shafts in one direction to move said members apart, and adjustable means for limiting the movement of said members by the last mentioned means.



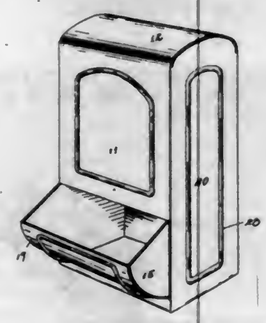
1,663,858. KIT. WILLIAM J. PICKETT, Wilkes-Barre, Pa. Filed May 8, 1926. Serial No. 107,832. 3 Claims. (Cl. 220—20.)

1. A kit comprising a container, a spout communicating with the interior of the container through the top side thereof and having a pouring end disposed beyond the vertical side thereof and a bracket attached to said vertical side at the lower portion of the container, said spout and said bracket serving as means for holding the said side of the container in an inclined position.



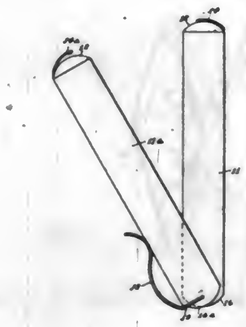
1,663,859. DIRECTION SIGNAL. DON W. PRATT, Santa Monica, Calif. Filed Oct. 21, 1926. Serial No. 143,168. 11 Claims. (Cl. 116—36.)

1. A direction signal for vehicles comprising an arm movable to either of two extreme positions, a signal element on the arm movable relatively to the latter to give



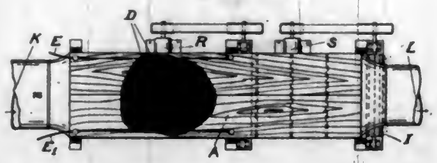
any one of a plurality of signal indications, mechanism for moving the arm in one direction or the other, and manually operable means for actuating the signal element and controlling the mechanism to cause the arm to move first in one direction and then the other.

1,663,860. AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed June 25, 1923, Serial No. 647,453. Renewed June 16, 1927. 42 Claims. (Cl. 179—18.)



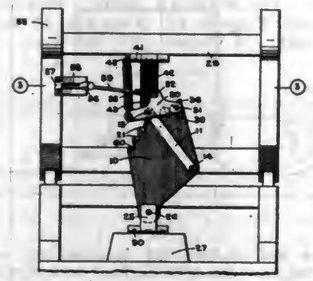
1. In a telephone system in which the telephone numbers are assigned according to a twenty character system of notation, automatic switches operated according to the decimal system of notation, and mechanism for translating from one system of notation to the other to enable the subscribers to operate said switches.

1,663,861. MATCH-BOX HOLDER. GIDEON RIETVELD, Knoxville, Iowa. Filed May 25, 1926. Serial No. 111,529. 6 Claims. (Cl. 206—31.)



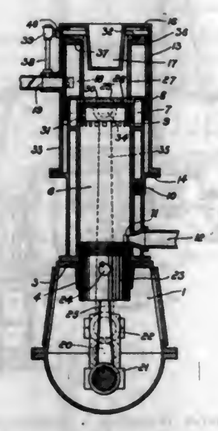
6. A match box holder formed of metal having a back member and a front member, the back member being provided with side and bottom members, and the front member being provided with side and bottom members, said side members being designed to overlap the side members of said back member, the front member being provided with an opening having a match delivery chute.

1,663,862. MAIL BOX. GIDEON RIETVELD, Knoxville, Iowa. Filed Mar. 22, 1927. Serial No. 177,332. 3 Claims. (Cl. 232—28.)



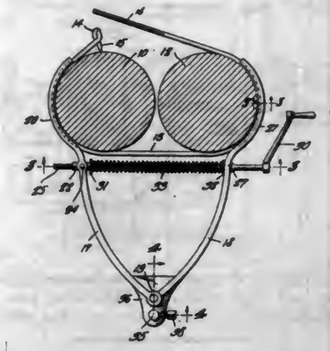
1. In a device of the class described, the combination of a sheet metal back member having its sides extended forwardly and having its top curved upwardly and forwardly and its bottom curved upwardly and forwardly, a front member formed substantially identical with the said back member and having its sides, top and bottom telescopically connected with the corresponding parts of the back member, and means for hinging together the downwardly extended ends of the side members.

1,663,863. PROCESS FOR SEPARATING VARIOUS CONSTITUENTS FROM MIXED MATERIALS AND APPARATUS FOR ACCOMPLISHING SAID SEPARATION. PERCY HOKE ROYSTER and WILLIAM W. ODELL, Minneapolis, Minn. Filed Nov. 28, 1924. Serial No. 752,639. 40 Claims. (Cl. 209—129.)



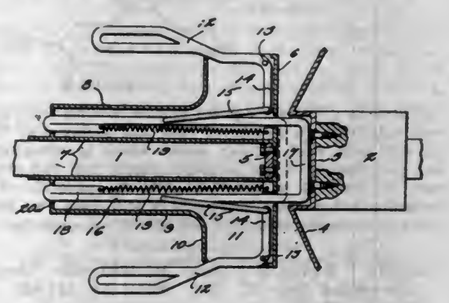
1. The process of separating complex mixtures of materials substantially into their component parts successively and substantially in the order of the magnitudes of their respective dielectric constants, consisting in, suspending the mixture in a suitably fine state of subdivision in a suitable gaseous stream; conducting the resulting suspension through a non-uniform electrostatic field of force of predetermined and controlled nature and intensity but substantially free from electric discharge at a predetermined and controlled velocity; diverting the several constituents of said mixture separately from the weaker to more intense portions of the electrostatic field by means of the electrostatic force of said field acting with greatest intensity upon the dielectrics having the highest dielectric constants; and separating said separately-diverted constituents substantially as described.

1,663,864. ADJUSTABLE SUPPORT OR STAY APPLICABLE TO DROP-END COUCHES. ROBERT RUSSELL, Birmingham, England, assignor to Alfred Henry Redfern, Birmingham, England. Filed Feb. 10, 1927, Serial No. 167,240, and in Great Britain Feb. 11, 1926. 5 Claims. (Cl. 155—113.)



1. A drop-end for furniture comprising two units hinged together and having an adjustable supporting stay, comprising a hinge on each of the relatively adjustable units, an arm pivoted on one of said hinges, a plate pivoted on the other of said hinges, a link connecting said arm with said plate, said link being pivoted to said plate and foldable thereon, the plate having one edge provided with teeth, and a catch having a projection for engaging said teeth, said catch and said link being connected to said arm by the same pivot pin.

1,663,865. INTERNAL-COMBUSTION ENGINE. DAVID THOM SCOTT, Vancouver, British Columbia, Canada. Filed Apr. 5, 1927, Serial No. 181,218, and in Canada Sept. 18, 1926. 2 Claims. (Cl. 123—51.)

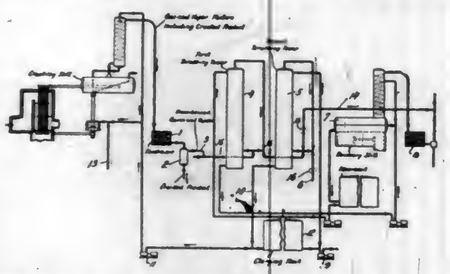


2. In a two stroke internal combustion engine having a crank shaft, opposed crank pins operatively connected to lower and upper pistons endwise movable within a cylinder, an intake head upon the cylinder having ports communicating with an intake pipe adapted to be closed by the upper piston during the major portion of its upward and downward movement, and a by pass tube extending from the intake pipe having a check valve and being in communication with a port adjacent the upper end of the intake head, means for transferring the mixture from the intake head to the cylinder between the pistons, and means for igniting the same and for exhausting the products of combustion from the cylinder.

1,663,866. SPLICING TOOL. JOHN PEMBERTON SNAPP, Limestone, Tenn. Filed May 7, 1926. Serial No. 107,482. 4 Claims. (Cl. 24—252.)

1. In a device of the class described, a pair of pivotally connected legs, jaws formed on the legs and curved in opposite directions, and detachable curved segmental elements carried by said jaws, these elements being channeled longitudinally, and having work engaging surfaces of a curvature differing from the curvature of the jaws.

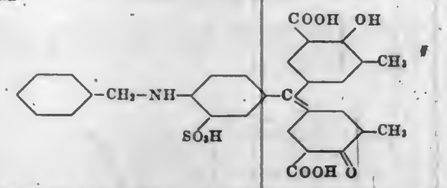
1,663,867. GATE LATCH. JOHN SWENKA, North Liberty, Iowa. Filed Mar. 10, 1926. Serial No. 93,810. 1 Claim. (Cl. 292—167.)



A gate latch, comprising a substantially U-shaped member which is designed to surround the end of a gate and to be affixed thereon, said member having its parallel sides formed with outwardly extending housings, and the said housings being provided with lateral extensions, whose ends are open, a substantially U-shaped bolt having its parallel arms guided through the housings, springs secured to the said arms of the bolts and to the housings for influencing the bolt outward of the said housings, a link pivotally connected to each arm of the bolt and an angle lever pivoted in the mentioned lateral extensions of the housings, having handle portions arranged exteriorly thereof and having their inner ends pivotally connected with the links.

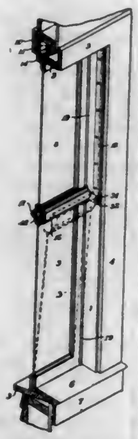
1,663,868. ART OF CRACKING HYDROCARBONS. GEORGE H. TABER, Jr., Rye, N. Y., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 24, 1926. Serial No. 118,357. 3 Claims. (Cl. 196—8.)

1. In cracking operations for the production of lighter hydrocarbon oils from heavier hydrocarbon oils in which vapors and gases are taken off and subjected to a condensing operation, the improvement which comprises subjecting the gas and vapor mixture remaining uncondensed



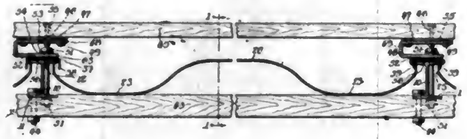
thereafter first to treatment with an absorbent medium from which absorbed constituents are recovered by treatment independent of the cracking operation and then

subjecting the still remaining uncondensed and unabsorbed gas and vapor mixture to treatment with charging stock subsequently supplied to the cracking operation.



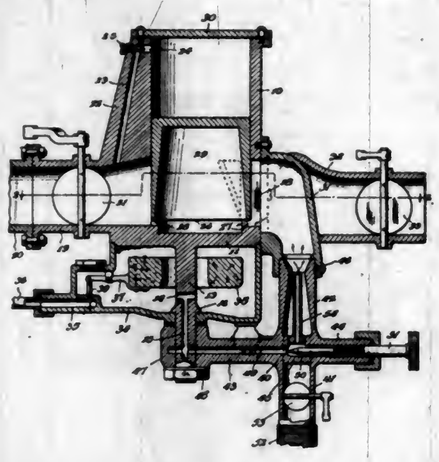
1,663,869. DYESTUFFS OF THE TRIPHENYL METHANE SERIES. OTTMAR WAHL, Leverkusen, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 26, 1927, Serial No. 186,830, and in Germany May 10, 1926. 2 Claims. (Cl. 260—65.)

2. A new dyestuff corresponding probably to the formula



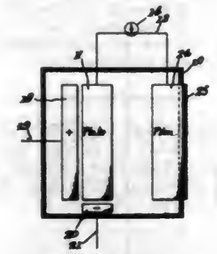
which is in a dry state a red powder, soluble in caustic soda solution with a deep red color and dyeing wool from an acid bath weak reddish shades which by afterchroming are changed to an intensely purple red, and which may be obtained by reacting with one molecule of 4-benzylamino-benzaldehyde-3-sulfonic acid upon two molecules of orthocresotinic acid and subsequent oxidation.

1,663,870. WINDOW. DAVID B. WHISTLER, Dayton, Ohio. Filed June 22, 1926. Serial No. 117,828. 11 Claims. (Cl. 20—42.)



1. A window including in combination, upper and lower, vertically aligned sash supported for vertical and angular adjustments, outer stops for the sash and a member yieldable to lateral pressure interposed between the opposite edges of both sash and the window jambs, said members coacting with the outer stops to effect weathering of the window.

1,663,871. RAILWAY-CAR ROOF. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill. Filed Feb. 15, 1926. Serial No. 88,229. 13 Claims. (Cl. 108—5.4.)

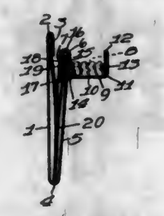


1. In a roof of the class described, the combination with a car provided with carlines and sideplates, of a roof sheet extending transversely of the car and having a relatively high central bulge portion, a relatively deep valley portion on each side thereof and having its edges curved upwardly and provided with flanges extending horizontally and adapted to rest on top of the carlines, the ends of the sheet in the region of the sideplates terminating in a relatively flat surface as relates to the bulge, valleys and turned up edges of the sheet, the end flanges projecting downward over the edge of the sideplate at each end of the roof sheet.

1,663,872. CARBURETOR. EZRA JACOB ZOLLINGER, Logan, Utah. Filed July 28, 1925. Serial No. 46,632. 4 Claims. (Cl. 261—47.)

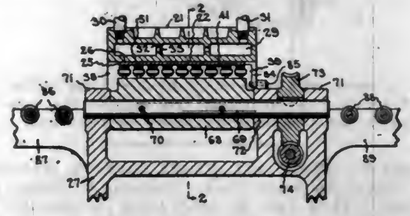
1. A carburetor including a mixing chamber provided in its wall with a fuel inlet port and an auxiliary air inlet port as well as a fuel mixture outlet, a suction operated valve slidable in said chamber and normally closing said air inlet port and extending across the fuel inlet port and said outlet, a mixture conduit attached to the wall of said chamber and overlying said fuel inlet port, a liquid fuel nozzle, means for conducting liquid fuel to the nozzle, and a separate fitting mounting said nozzle and connected to said conduit, said fitting being provided with a primary hot air inlet supplying a current of hot air heating the liquid fuel prior to entrance thereof into the nozzle and flowing about the nozzle for aspirating the fuel therefrom and supplying a heated fuel to said conduit.

1,663,873. ELECTRIC DISCHARGE DEVICE. JAMES ALLEN, Washington, D. C. Filed June 16, 1926. Serial No. 116,477. 3 Claims. (Cl. 250—27.5.)



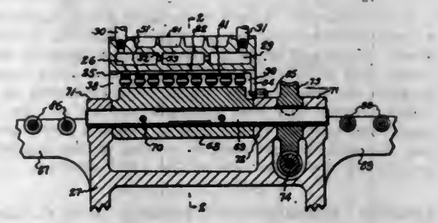
1. A vacuum tube comprising a cathode, an anode, said cathode adapted to be heated to induce an electric current to flow between the cathode and anode, an electrode adapted to receive a positive charge and located at one side of the anode, and an electrode adapted to receive a negative charge and located at one end of the anode for influencing the direction of the current produced.

1,663,874. HEATING SYSTEM. WALTER WILLIAM BRISSON, Norway, Mich. Filed Apr. 7, 1927. Serial No. 181,801. 1 Claim. (Cl. 219—19.)



A heating device embodying spaced plates, a heating element arranged between the spaced plates and disposed in spaced relation with the plates, means for securing the heating element and spaced plates to a supporting surface, a casing embodying a front plate having inwardly extended flanges formed along the side edges thereof, said flanges adapted to fit between the base and tread of a rail, and insulating strips carried by the casing.

1,663,875. SAFETY-RAZOR HANGER. ROBERT DONER, Toledo, Ohio. Filed Mar. 7, 1927. Serial No. 173,478. 4 Claims. (Cl. 132—80.)

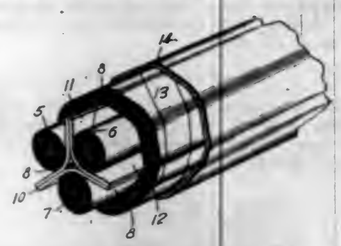


4. The combination of a sheet of metal bent to provide a back portion having a flange and a front portion inclined at an angle to said back portion, said front portion having an integral flange, a rack having openings therein for receiving a safety razor handle, said rack having flanges formed to slidably engage said second-named flange, and an envelope split at each end to form a pair of guide members, one of said guide members being adapted to slide between the back portion and said first-named flange, and the other guide member being folded and adapted to slide between the front portion and one of said last-named flanges, whereby said envelope can be removed and inserted from either end of the device.

1,663,876. METHOD OF CORRECTING PRINTING PLATES. LESLIE W. CLAYBOURN, Milwaukee, Wis. Filed Jan. 4, 1926. Serial No. 79,168. 9 Claims. (Cl. 101—401.3.)

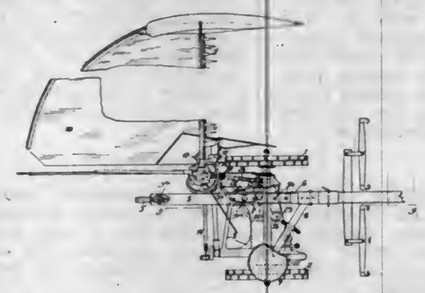
1. The method of correcting printing plates which comprises resisting the printing surface of the printing plate by a face, all portions whereof are in a predetermined surface, and applying roller pressure by a rolling surface having indentations upon the rear of said printing plate in spaced-apart paths with pressure pressing all printing portions of said printing surface into said predetermined surface as determined by printing pressures.

1,663,877. APPARATUS FOR CORRECTING PRINTING PLATES. LESLIE W. CLAYBOURN, Milwaukee, Wis. Original application filed Jan. 4, 1926, Serial No. 79,168. Divided and this application filed Jan. 6, 1927. Serial No. 159,389. 7 Claims. (Cl. 101—401.2.)



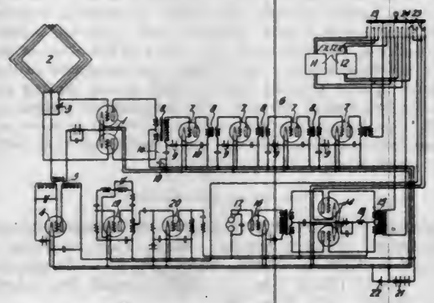
1. In an apparatus for correcting printing plates, the combination of a resistance member provided with a resistance surface for the printing surface of a printing plate, compression rollers arranged in sets, the compression rollers whereof are spaced in endwise relation, with the rollers of said respective sets operating between the paths of compression of the rollers of the other of said sets, arranged whereby to overcome the resistance to local flexure in said printing surface, and means causing progressive movement between said compression rollers and said resistance surface for coactive movement between said compression rollers and the rear surface of said printing plate along said rear surface.

1,663,878. MULTIPLE-CONDUCTOR HIGH-TENSION CABLE. LUIGI EMANUELI, Milan, Italy, assignor to Societa Italiana Pirelli, Milan, Italy, a Corporation of Italy. Filed Sept. 2, 1925. Serial No. 54,042. 8 Claims. (Cl. 173—266.)



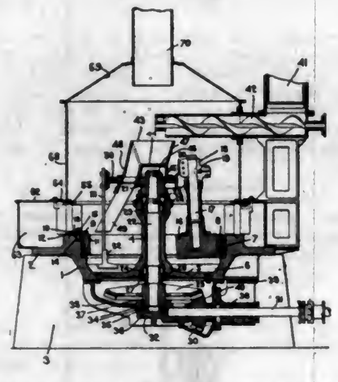
1. A multiple-conductor, oil-filled high tension electric cable comprising a plurality of insulated spirally-arranged conductors, spirally-arranged barriers between

the conductors, a covering of insulating material which is supported conjointly by the conductors and the peripheral edges of the barriers, said barriers and cover-



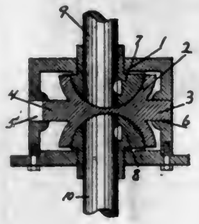
ing cooperating to form individual longitudinal oil passages for the conductors and wherein the same are disposed, and a metallic sheath for said covering.

1,663,879. GRAIN AND GRASS MOWING MACHINE. JOHANN HEINRICH FAHR, Stockach in Baden, Germany. Filed June 21, 1923, Serial No. 646,889, and in Germany June 26, 1922. 10 Claims. (Cl. 56—172.)



1. A convertible mower comprising cutter mechanism, a grain delivery mechanism, a grain platform, a vehicle frame, a vertical support for the grain delivery mechanism, and a supporting member with a pivot element between its two ends by which it is connected to the vehicle frame, the said platform resting on the said supporting member on one side of the said pivot element and the said vertical support resting on the supporting member at the other side of the pivot element.

1,663,880. SIGNALING APPARATUS. JOHN C. GABRIEL and GEORGE M. THURSTON, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 3, 1925. Serial No. 47,655. 7 Claims. (Cl. 250—20.)



1. In a signaling system, means for receiving an incoming wave carrying signals, a local oscillator, means for combining said received wave with oscillations supplied by said local oscillator to produce an intermediate frequency wave carrying signals, means for suppressing a portion of said intermediate frequency wave, means for locally supplying energy of the frequency of at least a part of said suppressed portion of the intermediate frequency wave, and means for combining said local energy with the unsuppressed portion of said intermediate frequency wave to produce signal currents.

1,663,881. CENTRIFUGAL GRINDING MILL. WILLIAM A. GIBSON and JAMES G. BURKE, Allentown, Pa., assignors to Bradley Pulverizer Company, Allentown, Pa., a Corporation of Maine. Filed June 22, 1925. Serial No. 38,676. 6 Claims. (Cl. 83—45.)

1. In a centrifugal grinding mill comprising a grinding chamber having therein a horizontal annular grinding ring, co-operating centrifugally actuated grinding members and a superposed air separating chamber communicating with said grinding chamber, means for admitting air to said grinding mill above and substantially adjacent to the grinding ring and adjustable means operable selectively to direct the air thus admitted in different predetermined directions relatively to the radius of the grinding mill chamber and thereby to vary the character of the air currents within said separating chamber and regulate the action of the air separator.

1,663,882. AUTOMATIC ADJUSTING MECHANISM. EDWIN J. GOULD, Oakland, Calif. Filed Mar. 12, 1924. Serial No. 698,771. 3 Claims. (Cl. 74—7.)

1. An automatic adjusting mechanism, comprising the combination of two hemispherical cams mounted on coaxial independent axle sections, a circular member with concave surfaces, and extending lug pins fitting said cams and a rotatable driving member, co-operating with the extending lug pins on said circular member said lug pins being slidably and rotatably mounted in the driving member to cause the said cams to have an opposite rotary motion in unison.

1,663,883. DISINFECTING AND INSECTICIDAL AGENT. HEINRICH GÜNZLER and OSKAR NEUBERT, Elberfeld, near Cologne, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Filed Mar. 31, 1927, Serial No. 180,058, and in Germany Apr. 13, 1926. 7 Claims. (Cl. 167—3.)

1. A composition comprising a water-soluble salt of an aromatic amino-sulfonic acid and a water-soluble mercury salt.

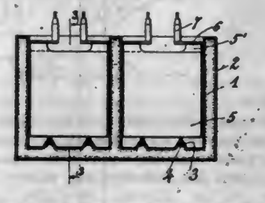
6. A composition comprising a water-soluble aromatic amino-sulfonic acid compound, a water-soluble mercury salt, an inert wetting material and an adhesion promoting material miscible with water.

7. As a disinfecting composition comprising the sodium salt of sulfanilic acid and mercuric chloride.

1,663,884. DEVICE FOR THE TRANSMISSION OF VIBRATORY ENERGY. HENRY C. HARRISON, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 5, 1924. Serial No. 711,044. 24 Claims. (Cl. 179—100.1.)

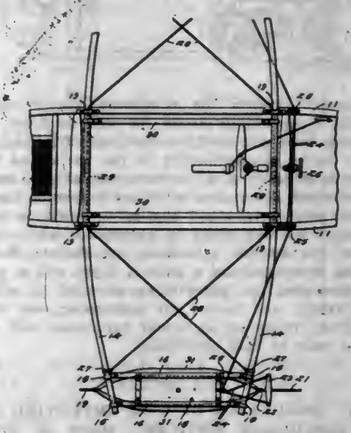
1. A solid medium for receiving and dissipating vibratory energy comprising an elongated body of non-metallic vibration absorbing material of a homogeneous character, said body having precomputed values of mass, elasticity, resistance and dissipation per unit length such that the characteristic impedance of said body is substantially constant throughout a range of frequencies to be transmitted.

1,663,885. ELECTROMAGNETIC DEVICE. NEWMAN H. HOLLAND, West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1924. Serial No. 731,952. 12 Claims. (Cl. 175—339.)



1. In an electromagnetic device, a magnet, a vibratory member comprising an armature adapted to vibrate in the field of said magnet, and means comprising a spring tensioned longitudinally adapted to flex in a plane perpendicular to the axis of oscillation of said vibratory member and to exert a pull thereon which varies in the same manner as the magnetic pull exerted on said armature thereby balancing the armature for all positions in the magnetic field.

1,663,886. HAMMER. ANTHONY F. LUTCH, Hays, Pa. Filed Sept. 29, 1926. Serial No. 138,510. 2 Claims. (Cl. 145—29.)

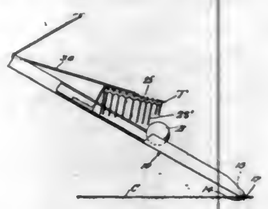


1. In combination with a hammer, a ferrule made of resilient material and having a flange at the base thereof, and means for securing said ferrule to the strike-head of said hammer, said means comprising a central core fitting within said ferrule and having a flange bearing on the face of said strike-head; a cap adapted to fit about said ferrule, flanges and strike head, and means for removably securing said cap on said strike-head.

1,663,887. ELECTRIC-BATTERY CONTAINER. EDWARD LYNDON, New York, N. Y. Filed Jan. 21, 1926. Serial No. 82,731. 8 Claims. (Cl. 206—2.)

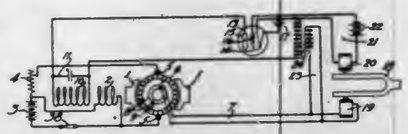
1. In a battery container made of an acid non-resisting material, a projection on the inner surface thereof, and a cap made of a tough acid-resisting material on said projection, said container, including said projection and said cap, being covered with an acid-resisting substance.

1,663,888. BOAT STABILIZER. WILLIAM H. OSTEN, Clearwater, Fla., assignor of one-half to Joseph D. Stites, Long Island City, N. Y. Filed Apr. 22, 1926. Serial No. 103,019. 2 Claims. (Cl. 114—123.)



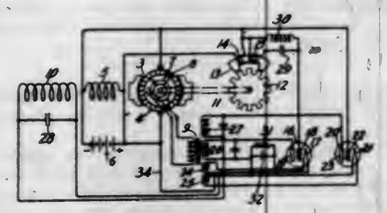
1. An attachment for a canoe or the like craft comprising flexible beams for disposition transversely amidship of a canoe, means for clamping the beams to the gunwales of the canoe, spacing means between the ends of the beams, floats on the spacing means and extending between the ends of the beams, keels on the floats, fins on the floats, and rudders on the keels and controlled from the canoe.

1,663,889. GOLF GAME. CHARLES A. ROLFE, Redlands, Calif. Filed Oct. 20, 1925. Serial No. 63,626. 23 Claims. (Cl. 273—36.)



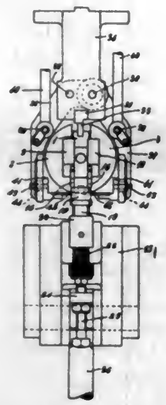
23. In game apparatus, a tiltable base, an upright supporting member on the base, an elevated plate hingedly connected to said support and normally held substantially at a given elevation, means depending from said plate and adapted to define a ball trapping chamber therebeneath, said depending means having inwardly opening entrance gates whereby the ball is admitted to said compartment, the plate being hingedly movable to raise said depending

means and thereby allow the ball to be released from the compartment; an arm overlying and spaced from the plate, said arm being rigidly supported by the base, and an operating member applied to said plate, extending



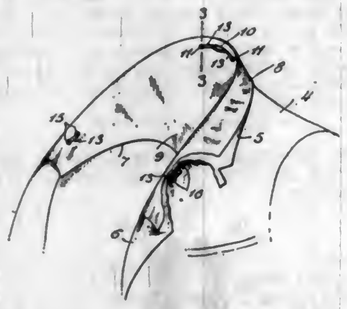
through said arm and applied to the base in a manner whereby a pull exerted on said operating member hingedly moves said plate upwardly and into contact with said arm and a continued pull tilts the base.

1,663,890. ELECTRICAL CONTROL SYSTEM. HUGH M. STOLLER, Mountain Lakes, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1924, Serial No. 750,857. Renewed Dec. 8, 1927. 16 Claims. (Cl. 171—312.)



1. A control system for a dynamo electric machine comprising a controlling circuit for said machine, means for deriving from said machine electrical variations whose frequency varies proportionally to the variations in the quantitative measure of a characteristic of said machine to be controlled, a source of auxiliary frequency electrical variations, said derived and auxiliary variations varying with respect to each other in accordance with the frequency of the derived variations, an electric discharge controlling device having a pair of input and a pair of output electrodes, the latter being included in said controlling circuit, and means for impressing said derived and auxiliary frequency electrical variations each on an individual pair of said electrodes.

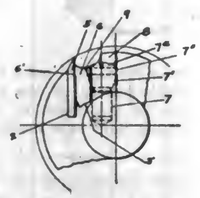
1,663,891. REGULATOR SYSTEM EMPLOYING ELECTRON-DISCHARGE DEVICES. HUGH M. STOLLER, Mountain Lakes, N. J., and EDMUND R. MORTON, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 24, 1926, Serial No. 124,599. Renewed June 11, 1927. 9 Claims. (Cl. 171—312.)



1. A system for regulating a characteristic of an electrical circuit, comprising means for deriving electrical variations the frequency of which is proportional to said characteristic, means for deriving other electrical variations the frequency of which is different from the frequency of said first variations, an electrical discharge device having a cathode, an anode and a control electrode, means for impressing one of said variations on said control electrode, means for impressing the other of said variations on said anode, and means for controlling said characteristic in response to changes in the anode current of said device.

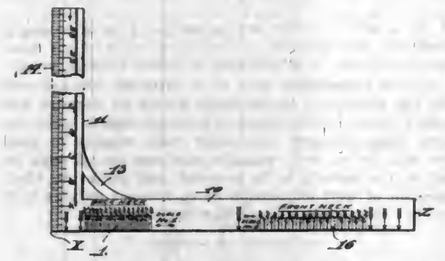
1,663,892. CAN-BODY-FORMING MACHINE. JOHANNES MARTINUS VAN HAASTEREN, Schiedam, Netherlands, assignor to Naamlooze Vennootschap: "De Komeet," Schiedam, Netherlands, a Corporation of the Netherlands. Filed Jan. 26, 1927, Serial No. 163,772, and in the Netherlands Feb. 11, 1925. 5 Claims. (Cl. 113—8.)

1. In a can body forming machine, an expansion horn comprising two sidepieces laterally movable parallel to each other for expanding the horn, means for wrapping a blank around said sidepieces and interlocking the edges thereof, a hammer adapted to compress the interlocked edges against the horn to form them into a seam, and mechanism adapted to actuate said hammer and to simultaneously force said sidepieces apart.



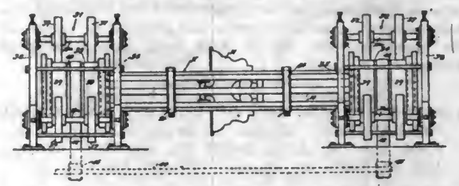
1,663,893. SCARF. MARIA STINGHE WAGNER, New York, N. Y. Filed Mar. 2, 1927. Serial No. 172,022. 1 Claim. (Cl. 2—91.)

A scarf for coats including an inner portion and a collar portion adapted to extend around and overlap the exterior of the collar of a coat and parts of the lapels thereof, said inner portion having at its center an elongated slot for the reception of the hook of a coat hanger



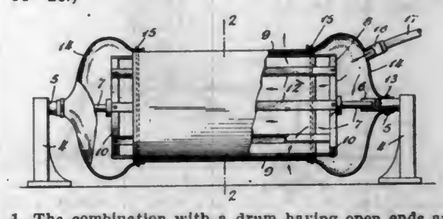
and also having an eyelet adjacent each end of the slot, said eyelets and the ends of said slot being adapted to align with eyelets formed in the coat beneath the collar thereof, other eyelets formed in the scarf between said slot and each end of the scarf and adapted for alignment with eyelets formed in the coat beneath the lapels thereof, securing strips looped through the ends of said slot and adjacent eyelets and through the aligned eyelets in the coat, and other securing strips looped through said other eyelets and the aligned eyelets in the coat beneath its lapels to secure the end portions of the scarf to the coat, said securing strips all being disposed beneath said collar portion.

1,663,894. CUTTER HEAD FOR WOODWORKING MACHINES. LELAND B. WHIPPLE, Rochester, N. Y. Filed July 11, 1923. Serial No. 650,822. 7 Claims. (Cl. 144—230.)



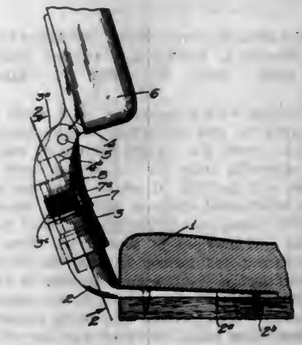
3. A cutter head containing a knife socket, a recess communicating with said socket and having converging inclined bottom walls, a bearing forming a fulcrum between said socket and recess, a knife in said socket, a tool holder in said recess and fulcrumed on said bearing, and means for rocking said holder on its fulcrum toward said knife.

1,663,895. GARMENT-PATTERN-DRAFTING SQUARE. CHARLES H. WOLFE and ETHEL E. WOLFE, Los Angeles, Calif. Filed Mar. 13, 1924. Serial No. 698,970. 1 Claim. (Cl. 33—11.)



A garment pattern drafting square comprising a pair of integrally connected straight edge members disposed at right angles to each other, one of which members is longer than the other, a graduated numbered back neck scale arranged on the shorter one of the straight edge members adjacent to the outer corner formed at the joint between said members, the numbers of said graduated back neck scale reading from left to right, a numbered graduated front neck scale arranged on the same side of the short straight edge member with said back neck scale and arranged between the latter and the outer end of the short straight edge member the numbers of said front neck scale reading in progression from right to left, the graduated lines of said back neck and front neck scales terminate at the outer edge of the short straight edge member, the reverse face of the short straight edge member being provided with graduated numbered top sleeve scale members.

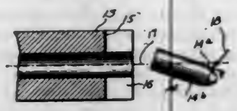
1,663,896. CENTRIFUGE AND MOLD HOLDER THEREFOR. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Mar. 29, 1926. Serial No. 98,176. 7 Claims. (Cl. 25—30.)



1. In a device of the character described, a pair of spaced and substantially axially alined centrifuge units, each having centrally arranged work-taking chucks, and an elongated mold holder adapted to extend longitudinally between the units and to be taken near its opposite ends and to be rotated by said chucks, said holder embodying a plurality of relatively movable sections adapted to take between them a mold element of lesser longitudinal extent than the spacing between units, and releasable means adapted to hold the sections against relative movement and to clamp the mold element between the sections.

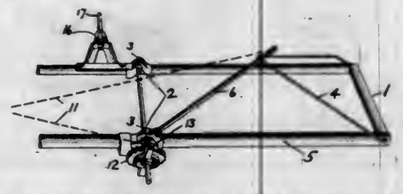
1,663,897. APPARATUS FOR DRYING TEXTILE FABRICS. ULRICH BAUMANN, Jr., Woodcliff, N. J. Filed Mar. 24, 1926. Serial No. 96,966. 5 Claims. (Cl. 34—26.)

1. The combination with a drum having open ends and through the wall of which heated air is capable of passing; of end closures for said drum forming compartments having communication with the interior of said drum, and means for injecting heated air into said compartments so that said air will pass into the interior of said drum and from thence outwardly through a fabric wound upon the wall of said drum.



1,663,898. YIELDABLE BACK SUPPORT FOR SEATS. FRANK C. BITZENBURGER, Los Angeles, Calif. Filed Sept. 18, 1924. Serial No. 738,439. 9 Claims. (Cl. 155—157.)

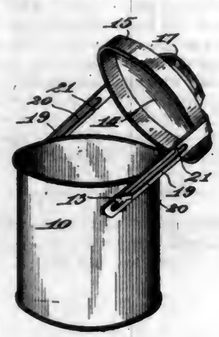
1. In a back supporting means, a supporting bracket, a supporting member secured to the upper end thereof, a back member securing bracket pivotally mounted at the



upper end of said supporting member and provided with a backwardly extending lug, a back member secured to said back member securing bracket, an internally threaded sleeve revolubly mounted within said supporting member, and a back positioning member provided with a threaded portion at its normally lower end extending into said internally threaded sleeve and adapted to engage at its upper end the lug of said back member securing bracket.

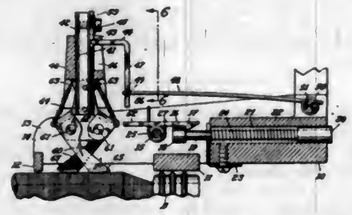
1,663,899. PROJECTION OF BULLETS AND OTHER PROJECTILES. ROBERT S. BLAIR, Stamford, Conn. Filed Apr. 26, 1923, Serial No. 634,682. Renewed Aug. 11, 1927. 21 Claims. (Cl. 89—42.)

1. The herein described art which consists in turning the axis of a rotating projectile at an angle with respect to its direction of flight to offset the effect of gravity tending to cause the projectile to drop.



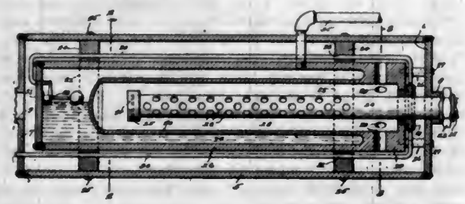
1,663,900. LAWN MOWER. WILLIAM F. H. BRAUN, Wynnewood, Pa., assignor to Pennsylvania Lawn Mower Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 24, 1926. Serial No. 156,829. 4 Claims. (Cl. 56—7.)

1. In a gang mower having a pivotal section, means for raising and lowering the free end of the pivotal section which comprise a revoluble drum having a threaded hub and mounted on the mower, connections between the section and drum whereby the former exerts unidirectional torque on the latter in unwinding direction, a ratchet wheel mounted on the mower and free to turn in winding direction only, and a nut on the hub adapted when turned in winding direction to clamp the drum onto the wheel against the torque on the drum and when turned in unwinding direction to back off and permit the drum to turn in unwinding direction under the torque and to screw into the nut and clamp the ratchet wheel with a braking action.



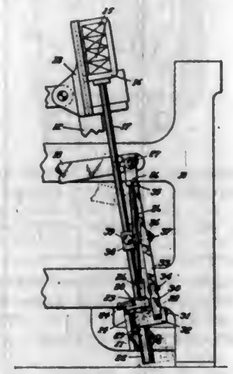
1,663,901. GARBAGE PAIL WITH NONDETACHABLE COVER. MILTON L. BROWN, Los Angeles, Calif. Filed Jan. 15, 1925. Serial No. 2,550. 1 Claim. (Cl. 220—38.)

The combination with a receptacle, of a cover therefor, a strap secured to and extending diametrically across the top of said cover, the central portion of which strap is extended upwardly from the top of the cover to form a handle, the end portions of which strap are extended downward a substantial distance below the lower end of the cover, there being elongated straight slots formed in the depending end portions of said strap, there being a laterally disposed notch formed at one side of each slot near the upper end thereof, plates secured to the upper portion of the body of the receptacle at diametrically opposite points, a neck portion extending upwardly and outwardly from each plate, the neck portions of the two plates extending respectively through the slots in the depending portions of the strap, a head portion formed integral with the upper end of the neck portion of each plate, the length of each head portion being substantially greater than the width of the slot in the depending portion of the strap and the width of each head portion



being slightly less than the width of the slot in the strap so as to permit disengagement of the straps from the heads when the cover is positioned so that the straps occupy positions parallel with said heads.

1,663,902. WEFT DETECTOR ON LOOM TRANSFERRER. AUGUSTIN J. CHEVRETTE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1926. Serial No. 157,047. 4 Claims. (Cl. 139—271.)



1. In a weft detector mechanism for a loom having a transferrer arm movable on detecting beats of the loom toward a surface to be detected, a carrier slidably mounted on the transferrer arm in a direction toward and from the surface to be detected, a pair of detector elements pivoted to the carrier at spaced points, said elements being disposed diagonally with respect to each other and having weft engaging surfaces spaced with respect to the surface to be detected, and means to effect indication of weft exhaustion at such times only as both detectors slide along the surface to be detected.

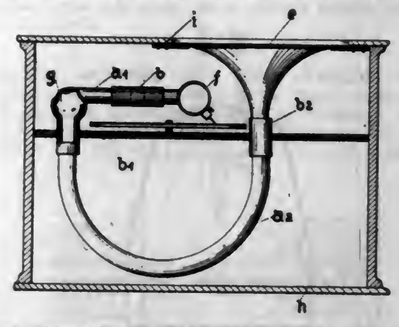
1,663,903. FUEL ECONOMIZER. JOSEPH CORBIERE, New York, N. Y., assignor to Nick Govin, New York, N. Y. Filed Sept. 18, 1926. Serial No. 136,293. 2 Claims. (Cl. 257—16.)

2. In an internal combustion engine, a water-jacketed muffler adapted for connection with the end of an exhaust pipe, said muffler comprising a casting having a central bore terminating short of the end thereof to receive said pipe, said casting being cored longitudinally and concentric with said bore to define a water-receiving chamber extending substantially to the inner end of said casting, a housing positioned over said casting and spaced therefrom to define a space therearound, said casting having exit means in the inner end thereof to permit the escape of the gases from the bore to the space around said casting and means for supplying water to said chamber, said means being arranged within the housing to subject its contents to the preheating action of the exhaust gases.

1,663,904. DROP-BOX-LIFTING MECHANISM. CLARENCE W. CRANE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 18, 1927. Serial No. 161,923. 6 Claims. (Cl. 139—182.)

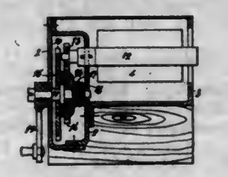
1. In a drop box lifting mechanism, a rock shaft, a plurality of drop boxes, a lifter rod for said boxes, a lifting lever, a connecting member slidable along the axis of said lifter rod, an operating connection from said lever to said sliding member, and a link pivoted to said sliding member at its lower end and pivoted to said lifter rod at the upper end of said link, whereby said rod may be actuated from said lifter lever.

1,663,905. SPLIT SHINGLE AND METHOD OF MAKING SAME. FRANK L. DIETZ, Seattle, Wash., assignor, by mesne assignments, of one-half to Edwin H. Luke, Seattle, Wash. Filed Dec. 10, 1926. Serial No. 153,889. 11 Claims. (Cl. 108—8.)



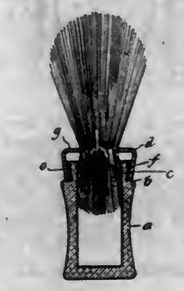
1. A shingle tapered from butt to tip, and having upper and lower surfaces naturally split.

8. The method of forming shingles from a block of wood which consists in splitting individual shingles alternately from opposite ends of the block.



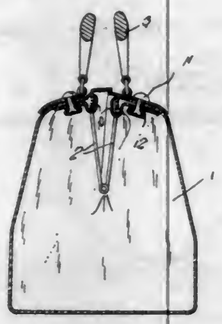
1,663,906. SOUND CONDUIT FOR SOUND-RECORDING AND SOUND-REPRODUCING INSTRUMENTS. ERNST FINKING, Leipzig, Germany. Filed Aug. 17, 1926. Serial No. 129,848, and in Germany Apr. 9, 1925. 2 Claims. (Cl. 274—2.)

2. A phonograph comprising a cabinet, a sound box, a tone arm, a horn, a U-shaped tube between the horn and the tone arm, resilient means connecting the sound box with one end of the tone arm, resilient means connecting the other end of the tone arm with one end of the U-



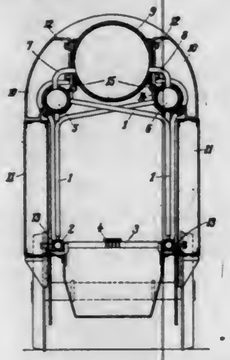
shaped tube, resilient means connecting the other end of the tube with the horn, and resilient means connecting the mouth of the horn with the cabinet.

1,663,907. GRINDING MACHINE FOR SAFETY-RAZOR BLADES. ALBERT E. FRIEDRICH, Berlin-Friedenau, Germany. Filed Dec. 12, 1921, Serial No. 521,877, and in Germany Dec. 16, 1920. 2 Claims. (Cl. 51—86.)



1. In a sharpener for double edged razor blades, a pair of grinding rollers, a pinion secured to each of said grinding rollers, a blade-holding roller mounted between said grinding rollers, a drive shaft parallel to and spaced from said rollers, a drive gear fixed to said drive shaft and adapted to engage said pinions, a crank on said drive shaft adapted to be turned in either direction to actuate said drive gear, a friction disk secured to said blade-holding roller, and a pair of disks mounted on said drive shaft for frictionally engaging both faces of said friction disk.

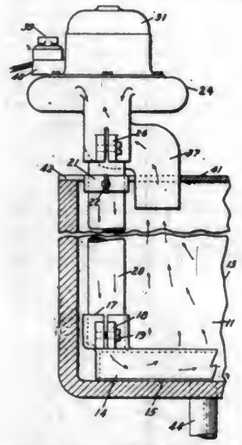
1,663,908. PORCELAIN-HANDLE BRUSH. LUDWIG FULD, Nuremberg, Germany. Filed Apr. 26, 1920. Serial No. 104,850. 2 Claims. (Cl. 15—191.)



1. A shaving brush comprising a recessed porcelain body having an annular under cut wall forming a shoulder above the said recess, bristles mounted in said recess, a metal ferrule encircling the bristles and resting on said shoulder, an elastic ring between the under cut wall of the body and said ferrule, said ferrule having an inwardly projecting annular rim overlying the under cut wall and engaging the bristles.

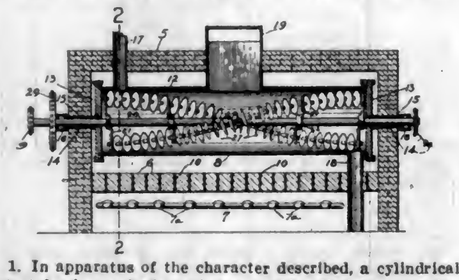
1,663,909. REENFORCING CLIP. ELDON DONNEWERTH HALLMAN, Kitchener, Ontario, Canada. Filed Sept. 4, 1926. Serial No. 133,705. 3 Claims. (Cl. 190—57.)

1. In a structure of the class described, in combination, a bag of the class described provided with a mouth, metal reenforcing frames associated with said mouth and cooperable with each other, said frames being hingedly connected together, a pair of handles disposed in side by side relation, connecting tabs for said handles, reenforcing members on the interior of the bag, said reenforcing members being cooperable with said frames and connecting means between said tabs and said reenforcing members.



1,663,910. WATER-TUBE BOILER. OTTO H. HARTMANN, Cassel-Wilhelmshohe, Germany, assignor to Schmidt'sche Heissdampf G. m. b. H., Cassel-Wilhelmshohe, Germany, a German Corporation. Filed July 13, 1926, Serial No. 122,234, and in Germany July 23, 1925. 6 Claims. (Cl. 122—510.)

2. In a locomotive, a water-tube fire box comprising lower water collectors, headers positioned above said collectors, and water-tubes connecting said collectors and said headers, a boiler drum located at a higher level than said headers and connected thereto, brackets supporting said boiler drum and fixed to the locomotive frame, and stirrups secured to said brackets and supporting said headers.



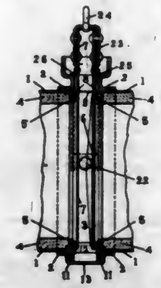
1,663,911. WASHING APPARATUS. HARRY C. HEATH, San Francisco, Calif., assignor to Household Necessity Company, San Francisco, Calif., a Corporation of California. Filed Jan. 25, 1924. Serial No. 688,436. 3 Claims. (Cl. 68—37.)

1. A washing machine comprising, a stationary tub, a blower mounted upon said tub, a motor for operating said blower, an adjustable stand pipe for supporting said blower, an air distributer removably secured to said stand pipe, said distributer having a rectangular shape, fitting approximately the bottom of said tub, and provided with

a plurality of outlets on one side thereof and deflecting ribs on the opposite side, said blower adapted to direct an air blast through said outlet of said distributer and said ribs causing the air to circulate within said tub.

1,663,912. RETORT. FRED L. HOYT, Denver, Colo., assignor of one-third to Charles S. Sloan, Sr., and one-third to John S. King, Denver, Colo. Filed Dec. 27, 1926. Serial No. 157,273. 10 Claims. (Cl. 202—14.)

1. In apparatus of the character described, a cylindrical retort having a feed-opening, a residue-discharge opening and a vapor-outlet, and a rotary agitating and impelling element including a helical shaft extending lengthwise of the retort, and spaced rotary disks on the shaft.



1,663,913. PROCESS FOR THE MANUFACTURE OF OLEOMARGARINE. HENRI LEROUDIER, Lyon-Villeurbanne, France. Filed May 7, 1926, Serial No. 107,490, and in France May 20, 1925. 3 Claims. (Cl. 99—13.)

1. A process for the manufacture of oleomargarine, which consists in adding to the principal mass of the oleomargarine and the melted fats and oils, an intimate mixture consisting only of fats and oils suspended in a great quantity of water which is more fluid than the said principal mass of the oleomargarine.

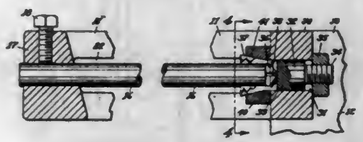
1,663,914. METHOD OF OXIDIZING AMMONIA BY MEANS OF OXYGEN. FRANS GEORG LILJENROTH, Stockholm, Sweden. Filed June 13, 1927, Serial No. 198,592, and in Sweden Aug. 19, 1926. 2 Claims. (Cl. 23—162.)

1. Method of continuously oxidizing ammonia, which comprises subjecting ammonia to a catalytic combustion by means of oxygen essentially in absence of gases alien to the reaction, supplying the whole resulting gas mixture to a condensation system and condensing a part thereof to nitric acid while the remainder is used as diluting agent in performing the catalytic combustion.

1,663,915. UNIVERSAL SAND DAMPER FOR HOT-GAS CONDUITS. WILBUR S. MAYERS, Fairmont, W. Va. Filed Mar. 27, 1922. Serial No. 547,317. 12 Claims. (Cl. 251—59.)

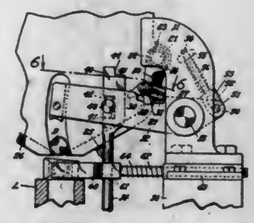
1. A sand damper, comprising a case having an orifice in each side thereof and provided with means of attachment to incoming and outgoing conduits, there being a chamber between the orifices of greater transverse dimensions than the corresponding dimensions of the flow area of said conduits and having an exterior opening adapted to receive damper plates and sealing material, and a removable duplex damper covering both orifices when inserted into said chamber, said damper comprising two plates interconnected outside of the area of flow of said conduit and yieldable toward and away from each other within said flow area.

1,663,916. MANUFACTURE OF PURE IRON. ALWIN MITTASCH and CARL MÜLLER, Mannheim, and WALTER SCHUBARDT, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed May 12, 1926, Serial No. 108,683, and in Germany June 10, 1925. 4 Claims. (Cl. 75—27.)



1. The process of producing practically pure iron which consists in heating iron obtained by decomposition of iron carbonyl and contaminated with carbon and oxygen, to a temperature of at least about 500° C., while excluding air and other oxidizing gases.

1,663,917. SHOVELING MACHINE. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Dec. 19, 1917, Serial No. 207,867. Renewed Oct. 19, 1925. 125 Claims. (Cl. 214—90.)

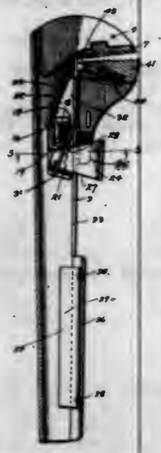


1. In loading apparatus, the combination with a main frame, of a supplemental frame, a scoop connected to said supplemental frame, means for moving said supplemental frame to cause said scoop to gather a load, and a endless conveyor mounted on said main and supplemental frames with a receiving portion continually in position to receive material from said scoop and a delivery portion on each of said frames.

1,663,918. SUPPORT FOR LOOM PICKING SPINDLES. CYRILL PARENT, Andover, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 18, 1926. Serial No. 155,742. 10 Claims. (Cl. 139—158.)

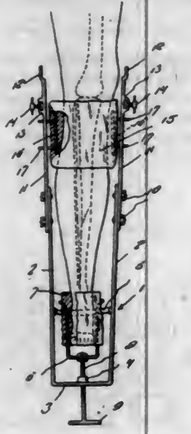
1. In a picker spindle mounting for loom lays, means to support the outer end of the spindle, a clamp for the inner end of the spindle having a bore to receive the inner end of the spindle and said clamp having a plurality of clamping members integral therewith and capable of slight movement relatively to the clamp, means forming an inclined surface on the clamp, means relatively stationary with respect to the lay presenting other inclined surfaces to correspond with and lying in contact with the first named inclined surfaces, and means to produce relative movement between the inclined surfaces to cause the clamping members to have tight engagement with the spindle.

1,663,919. REVOKING MEANS FOR REGULARLY-ACTUATED TRANSFERRER MECHANISM. OSCAR V. PAYNE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 22, 1926. Serial No. 156,476. 15 Claims. (Cl. 139—231.)



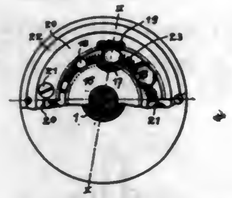
1. In a weft replenishing loom having a transferrer arm and a shuttle, means to give the transferrer arm a regular periodic movement toward the shuttle, and means effective during continued operation of the loom to disconnect the transferrer arm from the first named means to prevent said movement of the transferrer arm toward the shuttle when the shuttle is misplaced.

1,663,920. WRENCH. AXEL W. PETERSON, San Francisco, Calif. Filed June 11, 1924, Serial No. 719,407. Renewed Sept. 27, 1927. 4 Claims. (Cl. 81—149.)



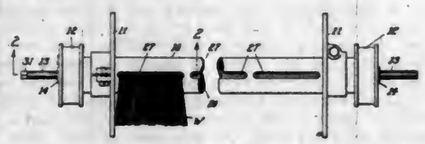
1. In a wrench of the character described, a longitudinally slotted shank having a jaw thereon, a second jaw extending into and slidable in the slot bearing on the outer edges thereof, an element within the shank

having yielding means associated therewith causing the same to bear against the inner edge of the slot for holding the second jaw in position, and a wedge manip-



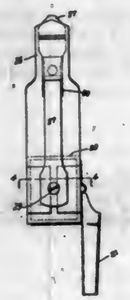
ulated from the outside of said shank for rendering said element inactive and allowing the second jaw to be moved in the slot.

1,663,921. LIMB BRACE. CHARLES HARRISON PIERCE, Wadena, Minn. Filed Dec. 14, 1926. Serial No. 154,734. 5 Claims. (Cl. 128—84.)



1. In a limb bracing structure of the class described, a substantially U-shaped member, the arms of which are disposed in spaced parallelism and adapted for disposition on opposite sides of the lower portion of a limb, the bight portion being adapted to be dispsed in spaced relation to the foot, a screw-threaded stem carried by the central part of said bight portion, said stem being provided on its outer end with a handle, a stirrup connected to the inner end of said stem and adapted to have its arms imbedded in a cast surrounding the foot and ankle, said arms being provided with apertures, and a pair of apertured primary extension struts connected by fastenings with said apertures, the upper ends of said struts being offset, the portions below said offset ends being formed with guides, set screws carried by said guides, and anchoring strips adapted to be imbedded in a knee cast, said strips being provided with pins for selective reception in apertures in said struts.

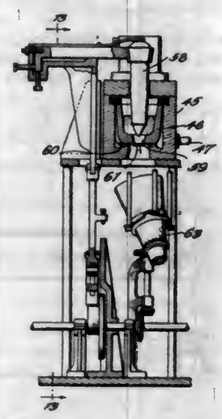
1,663,922. ONE-WAY DRIVING MECHANISM. LEO ROBIN, Ixelles, and PHILIPPE DE PONTHIERE, Woluwe St. Lambert, Belgium. Filed Mar. 3, 1927, Serial No. 172,485, and in Belgium Mar. 9, 1926. 1 Claim. (Cl. 192—45.)



A one-way driving mechanism comprising driving and driven members having track members eccentrically disposed relatively to each other, and sets of balls of different diameters wedged between the eccentrically disposed track members, said balls being spaced apart and held at definite points between the track members by means of springs.

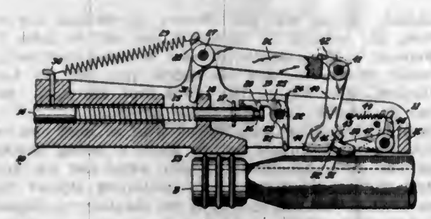
1,663,923. WARP BEAM. JESSE RAYMOND SHUTT, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 25, 1927. Serial No. 170,984. 3 Claims. (Cl. 242—118.)

1. A warp beam having a tubular outer barrel with an axially extended opening therein, a winding member rotatably mounted within said barrel, a flexible warp-attaching member secured to said winding member and adapted to be drawn thereby through said opening and within said tubular barrel, manually operated means to turn said winding member within said tubular barrel, a pawl and ratchet mechanism within said outer barrel effective to hold said member from movement in an unwinding direction but permitting free movement in a winding direction, and means external of said barrel for releasing said pawl.



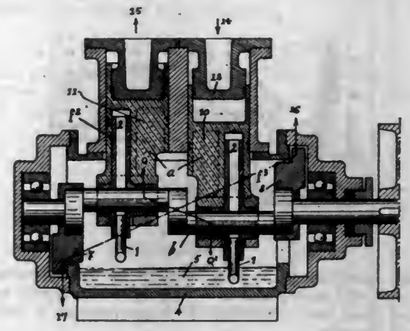
1,663,924. YARN-TUBE FRAME FOR LOOMS. JOHN G. SODERBERG and WILLIAM W. ROBERTSON, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 19, 1923. Serial No. 640,250. 7 Claims. (Cl. 139—10.)

1. A tube frame for looms comprising a tubular member and supporting brackets for said member, each bracket including a rigid spool bearing plate having



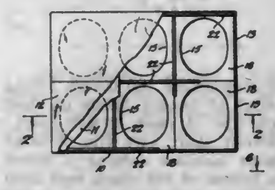
notches in its side edges and said tubular member having holding portions co-operating directly with the notched edges of said plate to secure said plate firmly and permanently against the end of said member and from displacement longitudinally of said plate, said holding portions and notches forming the entire securing means for said plate.

1,663,925. GLASS-FEEDING MECHANISM. THEODORE C. STEIMER, deceased, Pittsburgh, Pa., by Charles M. Steimer, executor, Zanesville, Ohio, assignor, by mesne assignments, to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Original application filed Feb. 12, 1910, Serial No. 543,582, and in Canada Jan. 26, 1918. Divided and this application filed Oct. 27, 1925. Serial No. 65,186. 13 Claims. (Cl. 49—55.)



1. A measuring and interrupting device, comprising a receptacle having an outlet, a stopper adapted to constrict the outlet, a flame under the outlet, and mechanism to automatically operate the stopper at predetermined times to a regulable degree.

1,663,926. GUARD FOR WEFT DETECTORS IN LOOM TRANSFERRERS. KENNETH J. UNWIN, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1926. Serial No. 157,078. 8 Claims. (Cl. 139—271.)

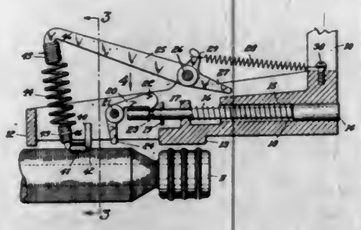


1. In weft detecting mechanism for a loom having a transferrer arm receiving a movement toward the surface to be detected each detecting beat of the loom, a weft detector, a carrier therefor movably mounted on the transferrer arm, and a guard pivoted to the transferrer arm and movable by an abundant supply of weft into holding engagement with respect to the detector to hold the latter out of contact with the weft.

1,663,927. VALVELESS AIR PUMP. PAUL VOREAUX, Paris, France, assignor to Etablissements Samga Bavox Reunis, Paris, France. Filed June 22, 1925, Serial No. 38,792, and in France June 30, 1924. 2 Claims. (Cl. 230—184.)

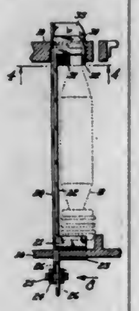
1. A pump comprising a crank case, two cylinders disposed side by side, pistons coacting therewith, a crank shaft having two cranks, and extending through the said crankcase, eccentric means connecting each piston with the crank and slidable along the latter to impart a helical movement to the pistons in their cylinders, two eccentric masses disposed at the respective sides of the pistons and fixed in diametrically opposed direction on the crank shaft for obtaining the equilibration of the moving parts of the pump, the eccentric masses producing a couple which in the plane of the axis of the cylinders, equilibrates the couple due to the straight displacement of the pistons, and, in a plane perpendicular to the first-mentioned plane, equilibrates the couple due to the movement of rotation of said pistons upon their own axes.

1,663,928. PACKING CASE FOR HATS. ERNEST A. WALTHER, Danbury, Conn. Filed May 17, 1926. Serial No. 109,504. 5 Claims. (Cl. 206—9.)



1. A holder for hats comprising an outer carton and a plurality of superposed frames for holding the hats, each frame having a horizontal top wall adapted to support the brim of a hat, said wall being provided with an opening for passage of a hat crown and also having downwardly extending side walls on the sides thereof resting directly on the top wall of the next lower frame whereby each hat is supported independently of the weight of the other hats.

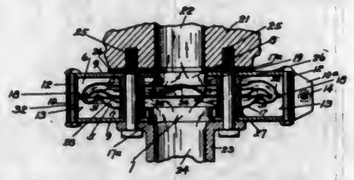
1,663,929. WEFT DETECTOR IN TRANSFERRER ARM. HERBERT H. WATSON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1926. Serial No. 157,092. 9 Claims. (Cl. 139—271.)



1. In weft detecting mechanism for a loom having a transferrer arm receiving a regular movement toward the

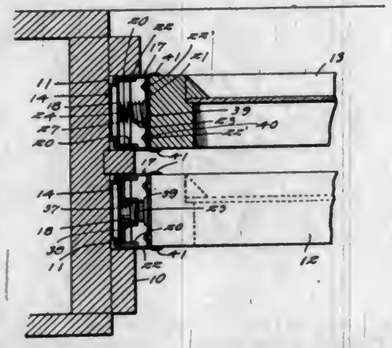
surface to be detected sach detecting beat of the loom, a weft engaging detecting unit, a coil spring having one end connected to the unit, and connections between the other end of the coil spring and the transferrer arm, said coil

spring constituting the only support for said detecting unit and said spring and detecting unit being freely suspended from the connections to be movable as a whole in any direction.



1,663,930. SLIDE CRADLE FOR WEFT-REPLENISHING LOOMS. HERBERT H. WATSON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1926. Serial No. 157,093. 6 Claims. (Cl. 139—232.)

1. In a weft replenishing mechanism having provision for guiding a stack of bobbins certain of which are relatively long with tips of small diameter and certain of which are relatively short with tips of large diameter, a pair of slidable members defining a bobbin releasing element at the bottom of the stack, each slide having a plurality of bobbin tip engaging portions certain of which hold one type and other portions to hold the other type of bobbins when the slidable members are in one relative position and said portions releasing both types of bobbins when the slidable members are in another relative position.

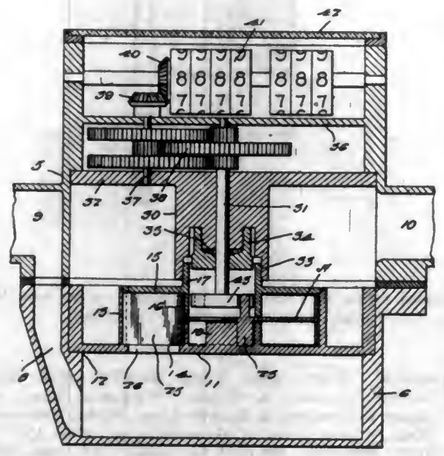


1,663,931. VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. MILLARD WOODSOME, Littleton, Colo., assignor of fifty-one one-hundredths to James D. Canary, Littleton, Colo. Filed Mar. 21, 1925. Serial No. 17,389. 7 Claims. (Cl. 48—180.)

1. A vaporizer for internal combustion engines comprising a cylindrical casing having concentric inlet and outlet openings and adapted to receive exhaust gases, a chamber arranged within the casing and consisting of peripherally connected disks and having central openings and provided therein with outwardly extending flanges connected with the casing at the central openings thereof, and a spreader consisting of a disk arranged within the chamber in spaced relation with the said disks and providing a narrow peripheral passage, said disks having annu-

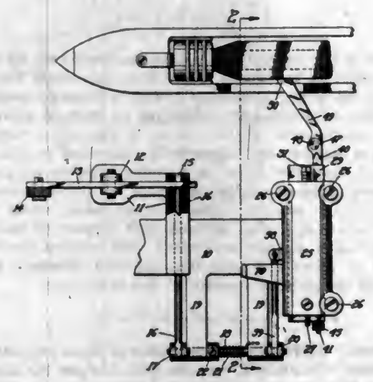
lar undulations and the spreader disk being provided at the center with a concavo-convex portion located opposite the said openings in said chamber.

1,663,932. WINDOW CONSTRUCTION. FERDINAND ZIGANEK and WILLIAM E. METTLER, Detroit, Mich. Filed Mar. 1, 1927. Serial No. 171,860. 9 Claims. (Cl. 20—49.)



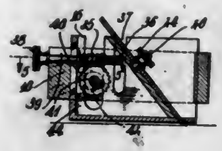
1. In a window, opposed stiles, a sash therebetween and members operatively slidably engaging each stile having pivots engaging the adjacent sides of the sash permitting rotation of the sash from a position where it aligns with the members to a position where it is disposed at an angle thereto and latches preventing longitudinal movement of the sash with relation to the pivots automatically disengaging the pivots to permit such movement when the sash is in the last named position.

1,663,933. MILK METER. FRANK J. BENDER, Forest Park, Ill., assignor of one-eighth per cent to John C. Weirsert and one-eighth per cent to John Hollerbach, Forest Park, Ill., and one-eighth per cent to Leo Stiegart, River Forest, Ill. Filed Sept. 14, 1925. Serial No. 56,409. 1 Claim. (Cl. 73—37.)



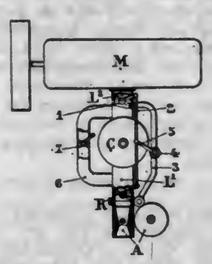
In a milk meter, a shell formed with an inlet and an outlet, shoulders formed in the shell, a casing having inner and outer concentric circular walls and top and bottom walls, said bottom wall projecting beyond the outer circular wall and resting on the shoulders to dispose the casing between the inlet and the outlet, a partition disposed radially between the circular walls and between the top and bottom walls, said casing having an opening in its top to one side of the partition and another opening in its bottom to the other side of the partition, a propeller including a circular plate having a radially disposed slot extending inwardly from its edge, a rim about the outer edge and having a slot at the slot of the plate, said inner circular wall being formed in top and bottom sections disposed in spaced relation to accommodate said plate therebetween, said plate being provided

with slots to allow liquid to pass into the space above the plate, a lug rising from the bottom of the casing centrally of the inner wall, a pin projecting downwardly and centrally from the plate to move in a circular orbit about the lug within the inner wall, said rim being of of such length as to engage said top and bottom walls to



form therewith and with the concentric circular walls a measuring chamber, said partition extending into the slot of the plate and the rim, a second pin projecting upwardly from the center of the plate, a shaft, a crank on the shaft engaged by the second pin, and a counter mechanism operatively connected with the shaft.

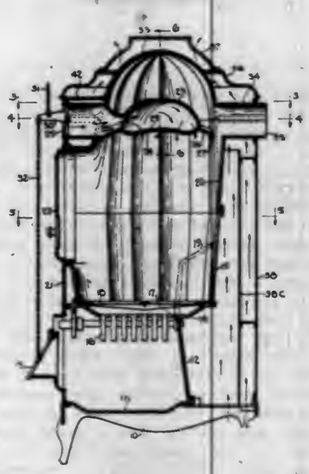
1,663,934. SIDE-SLIP WEFT DETECTOR. ALBERT CEDERLUND, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 4, 1926. Serial No. 86,071. 9 Claims. (Cl. 139—286.)



1. In a weft detecting mechanism for looms, a support, a carrier slidably and angularly movable on the support, a weft detector supported by and mounted for angular movement on the carrier and having a side slipping movement along an exhausted bobbin, said detector having a portion to engage the support to move the carrier angularly with respect to the support at substantial exhaustion of weft, and means effective when the carrier moves angularly to indicate weft exhaustion.

1,663,935. CUTTING TOOL. ANTON CORNELL, New York, N. Y. Filed Mar. 7, 1927. Serial No. 173,270. 1 Claim. (Cl. 145—55.)

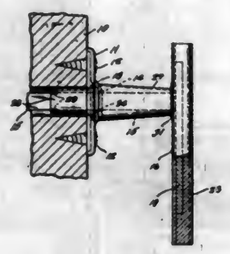
In a cutting tool of the class described, a frame comprising spaced handles, a plane body slidably mounted in said frame comprising a smooth base portion adapted to engage the surface being worked upon, a bit slidably mounted in said plane body having a cutting edge thereon disposed through a slot in the base portion of said plane body, a pin disposed through elongated slots in said plane body and mounted at its ends in the sides of said frame, a shaft disposed through elongated slots in said plane body and journaled at its extremities on the sides of said frame, a shaft pivotally connected at its inner end to said pin and rotatively journaled intermediate its ends in said frame, a worm on said shaft, a worm gear on said first mentioned shaft meshed with the worm of said second mentioned shaft, teeth formed on the edge of the slot of said plane body through which said first mentioned shaft is disposed, gear segments rigidly mounted on said first mentioned shaft in mesh with the teeth of said edge portion, and a thumb knob on the external end of said second mentioned shaft adapted to be manipulated for driving said gear segments to raise and lower said plane body for adjustably positioning the base portion thereof in close proximity to the surface being worked.



1,663,936. EXPLOSION-ENGINE SUPERCHARGER. RENÉ JEAN PAUL EMILE COZETTE, Neuilly-sur-Seine, France. Filed Dec. 12, 1925, Serial No. 75,088, and in France Dec. 29, 1924. 1 Claim. (Cl. 123—119.)

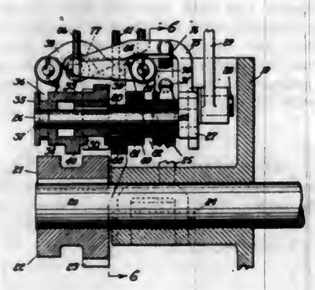
A supercharging device for an explosion engine, comprising a carburetor, a compressor placed between said carburetor and engine, a controlling valve member placed

between said carburetor and said compressor, another controlling valve member placed between said compressor and the engine, said controlling valve members being suitably conjugated so that they act simultaneously, a slow speed duct directly connecting said carburetor to the admission pipe of the engine, said duct opening into said pipe beyond said compressor in the direction of flow, and being provided with a cock integrally connected to said controlling valve members.



1,663,937. HEATING APPLIANCE. JOHN B. EHRLICH, Portland, Oreg. Filed July 15, 1926. Serial No. 122,616. 1 Claim. (Cl. 126—77.)

In a stove, the combination of a combustion chamber having a dome over the top thereof and having a smoke outlet projecting backwardly from the bottom of said dome; an air warming inlet projecting forwardly from the bottom of said dome; an air warming box mounted within said combustion chamber near the bottom of said dome and spaced therefrom, said air warming box having a circular form and having a somewhat concave perforated under side and a convex upper side, said warming box having an inlet duct projecting through said air warming inlet and spaced therefrom, said inlet duct having a damper therein; a damper for admitting air to the under side of the grates in the combustion chamber: and means for connecting said dampers causing same to operate in unison.

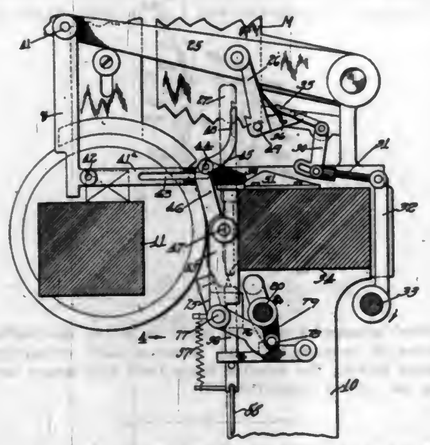


1,663,938. DOOR HANDLE. JOSEPH GOODMAN, Whitneyville, Conn., assignor to The Mt. Carmel Mfg. Co., Mount Carmel, Conn., a Corporation of Connecticut. Filed Dec. 31, 1924. Serial No. 759,034. 5 Claims. (Cl. 292—347.)

1. A handle comprising a channel shaped cross bar provided with inturned flanges along the sides thereof and having an opening in the central wall, a spindle extending through said opening, a bar secured to the spindle and extending longitudinally in the channel, and a block of material hard at ordinary temperatures and plastic when

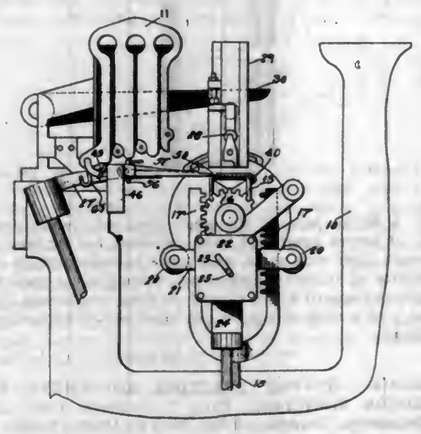
heated filling said channel and clamped about said bar by said flanges while in the plastic condition.

1,663,939. PICK AND PICK MOTION FOR BOX LOOMS. ALBERT A. GORDON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 23, 1926. Serial No. 104,186. 16 Claims. (Cl. 139—179.)



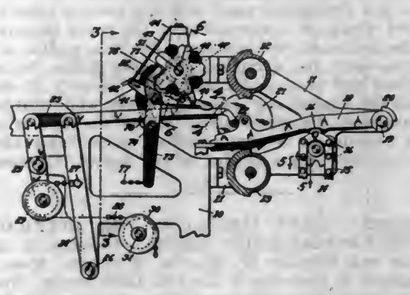
1. In a box controlling mechanism for looms having a set of shifting boxes and a box lever to control the position of the boxes, a member having a regular movement in a plane of action and completing its cycle of movement every second pick of the loom, a pinion to cooperate with the member and operatively connected to the lever to move the latter when said pinion receives an angular movement, sliding starting teeth for the pinion located on diametrically opposite sides thereof, each tooth being movable into operative position with respect to the member having a regular movement, and pattern controlled means to move and hold both of said members in the plane of the rotating member at the same time.

1,663,940. REVOKING MECHANISM FOR AUTOMATIC LOOMS. ALBERT A. GORDON and ALFRED F. MORRELL, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 17, 1926. Serial No. 116,726. 14 Claims. (Cl. 139—231.)



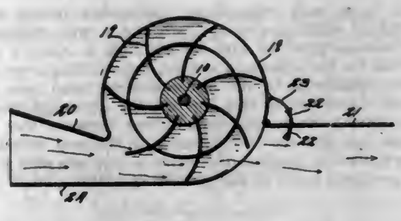
1. In a weft replenishing loom, a lay, a magazine and a plurality of shifting shuttle boxes at one side of the

loom, and means to revoke the transfer and prevent shifting of the shuttle boxes if the running shuttle en-



gages said revoking means on forward movement of the lay.

1,663,941. CUTTING AND CLAMPING MECHANISM FOR PICKS AND PICK LOOMS. ALBERT A. GORDON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 6, 1926. Serial No. 127,697. 12 Claims. (Cl. 139—263.)

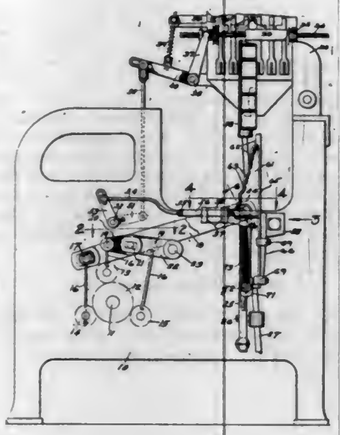


1. In a loom, a weft carrier magazine, a weft end holder, a lay, a plurality of shuttle boxes mounted thereon at the magazine end of the loom, means to move said shuttle boxes to and from active position, means to transfer a weft carrier to the active shuttle box, a thread cutting and clamping device mounted on each shuttle box, and means to actuate the cutting and clamping device associated with the active shuttle box only.

1,663,942. COLOR INDICATOR FOR WEFT-REPLENISHING LOOMS. ALBERT A. GORDON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 19, 1926. Serial No. 142,773. 7 Claims. (Cl. 139—232.)

1. In a color indication mechanism for a weft replenishing loom having a vibrator lever, a vibrator gear rotatably mounted thereon, a vibrator connector given operative movements by the vibrator gear, a shuttle box actuating mechanism operated by the vibrator connector, and a color slide, a drop weight lever to position the vibrator connector, a control lever operatively connected with the color slide, and means operatively related to the drop weight lever and the control lever to give the latter a plurality of positions as the vibrator moves under influence of the vibrator gear and to complete the movement of the color slide prior to the movement of the shuttle box actuating mechanism.

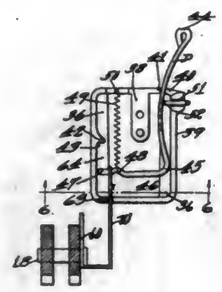
1,663,943. AIR-OPERATED POWER GENERATOR. WILLIAM L. HAYS, Sterling, Colo. Filed Aug. 14, 1926. Serial No. 129,201. 2 Claims. (Cl. 170—5.)



1. An air current power generator comprising a vertically disposed shaft journaled for rotation, a series of substantially radially disposed blades carried by the shaft, a cylindrical casing journaled upon the shaft and housing the series of blades, the said casing being provided at one side with a funnel shaped air inlet opening and at an opposite side portion with an air exit opening, and a vertically disposed vane hinged to the casing eccentrically thereof and at that edge of the air exit opening which is the more remote from the air inlet opening.

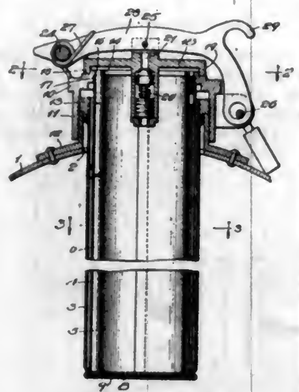
1,663,944. METHOD FOR PREVENTING SCORIFICATION OF FIRE BARS, GRATE SURFACES, AND THE LIKE. ROBERT HOFFELT, Hamburg, Germany, assignor to the Firm Metallisator Berlin Aktien-Gesellschaft, Berlin-Neukolln, Germany. Filed Jan. 29, 1925, Serial No. 5,661, and in Germany partly on Feb. 28, 1924. 1 Claim. (Cl. 91—70.2.)

A method for preventing the scorification of fire or furnace bars, grates and the like comprising projecting molten aluminum against the cold work-piece to form upon it a preliminary firmly adherent coating, heating the coated workpiece to approximately the fusion temperature of the aluminum, thereby alloying the inner portion of said coating with the workpiece, the outer portion becoming oxidized and projecting a subsequent quantity of molten aluminum against said coated workpiece while still in its heated state, thereby breaking through the layer of oxide and forming an integral accretion to the inner alloyed portion, producing a coating of any desired thickness.



1,663,945. COLOR INDICATION FOR MULTICOLOR WEFT-REPLENISHING LOOMS. CHARLES R. HOWARD and RICHARD W. WAGNER, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 8, 1926. Serial No. 140,352. 6 Claims. (Cl. 139—232.)

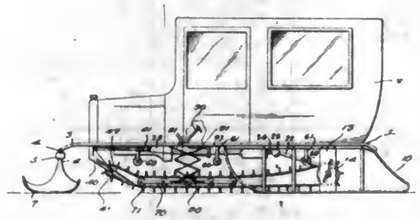
1. In a weft replenishing mechanism having a plurality of shifting shuttle boxes and a weft replenishing mechanism provided with a color slide to select a proper bobbin for the exhausted shuttle, a box lifting lever operatively connected to the boxes, a multi-faced cam operatively connected to and deriving its movement from the box lifting lever, and connections between the multi-faced cam and the color selector on the weft replenishing mechanism to position the latter in any one of a number of positions equal to the number of boxes.



1,663,946. WEFT-DETECTOR-WITHDRAWING MEANS. VICTOR H. JENNINGS, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 13, 1926. Serial No. 108,942. 4 Claims. (Cl. 139—271.)

1. In a weft detector for weft replenishing looms, a support, a side slipping weft detector mounted on the support and having an angular movement on indicating beats of the loom and having a forward sliding movement on non-indicating detecting beats of the loom relatively to the support, means defining a pivotal connection between the detector and the support about which the detector swings on indicating beats of the loom, resilient means connected to the detector to hold the same in normal position, and withdrawing means for the detector having connection with the latter at a point intermediate the

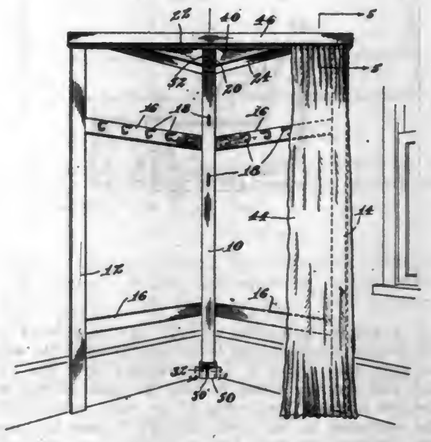
pivotal connection and the point at which the resilient means is connected to the detector, said withdrawing means moving the detector away from said means defining the pivotal connection.



1,663,947. TANK-FILLING TUBE. LOUIS KESSLER, Chicago, Ill., assignor to Roy W. Hill, trustee. Filed Apr. 26, 1923. Serial No. 634,756. 3 Claims. (Cl. 220—88.)

1. A filling tube of the kind described, comprising a pair of spaced inner and outer cylinders having openings through their side walls, said inner cylinder formed of a plurality of arcuate segments overlapping along their side edges and spaced apart thereat to form continuous openings, and a closure cap for the open end of both of said cylinders.

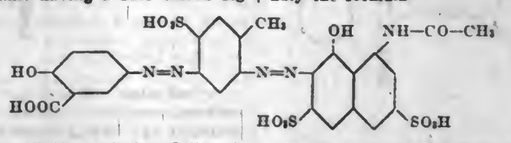
1,663,948. WINTER TRACTION EQUIPMENT FOR MOTOR VEHICLES. PAUL C. LAPORTE, Clair, New Brunswick, Canada. Filed Feb. 4, 1926. Serial No. 85,979. 4 Claims. (Cl. 180—5.)



1. The combination with the chassis of a motor vehicle, of rear runners fixed to the chassis, front runners connected with the chassis and controllable by the steering means of the motor vehicle, a drive shaft carried by the rear runners, a sprocket drum fixed to said drive shaft, a connection between the drive shaft and the shaft of the engine of the motor vehicle, hangers on the forward portion of the chassis, idler sprocket gears connected with said hangers, a traction belt having spaced and parallel chains engaged with the sprocket teeth of the drum and also engaged with the teeth of said idler sprocket gears, and also having transverse traction bars interposed between and connected to the chains, bars arranged between the upper and lower stretches of the chains and having anti-friction means in engagement with the chains, means for yieldingly pressing said bars downwardly, interposed

between and connected with the bars and the chassis, a lever disposed in the body, a connection between the said lever and the forward portion of the traction belt for forward movement of said forward portion, and means for raising the forward portion of the traction belt on forward movement thereof.

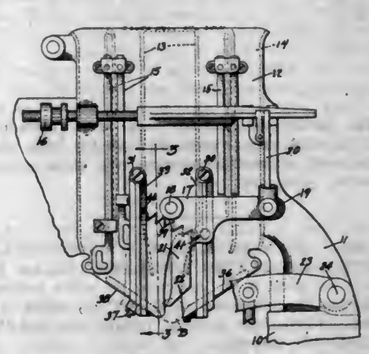
1,663,949. PORTABLE WARDROBE. ANDREW S. LAWTON, Brockton, Mass., assignor to Mawhinney Last Company, Brockton, Mass., a Corporation of Massachusetts. Filed Oct. 3, 1924. Serial No. 741,351. 7 Claims. (Cl. 312—6.)



2. A portable wardrobe adapted to be set in the corner of a room, comprising a frame having a rear corner leg and two front wall legs, and a top mounted thereon; the said rear leg being adjustable in length, for canting the

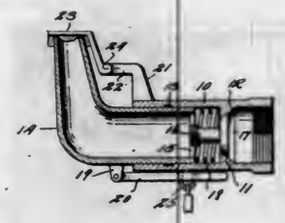
wardrobe to hold its top against the walls while its feet are on the floor.

1,663,950. RED DISAZO DYES FOR COTTON PRINTING. WILHELM NEELMEIER, Leverkusen, near Cologne, and HANS SCHNEIDER, Stammheim, near Cologne, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 23, 1925, Serial No. 17,772, and in Germany Apr. 4, 1924. 3 Claims. (Cl. 260—84.)



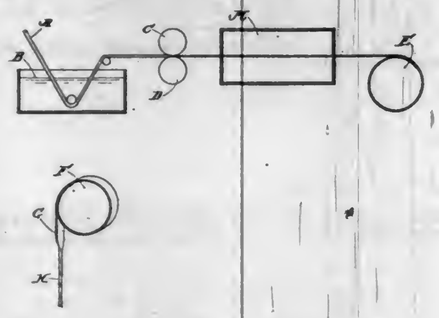
3. As a new product the disazo dye having most probably the formula—

obtainable by combining in alkaline solution 2-diazo-1-methyl-benzol-5-sulfonic acid-4-azo-salicylic acid with 1-acetylamino-8-naphthol-3-6-di-sulfonic acid, being in form of its alkali metal salt a dark red powder soluble in water and in concentrated sulfuric acid with a bluish-red color, yielding by reduction with zinc and hydrochloric acid, para-amino-salicylic acid, 2-4-di-amino-toluol-5 sulfonic acid and 7-amino-1-acetyl-amino-8-naphthol-3-6-di-sulfonic acid and yielding when printed on cotton with chromium acetate bluish-red shades of excellent fastness to chlorine, washing and light.



1,663,951. GIVE WAY FOR WEFT-REPLENISHING MECHANISM. OSCAR V. PAYNE and RICHARD GREENLEAF TURNER, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1926. Serial No. 148,401. 9 Claims. (Cl. 139—251.)

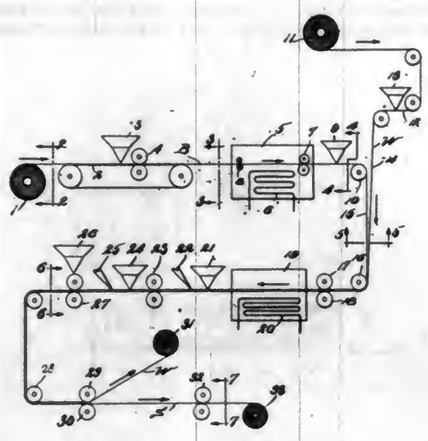
1. In a weft replenishing mechanism, a pair of movable supports for holding one end of a bobbin in transfer position, means to hold the supports apart a distance less than the diameter of the butt of the bobbin, and a single yielding device connected to both of said supports to hold said supports in normal position and resisting movement of each support away from normal bobbin supporting position, each support being yieldable and the deformation



of the device being dependent upon the diameter of the butt of the bobbin and independent of the relative amounts each support moves.

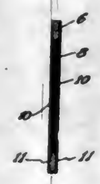
1,663,952. FAUCET. WILLIAM H. PEADEN, Tulsa, Okla., assignor to R. D. Donnelly and B. R. Graham, Tulsa, Okla. Filed Mar. 14, 1927. Serial No. 175,266. 4 Claims. (Cl. 251—115.)

1. A faucet comprising a body having a valve seat and a spout rotatably and longitudinally shiftable within the body and having a valve coacting with the valve seat, and a spring acting to hold the spout shifted in a direction to cause the closing of the valve, a lever pivotally connected to the spout whereby it may be turned, and a fulcrum member with which the lever coacts when the spout has been turned by the lever to a discharge position.



1,663,953. WATERPROOF YARN AND METHOD OF MAKING SAME. JAMES C. PEABODY, Boston, Mass. Filed Nov. 23, 1922. Serial No. 602,782. 9 Claims. (Cl. 117—53.)

1. The method of making yarn which includes completely impregnating a strip of fibre bat with vulcanizable material, thereafter twisting said strip, and finally vulcanizing said yarn.

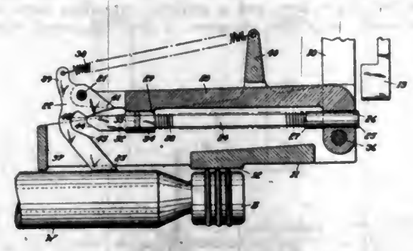


1,663,954. BUFFING-LEATHER SUBSTITUTE AND PROCESS OF MAKING THE SAME. ROLAND B. RESPESS, New York, N. Y., assignor, by mesne assignments, to Respro Inc., Cranston, R. I., a Corporation of Rhode Island. Filed June 5, 1920. Serial No. 386,713. 16 Claims. (Cl. 91—68.)

1. That process of making buffing leather which comprises forming a bat consisting of a plurality of separable layers of unspun fibers, impregnating the bat with adhesive, drying and pressing the bat under tension, coating one side of the bat with a rubber solution, vulcanising the coating of rubber, and splitting the coated side

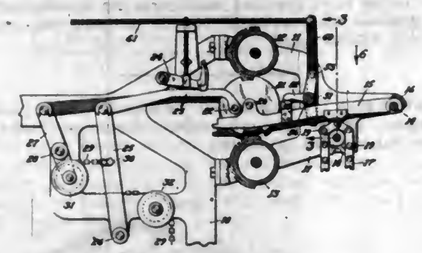
of the bat from the other side to leave the vulcanized rubber coating with a very thin layer of fibers adhering to one side of it.

1,663,955. FUEL-MIXING DEVICE. HASSEL D. ROBINSON, Washington, D. C. Filed Jan. 7, 1927. Serial No. 159,637. 1 Claim. (Cl. 48—180.)



A fuel mixer comprising a body adapted to be gripped between companion portions of a carbureter and intake manifold and having opposed flat faces, said body being formed with an opening constituting a fuel passage and having its opposite faces formed with recesses extending about the margins of the opening and constituting seats, gauze disks spaced from each other and covering opposite ends of said opening and having their marginal portions fitting snugly into and completely filling said seats, the outer surfaces of said disks being flush with the faces of said body, and facing sheets completely covering the said faces of said body and secured against the same and overlapping the portions of the gauze fitting into said seats and secured thereon, said sheets being formed with openings registering with the opening in the body.

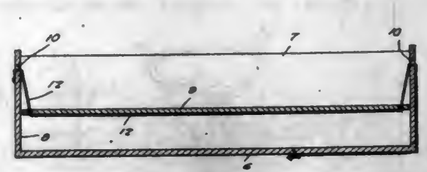
1,663,956. WEFT DETECTOR FOR LOOM TRANSFERRER ARMS. EPPA H. RYON, Pasadena, Calif., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 1, 1926. Serial No. 138,965. 13 Claims. (Cl. 139—271.)



1. In a weft detector for a loom having a transferrer arm moved toward the surface to be detected on detecting beats of the loom and an indicating lever, a weft detector, an indicating plunger to cooperate with the lever and to be operatively related to the detector to indicate

weft exhaustion and normally in non-indicating position relatively to the lever, and a common support for said detector and indicating plunger movably mounted with

respect to the transferrer arm and movable relatively to the transferrer arm to present the detector to the surface to be detected.

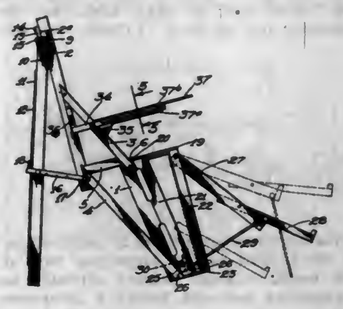


1,663,957. COLOR INDICATOR FOR WEFT-REPLENISHING LOOMS. EPPA H. RYON, Pasadena, Calif., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 4, 1926. Serial No. 138,968. 8 Claims. (Cl. 139—232.)

1. In a weft replenishing loom having a multi-color magazine and a color selector therefor, a pair of spaced actuating cylinders, a vibrating element comprising a lever, a gear rotatable thereon, and a vibrator connector operatively connected to the gear, shuttle box actuating mechanism operatively connected to the connector, a pattern mechanism to give the lever a complete movement prior to the actuation of the shuttle box controlling mechanism by the connector, and means connected to the selector and actuated by a portion of the vibrating element, whereby the selector is given a complete movement before the movement of the shuttle box controlling mechanism is completed.

1,663,958. DISPLAY BOX. JOHN WESLEY SAUER, Lexington, Ky. Filed Jan. 26, 1927. Serial No. 163,705. 1 Claim. (Cl. 217—64.)

The combination with a cigar box having a bottom, side and end walls, each of the end walls being formed with a pair of openings adjacent the upper edge thereof and adjacent the front and rear sides of the box; of a false bottom loosely arranged within the box, and provided with an opening at each corner, a length of cord bent back upon itself intermediate its ends, the free ends of the cord extending upwardly through the openings at one end of the false bottom, and through the adjacent openings in the adjacent end wall of the box, the extremities of the cord being secured to said end of the box adjacent the rspective openings formed therein, the intermediate portions of the cord being disposed beneath the false bottom adjacent the respective side edges thereof, said cord extending upwardly through the opening in the opposite end of the false bottom and through the openings in the adjacent end wall of the box, and a pin fastener permanently carried by the bend in the cord for

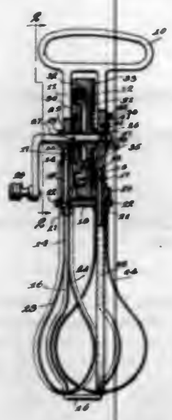


forcible engagement with the outside of the box for supporting the false bottom in any vertically adjusted position in the cigar box.

1,663,959. PREPARATION OF PHOTOGRAPHIC DEVELOPERS. PIERRE SCHESTAKOFF, Paris, France. Filed Apr. 29, 1925, Serial No. 26,804, and in Germany May 12, 1924. 4 Claims. (Cl. 95—88.)

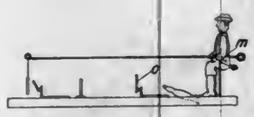
1. A photographic developer formed by mixing with substances constituting an ordinary developer, nitrous acid salts and sulphurous acid salts, substantially as described.

1,663,960. COMBINATION CHAIR AND STEPLADDER. EMANUEL W. SWEIGARD, San Diego, Calif. Filed Aug. 18, 1924. Serial No. 732,650. 5 Claims. (Cl. 155—42.)



1. In a device of the class described, a frame provided with a seat member intermediate its ends, a rear leg means pivotally connected to near the upper portion of said frame, means in connection with said frame and said rear leg means for variously pivotally connecting and locking the same relatively to each other, resilient rear leg positioning means in connection with said frame and said rear leg means for simultaneously engaging and disengaging both sides of said frame and said rear leg means from each other intermediate their ends, and another seat member pivotally connected to the front portion of said first mentioned seat member.

1,663,961. BEATING AND MIXING DEVICE. WILLIAM J. TAYLOR, Nenana, Territory of Alaska. Filed Jan. 6, 1925. Serial No. 853. 6 Claims. (Cl. 74—58.)

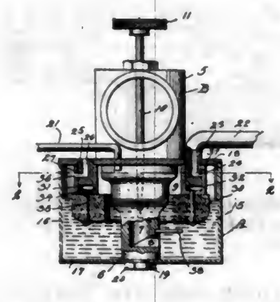


2. A device of the character described, comprising a main supporting frame, driven shafts carried by said frame, pinions arranged to rotate said driven shafts, a drive shaft rotatably and slidably supported by said frame, a gear fixed to said drive shaft and adapted to mesh with one of said pinions, a second gear loosely carried by said drive shaft and adapted to continuously mesh with both

of said pinions, and means for causing said second mentioned gear to turn with said shaft when said first mentioned gear is moved by the sliding of said drive shaft

and disengaged from the pinion the same is arranged to engage with for changing the speed of the agitating elements.

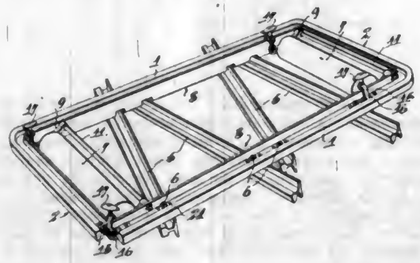
1,663,962. ANGLING GAME REQUIRING PATIENCE AND SKILL. WILLY ROBERT UHLIG, Dresden, Germany. Filed Apr. 26, 1927. Serial No. 186,770, and in Germany Dec. 30, 1926. 1 Claim. (Cl. 273—140.)



An angling game, comprising in combination a playing board, an angling rod, a supporting bow at one end of said board, a guide element shiftably mounted on said supporting bow and having a transverse bore for said angling rod, pins, toy figures with hooks and with barbed hooks mounted on said board inclined at different angles and to different sides, and a ring suspended at the end of the elastic angling rod and designed to be placed over a pin or hook to catch the same, the time used by a player for catching a predetermined number of pins or figures being measured, the game serving also as tremometer.

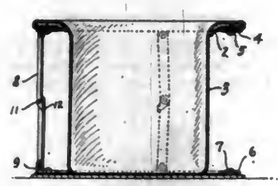
1,663,963. MAGNESIUM ALLOY AND METHOD OF MAKING SAME. WILLIAM R. VEAZEY, Cleveland Heights, Ohio, assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Dec. 8, 1924. Serial No. 754,464. 8 Claims. (Cl. 75—1.)

4. As a new product, an alloy consisting of magnesium and approximately fifteen (15) hundredths per cent of vanadium.



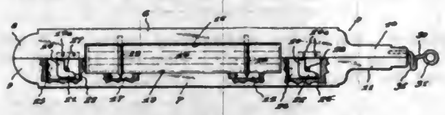
1,663,964. PUMP. CHARLES I. WILLIAMS, Utica, N. Y. Filed June 29, 1925. Serial No. 40,358. 4 Claims. (Cl. 158—36.1.)

1. In a device of the class described, the combination of a chamber having communication with a fuel supply pipe, a suction pipe and the atmosphere, the suction pipe extending into the upper end of the chamber and having a radially extending bore, the atmospherical communication including a stud extending into the upper end of the chamber having an axial bore communicating with the atmosphere and a radially extending bore communicating with the chamber, a float mounted within



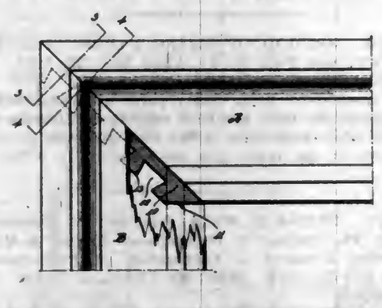
the chamber, and sleeve valves secured to the upper face of the float slidably receiving the stud and the part of the suction pipe extending into the chamber, the valves being provided with ports for communication at different times with the port in the stud and a port in said suction pipe.

1,663,965. ROAD DRAG. ANDREAS AIKELE, Moore, Idaho. Filed Apr. 16, 1926. Serial No. 102,584. 6 Claims. (Cl. 37—146.)



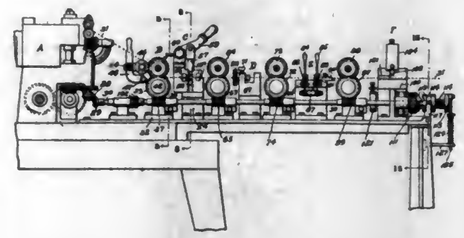
1. A road drag comprising a framing, drag bars secured to the framing with the edges thereof presented for engagement with the surface of the roadway, rollers for supporting the framing above the ground, and adjustable mounting means for mounting the rollers on the framing in a manner permitting adjustment of the height of the framing from the ground, said mounting means comprising a pivot rod associated with each roller and mounted on the frame, bearing members for each roller pivoted at one end to the respective pivot rod and providing rotatable bearing for the roller, and means for elevating and lowering the free ends of the bearing members to vary the position of the rollers relatively to the framing, said elevating means each comprising a screw bearing secured to the framing, an adjusting screw operable through the screw bearing and having a turning handle, and upper and lower abutment members secured on the lower end of the adjusting screw and adapted for engaging above and below the free end of the respective pivoted bearing member to raise and lower said free end accordingly as said adjusting screw is screwed up or down.

1,663,966. COLLAPSIBLE COMMODE. LUCY COTTON AMENT and CLARA HILFIKER, New York, N. Y. Filed July 22, 1927. Serial No. 207,754. 2 Claims. (Cl. 4—142.)



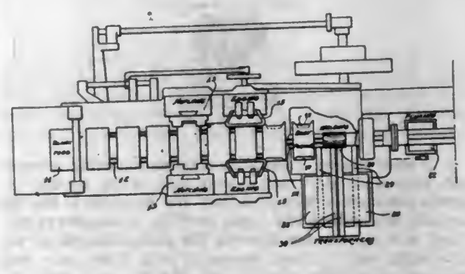
1. A device of the character described comprising a base, an upper rim, foldable supports connecting base and rim, a flexible body secured to and depending from the upper rim, said body having a bottom integral with its sides, a marginal flange on said body extending outwardly from the body bottom and in the same plane therewith, said flange being secured to said base.

1,663,967. FILE AND BINDER. ABRAHAM ASHKENAS, Brooklyn, N. Y. Filed Mar. 25, 1927. Serial No. 178,259. 3 Claims. (Cl. 129—23.)



1. A binder comprising two members of similar form, which when united define an opening for the reception of leaves, a hooked member carried by one of said members and a transverse pin disposed in the other of said similar members, said hooked member and pin being adapted to slidably engage with each other to secure said similar members in position.

1,663,968. INTERLOCKING ANGLE JOINT FOR DOOR AND WINDOW TRIMS. HARRY H. BECKANSTIN, Hartford, Conn. Filed May 29, 1926. Serial No. 112,706. 2 Claims. (Cl. 20—92.)

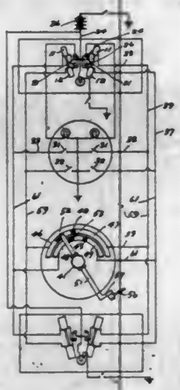


1. Trim for doors and windows comprising a head section, and a side section, said sections having their ends mitred for abutting relation to determine the angular relation between said sections, the mitred ends having abutting faces extending from the outer side of the trim to a depth substantially equal to one-half of the thickness of the sections, one of said sections having an extension at its inner side and the other section having a recess at its inner side for receiving the extension, said sections having upon the extension and in the recess interlocking means extending throughout substantially the entire width of the abutting faces of the sections.

1,663,969. WIRE STRAIGHTENING AND CUTTING MACHINE. WILLIAM E. BOWLER, Niagara Falls, N. Y., assignor to The Spirella Company, Meadville, Pa., a Corporation of Pennsylvania. Filed June 17, 1925. Serial No. 37,731. 8 Claims. (Cl. 140—71.)

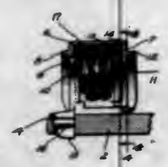
1. Wire fabricating mechanism, comprising in combination mechanism for bending wire into successive oppositely disposed overlapping loops, straightening mechanism for uncoiling, flattening, untwisting, and removing edgewise bends from the fabric so formed, mechanism for severing the fabric into lengths, and driving mechanism organized to actuate all of said mechanisms simultaneously, synchronously and automatically.

1,663,970. MEANS FOR THE ELECTRIC WELDING OF CAN BODIES. JULIUS BRENZINGER, Fairfield, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed July 1, 1925. Serial No. 40,731. 2 Claims. (Cl. 219—4.)



1. An electric welding device including: a support for the interior of a can body, and a transformer consisting of a primary composed of two coils and a secondary comprising two members extending through the coils to engage one side of the exterior of the body on the support and a third member connected to the other two and extending outside of the coils to engage the other side of the exterior of the body on the support.

1,663,971. DIRECTION INDICATOR. JOHN D. BROWER, Jr., Piedmont, Calif. Filed May 31, 1921. Serial No. 473,603. 4 Claims. (Cl. 177—337.)

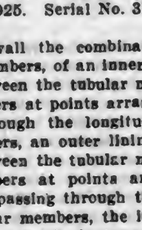


1. In a device of the character described, two indicating signals, two circuits associated with each signal having means incorporated therein for positively actuating the signal in oposite senses and each signal having means associated therewith for opening its actuating circuit and closing the other circuit when rendered active, a switch for controlling the signals comprising a base having two parallel conducting contact ways each way being intercepted subatantially intermediate its ends by a relatively short length of insulation, thereby dividing each way into two electrically separate segments, two electrically integral grounding contact fingers, one for each way, means

for mounting the fingers for sliding movement one respectively over each way and for selectively contacting the respective ways singly when the mounting means is

moved in one or the other of two opposite senses, a conductor between each of said segments and one of the signal circuits, and other conductor means for completing the electrical circuits of the system.

1,663,972. SHOE CLEANER. CHARLES BRUDERLEIN, New York, N. Y. Filed Mar. 10, 1927. Serial No. 174,340. 3 Claims. (Cl. 15—112.)



1. A shoe cleaner comprising a frame including integral and removable side walls, said side walls having inwardly extending flanges, means for connecting the removable side wall to the frame whereby a chamber is provided with an opening between the facing flanges of the side walls, and a brush having a back fitted into said chamber, said back resting on said flanges while the bristles of the brush extend through the opening between the flanges.

1,663,973. WEIGHING SCALE. FRANK H. CHAPMAN, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 5, 1925. Serial No. 60,385. 3 Claims. (Cl. 116—129.)

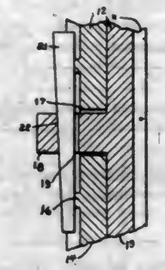
2. In a device of the class described, in combination, a chart comprising a sheet of material formed into a cylinder, supporting spiders secured to said cylinder, and means for reinforcing said chart including a plurality of rings interposed between the spiders in said cylinder, said reinforcing rings having annular flanges to increase the strength and rigidity thereof.

1,663,974. RAIL-FASTENING CONSTRUCTION. WILLIAM COOK, Fort Madison, Iowa. Filed Aug. 29, 1927. Serial No. 216,266. 2 Claims. (Cl. 238—377.)

1. A method of securing a rail to a base member comprising forming a recess in said base member, inserting a fastener into said recess in position to hold the rail on said base member, and pouring a moldable material into said recess around said fastener whereby when the said material hardens it will hold the fastener in the recess.

1,663,975. WHEELED MASSAGING DEVICE. TANOUS H. DAVID, Sacramento, Calif. Filed May 10, 1926. Serial No. 108,128. 2 Claims. (Cl. 128—57.)

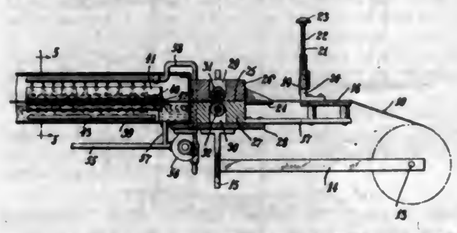
1. A chiropractic treatment device comprising spine engaging wheels of substantial width, leg members to which said wheels are secured, straps joining said leg members, and an adjusting member connecting said straps whereby the transverse distance separating said wheels may be adjusted.



1,663,976. METHOD OF SIZING PAPER. JUDSON A. DE CEW, New York, N. Y. Filed Sept. 22, 1926. Serial No. 137,167. 6 Claims. (Cl. 92—21.)

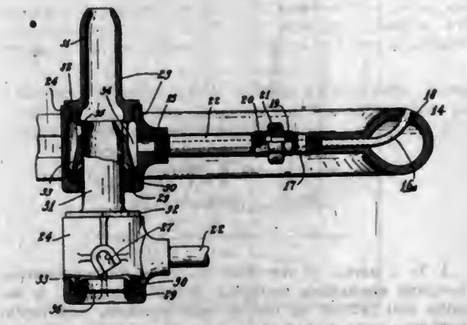
1. A method of sizing paper pulp, which consists in precipitating the rosin size with sulphate of alumina that has been made basic after it has been dissolved in water and before it can react with the size.

1,663,977. FURNACE WALL. ROBERT A. FORESMAN, Moore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 22, 1925. Serial No. 32,111. 1 Claim. (Cl. 110—1.)



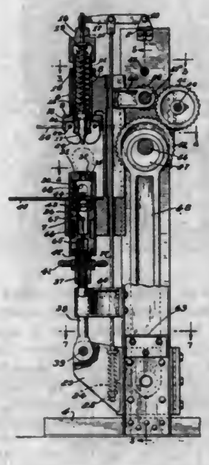
In a furnace wall the combination with a pair of spaced tubular members, of an inner lining member bridging the space between the tubular members and engaging the tubular members at points arranged at one side of a plane passing through the longitudinal center lines of the tubular members, an outer lining member also bridging the space between the tubular members and engaging the tubular members at points arranged at the other side of the plane passing through the longitudinal center lines of the tubular members, the inner and outer lining members being arranged in juxtaposed position with each other, said outer lining member being provided with an aperture, raised portions on said outer member arranged

at opposite sides of the aperture, a projection on said inner member extending through and beyond the aperture in the outer member and having a transverse aper-



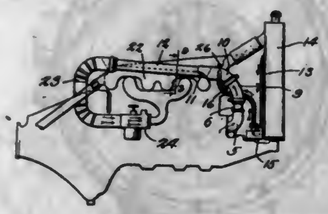
ture in the portion thereof extending beyond the outer member, and a locking member extending through the aperture in the projection and engaging the raised portions of the outer member.

1,663,978. MATCH-SPLINT MACHINE. SAMUEL M. FRIEDE, New York, N. Y., and CHARLES HAKEMEYER, Paterson, N. J., assignors, by mesne assignments, to American Safety Match Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 15, 1926. Serial No. 81,479. 19 Claims. (Cl. 144—50.)



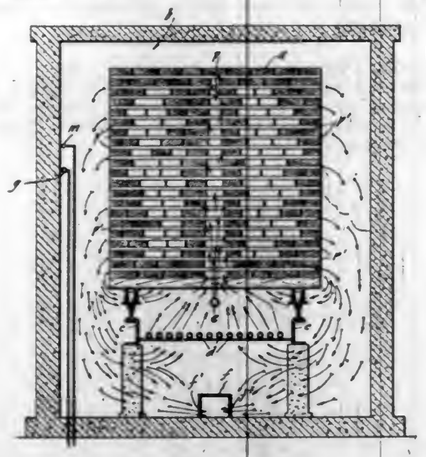
1. A machine for cutting wood veneers into match splints, comprising an impregnating bath, means for guiding the stock through the bath at an angle which will prevent breaking the stock, a drier for drying the veneer stock in the strip, a cutter for cutting the stock transversely into individual match splints, a magazine to receive the splints direct from the cutter, and means for feeding the stock uninterruptedly through and to the aforesaid elements.

1,663,979. VULCANIZING APPARATUS. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 19, 1922. Serial No. 582,956. 18 Claims. (Cl. 18—17.)



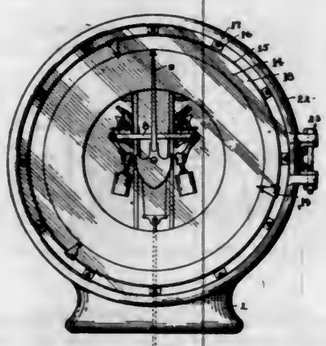
2. An apparatus including press members for subjecting molds to treatment in combination with, means for supplying fluid to the interior of the molds, including a header composed of sections having inter-fitting seats and guiding devices on their extremities, means associated with the press members for coupling by their operation the sections of the header together, and branch connections between the sections and the molds whereby articles within the molds may be subjected to internal fluid pressure.

1,663,980. NUT-CRACKING MACHINE. WILLIAM E. GIESECKE, New York, N. Y., assignor to Charles T. Wilson Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 3, 1927. Serial No. 172,422. 12 Claims. (Cl. 146—10.)



1. In a machine of the class described, a pair of jaws mounted for relative movement toward and from each other, one of said jaws having a resiliently mounter core cutter of substantially cylindrical shape to partially segregate from the remainder of the nut a central column.

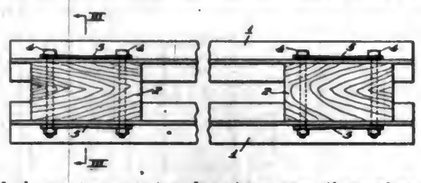
1,663,981. AUTOMATIC OILER. CHARLES F. GOFORTH, Lemoore, Calif. Filed Oct. 26, 1926. Serial No. 144,339. 1 Claim. (Cl. 123—119.)



In combination with the radiator and breather pipe of an internal combustion engine, a pipe communicating with the breather pipe to carry off gases therefrom, a heating pipe adapted to be positioned over the exhaust pipe of an internal combustion engine and having a passageway heated by the heat from the exhaust pipe, a tank communicating with the radiator to receive water therefrom, a pipe leading from the tank and extending into the pipe leading from the breather pipe and having a threaded extremity a valve member having a slotted lower portion fitted in the pipe and adapted to be adjusted to vary the length of the slotted portion to regulate the quantity of vapors passing from the tank to the pipe, and means for establishing communication between the heating pipe and carburetor of the engine.

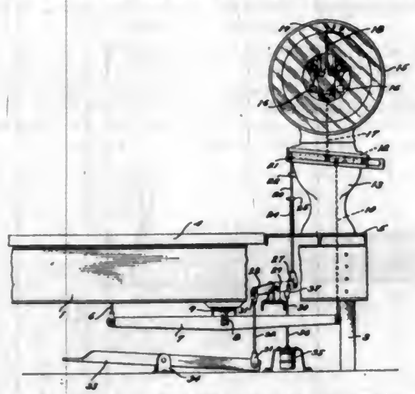
1,663,982. METHOD AND MEANS FOR ECONOMICALLY DRYING BY AIR CIRCULATION. OLIVER P. M. GOSS, Seattle, Wash., and RALPH H. RAWSON, Portland, Oreg. Filed Sept. 16, 1926. Serial No. 135,834. 6 Claims. (Cl. 34—46.)

1. In the method of drying lumber, piled as described to form a blind flue therein, the air under the bottom of the lumber pile being heated, and a spray of steam injected directly into said flue to induce the heated air to rise therein and spread laterally therefrom, the improvement consisting in removing by mechanically induced suction a portion of the air settling at the bottom of the kiln, relatively to a predetermined condition of relative humidity within the kiln.



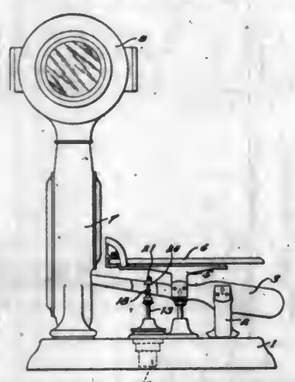
1,663,983. PREDETERMINED-WEIGHT SCALE. CLARENCE H. HAPGOOD, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Feb. 25, 1920. Serial No. 361,173. 5 Claims. (Cl. 116—129.)

2. In a predetermined weight scale, in combination, a dial, an index co-operating therewith, an annulus secured on said dial, and a plurality of distinctively marked indicators on said annulus, said mounting means being so arranged that said indicators are adjustable and detachable.



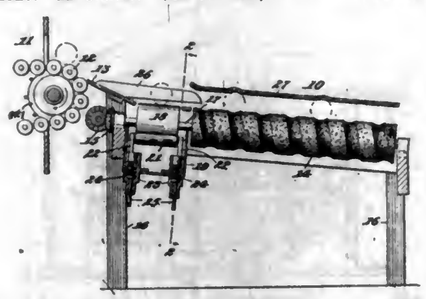
1,663,984. RAILROAD TIE. BRODERICK HASKELL, Franklin, Pa. Filed June 16, 1927. Serial No. 199,188. 5 Claims. (Cl. 238—58.)

1. A railway tie comprising a pair of spaced metal sections each having a vertically disposed web and a flange base, rail-supporting blocks of wood arranged between the webs of said sections, clamps for attaching said blocks to said sections, and resilient means acting upon



said clamps to prevent undue stress upon them when the blocks expand and to maintain the blocks firmly clamped between the sections when the blocks contact.

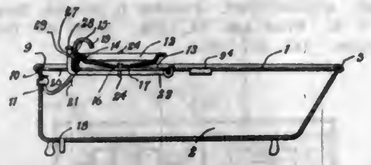
1,663,985. WEIGHING SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Jan. 24, 1927. Serial No. 163,031. 6 Claims. (Cl. 265—72.)



1. In a device of the class described, in combination, weighing mechanism including a lever, and locking means for said lever including a dash pot.

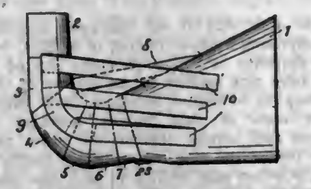
1,663,986. WEIGHING SCALE. SAMUEL N. HURT, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Apr. 2, 1926. Serial No. 99,262. 6 Claims. (Cl. 265—39.)

1. In a device of the class described, in combination, weighing mechanism including movable members, a metallic ball carried by one of said members, and means including a U-shaped element carried by the other of said members and fixedly engaging said ball to form a flexible joint between said members.



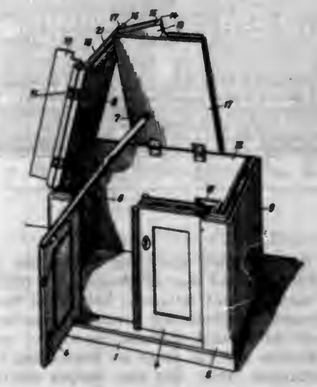
1,663,987. APPARATUS FOR COATING ARTICLES. CHARLES MURDOCK JAMIESON, Winter Haven, Fla., assignor, by mesne assignments, to Brogdex Company, Winter Haven, Fla., a Corporation of Florida. Filed Feb. 14, 1922, Serial No. 536,553. Renewed Aug. 20, 1927. 12 Claims. (Cl. 91—41.)

5. Coating apparatus for fruit or like articles comprising in combination, means for applying coating material including elements presenting surfaces adapted to receive a spread of the coating material and means for spreading said material thereon, said elements being arranged to present said surfaces in juxtaposition to engage the articles to be coated at points spaced circumferentially thereof, means for projecting the articles to be coated in a rolling movement along said surfaces, said elements being movable to vary the axes of rotation of said articles in said rolling movement along said surfaces, means to move said elements, and means arranged to receive said articles from said surfaces and operative to distribute adhering coating material thereover.



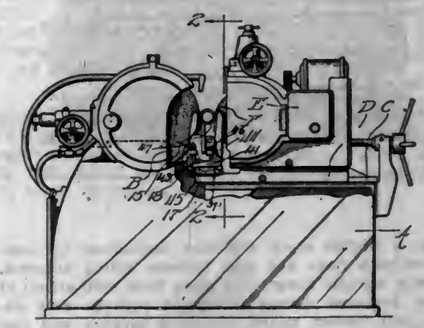
10. Coating apparatus comprising, in combination, composition-applying roll means, and rubbing or brushing means arranged to provide runway means receiving articles from said roll means.

1,663,988. TUB COVER. CARL S. JOHNSON, Butte, Mont. Filed Aug. 31, 1927. Serial No. 216,741. 6 Claims. (Cl. 4—4.)



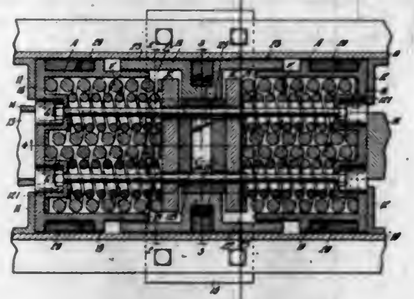
1. A tub cover comprising a body having marginal portions adapted to rest upon walls of a tub with the body in covering relation to the tub, a basin, resilient means yieldably supporting said basin in an elevated position above an opening in the body, means to move the basin downwardly against the action of said resilient means and releasably retain the basin in a depressed position, and means to conduct water from a tub faucet into said basin.

1,663,989. PHONOGRAPH SOUND AMPLIFIER. CHESTER ALFRED LINTON, Kansas City, Mo. Filed Nov. 16, 1920. Serial No. 424,347. 63 Claims. (Cl. 181—27.)



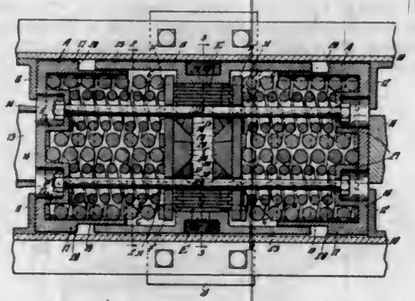
1. A phonograph sound amplifier comprising a restricted portion adapted to receive sound waves, a sounding-chamber portion connected to the restricted portion, the inner surface of the restricted portion and sounding-chamber portion having a varnish coating, and an asphaltum coating over the varnish coating.

1,663,990. CUPBOARD. ALBERT HERMANN FRANZ MAROHN, Hamburg, Germany. Filed Feb. 25, 1927, Serial No. 171,012, and in Germany Dec. 8, 1926. 1 Claim. (Cl. 312—144.)



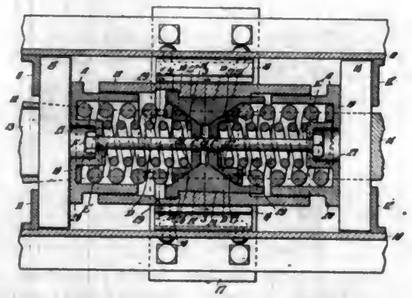
Folding cupboard, comprising in combination with a base plate, a lower part of the cupboard rigidly connected with said base plate, an upper part of the cupboard composed of several elements each of which is hingedly fixed on said lower part of the cupboard and adapted to be folded over into the lower part of the cupboard, a top plate, and means for securely connecting the elements of the upper part of the cupboard with said top plate when the upper part of the cupboard is in the position for use.

1,663,991. CENTERLESS WORK GUIDE. LESTER F. NENNINGER, Cincinnati, Ohio, assignor to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed May 31, 1927. Serial No. 195,409. 11 Claims. (Cl. 51—103.)



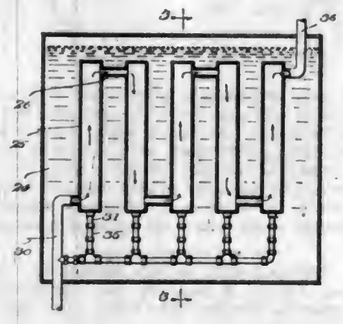
1. A work guide for a centerless grinder including a support, a work rest carried by the support, spaced rock shafts carried by the support, guide members rising from the shafts on opposite sides of the work rest, and means for rocking the shafts to vary the position of the guides with respect to the work rest.

1,663,992. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 21, 1924. Serial No. 727,108. Renewed Nov. 28, 1927. 5 Claims. (Cl. 213—24.)



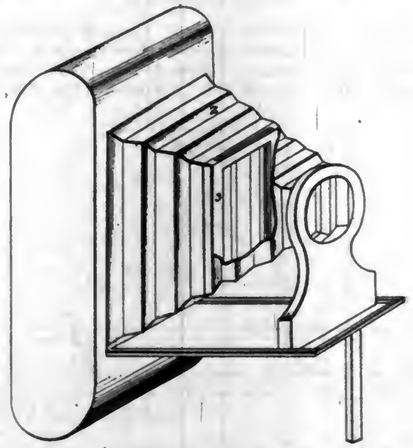
1. In a friction shock absorbing mechanism, the combination with front and rear followers; of a friction shell interposed between said followers, said shell having two sets of opposed, longitudinally arranged interior friction surfaces, one set of said surfaces converging rearwardly of the mechanism and the other set converging forwardly of said mechanism; front and rear wedges adapted to be actuated by the respective followers; front and rear pairs of wedge friction shoes, cooperating with the respective sets of friction surfaces of the shell; and front and rear spring resistance elements cooperating with the respective sets of friction shoes.

1,663,993. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 21, 1924, Serial No. 727,109. Renewed Nov. 28, 1927. 12 Claims. (Cl. 213—24.)



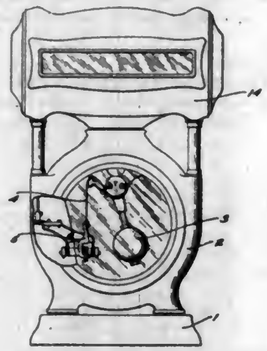
1. In a friction shock absorbing mechanism, the combination with front and rear follower acting elements, relatively movable toward and away from each other; of tandem arranged springs interposed between said elements, and friction means interposed between said tandem arranged springs, said means including two sets of relatively movable friction plates and pressure transmitting members interposed between each of said follower elements and one of said sets of plates, said sets of plates cooperating respectively with the tandem arranged springs during relative movement of said plates, whereby said plates are actuated upon relative movement of said follower elements to compress said springs.

1,663,994. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Oct. 1, 1924, Serial No. 740,933. Renewed Nov. 28, 1927. 9 Claims. (Cl. 213—24.)



1. In a friction shock absorbing mechanism, the combination with front and rear follower acting members, relatively movable toward and away from each other; of tandem arranged spring resistance elements interposed between said follower-acting members, a purality of longitudinally disposed, relatively movable friction shoes interposed between said springs, certain of said shoes cooperating with one of said follower-acting members to be moved thereby during the compression stroke, and the remaining shoes cooperating with the other follower-acting member to be moved thereby during said compression stroke; a friction shell having curved interior friction surfaces with which said shoes cooperate and means for pressing said shoes against said surfaces, said means including a pair of relatively movable lateral wedge pressure creating members adapted to be resisted by the respective spring resistance elements.

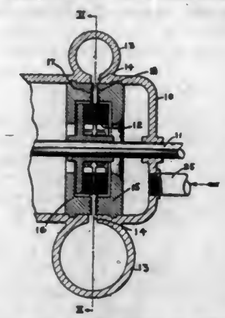
1,663,995. CONDENSER. FORREST L. BAYANT, Binghamton, N. Y. Filed Apr. 12, 1924. Serial No. 706,178. 2 Claims. (Cl. 257—42.)



1. In an apparatus of the character described, a separator comprising a tank adapted to be filled with cooling liquid, a plurality of hollow members located within the tank, an inlet pipe leading to the bottom of the first one of the plurality of hollow members, pipes connecting the successive ones of said hollow members alternately at the top and bottom thereof, an outlet pipe leading from the top of the last one of the plurality of hollow members, a return pipe leading to said inlet pipe and connected with the bottoms of the respective hollow members, and check valves interposed in said connections.

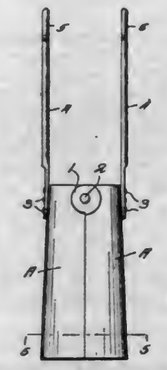
1,663,996. SHADER FOR CAMERAS AND IN THE ART OF REGULATING LOCALLY THE SHADING OF A PHOTOGRAPH. MARK W. COLLET, Philadelphia, Pa. Filed Feb. 4, 1919. Serial No. 275,020. 9 Claims. (Cl. 95—5.)

1. A shader for cameras, having an obstruction screen composed of transparent material with obstructions photographically formed thereon.



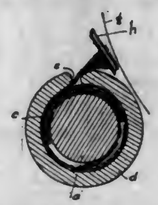
1,663,997. RACK-FOOT CONNECTION. CHASE C. REED, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed July 16, 1926. Serial No. 122,856. 5 Claims. (Cl. 265—37.)

1. In a device of the class described, in combination, a movable scale member, a rack foot, means for pivotally connecting said rack foot to said movable scale member, and substantially frictionless means for preventing shifting of said rack foot along its pivotal axis.



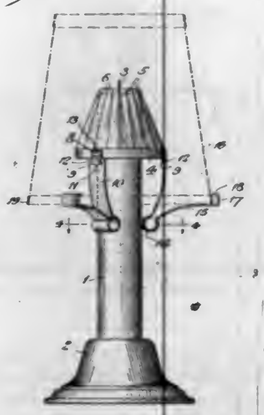
1,663,998. MEANS FOR MINIMIZING FLUID PULSATIONS. HENRY F. SCHMIDT, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 28, 1925. Serial No. 33,415. 6 Claims. (Cl. 103—103.)

1. The combination with a pump comprising a central revoluble multi-vane runner and a volute discharge chamber surrounding said runner, of a pair of fixed juxtaposed rings interposed between said runner and said chamber and defining therebetween an annular discharge port, the juxtaposed faces of said rings being provided with opposing annular flanges, the inwardly presented faces of which define a different angle with the axis of said runner than do the outwardly presented faces, whereby a plurality of successive annular discharge



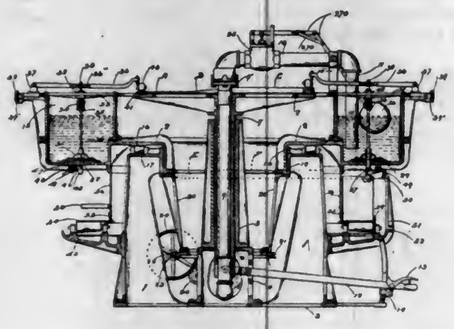
nozzles is formed, each of which has a different discharge coefficient in an outward direction than in an inward direction.

1,663,999. TOOL FOR BALLING AND REMOVING OF PLANTS. BENJAMIN HENRY SINGLETARY, Baton Rouge, La. Filed Aug. 26, 1927. Serial No. 215,698. 8 Claims. (Cl. 55—119.)



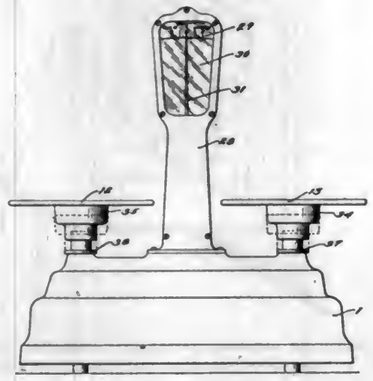
1. An implement of the class described for balling and removing plants comprising two substantially duplicate blades, means for connecting said blades for movement one with respect to the other, said blades when in closed position providing a substantially cylindrical body, one end portion of said body when the blades are in their substantially closed position being circular and the opposite end being elliptical.

1,664,000. PROCESS AND APPARATUS FOR WAVING THE HAIR. HENRI STEFFEN, Sierre, Switzerland, assignor to Emile Gissler, Aigle, Switzerland. Filed Jan. 13, 1927, Serial No. 160,893, and in Switzerland Jan. 23, 1926. 13 Claims. (Cl. 132—36.)



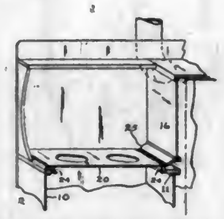
1. The process of semi-permanently undulating the hair which comprises winding a tress of hair on a cold element and applying heat to each turn of tress during said winding operation.

1,664,001. SHADE HOLDER FOR CANDLES. DOUGLAS MACCOLLUM STEWART, New York, N. Y. Filed Mar. 2, 1925. Serial No. 12,553. 7 Claims. (Cl. 240—141.)



1. A shade holder for candles, comprising an element engaging and descending with the upper burning end of the candle, a plurality of members connected to said element to depend therefrom, said members engaging with the candle body at spaced peripheral points of the latter and then extending outwardly to form supports for a shade, the portions of said members which engage the side of the candle body being inclined to planes tangent to the candle body at the points of contact and the inclination of all of said members corresponding in direction, whereby when any of said members engage protuberances upon the candle body, the said angle of inclination will serve during descent of the holder to cause a gradual rotation of the members and elements about the axis of the candle and free the members from the protuberances.

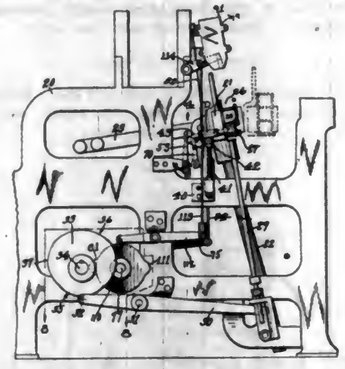
1,664,002. RECEPTACLE-FILLING MACHINE. CHARLES W. STONE, RALPH H. BUMBAUGH, and JOHN DAN, Los Angeles, Calif.; said Stone assignor to said Bumbaugh and said Dan. Filed Aug. 25, 1924. Serial No. 733,866. 11 Claims. (Cl. 226—96.)



1. In a machine for filling receptacles with fluids, the combination with a rotatable fluid containing reservoir having a plurality of outlets, and a receptacle supporting device movable with said reservoir, of valves to open and close said outlets, valve operating devices movable with said reservoir, a circular cam track for operating said valve operating devices, and a lever selectively operable to move said cam track into or out of engagement with said valve operating devices.

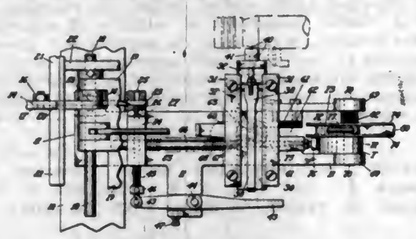
1,664,003. WEIGHING SCALE. CHARLES G. STRUBLER, Chicago, Ill., assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 28, 1925. Serial No. 58,965. 5 Claims. (Cl. 265—54.)

1. In a device of the class described, in combination, a frame, a lever fulcrumed upon said frame, platter supports pivotally supported upon each end of the lever, weight and load receiving platters mounted upon said supports, and means carried by said platter supports adjustable relatively thereto and engageable with said frame to lock said lever against relative movements.



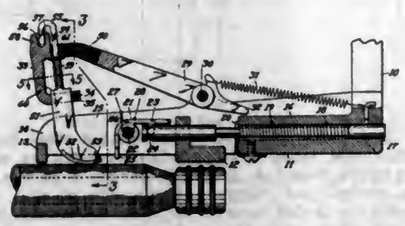
1,664,004. STOVE-TOP CONSTRUCTION. ALBERT H. TINNERMAN, Cleveland, Ohio. Filed Feb. 4, 1927. Serial No. 165,833. 6 Claims. (Cl. 126—214.)

1. In a stove, the combination with a grate frame, of a removable grille mounted thereon, and a solid top adapted to be interchangeably positioned with the grille upon the frame, said top having the plane of the upper surface thereof disposed above the plane of the upper surface of said frame, and having a gas passageway associated with one edge thereof.



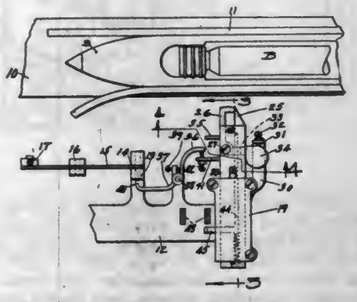
1,664,005. LOOM TO TRANSFER ON BACKWARD STROKE OF THE LAY. RICHARD GREENLEAF TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 28, 1925. Serial No. 65,438. 10 Claims. (Cl. 139—232.)

1. In a loom, a lay movable backwardly and forwardly therein, shifting shuttle boxes on the lay movable relatively to the lay when the latter is in its forward position and stationary with respect to the lay when the latter is in its rear position, said boxes accommodating a plurality of shuttles all but one of which are idle when



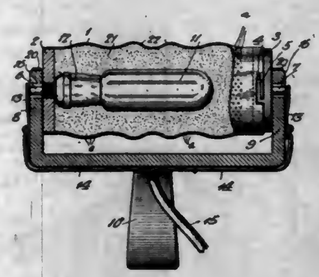
the lay is in backward position, and means to effect replenishment of weft into an idle shuttle while the lay is in its backward position.

1,664,006. FEELER MOVABLE TO DISTRIBUTE WEAR ON YARN. RICHARD GREENLEAF TURNER, Worcester, Mass., assignor to The Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 2, 1925. Serial No. 66,156. 18 Claims. (Cl. 139—269.)



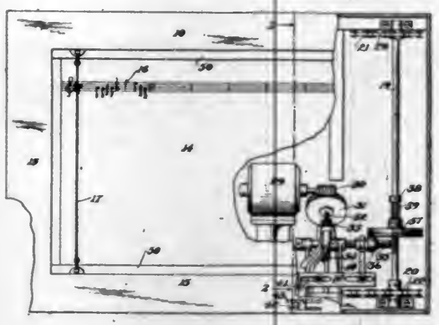
1. In a loom having a supply of weft, a detector to cooperate with the same, and means to give said detector a regular progressive movement in the direction of the length of the weft to present the same to different portions of the weft independently of the position of the weft relatively to the loom.

1,664,007. WEFT DETECTOR IN TRANSFERRER ARM. RICHARD GREENLEAF TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 14, 1926. Serial No. 154,804. 4 Claims. (Cl. 139—271.)



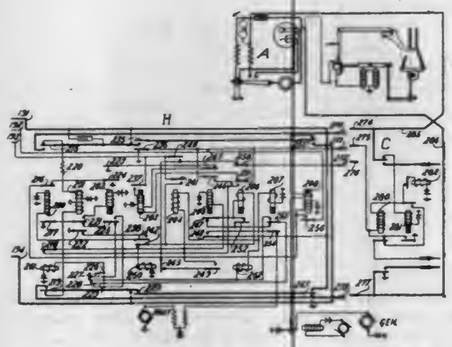
1. In weft detecting mechanism for a loom having a regularly moving transferrer arm, a carrier lever member pivoted to the transferrer, a detector member mounted on the carrier lever and moved by the latter toward the surface to be detected as the transferrer arm moves downwardly, and complementarily formed connections between the members, said connections including an open notch in one member into which a part of the other member extends.

1,664,008. NORMALLY STATIONARY INERTIA-ACTUATED WEFT DETECTOR. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 19, 1926. Serial No. 123,402. 5 Claims. (Cl. 139—286.)



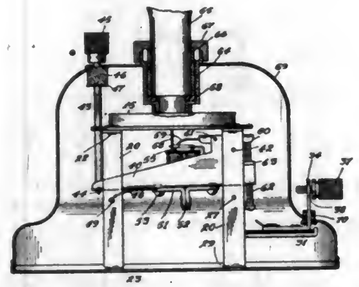
1. In a weft detector for a loom having a lay movable toward the detector and a surface to be detected, a movable support, a swinging detector, a pivoted connection between the detector and the support, said detector having a portion to engage the surface lying on one side of the pivoted connection, a weighted member movable in a horizontal plane and operatively connected to the swinging detector and having the center of gravity thereof located on that side of the pivoted connection opposite a portion of the surface to be detected, said weighted member being normally at rest and acting by reason of the latent energy stored therein to turn the swinging detector on the pivotal connection as the surface to be detected engages the aforesaid portion during the forward movement of the lay.

1,664,009. MEDICINAL ROLLER. JACOB H. WEBER, Brooklyn, N. Y. Filed May 14, 1925. Serial No. 30,189. 3 Claims. (Cl. 128—57.)



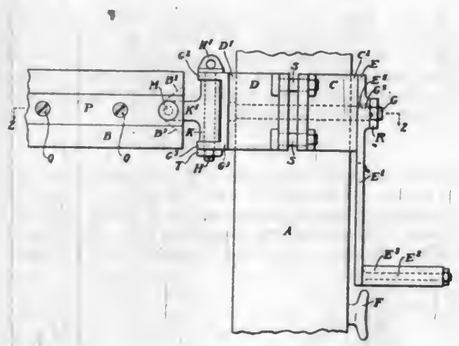
1. A therapeutic device comprising a handle having apertured forked arms, slots in said arms leading to said apertures, and a hollow perforated roller mounted within said arms including a base member, a cap, pins carried by said base and cap, an electric heating element extending into said roller supported by said base, contacts mounted on said arms contacting with said pins and electrical connections between said pins and said heating element.

1,664,010. MUSIC-TIME-COUNTING DEVICE. EDWARD HARVEY WELCH, Oakland, Calif. Filed Jan. 22, 1925. Serial No. 4,032. 6 Claims. (Cl. 84—484.)



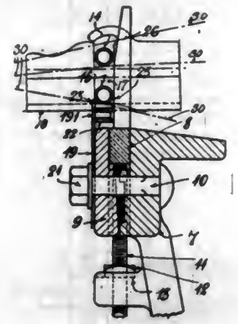
1. A music time counter comprising a music rack upon which music may be arranged with the staffs disposed longitudinally of the rack, a pair of continuous chains disposed one at each side of said music rack and parallel with the staffs on the music, indicating members extending between said chains over said rack and the music thereon whereby said indicating members will indicate the notes on each staff of the music on the rack, said indicating members being disposed at equally spaced distances apart, spring-pressed connections connecting the ends of the indicating members to the chains whereby the indicating members will be under tension and will not vibrate during the operation of the device, the connections at the opposite ends of said indicating members and the chains being spring-pressed in opposite directions, and means for operating said chains in unison at a desired rate of speed.

1,664,011. AUTOMATIC TELEPHONE SYSTEM. JOHN WICKS, Chicago, Ill., assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Original application filed July 6, 1921, Serial No. 482,765. Divided and this application filed Dec. 7, 1925. Serial No. 73,553. 11 Claims. (Cl. 179—27.)



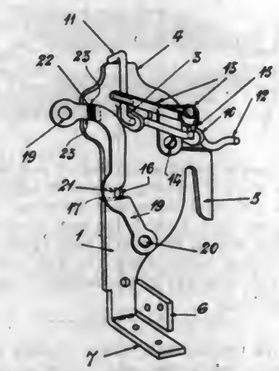
1. In a telephone system, a series of automatic switches and interconnecting trunk lines for extending a talking connection to a called line, one of said switches being a final connector switch, a controlling line relay in said connector in bridge of the associated trunk line, means for automatically reversing the line conductors of said trunk line when the connection to the called line is completed, and means responsive to said reversal for disconnecting said line relay.

1,664,012. LOUD-SPEAKING RECEIVER. SAMUEL E. WITT, Chicago, Ill. Filed Aug. 12, 1924. Serial No. 731,608. 8 Claims. (Cl. 179—108.)



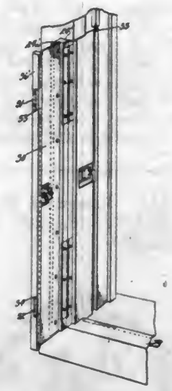
1. In a receiver, a diaphragm and mounting therefor, an electromagnet and an armature therefor connected to the diaphragm, a spring yieldingly holding the armature under tension, means for adjusting the spring tension independent of variation of adjustment of the armature, a frame for the electromagnet pivotally supported at one end by said mounting, and means for adjusting the mounting on its pivot to move the electromagnet to vary the air gap between the armature and electromagnet.

1,664,013. HAND-REEFING BOOM. CIPRIANO ANDRADE, Jr., New York, N. Y. Filed Oct. 5, 1927. Serial No. 224,049. 2 Claims. (Cl. 114—106.)



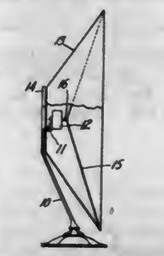
1. In a hand reefing boom; a mast; a shaft located through said mast, said shaft being adapted to rotate said reefing boom; a gooseneck having a surface flat both vertical and sideway on the side of said mast opposite the reefing boom; a flat element fastened direct to said shaft, said flat element being also rotatable directly against said flat surface of the gooseneck; and a hand holder integral with and in alignment with said flat element.

1,664,014. NEEDLE-GUIDING DEVICE FOR LOOMS FOR WEAVING PILE OR OTHER FABRICS. FREDERICK WILLIAM AUSTIN, Oldham, England. Filed Mar. 27, 1925, Serial No. 18,710, and in Great Britain Mar. 28, 1924. 7 Claims. (Cl. 139—21.)



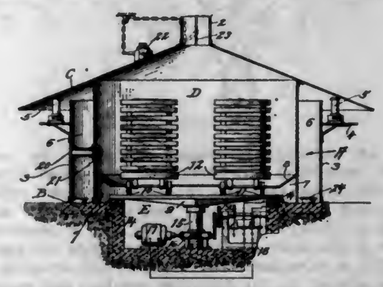
1. In a loom of the kind described provided with two needles one above the other for projection together, guiding means secured on the lathe to move with such lathe and the slay and extending close to the slay across the breadth of the warp space of the loom and presenting upwardly parts for presentation by the lathe below the path of the lower needle for the guidance and support thereof.

1,664,015. TUBE FRAME FOR HOLDING SPOOLS OF TUFT YARN. FREDERICK WILLIAM AUSTIN, Oldham, England. Filed May 15, 1925, Serial No. 30,644, and in Great Britain May 14, 1924. 9 Claims. (Cl. 139—10.)



1. In a tube frame of the character described, end plates each characterized by being formed mainly as a plate of metal which presents a plane outer surface directed outwardly away from a spool in the tube frame and presents in its general plane a part for insertion between the side plates of a link of a carrying chain and also presents in its general plane and at the rear edge thereof, a hook-like projection for engagement with a holder for moving it to and from and holding it while away from a carrying chain.

1,664,016. WINDOW. STEPHEN BALLNER, Chicago, Ill. Filed Sept. 18, 1926. Serial No. 136,290. 6 Claims. (Cl. 20—12.)



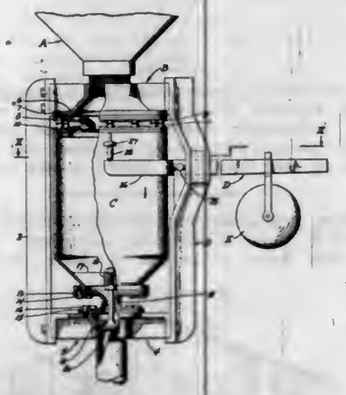
1. A window, including a frame, sashes fitted for vertical reciprocation therein, and a single means pivotally secured to said frame for permitting complete and simultaneous removal of said sash from said frame.

1,664,017. LOUD-SPEAKING DEVICE. JOHN C. BENJAMIN, Bronxville, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 4, 1924. Serial No. 747,735. 6 Claims. (Cl. 181—31.)

1. An acoustic device comprising a plurality of coaxially arranged diaphragms one disposed within another, peripherally secured together and arranged to provide therebetween an air chamber, and actuating means for said diaphragms located in said chamber.

1,664,018. PROCESSING AND DEHYDRATING APPARATUS. LOUIS H. BIEN, Palo Alto, Calif. Filed Nov. 4, 1926. Serial No. 146,085. 4 Claims. (Cl. 34—32.)

1. An apparatus of the character described, comprising a substantially cylindrical-shaped vertically disposed wall, a roof section, supported thereby and extending a

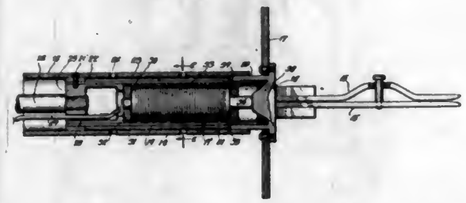


considerable distance over the vertical wall, a second vertical wall interspaced with relation to the first wall and forming an air inlet passage, a plurality of heaters supported with relation to the upper end of said inlet passage, said heaters being covered by the roof section and said roof sections slanting to direct heat into the upper end of the passage, means for directing air from the lower end of said passage into the housing, a stack connected with the roof and forming an outlet for the heated air, means in the stack for maintaining a predetermined temperature within the housing.

1,664,019. TRELLIS. JOSEPHINE W. BLACKMAN, New Haven, Conn. Filed Mar. 18, 1927. Serial No. 176,389. 1 Claim. (Cl. 47—47.)

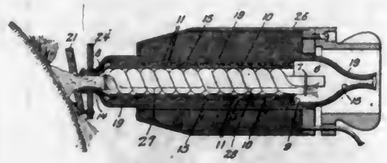
The combination with a trellis, comprising a ring and a stem integral therewith, of a vase secured within the ring at the junction of the ring with the stem.

1,664,020. AUTOMATIC DISCHARGE VALVE. WILLIAM A. BRADLEY, deceased, San Francisco, Calif., by Irvin S. Thyle, administrator, San Francisco, Calif. Filed Sept. 8, 1925. Serial No. 54,892. 4 Claims. (Cl. 210—54.)



1. An automatic discharge mechanism for settling tanks, comprising a discharge member spaced from and disposed below the tank, a bowl below the tank and interposed between the tank and the discharge member so that settling matter from the tank is permitted to settle in the bowl and later discharge into the discharge member, a valve carried by the bowl and normally forming a closure for the discharge member, and means for permitting vertical movement of the valve and the bowl when a predetermined amount of matter has settled therein to permit discharge of settling matter.

1,664,021. PROCESS OF MANUFACTURING TETRAETHYL LEAD. WILLIAM S. CALCOTT, Penns Grove, ALFRED E. FARMELEE, Carneys Point, and FREDERICK B. LORRIMAN, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 3, 1926. Serial No. 146,063. 8 Claims. (Cl. 260—11.)

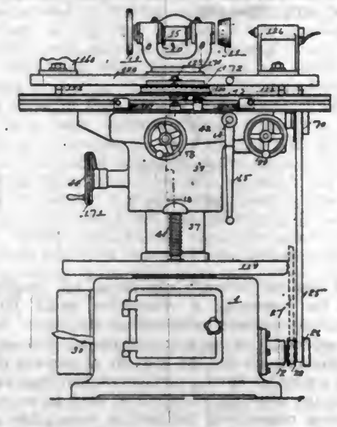


1. The process of producing tetra-ethyl lead which comprises treating lead, intimately associated with sodium and potassium, with ethyl chloride.

1,664,022. ELECTRIC WELDING APPARATUS. ALEXANDER CHURCHWARD, New York, N. Y., assignor to Wilson Welder & Metals Company, Inc., Hoboken, N. J., a Corporation of New York. Filed Feb. 17, 1927. Serial No. 168,939. 5 Claims. (Cl. 219—8.)

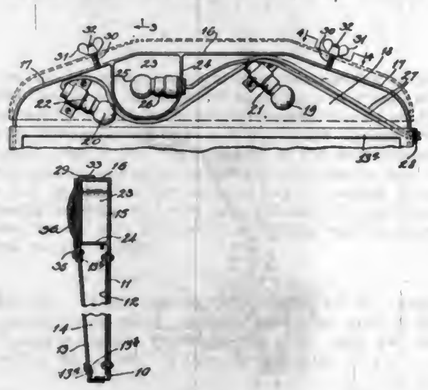
1. For use in electric welding, a combined electrode holder and shunt field resistance comprising a handle portion, a resistance element housed therein, means manually operable from the exterior of said handle portion for varying the resistance of said resistance element, and means for holding an electrode.

1,664,023. PROCESS OF AND MEANS FOR PERMANENTLY WAVING HAIR. EDWARD COULSON, Los Angeles, Calif. Filed Feb. 26, 1926. Serial No. 90,729. 19 Claims. (Cl. 132—36.2.)



1. In the herein described process of permanently waving hair, the steps of winding a tress of hair on a curler, saturating a pad, applying a hair softening agent externally to the wet pad, placing the pad carrying the hair softening agent around the wound hair, applying vapor or moisture confining means about the pad, and then subjecting the hair and pad to the action of heat, for the purpose specified.

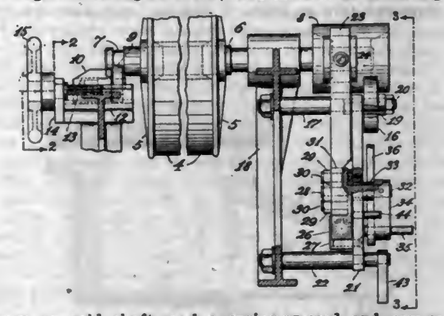
1,664,024. GRINDING MACHINE. JACOB DE KONING, Grand Rapids, Mich., assignor to Gallmeyer and Livingston Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Aug. 20, 1924. Serial No. 733,059. 2 Claims. (Cl. 51—166.)



1. In a machine of the character described: a hollow column; a tool rotatably mounted on the column and having an operating pulley; a rotatable driving element having a pulley below the first-mentioned pulley; a sleeve turnably mounted around the column; a knee having a vertical movement on the sleeve; a table having a movement on the knee toward and away from the column; a work-supporting carrier having a movement on the table transverse to the table's movement and having a rack; a shaft rotatably mounted on the table and carrying a

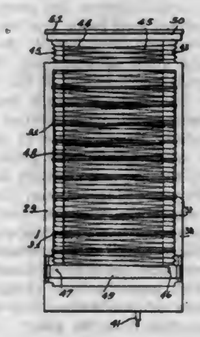
gear meshing with the rack and having a sprocket wheel and a crank at one side of the machine; a shaft rotatably mounted on the table parallelly with the first-mentioned

shaft and having a sprocket wheel and a crank on the opposite side of the machine; a chain on the sprocket wheels; a belt carried by said pulleys and extending in the hollow column.



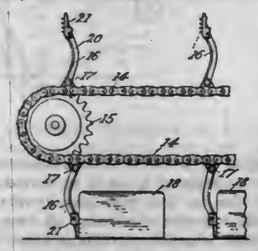
1,664,025. LICENSE-PLATE HOLDER. ERNEST L. ETHERIDGE, Brooklyn, N. Y. Filed Jan. 2, 1926. Serial No. 78,793. 6 Claims. (Cl. 40—132.)

1. A license plate holder comprising a narrow box-shaped casing, means for supporting the license plate in said casing, a chamber in said casing and extending into the top portion thereof, said chamber at the top of the casing opening outwardly through the front wall thereof, a cover plate for closing said opening at the top of the casing, stop light and tail light lenses in said cover plate, means for supporting independent electric bulbs in said chamber in alinement with said lenses, means encircling one of said bulbs mounted in said chamber to direct the light outwardly through the lenses registering therewith, and not into said chamber.



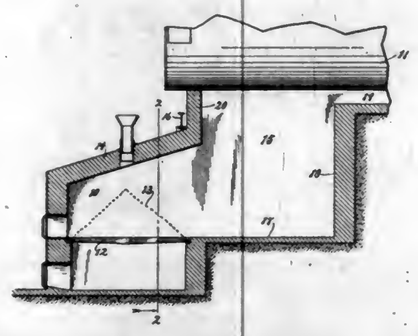
1,664,026. PAPER-FEED CONTROL. FRED FARMER, Brooklyn, N. Y., assignor to American Machine and Foundry Company, a Corporation of New Jersey. Filed July 31, 1926. Serial No. 126,188. 4 Claims. (Cl. 242—68.)

3. The combination with a shaft for supporting a reel of paper, of means for permitting free rotation and effecting axial adjustment of said reel during paper feeding intervals, and mechanism for preventing shaft rotation during non-feeding intervals, said mechanism including a



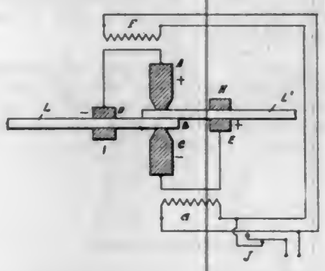
drum on said shaft, and a spring-pressed and cam-controlled braking device engaging said drum during non-feeding intervals only.

1,664,027. ELECTRIC FLYTRAP. DOMINIK FILLIER, Vienna, Austria. Filed Jan. 6, 1925, Serial No. 771. and in Austria Aug. 4, 1924. 13 Claims. (Cl. 43—112.)



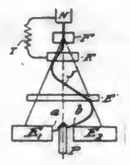
1. In an electric insect trap, the combination with a source of electric current, of an insulating frame, two conducting wires wound on said frame, and a protecting frame adapted to receive said insulating frame, means on said protecting frame for establishing an electric connection between each of said conducting wires wound upon said insulating frame and one of the poles of said source of current respectively upon said insulating frame being completely inserted in said protecting frame, the circuit between said conducting wires being closed by an insect when touching two wires.

1,664,028. MARKING DEVICE FOR WRAPPING MACHINES. MAX E. FOERNSLER, Richmond Hill, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Apr. 26, 1927. Serial No. 186,631. 6 Claims. (Cl. 101—8.)



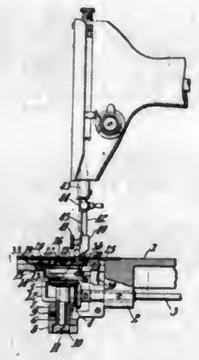
1. The combination with means for moving a wrapped article in a wrapping machine, of means carried by said moving means for marking the wrappers of said articles during the moving operation.

1,664,029. FURNACE. WILLIAM A. GILCHRIST, New York, N. Y. Filed July 8, 1919, Serial No. 309,340. Renewed July 2, 1923. 9 Claims. (Cl. 110—7.)



2. In a furnace, in combination, a grate, a masonry arch sloping upwardly at a substantial angle from its forward end and extending over the grate, the said arch constituting an inclined roof for a fire box chamber which is open at its rear end throughout the width of the grate and arch and from substantially the level of the rear end of the grate to the level of the rear end of the arch, an upright transverse masonry heat storage and reflecting wall extending from the level of the rear end of the grate substantially to the plane of the arch but located beyond the rear ends of the grate and arch and facing directly into the fire box chamber and an upwardly facing masonry floor extendng between the grate and the said upright wall substantially at the level of the rear end of the grate and constituting with the said upright wall the floor and end respectively of a combustion chamber adjoining the fire box and opening upwardly between the rear end of the arch and the said upright wall for the delivery of products of combustion and direct radiation of heat to a steam boiler or the like.

1,664,030. METHOD OF AND APPARATUS FOR ELECTRIC-RESISTANCE WELDING. JAMES HARVEY GRAVELL, Elkins Park, Pa. Filed Mar. 23, 1926. Serial No. 96,684. 14 Claims. (Cl. 219—4.)



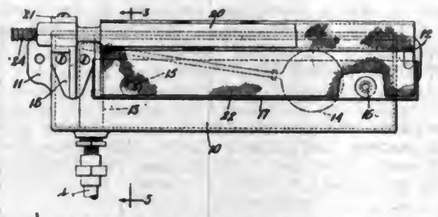
14. The method of electric heating consisting in pinching the section or point of work to be heated between two pressure electrodes in line with one another and forming respectively opposite electrodes of two separate or independent work current circuits whose currents are passed through the work in the same line or path, each said electrode carrying the current of one circuit only and having its circuit completed through the work to the place of heating independently of the other electrode.

1,664,031. ELECTRIC JET-WAVE COMMUTATOR AND INTERRUPTER. JULIUS FREDERIK GEORG POUL HARTMANN, Copenhagen, Denmark. Filed Feb. 25, 1926, Serial No. 90,469, and in Great Britain Mar. 25, 1925. 6 Claims. (Cl. 175—363.)

6. In an electric jet-wave apparatus, the combination of means for producing a conductive liquid jet-wave, main electrode members cooperating therewith for the alternate collection of current therefrom, and an auxiliary electrode means for the delivery of current thereto, comprising a member having surfaces cooperating with the jet-wave in the plane of vibration of said jet-wave, said surfaces being respectively inclined to each other and to the line of propagation of the liquid particles of said wave.

1,664,032. REVOLVING-HOOK MACHINE. MARTIN HEMLEB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 1, 1926. Serial No. 91,320. 4 Claims. (Cl. 112—184.)

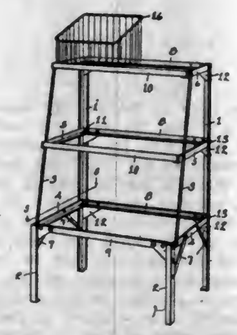
1. In a sewing machine, in combination with a cup-shaped rotary hook and a thread-case with a bearing flange having one of two substantially parallel faces in external engagement with the rim of said hook and the other of said faces exposed beyond said hook, of a stationary holder overlying a portion of said exposed face of the bearing flange and having rotation-restraining engagement with said thread-case, and a locking plate overlying another portion of said exposed face of the bearing flange and manually retractible to uncover said bearing flange for permitting ready removal of the thread-case.



1,664,033. STENCIL SHEET. SHINJIRO HORII, Tokyo, Japan. Filed Mar. 10, 1927. Serial No. 174,415. 4 Claims. (Cl. 41—38.6.)

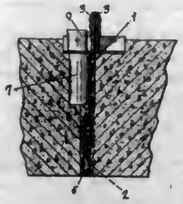
1. A stencil sheet adapted for stencilizing by pressure, consisting of a base of fibrous material impregnated with a coating material including esters of polysaccharides and fatty acid of tsubaki oil.

1,664,034. PROCESS OF COATING MANUFACTURED PRODUCTS. ARTHUR W. HUSEMAN and THOMAS A. LEONARD, Chicago, Ill. Filed June 19, 1922. Serial No. 569,429. 1 Claim. (Cl. 41—29.)



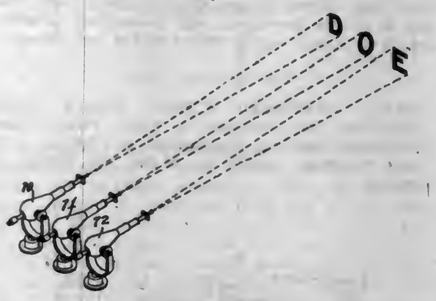
The process of coating metal, parts of which must be machined, so that the portion of the coating from the machined parts may be easily removed, which consists in first machining the parts to be machined and then applying a coating of gelatinous, proteic substance in a liquid form to the portions of the surface of the metal that have been machined from which the permanent coating is to be removed, then coating with the permanent enamel in a liquid form the entire surface to be coated, including the machined surface on which the gelatinous, proteic substance is placed, then heating the metal and coating, until the gelatinous, proteic substance forms a white, bubbly mass thicker than the enamel coating at the points free from the gelatinous, proteic substance, and then brushing the bubbly mass from the surface of the metal so as to leave it exposed.

1,664,035. HYGROMETER APPARATUS. EMIL AUGUST ILEMAN, Queens, N. Y., assignor to American Schaeffer and Budenberg Corporation, a Corporation of New York. Filed Feb. 10, 1925. Serial No. 8,161. 5 Claims. (Cl. 73—24.)



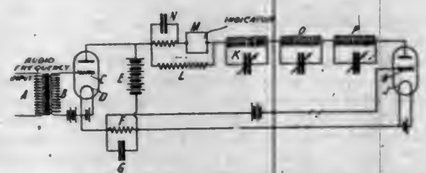
1. In a hygrometer apparatus, means forming an elongated horizontal chamber for receiving a wet bulb wick, the upper horizontal side of said chamber having an elongated horizontal opening and the width thereof being slightly greater than the thickness of the wick extending therethrough, means for supporting an elongated wet bulb so that it substantially overlies and is parallel to said opening whereby the wick may substantially completely cover the wet bulb, and means permitting liquid to be supplied to said chamber.

1,664,036. DISPLAY RACK. CHARLES H. JARVIS, Battle Creek, Mich., assignor to United Steel & Wire Company, Battle Creek, Mich. Filed Mar. 14, 1925. Serial No. 15,601. 4 Claims. (Cl. 211—71.)



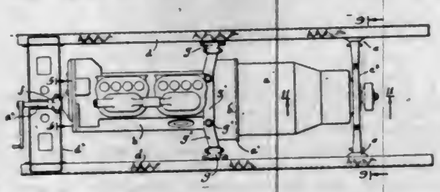
1. In a rack, the combination of end members each comprising angle iron rear uprights and angle iron front legs disposed with their angles facing inwardly, rearwardly inclined front uprights, angle iron cross members disposed with their angles facing inwardly and upwardly with their rear ends in the angles of said rear uprights and in spaced relation to the rear arms thereof, the front ends of the bottom cross member being disposed in the angles of the legs and in spaced relation to the angles thereof, the front uprights being mounted on the front ends of the bottom cross members, said rear uprights and front legs having pairs of slots adjacent their cross members, front and rear longitudinal rails disposed with their ends in the angles of said cross members and with their angles facing upwardly and inwardly, said longitudinal rails and cross members being detachably bolted together, and plate-like corner irons on the ends of the rear longitudinal rails and the bottom front rail, said corner irons having downwardly facing hooks engaging said pairs of slots in said rear uprights and front legs with the edges of the corner irons abutting the uprights and legs whereby said plates constitute tie and brace members.

1,664,037. PAVEMENT FELT HOLDER. WALTER H. KNAPP, Monroe, Mich., assignor to The Wilder-Strong Implement Company, Monroe, Mich., a Corporation of Michigan. Filed May 4, 1927. Serial No. 188,644. 2 Claims. (Cl. 98—51.)



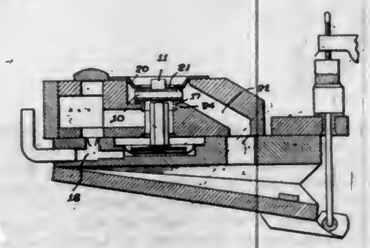
1. In a tool for locating a fibrous strip to form a flexible joint for pavements and the like, a thin metallic strip, means for supporting the ends of the metallic strip, a pair of L-irons clamped against opposite sides of the metallic strip and located along one edge thereof, a plurality of cams for removably connecting the strip of fibrous material to the metallic strip and rotatably supported in one of the L-irons.

1,664,038. PROJECTION APPARATUS. LUTHER B. MCEWING, Chicago, Ill. Filed May 17, 1923. Serial No. 639,504. 4 Claims. (Cl. 88—24.)



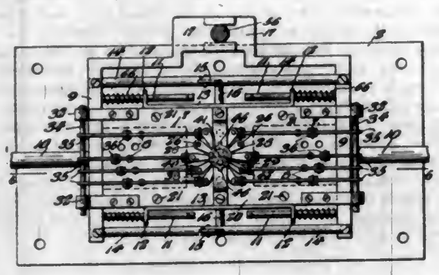
1. In a projection apparatus, a vertical rotatable shaft, a projection instrument mounted to rotate with said shaft, a pedestal in which said shaft is mounted, having a recess in its top, an enlargement on said shaft intermediate its length disposed in said recess in the top of said pedestal, a worm wheel on said enlargement, a worm in engagement therewith, a bottom recess in said pedestal into which said shaft projects, set and lock nuts in said lower recess for said shaft, and ball bearings between said enlargements and base and between said set nut and base.

1,664,039. WIRELESS-TELEGRAPH RECEIVING APPARATUS. NORMAN WILLIAM MCLACHLAN, Newcastle-upon-Tyne, and ARCHIE WILLIAM LANGRIDGE, Shipley, England, assignors to Radio Corporation of America, a Corporation of Delaware. Filed Nov. 24, 1922, Serial No. 603,028, and in Great Britain Dec. 7, 1921. 7 Claims. (Cl. 179—171.)



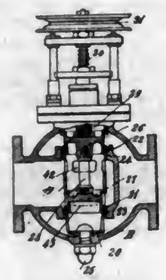
1. In wireless telegraph receiving apparatus, the combination of two rectifying vacuum tubes, a resistance shunted by a condenser and connected in the anode circuit of the first tube and also in the grid circuit of the second tube, indicating means shunted by a resistance in the anode circuit of the second tube, and a rejector circuit in this anode circuit.

1,664,040. POWER-PLANT MOUNTING. ALFRED F. MASURY and CHARLES FROESCH, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 22, 1925. Serial No. 51,806. 3 Claims. (Cl. 180—64.)



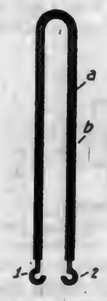
1. The combination with a supporting frame, of an internal combustion engine and electric generator as a unitary structure exerting a thrust longitudinally of the frame, yielding non-metallic connections and supports between said structure and the frame disposed, respectively, substantially in the transverse plane including the center of gravity of the structure upon either side thereof to provide a relatively rigid connection to receive the thrust, and connections between the unitary structure and frame at either end thereof.

1,664,041. PNEUMATIC ACTION. JOHN S. MAXWELL, Richmond, Ind., assignor to Starr Piano Company, Richmond, Ind., a Corporation of Indiana. Filed Aug. 25, 1925. Serial No. 52,309. 14 Claims. (Cl. 84—60.)



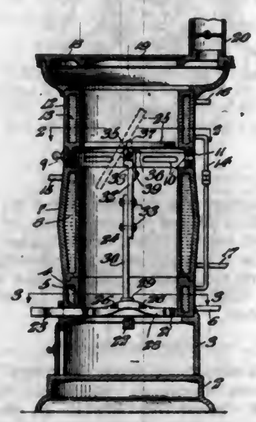
1. A valve comprising a head, a stem, and a resilient facing intermediate said head and stem, said head having a projection directly above said stem.

1,664,042. LOCKING MECHANISM. EDWARD W. MCGINLEY, Philadelphia, Pa. Filed Dec. 28, 1926. Serial No. 156,733. 12 Claims. (Cl. 70—90.)



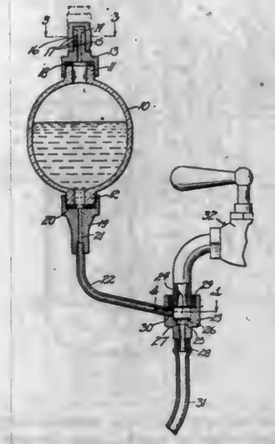
1. The combination with the transmission of a motor vehicle and a door controlling access to the driver's seat, of locking mechanism controlled by the opening of said door and effective to automatically lock said transmission in its neutral position irrespective of the position in which it has been set.

1,664,043. COCK AND VALVE. ELIE PIERRE JULES NICLAUSSE and ALBERT LOUIS NICLAUSSE, Paris, France. Filed Dec. 8, 1925, Serial No. 72,876, and in France Sept. 5, 1925. 11 Claims. (Cl. 251—167.)



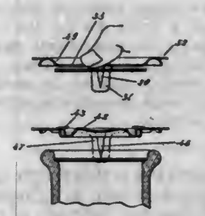
5. In a valve, cock or the like, the combination of a valve member, a seating for the said valve member, a casing adapted to receive the said seating, a pair of corners or shoulders on the said valve member, a conical surface on the said seating, one of the corners or shoulders being adapted, as the valve is being closed, to engage the conical seating before the other said corner or shoulder, so that when the valve is closed, the material forming the surfaces first in engagement is compressed, a corner or shoulder on the said seating, a conical surface on the said casing, and a stop on the said casing adapted to be engaged by the seating, the corner or shoulder being adapted to engage the conical surface on the casing before the seating engages the stop, so that when the seating is moved to engage the stop the material forming the surfaces in engagement is compressed.

1,664,044. CONDUCTOR FOR HIGH-FREQUENCY WORK. MENDEL OSNOS and RICHARD KUMMICH, Berlin, Germany, assignors to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Oct. 20, 1925, Serial No. 63,617, and in Germany Sept. 5, 1924. 3 Claims. (Cl. 178—45.)



1. A high frequency conductor comprising an inner nonmagnetic conducting member, a thin magnetic layer surrounding said conducting member and in direct contact therewith, said layer being designed to provide maximum magnetic permeability irrespective of tensile strength and means for neutralizing the leakage flux which passes through said outer magnetic layer, said neutralizing means being provided in winding said conductor bifilar fashion.

1,664,045. STOVE. SAMUEL V. REEVES, Haddonfield, N. J. Filed July 7, 1925. Serial No. 41,931. 8 Claims. (Cl. 126—3.)

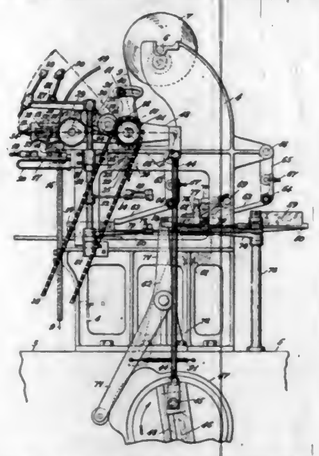


1. In a stove, superimposed fire pots each forming an independent source of heat, an upper fire to heat the upper of said fire pots, an independent source of draft for said upper fire opening through the side walls of the stove between said fire pots, and means to adjust the location of said upper fire to cause it to have a desired fire contact with the lower of said fire pots.

1,664,046. APPARATUS FOR REGULATING THE ADMIXTURE OF A SOLUTION TO RUNNING WATER. IDA ROSENBERG, Chicago, Ill. Filed Mar. 14, 1927. Serial No. 175,812. 3 Claims. (Cl. 128—229.)

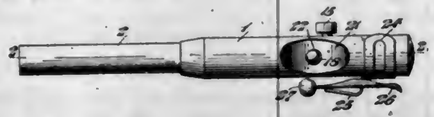
1. Apparatus regulating the admixture of a solution to running water, including a stationary container, a fitting rigidly connected to a source of water supply and having a chamber, a tube connecting said container and said chamber, a hose for the discharge from said chamber, and air controlled means on said container for regulating the rate of flow through said tube.

1,664,047. BOTTLE-CAP REMOVER AND HOLDER. GUIDO M. SACERDOTE, Bayside, N. Y. Filed Jan. 27, 1926. Serial No. 84,127. 11 Claims. (Cl. 215—55.)



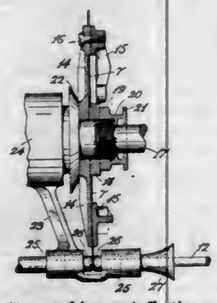
1. In a device for removing paper bottle caps of the character described, a body portion provided with a plurality of members extending from the underside thereof, adapted to pierce the paper cap to be removed when said body portion is forced towards said paper cap in an axial direction, said body portion being provided with an opening through which an ejecting action may be exerted in order to force the cap away from the said members.

1,664,048. AUTOMATIC WRAPPER CONTROL FOR PACKAGING MACHINES. FRANK R. SCHMITT, Brooklyn, N. Y., assignor to American Machine and Foundry Company, a Corporation of New Jersey. Filed Aug. 12, 1926. Serial No. 128,717. 13 Claims. (Cl. 93—2.)



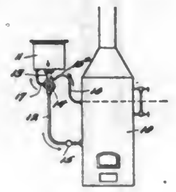
1. The combination with devices for continuously feeding wrapping paper from a roll and intermittently delivering it into position to be assembled with articles

to be wrapped, of mechanism for advancing a succession of articles at regular intervals to said position, and means having a movable controlling feeler in the path



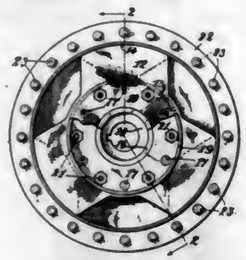
of the articles and operative to automatically incapacitate said devices when a break occurs in said succession and to rehabilitate the same immediately thereafter.

1,664,049. FIREARM. REGINALD F. SEDGLEY, Philadelphia, Pa. Filed Dec. 31, 1927. Serial No. 243,831. 3 Claims. (Cl. 42—1.)



1. A firearm simulating a fountain pen, comprising a casing, a barrel detachably connected with said casing and provided with a thumb receiving depression, a breech block in said barrel, a firing pin for the breech block, a spring pressed plunger in said barrel, said barrel having an opening through said depression, and a spring pressed releasing member carried by said plunger and adapted to extend through said opening when said plunger is in its retracted position.

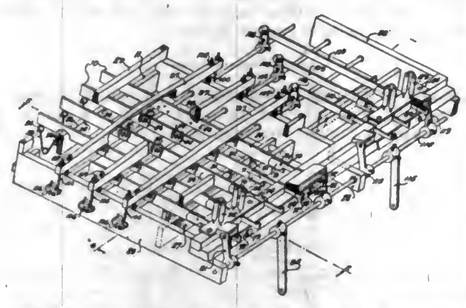
1,664,050. CIGARETTE-MACHINE CUT-OFF. THOMAS C. SHEEHAN, Upper Montclair, N. J., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Aug. 21, 1926. Serial No. 130,622. 4 Claims. (Cl. 131—37.)



3. In a cigarette machine cutoff, the combination with two alternately acting knives, of a dynamically balanced holder for said knives, and means whereby said knives may be adjusted and held at diametrically opposite positions in said holder without disturbing the dynamic balance of the cutoff, said means including two racks one of which is attached to each knife, and a pinion engaging said racks and provided with a series of holes whereby it may be turned.

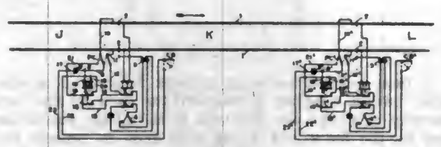
1,664,051. GRAVITY LIQUID FEEDER. BURCHARD THOENS, New York, N. Y., assignor of one-half to Burchard M. Thoens, New York, N. Y. Filed Mar. 3, 1927. Serial No. 172,506. 11 Claims. (Cl. 137—101.)

11. In a gravity liquid feeding device, in combination, a casing having spaced fluid inlet, gas inlet and fluid outlet ports arranged in the order named about the circumference of a bore through the casing, a rotatable plug having a pocket adapted to move past said ports in the order named, a conduit connecting said fluid outlet port to a closed receptacle, a conduit member connecting said fluid inlet port and gas outlet port to a source of fluid supply, and a removable partition in said member to separate the inflowing liquid from the outflowing gas.



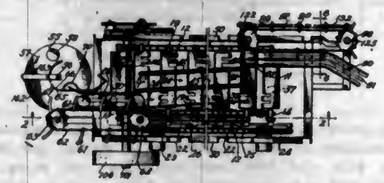
1,664,052. FLEXIBLE COUPLING. GUSTAVE A. UNGAR, Pelham Manor, N. Y. Filed Jan. 9, 1925. Serial No. 1,350. 22 Claims. (Cl. 64—66.)

1. A torque-transmitting flexible element for couplings, said element being formed of a plurality of layers of fabric vulcanized together, and having outer and inner edge portions spaced axially, and an intermediate flexible continuously curved connecting portion, said inner edge portion having means secured thereto for holding the same stiff and rigid.



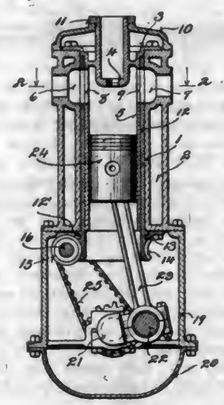
1,664,053. COMBINATION STOP ACTION FOR ORGANS. EDMOND VERLINDEN, Milwaukee, Wis. Filed Sept. 25, 1924. Serial No. 739,811. 14 Claims. (Cl. 84—345.)

14. In a combination stop action for organs, the combination, with a plurality of stop keys, of a series of traces mounted for movement to alternative spaced positions, there being a trace for each stop key, stop key controlled means for selectively placing said traces in their alternative spaced positions, a plurality of circuit closers associated with each trace and each including a switch member movable to alternative positions for controlling the "off" and "on" positions of a stop, the circuit closers associated with any one trace controlling the same stop in different combinations, and an actuator arranged transversely of said traces and movable to displace a group of said switch members to alternative



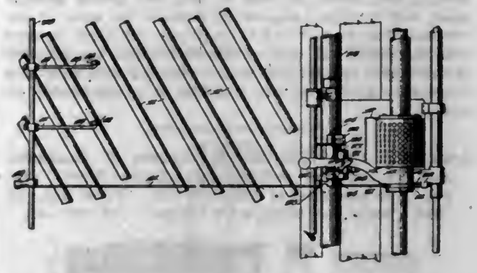
positions determined and selected by the alternative placement of said traces, said group including a switch member for each trace, and means for moving said actuator to displace said group of switch members.

1,664,054. BLOCK-SIGNAL SYSTEM FOR RAILROADS. WALTER W. WENHOLZ, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed July 31, 1926. Serial No. 126,229. 13 Claims. (Cl. 246—45.)



6. In a block signal system of the type described, blocks provided with polarized track circuits, a semaphore signal at the entrance to each block, means for interrupting the supply of track circuit current of normal polarity but not the reverse polarity when the block next in advance is occupied.

1,664,055. PREHEATER. GEORGE WILCOX, Riverside, Calif., assignor to California Canning Machinery Co., a Corporation of California. Filed Nov. 10, 1923. Serial No. 674,095. 14 Claims. (Cl. 126—272.)

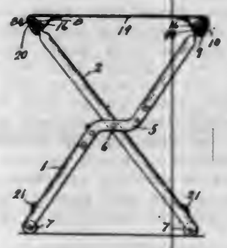


1. In a preheating organization, the combination of a treating chamber; a plurality of carrying members arranged to receive objects to be treated and to hold said objects in an upright position; flexible traveling members extending over wheels upon which said carrying members are advanced through a flattened elliptical orbit; means for moving said objects in a direction transverse to the direction of advance of said carrying members, in a manner causing the passage of said objects through said treating chamber in a substantially helical path, and sets of spaced and resiliently closed doors positioned in the openings of said heating chamber, and operating in a substantially vertical plane under contact with said advancing objects, in such a manner to maintain constantly closed openings to said heating chamber.

1,664,056. INTERNAL-COMBUSTION ENGINE. JOHN ASTROM, Fort Wayne, Ind. Filed Mar. 23, 1923. Serial No. 627,052. 1 Claim. (Cl. 123—190.)

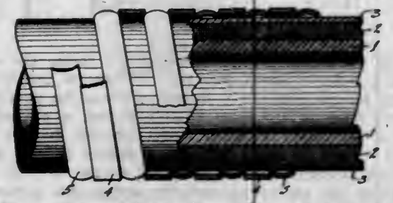
An internal combustion engine comprising a cylinder having inlet and exhaust ports, a rotary sleeve mounted within said cylinder and having ports cooperating with said first mentioned ports to control the flow of gases, a stationary sleeve mounted within said rotary sleeve and having ports aligning with said first mentioned ports, a piston mounted for reciprication within said stationary sleeve, a crank shaft operatively coupled with said piston, mechanism for communicating motion from said crank shaft to said sleeve, a cylinder head integral with said stationary sleeve and consisting of an outer flange bolted to the end of the cylinder and an inner web of annular formation extending inwardly from said sleeve, a small cylinder carried by said inwardly extending web and projecting downwardly below said web into said cylinder and having a bottom apertured and threaded for the reception of a spark plug, said small cylinder extending upwardly above said web and having an open upper end.

1,664,057. SHEET DETECTOR AND STOP. ALBERT BROADMEYER, Harrisburg, Pa., assignor to W. O. Hickok Manufacturing Company, Harrisburg, Pa., a Corporation of Pennsylvania. Filed Dec. 27, 1922. Serial No. 609,241. 7 Claims. (Cl. 271—56.)



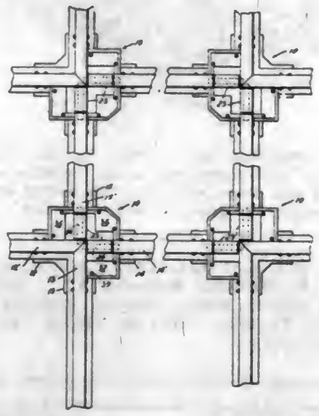
1. In apparatus of the character set forth, the combination with a sheet carrying member, of means for feeding sheets successively thereto, a device for governing the operation of the sheet feeding means, a controlling member associated with the sheet carrying member and moved by an excessive number of sheets on the sheet carrying member, and an operating device directly connected to the controlling member and to the governing device for the sheet feeding means to cause the operation of the latter on the movement of the controlling member.

1,664,058. LEAD PENCIL. GEORGE W. BROWN, Cape Elizabeth, Me. Filed Mar. 2, 1925. Serial No. 12,736. 3 Claims. (Cl. 120—19.)



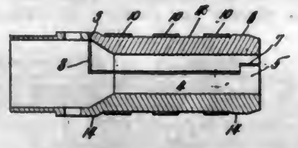
3. In a propelling lead pencil, consisting of a body member, having a central bore therein, a split tube reciprocable within said bore, a flattened side on said split tube, a lead within said split tube, means to contract, diametrically, the outer end of said split tube whereby the lead may be gripped and said tube held against longitudinal movement within said body member, a plunger slidable within said split tube, a key on said plunger extending through and projecting beyond the scarf on said split tube, a projection on said body extending a spaced distance into the bore of the same, means to alternately position said key in advance of and in arrear of the said projection, whereby the oscillation of said split tube combined with the longitudinal movement of the same backwardly and forwardly, co-acting with said projection and said key, may cause said plunger to be moved within said split tube, forwardly and backwardly, respectively.

1,664,059. FOLDING CAMP CHAIR. JULIUS L. CABLE, Boston, Mass., assignor to The Cable Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 25, 1924, Serial No. 739,777. Renewed June 7, 1927. 8 Claims. (Cl. 155—150.)



1. A folding supporting frame having two pairs of pivotally connected crossed-legs each leg comprising a sheet metal strip bent to provide a semitubular main portion and a continuously extending flattened tongue portion at its upper end, a pair of cross bars each consisting of a sheet metal strip bent to form a semitubular intermediate portion and socket portions at each end having parallel sides, said tongues being fitted between the sides of the corresponding sockets and having their end edges engaged with the bottoms of said sockets throughout approximately the length thereof and means engaging said sides and tongues to hold said bars and legs in perpendicular relation.

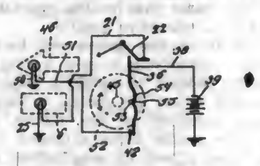
1,664,060. ARMORED HOSE. ALBERT E. CALDWELL, Erie, Pa., assignor to Continental Rubber Works, Erie, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1923. Serial No. 679,615. 6 Claims. (Cl. 137—9.)



1. In an armored hose, the combination of a flexible tube; and an armor winding comprising alternate wires coiled spirally with the succeeding coils of each wire spaced apart, one wire having both its inner and outer surfaces flat and the other having in cross section its outer surface convex, the flat wire bridging the space between and inner surface lapping onto the coils of the wire having its outer surface convex.

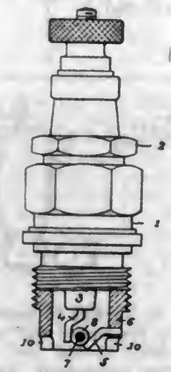
1,664,061. RAILROAD CROSSING. RALPH E. COTTER, Oakland, Calif. Filed June 13, 1927. Serial No. 198,446. 5 Claims. (Cl. 246—375.)

1. In a railroad crossing, a block forming a housing, said housing adapted to support the ends of the rails whereby rail gaps are provided in the block, means carried by the block and filling said gaps to present continuous rail-joints therent, and said gap-filling means provided with additional means and carried by the block to automatically close the joint after the passage of the said wheel thereover, the housing having a closed bottom and being adapted to receive and return a lubricant for submerging the said last-named means.



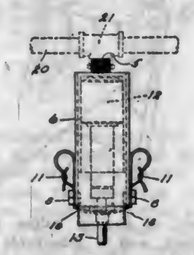
1,664,062. STOCK PUSHER. FRANK L. CONE, Windsor, Vt. Filed July 14, 1923. Serial No. 651,528. 8 Claims. (Cl. 29—62.)

1. A stock pusher comprising a sleeve, a stock-engaging jaw integral with said sleeve, a mating jaw interfitting with said first mentioned jaw, and means for holding said jaws assembled to form a stock receiving space therebetween of substantially uniform size from end to end.



1,664,063. VEHICLE SIGNAL. WILLIAM CRITSER, Traverse City, Mich., assignor to Albert W. Bonnell, Traverse City, Mich. Filed Apr. 15, 1926. Serial No. 102,197. 1 Claim. (Cl. 177—337.)

An indicator of the class described, including, in combination, a casing, a rotary element in the casing and having an eccentric pin, a signal carried by the rotating element, a stationary contact, a spring contact engageable with said stationary contact, said pin being abuttable with said spring contact to force it out of engagement with said fixed contact when the signal is in the non-operative position, a second spring contact, means for bending the second spring contact to engage the first spring contact, a signal in open circuit with said spring



contacts, and a lamp on said first mentioned signal in open circuit with the first spring contact and the stationary contact.

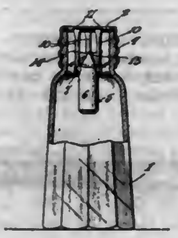
1,664,064. SPARK PLUG. JAMES G. DICKSON, Glencoe, Ill. Filed Aug. 24, 1926. Serial No. 131,181. 2 Claims. (Cl. 123—169.)

1. In a spark plug of the type described, the combination of an enclosing shell having an annular depending skirt portion providing an open bottom chamber at the lower end of the plug housing, the lower end of the skirt portion having a plane form, a supply terminal stem depending within said bore, a return terminal stem fixed at one end in the wall of said skirt portion, and an intermediate electrode of the rod form arranged transversely in the lower end of the bore of said skirt portion and in angular relation to and in line with the aforesaid return terminal stem, said intermediate electrode being supported at its respective ends in an insulated manner in the annular wall of said skirt portion by individual insulating sockets fitted to orifices in the wall of the aforesaid skirt portion.

1,664,065. CIRCUIT BREAKER. ROY F. DOWDY and JESS W. BREWBAKER, Roanoke, Va. Filed Jan. 19, 1926. Serial No. 82,363. 6 Claims. (Cl. 200—82.)

1. In a pneumatically operated circuit controller, a cylinder adapted to have suction producing means connected therewith, a piston movably mounted within the cylinder and adapted to be moved in one direction upon the application of suction to the cylinder, contacts mounted upon and insulated from the cylinder and provided with terminal means located exteriorly of the cylinder, a member of insulating material carried by the piston and engageable with the contacts for limiting movement of the piston in one direction, and a spring structure extending transversely with respect to the piston and carried thereby and adapted to engage and bridge said contacts upon movement of the piston in the other direction.

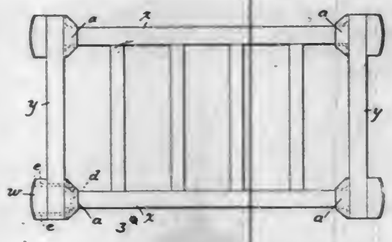
1,664,066. RING SPINNING AND DOUBLING FRAME. ROBERT WILLIAM EDOM, Southport, England. Filed Feb. 3, 1927. Serial No. 165,722. 2 Claims. (Cl. 118—50.)



1. In a spinning and doubling frame in which delivery rollers deliver the roving to the tip of a rotating spindle to be spun, by the rotation of the said spindle, between the latter and the delivery rollers, a rising and falling ring rail, a ring in the said rail surrounding the spindle, and a yarn guide held within the ring to move tangentially, radially, and angularly thereto, the said yarn guide being straight and cylindrical and without projections within the ring, for the purpose set forth.

1,664,067. PROCESS FOR TREATING REFRACTORY ORES CONTAINING PRECIOUS METALS. GEORGE W. B. EVANS, Wilderness, Va., assignor to Evans Ore Reduction Company, Washington, D. C. Filed Aug. 13, 1926. Serial No. 128,990. 1 Claim. (Cl. 75—64.)

The process of treating refractory ores containing precious metals, which consists in mixing ore with lime, salt and sal-ammoniac, heating the mixture in an atmosphere of hydrogen while being agitated, and separating out the precious metals.

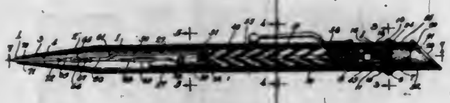


1,664,068. SALT SHAKER. CARL E. FISHER, Clearwater, Fla. Filed Feb. 1, 1927. Serial No. 165,161. 1 Claim. (Cl. 65—57.)

A device of the class described comprising a container, a cap having perforations carried by the container, an agitator movable in the container and including a body having furcations carried thereby, valve heads normally closing the perforations of the cap, stems for

the valve heads slidable in the perforations of the cap, said stems having their inner ends engaged between the furcations, said furcations being pliable and capable of being bent into clamping engagement with said stems, as and for the purpose set forth.

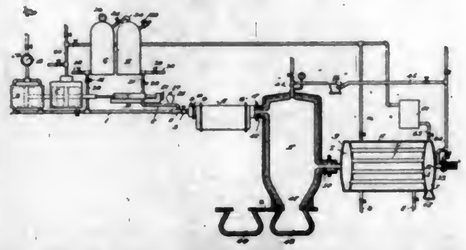
1,664,069. MINE-CAR-TRUCK FRAME. JAMES R. FLEMING, Scranton, Pa. Filed Apr. 23, 1927. Serial No. 185,935. 11 Claims. (Cl. 105—364.)



1. A car truck frame comprising end sills, side sills extending between the end sills, and a bracket at each corner; each bracket comprising an upright plate engaging the side of a side sill, an upright wing extending laterally from said plate, bolts securing the side sill to said plate, and bolts securing the end sill to said wing; and a ledge carried by said bracket and supporting the end sill.

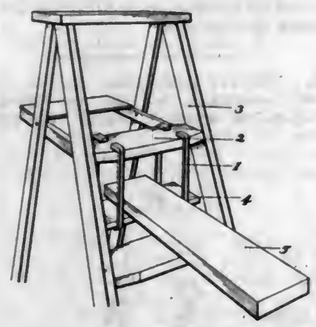
1,664,070. ROADWAY WITH TRAFFIC-CONTROL MARKING. BENJAMIN FOSTER, Philadelphia, Pa. Filed Aug. 7, 1923. Serial No. 656,153. 5 Claims. (Cl. 94—1.5.)

1. A roadway presenting a permanent traffic-control marking comprising a piece of material having a superficial contour corresponding to said marking and webs projecting laterally from said piece of material, the material of the roadway underlying and surrounding said piece of material and overlying and underlying said webs, the depth of roadway material overlying said webs substantially corresponding to the distance of said webs from the top surface of said piece of material so that said top surface is substantially flush with the material of the roadway.



1,664,071. WRITING IMPLEMENT. FRANK FUREDY, Brooklyn, N. Y., assignor to Bushwick National Bank. Filed Apr. 28, 1925. Serial No. 26,378. Renewed July 16, 1927. 9 Claims. (Cl. 120—14.)

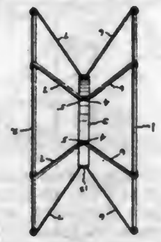
1. A pencil or analogous writing implement comprising an outer case and operating mechanism normally contained within the case and slidable outward, said operating mechanism including a spare-lead magazine and a magazine case rotatable thereon and apertured to give access to the magazine when placed in a certain rotative position, the outer case having at its upper end a notch and the magazine and magazine case having lugs so positioned that the magazine case must be turned to closed position to align the lugs which will then enter the slot in the outer case as the operating mechanism is slid inward to operative position.



8. In a pencil or like implement, lead holding and ejecting means comprising a case having a lead aperture at the tip defined by resilient fingers, a lead carrier reciprocable within the casing, a lead grip slidably and revolubly mounted on the carrier and having a lead clutch, the carrier being arranged to slide within the grip to eject a lead by longitudinal movement and the grip having a formation to co-operate with the tip fingers to control relative movement of the carrier and grip.

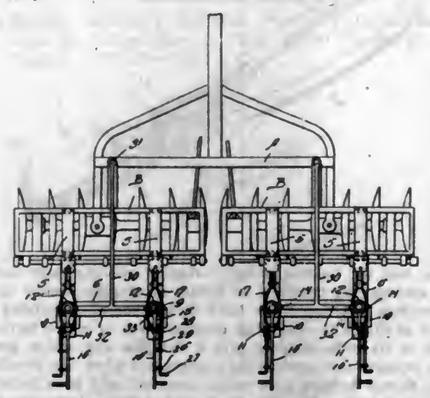
1,664,072. METHOD FOR COMBUSTION UNDER PRESSURE. ELMER GATES, Washington, D. C.; Donald E. Gates, administrator of said Elmer Gates, deceased. Filed Apr. 8, 1922. Serial No. 550,738. 4 Claims. (Cl. 110—28.)

1. The method of securing increased efficiency in extracting heat from the burned fuel and air which consists in mixing finely divided fuel with air under a pressure higher than atmospheric, igniting the mixture, directing the burning fuel against an incandescent surface of a plurality of spirally arranged convolutions so as to repeatedly re-ignite the unburned portions of the fuel, and keeping the burned gases under the same pressure until all available heat units have been extracted therefrom before allowing them to exhaust from the system.



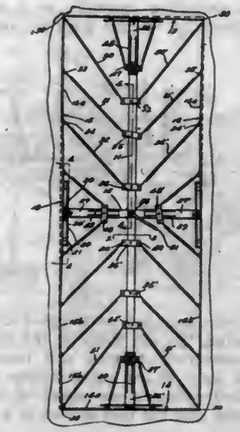
1,664,073. STEPLADDER. ALLEN T. HAYWOOD, East Cleveland, Ohio. Filed May 14, 1926. Serial No. 109,178. 1 Claim. (Cl. 304—34.)

The combination of a step ladder including a plurality of flat steps, and a removable half step comprising a pair of U-shaped supports depending from one step, each including a pair of supporting legs and a lower connecting portion, the upper ends of the legs extending inwardly for engagement with the opposite



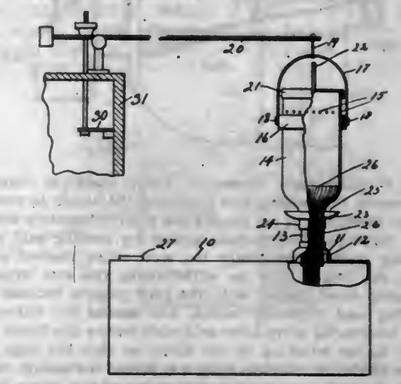
side portions of the step and spaced apart a distance to permit the support to be positioned on the step, and a tread piece mounted at its ends on the connecting portions of the supports.

1,664,074. HOSE REEL. CORNELIUS D. HEFFERNAN, Cleveland, Ohio. Filed June 7, 1926. Serial No. 114,118. 14 Claims. (Cl. 242—86.)



1. A collapsible hose reel comprising, in combination, a pair of spaced, axially aligned rims of substantially equal size, an annular hub member of smaller size than said rims disposed in substantial axial alignment with and intermediate said rims, a plurality of spokes each attached adjacent its outer end to one of said rims, said hub member being provided with a plurality of spaced, radial, spoke receiving apertures, each said spoke extending through a spoke receiving aperture and shaped for attachment adjacent its inner end to said hub member when said reel is in operative position, the inner end of each spoke being adapted to move toward the axis of said hub member when the rims are moved toward each other to collapse said reel.

1,664,075. ATTACHMENT FOR DISK HARROWS. JAMES A. HENNINGER, Roundup, Mont. Filed Mar. 15, 1927. Serial No. 175,497. 4 Claims. (Cl. 55—30.)

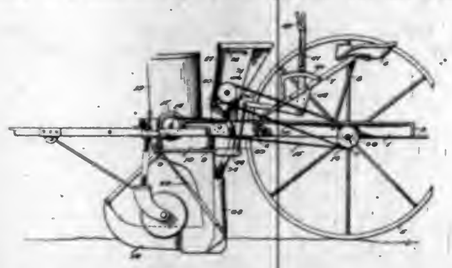


1. In an attachment for gang disk harrows and the like comprising a U-shaped frame having bearings in the corners thereof, standards slidable through the bearings, wheels, means for journaling the wheels on the lower ends of the standards, sleeves fixed to the standards above the frame, trunnions projecting from the sleeves, levers pivoted on the trunnions, notched segments projecting from the sleeves, spring pressed pawls on the levers, engageable with the notched segments, and links pivotally engaged with the levers and the frame.

1,664,076. TEMPLATE FOR DOORS AND WINDOWS. RAYMOND L. HUMPHREY, Los Angeles, Calif. Filed Apr. 12, 1926. Serial No. 101,309. 10 Claims. (Cl. 33—194.)

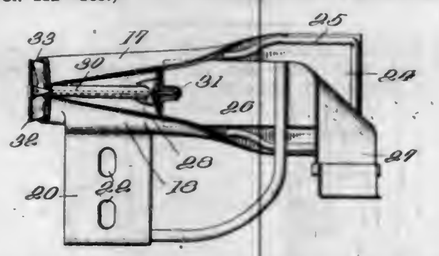
1. In a template for use in quadrilateral openings: a substantially rigid interior frame; a flexible exterior frame mounted on said interior frame comprising parts pivotally connected to form corners; and means operatively connected to said interior frame for thrusting said corners into the angles of an opening.

1,664,077. ALCOHOL LAMP. GEORGE KNIERIEMEN, Atco, N. J. Filed Mar. 15, 1926. Serial No. 94,691. 1 Claim. (Cl. 158—72.)



A lamp of the character described comprising a body; a shank; a base into which said shank is adapted to pass; said base being adapted to fit over a collar carried by a suitable supply tank; a sleeve surrounding the body and movable lengthwise thereof for deflecting the flow of vapor thru a series of holes formed in the body, a bail pivoted to said sleeve, said bail having means for attachment to the lever of a thermostat; a cap adapted to snugly fit over the upper end of the body for closing the same; a prong of high heat conductivity projecting upward from the cap and a pilot cup fitted upon the shank adjustable relative to the bottom of said body.

1,664,078. BROADCAST FERTILIZER DISTRIBUTOR. JOHN F. LAVERY, Greenfield, Ohio. Filed Dec. 15, 1925. Serial No. 75,594. 2 Claims. (Cl. 221—118.)

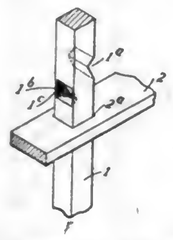


1. A hopper of the character described comprising companion front and rear sections, said front section having a bottom formed with outlet openings, and front and

end walls rigid with and extending upwardly from its bottom, said rear section having a rear wall pivoted at its lower end to the bottom of the front section whereby the rear section may be swung towards the front section from a position extending upwardly at a rearward incline to a substantially vertical position and end walls

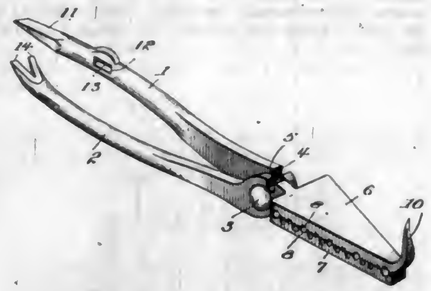
rigid with the rear wall and overlapping the end walls of the front section, the end walls of one section having slots formed transversely therein, and fasteners passed through the end walls of the other section and through said slots to limit swinging movement of the rear section and releasably hold the rear section in a set position.

1,664,079. CENTER-PLAIT FOLDER. JOSEPH MANN. Philadelphia, Pa., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 24, 1925. Serial No. 17,961. 5 Claims. (Cl. 112—145.)



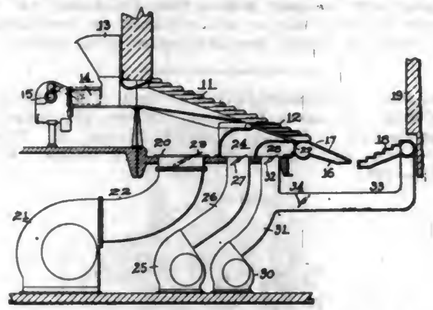
5. A center plait folder for sewing machines comprising means for guiding and infolding the fabric to form a center plait, means for placing the reinforcing strip within said folder as it is formed, means for bending said reinforcing strip intermediate the side edges thereof away from the center plait for withdrawing the side edges of the strip from contact with the plait passing through the guiding and infolding means, and means for flattening said reinforcing strip after said plait leaves the folder and prior to the stitching of the fabric so that the edge portions of the reinforcing strip are forced outwardly to lie close to the respective folded portions of the fabric forming the plait.

1,664,080. ORNAMENTAL IRON STAIR-RAIL STRUCTURE. ROBERT L. MAPSON, Los Angeles, Calif. Filed May 6, 1926. Serial No. 107,087. 7 Claims. (Cl. 256—22.)



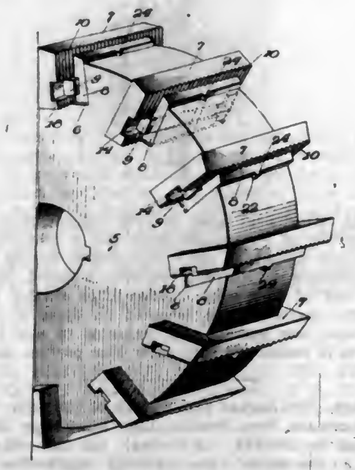
1. In a structure of the class described, a plurality of polygon cross section bars provided with pairs of angular notches in opposite sides of said bars and a plurality of other bars connecting each of the former and provided with holes therethrough of substantially the same cross-section as the cross-section of said first mentioned bars between the opposed notches thereof and adapted to fit over said latter bars and fit in the notches in said first mentioned bars, the transverse axis of the last mentioned bars being at a right angle to the first mentioned bars and the longitudinal axis being at an acute angle thereto.

3. In a stair side rail, a plurality of bars provided with pairs of angular notches positioned in opposite sides of said bars, the one slightly above the other, and a plurality of other bars connecting each of the former and provided with holes therethrough conforming to the cross section of said first mentioned bars the wall surrounding said holes in said second mentioned bars being adapted to fit in the notches in the first mentioned bars, said second mentioned bars being fitted to an angle relatively to said first mentioned bars whereby said bars are interlocked relatively to each other, and a web positioned at the end of one of said notches adapted to be engaged by the corner of the wall of the second mentioned bars.



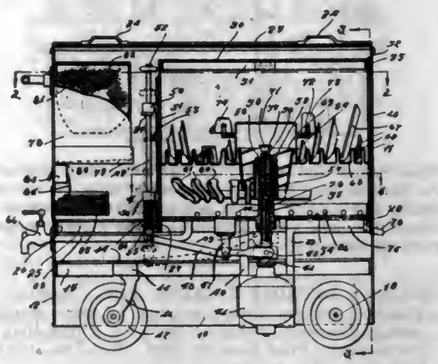
7. In a stair rail of the class described, a plurality of square, perpendicular members, provided with a plurality of pairs of spaced notches in opposite sides thereof and webs in said notches; and a plurality of spaced bars provided with holes adapted to fit loosely over said perpendicular bars and fit in said notches and to crush said webs when turned to an angular position on said bars, and means interposed between said perpendicular and angular bars for holding said bars in separate spaced relation and rigidly securing them together.

1,664,081. COMBINATION TOOL. REUBEN LEE MEANS, Valentine, Tex. Filed Dec. 17, 1923, Serial No. 681,229 Renewed Aug. 25, 1927. 1 Claim. (Cl. 7—3.)



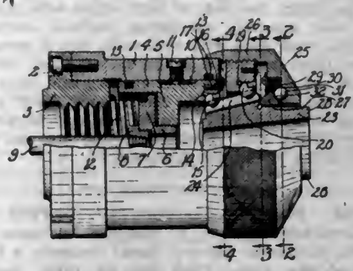
A tool for holding nails or staples whereby such nails or staples may be given an initial driving movement into a surface and thereafter fully driven home, comprising a pair of pivotally connected handles, each of which having one of its ends merging into a flat jaw and which jaws are brought into contacting engagement when the handles are forced toward each other, each of said jaws having its confronting face provided with alining laterally arranged semicircular grooves which vary in area throughout the length of the jaws and which are designed to clamp therebetween nails of different cross-sectional diameters to hold the nails in the initial driving thereof, one of said jaws being formed with other laterally disposed grooves which are not in alinement with the grooves in the cooperating jaws, and said last-mentioned jaw having arched passages communicating with the last-mentioned grooves, whereby the shanks and the rounded connecting ends of staples may be received in the said grooves for the initial driving of said staples.

1,664,082. UNDERFEED FURNACE. REGINALD B. MILDON, Lansdowne, Pa., assignor to Riley Stoker Corporation, a Corporation of Massachusetts. Filed Feb. 6, 1922. Serial No. 534,380. 1 Claim. (Cl. 110—44.)



An underfeed stoker having in combination a fuel retort, means for feeding fuel to said fuel retort, an independently controllable primary air supply, means for conveying air from said primary air supply to the fuel in the upper portion of said retort to support the initial stages of combustion thereof, and means for thereafter causing substantially complete combustion of said fuel, said means comprising a fuel support and a refuse support at the rear of the retort, each having its supporting face provided with air outlets and each being constructed in box form with side and bottom walls enclosing an air chamber, a separate supplemental and independently controlled air supply connected to the interior of the air chamber in said fuel support effective to supply air to the partially consumed fuel thereon for further combustion thereof, and another separate supplemental and independently controllable air supply connected to the interior of the air chamber in said refuse support effective to supply air to the fuel refuse on said support for final combustion thereof, whereby the air pressures in the upper portion of said retort for initial combustion, in said fuel support for further combustion, and in said refuse support for final combustion of said fuel may each be varied and caused to be equal to, greater than or less than the air pressures in the other air-supplied portions of said stoker.

1,664,083. ROTARY CUTTER. FRANK P. MILLER, Meadville, Pa. Filed May 16, 1925. Serial No. 30,781. 14 Claims. (Cl. 29—105.)

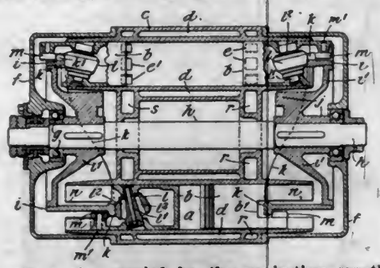


1. A cutter comprising a body having a slot, a blade in said slot, a tapered wedge block in said slot and having means to hold the blade against radial and longitudinal displacement, and an axially extending wedge pin between said blade and block and having means to urge the blade inwardly and the block outwardly.

1,664,084. DISHWASHER. ERNEST J. NASH, Detroit, Mich. Filed Apr. 7, 1927. Serial No. 181,637. 9 Claims. (Cl. 141—9.)

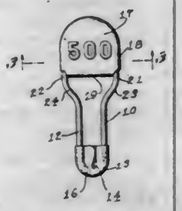
1. A dish washer comprising: a reservoir; a dish tray mounted in said reservoir; means rotatably mounted in said reservoir for throwing water against said dishes, said means being axially movable of said reservoir at will; and means for raising said throwing means out of said water, said throwing means being adapted upon rotation out of said water for setting up a current of air in said reservoir, for drying said dishes.

1,664,085. CHUCK. ROBERT E. NAYLON, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 22, 1924. Serial No. 745,066. 4 Claims. (Cl. 279—1.)



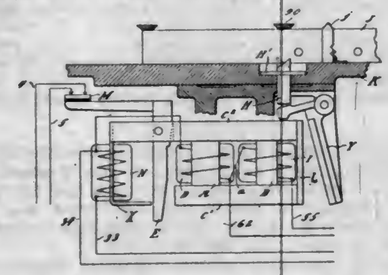
2. A chuck for holding toothed articles comprising inner and outer members provided with means that are adapted to be disposed between the teeth of the work, a cap threaded onto said outer member, an annular washer mounted in said cap and adapted to engage the work to hold it in position, and a circular series of balls mounted in said cap and engaging the end of said washer.

1,664,086. TWO-STROKE INTERNAL-COMBUSTION ENGINE. SIMON DOKK OLSEN, London, England, assignor to The Olsen Engine Syndicate Limited, London, England, a British Company. Filed Aug. 19, 1925, Serial No. 51,218, and in Great Britain Sept. 5, 1924. 5 Claims. (Cl. 123—58.)



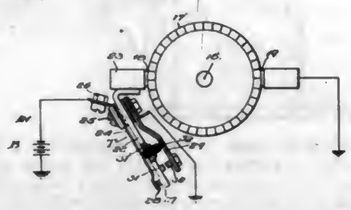
3. In a two-stroke internal-combustion engine, the combination of a main shaft, end cams co-axial therewith, cylinders parallel therewith and having slotted mouths overlapping the cams, opposed pistons working counter to each other in said cylinders and acting as valves to

control the air-inlet and the exhaust ports, rollers carried on inclined axles in the mouths of said pistons and engaging the inner sides of tracks on the cams, said cam tracks being formed by upstanding lips on the cams,



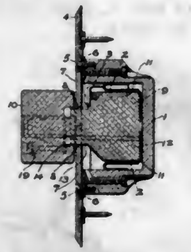
outer rollers also carried by the projecting mouths of the pistons and engaging the outer sides of the cam tracks, and slots or gaps in said tracks through which the rollers can pass when withdrawing the pistons, substantially as described.

1,664,087. LAUNDRY-MARKING PIN. HOWARD M. PERKINS, Meriden, Conn., assignor to Remo Manufacturing Company, Meriden, Conn., a Corporation of Connecticut. Filed June 16, 1926. Serial No. 116,385. 2 Claims. (Cl. 40—26.)



1. In a safety marking pin, a looped wire having a rounded intermediate section with its sides spaced relatively far apart, the ends of said looped wire being relatively near together, converging inclined sections for connecting said sides with said ends, and a symmetrical marking plate having a flange curled about said sides and said rounded intermediate section, said plate having a transverse interior edge curled upon itself and terminating short of said inclined sections to provide a relatively large open space within the pin and prevent tearing of the clothes by said plate.

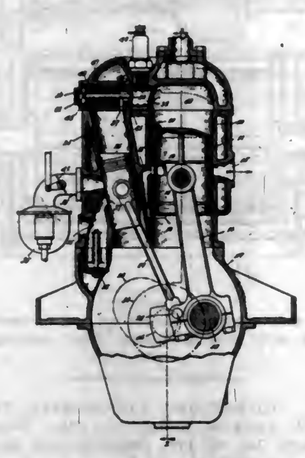
1,664,088. ELECTRICAL CONTROL DEVICE. WADE H. REICHARD, Troy, N. Y., assignor, by mesne assignments, to General Railway Signal Company, a Corporation of New York. Filed May 24, 1923. Serial No. 641,074. 27 Claims. (Cl. 246—135.)



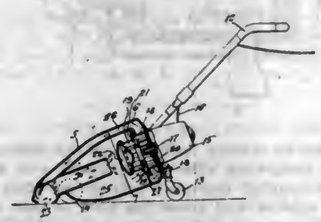
6. The combination in a traffic controlling system; a source of energy; a motor comprised in the system and operated from said source; a lever for controlling the supply of current to said source; indication means for indicating when the motor has operated in response to a movement of the lever and comprising a winding supplied with current from the source and a second winding supplied with dynamic current from the motor; and a circuit including one of said windings for controlling the supply of current from said source to the system.

1,664,089. THERMOSTATIC CONTROL FOR GENERATORS. CLARENCE RINGWALD, Chicago, Ill., assignor of one-half to Charles H. Caine, Chicago, Ill. Filed Feb. 23, 1926. Serial No. 89,862. 4 Claims. (Cl. 200—138.)

1. A unitary switch structure comprising a main switch element, a secondary switch element adapted for connection normally in electrical engagement with said main switch element, a heat responsive switch element, said heat responsive switch element and said main switch element being adapted to cooperate, and abutment means between said secondary switch member and said heat responsive element, said heat responsive element under normal temperature releasing said abutment member to permit engagement of said secondary and main switch elements, said heat responsive member responding to abnormal temperature to exert pressure against said abutment member to disconnect said secondary switch element from said main switch element, said heat responsive member then contacting with said main switch element.



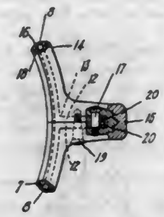
1,664,090. ATTACHMENT-PLUG ADAPTER. HOWARD R. SARGENT, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Feb. 27, 1923. Serial No. 621,647. 3 Claims. (Cl. 173—330.)



1. An attachment plug adapter comprising an inner base portion of rectangular shape and a contracted neck at one end thereof, an outer base portion having recesses and passageways therein brackets mounted upon the outer end of said neck, contact clips carried by said brackets, contact plates mounted on opposite edges of said inner base portion and connected to said brackets, and means connecting said outer base portion therewith.

1,664,091. INTERNAL-COMBUSTION ENGINE. ALFRED C. SINCLAIR, New Orleans, La. Filed Sept. 15, 1922. Serial No. 588,343. 29 Claims. (Cl. 123—72.)

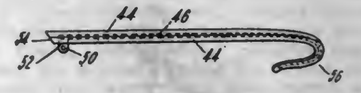
18. A two-stroke cycle internal combustion engine, comprising a main cylinder and piston, a crank-shaft connected to said main piston, a supplemental cylinder and piston, said supplemental piston also being driven from said crank-shaft and being arranged to have a lead over the main piston in their cycle of movement, a crank-case in which air is compressed by the movement of the main piston and which is connected to said main cylinder by passages which are opened when the main piston is at the lower part of its stroke, said main cylinder also having exhaust ports which are controlled by the piston movement, a carbureter from which explosive mixture is supplied to said supplemental cylinder by the suction action of said supplemental piston on its down stroke, a valved passage between the upper ends of said two cylinders, and a spark plug having electrodes in said passage which interconnects said two cylinders.



1,664,092. DIRT AND AIR SEPARATION. JOHN SQUIRES, Detroit, Mich. Filed Nov. 1, 1924. Serial No. 747,268. 3 Claims. (Cl. 183—77.)

1. A cleaner of the class described comprising a housing, an opening in said housing, a motor, a suction producing device and a rotatable separating device in said housing and operated by said motor to draw air and foreign matter through said opening and separate the two, a chamber in said housing for holding the separated foreign matter and a passage through which said separated air may pass, said passage having an opening extending adjacent said first opening, whereby said air may re-enter said opening and be re-used.

1,664,093. OPHTHALMIC MOUNTING AND METHOD OF MAKING THE SAME. FREDERICK A. STEVENS, Providence, R. I., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 20, 1923. Serial No. 613,811. 18 Claims. (Cl. 88—47.)

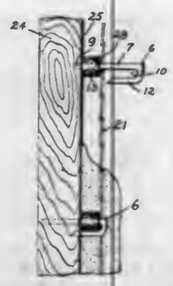


1. An ophthalmic mounting comprising non-metallic sheets disposed side by side in face-to-face contact and integrally united together along the contacting faces with one or more reenforcing parts between them.

5. The method of making an ophthalmic mounting that comprises grooving a non-metallic sheet, inserting one or more reenforcing parts in the groove, assembling the sheet with one or more ungrooved non-metallic sheets, and integrally uniting the reenforcing parts and the non-metallic sheets together.

18. An ophthalmic mounting comprising non-metallic strips disposed side by side in face-to-face contact and integrally united together along the contacting faces with a reinforcing rod of square cross section between them.

1,664,094. SPECTACLE TEMPLE AND METHOD OF MAKING THE SAME. FREDERICK A. STEVENS, Providence, R. I., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Original application filed July 22, 1921, Serial No. 486,703. Divided and this application filed Nov. 9, 1923. Serial No. 673,748. 18 Claims. (Cl. 88—52.)



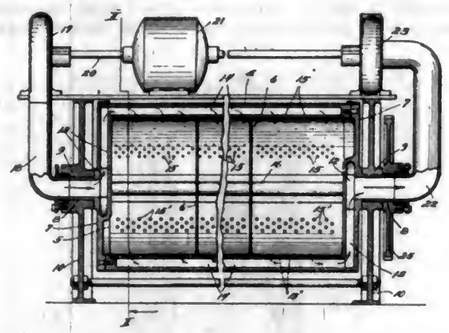
11. The process of producing a temple for an ophthalmic mounting, consisting in forming a metal-receiving groove in a sheet-material portion, inserting a metal member within the groove, assembling the portion with a separate member of material corresponding to the first portion to close the groove, and subsequently shaping the temple blank into the completed article.

1,664,095. OPHTHALMIC MOUNTING. FREDERICK A. STEVENS, Providence, R. I., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed July 22, 1921. Serial No. 486,703. 1 Claim. (Cl. 88—43.)

An ophthalmic mounting comprising a non-metallic bridge having a reenforcing metal skeleton, and a rim having a recess within which the end of the non-metallic bridge is embedded.

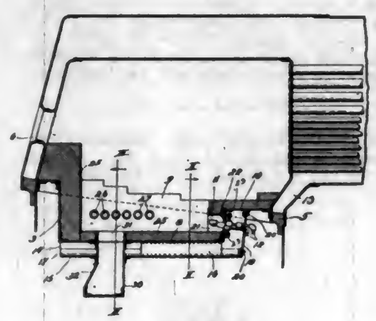
1,664,096. FURRING AND FASTENING DEVICE. JOHN L. SULLIVAN, Oakland, Calif. Filed Dec. 26, 1923. Serial No. 682,836. 6 Claims. (Cl. 72—118.)

1. In a device of the character described, a fastening member comprising a shank having a wire engaging portion thereon, a spacing member of yieldable material arranged to permit the wire to be embedded into the body thereof slidably held on said shank and arranged for coaxial rotation thereabout and having an end surface adjacent said wire engaging portion adapted to cooperate with the latter to hold the wire therebetween.



1,664,097. PROTECTIVE DEVICE. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 1, 1924. Serial No. 690,098. 10 Claims. (Cl. 200—94.)

2. In a device of the class described, circuit controlling mechanism, electroresponsive means spaced therefrom for controlling the operation thereof, a flexible insulating connection between said mechanism and said electroresponsive means, and means whereby the control of said mechanism by said electroresponsive means is rendered substantially independent of inherent changes in the length of said connection.

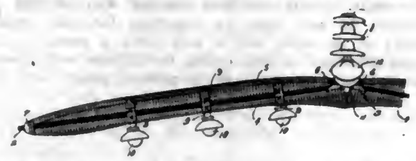


1,664,098. LAUNDRY DRIER. RICHARD W. YATES, Kansas City, Mo. Filed Nov. 3, 1924. Serial No. 747,495. 7 Claims. (Cl. 34—5.)

1. Laundry apparatus comprising a drying chamber provided with air inlet openings and air outlet openings at opposite sides of the chamber, means for imparting motion to the chamber to agitate the contents thereof, and means including intake and discharge conduit passages

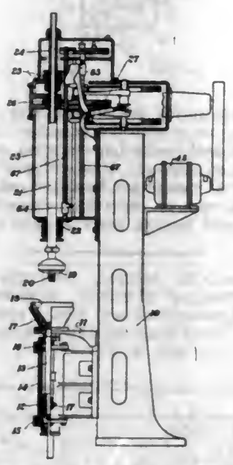
moving in unison with said chamber and in constant communication with said inlet and outlet openings respectively.

1,664,099. OIL-BURNING LOCOMOTIVE FURNACE. HARRY A. ATWATER, Kansas City, Mo. Filed Oct. 8, 1923, Serial No. 667,177. Renewed Nov. 30, 1927. 5 Claims. (Cl. 158—3.)



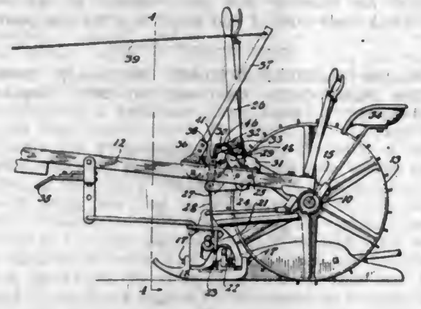
1. In an oil-burning locomotive firebox construction, a fire pan comprising side shelf portions and a longitudinally extending depressed portion providing a flame channel between and below the level of said shelf portions, exterior side and bottom walls spaced from the sides and bottom of said depressed portion and cooperating therewith to form an air-preheating passage, and a burner compartment forming a communicating passage between said flame channel and one end of said preheating passage, the bottom or floor of said depressed portion being closed as regards communication with said preheating passage.

1,664,100. HIGH-TENSION INSTALLATION. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Oct. 20, 1921. Serial No. 508,933. 26 Claims. (Cl. 173—13.)



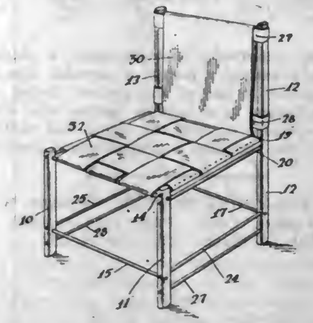
1. The combination with a conductor, of an openwork conducting cage surrounding said conductor and spaced outwardly therefrom for increasing the effective diameter of said conductor, said cage being of less length than said conductor.

5. The combination with a conductor, of a supporting insulator therefor, a flux control member connected with said conductor adjacent said insulator, and a cage of conducting material extending continuously along said



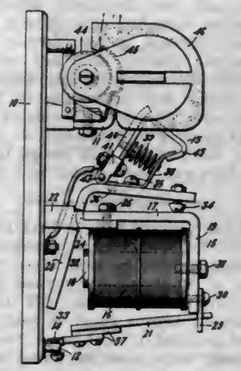
conductor adjacent said insulator and control member for a limited distance, said conductor continuing beyond said cage.

1,664,101. FORMING AND THREADING MACHINE. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Feb. 12, 1925. Serial No. 8,825. 22 Claims. (Cl. 25—3.)



1. In combination a thread forming device, a continuous drive for said device, a periodically reversing drive for said device, and means for connecting said device with either of said drives.

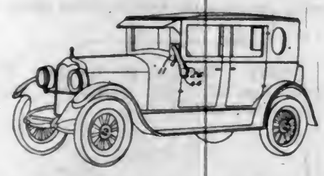
1,664,102. CUTTER-BAR-ADJUSTING MECHANISM FOR MOWING MACHINES. ERNEST BASEMAN, Batavia, N. Y., assignor to Massey-Harris Harvester Company, Inc., Batavia, N. Y., a Corporation of New York. Filed Sept. 4, 1924. Serial No. 735,918. 4 Claims. (Cl. 56—281.)



1. A mower comprising a main frame, a vertically swinging cutter bar pivotally mounted on said frame, a lever pivotally mounted on said frame and operatively connected with said cutter bar, and means for locking said lever in position when the cutter bar is raised to an inoperative position comprising a bracket mounted on said frame and having a shoulder, a pawl pivotally mounted on said lever and adapted to engage said shoulder upon moving said lever in the direction for lifting the cutter bar, and a releasing finger movably mounted on said pawl and adapted to move past said shoulder upon shifting said lever further in the direction for raising said cutter bar and to engage said shoulder and cause the pawl to clear said shoulder as the lever moves in the opposite direction for lowering said cutter bar.

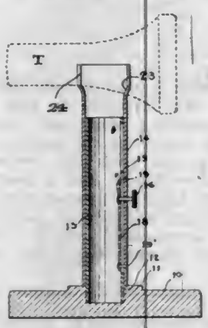
1,664,103. CHAIR. EUGENE M. BISHOFF, Pasadena, Calif. Filed Aug. 17, 1926. Serial No. 129,712. 8 Claims. (Cl. 155—187.)

1. A chair having a pair of front and rear supporting uprights, a seat attached to said uprights, said rear uprights extending above said seat to form a back, a cross bar connecting the uprights adjacent their upper ends, a second cross bar connecting the uprights in a plane with said seat, a flexible cross member connecting the uprights between the cross bars, and a back forming flexible member extending from the first cross bar downwardly over the forward side of the flexible cross member and being secured to the second cross bar.



1,664,104. ELECTROMAGNETIC DEVICE. EUGENE R. CARICHOFF, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 9, 1924. Serial No. 691,797. 20 Claims. (Cl. 200—103.)

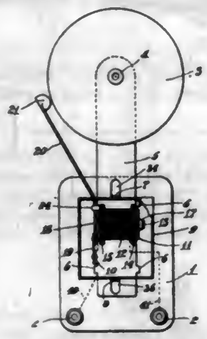
1. In an electromagnetic device, a magnetic structure comprising a fixed support and a magnetic return member removably secured to the free end of the support, an electromagnet having one end of the core thereof secured to



said return member with the free end of the core disposed adjacent the said support, and an armature hingedly mounted with respect to the said support for operation between the support and the free end of said core in response to the energization of said electromagnet.

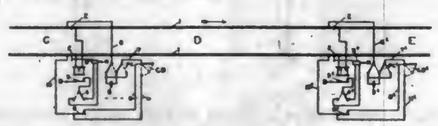
1,664,105. TRAFFIC SIGNAL FOR MOTOR VEHICLES. JAMES L. DONLAY, Hynes, Calif. Filed May 25, 1927. Serial No. 194,062. 9 Claims. (Cl. 116—39.)

1. A signal comprising in combination a plurality of cylinders, each having a piston, a movable signal operatively connected to one of the pistons, means to connect said cylinders to a vacuum device, and means to control one cylinder to shift the signal and another cylinder to stop the signal in a predetermined position.



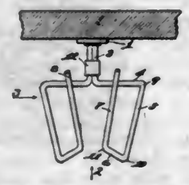
1,664,106. EAR-PHONE HOLDER. WARREN W. FISHER, Los Angeles, Calif. Filed June 1, 1927. Serial No. 195,750. 1 Claim. (Cl. 179—153.)

A telephone stand comprising a base plate, a tubular member extending into said base plate, a slot in said tubular member, a second tubular member receivable slidably over said first mentioned tubular member, a leaf-spring, means extending through said slot attaching said leaf-spring to said second tubular member, said leaf-spring bearing against said first tubular member, means extending through said slot providing a finger button for causing said leaf-spring to release its engagement with said first tubular member, whereby said second tubular member is adjustable on said first tubular member, a flared end on said second tubular member, and opposed cut-away portions on said flared end.



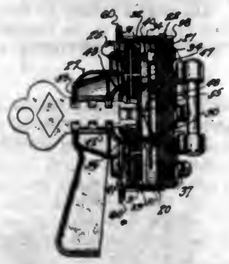
1,664,107. ELECTRIC BELL. WILLIAM F. HENDRY, Ossining, N. Y., assignor to Manhattan Electrical Supply Company, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Sept. 12, 1924. Serial No. 737,353. 4 Claims. (Cl. 177—7.)

4. In an electric bell, a panel of insulating material, four apertures provided in said panel, two binding posts mounted on said panel near the lower edge thereof, a metal bracket, means to clamp the bracket on said panel, two arms integral with the bracket and bent up on opposite sides thereof in staggered relation with each other, a magnet core, one end of which is frictionally held in one of said arms, and the other end of which serves as a polepiece, a coil and two spool heads of insulating material on said core, the lower edges of said spool heads resting on said bracket and serving as a support for said core, an armature for said magnet mounted on the other one of said arms, a contact point on said armature, a leaf spring having one end riveted to one of said spool heads, a contact point near the



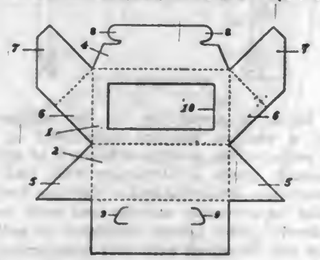
free end of said spring cooperating with the contact on the armature, an electrical connection from one end of said coil to said spring, an electrical connection from the other end of said coil to one of said binding posts, and an electrical connection from the other one of said binding posts to said bracket.

1,664,108. BLOCK SIGNAL SYSTEM FOR RAILROADS. WILLIAM S. HENRY, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed July 26, 1926. Serial No. 124,965. 6 Claims. (Cl. 246—45.)



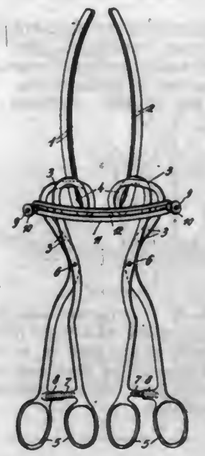
1. In a block signaling system for railroads, having tracks divided into blocks, a semaphore at the entrance to each block, a polarized track relay at the entrance end of each block governing said signal, a pole changer mechanically operated by each signal, a source of current, electrical connections between said source of current and the track rails including said pole changer and a front contact of the corresponding track relay for supplying track circuit current to the block next in the rear, and circuit controlling means operated by the signal for shunting said front contact of the corresponding track relay if said signal is in its stop position.

1,664,109. ARTICLE HOLDER. WILLIAM N. HOWDEN, San Pedro, Calif. Filed Oct. 20, 1926. Serial No. 142,898. 7 Claims. (Cl. 24—257.)



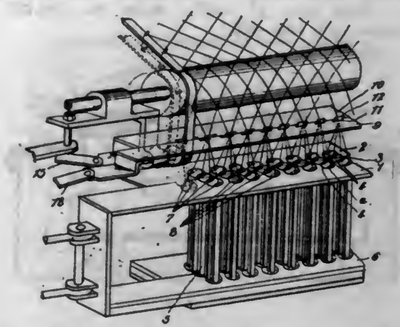
1. An article holder comprising a single wire having bent portions forming substantially two rectangles, the base sides of such rectangles being in substantial alinement, the adjacent sides of the rectangles forming gripping strands, the free ends of such strands such being the free ends of the wire riding on the base sides.

1,664,110. LIGHTING AND IGNITION SWITCH. EDWARD N. JACOBI, Milwaukee, Wis., assignor, by mesne assignments, to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Nov. 12, 1924. Serial No. 749,442. 13 Claims. (Cl. 200—44.)



1. In a switch, a switch-case having a closed end, a handle member mounted to turn on the end of the switch-case, a key guide positioned between the handle and the end of the switch-case and mounted to turn therein, a contact member mounted to turn on the end of the key guide, and a key fitting in a slot of the key guide and engaging the contact member for turning it.

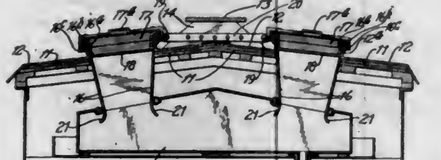
1,664,111. CARTON. WILLIAM M. JOHNSON, Urbana, Ohio, assignor to The W. H. Marvin Company, Urbana, Ohio, a Corporation of Ohio. Filed Mar. 23, 1927. Serial No. 177,720. 1 Claim. (Cl. 229—22.)



In a carton, a blank formed to provide a triangular shaped carton which is in cross section the shape of a plane right-angled, isoceles triangle, said blank having a rectangular shaped section to form the front, another rectangular shaped section to form the back, and a third rectangular shaped section to form the bottom, said front section being of greater width than the other sections and provided with a transparent window, said front section being provided at each end with a triangularly-shaped section of right-angled form attached to said front section along the line of its hypothenuse, a locking flap projecting from one of the sides of each of said triangular shaped sections, said back section also having at each end a triangular shaped section attached thereto along the line of its altitude with the base thereof co-extensive with the adjacent side of said back section, and another section attached to said front section adapted to overlie the bottom section and be interlocked therewith, the triangular sections which are attached to the front section being adapted to over-lie the outer side of those triangular sections which are attached to the back section so as to form the ends of the carton when folded, the rectangular shaped locking flaps projecting inwardly parallel with said bottom sections.

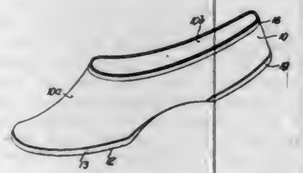
1,664,112. SURGICAL FORCEPS. AUGUST JÜNEMANN, Wittenberge, Germany. Filed Nov. 2, 1927, Serial No. 230,647, and in Germany Oct. 18, 1926. 4 Claims. (Cl. 128—325.)

1. An appliance for preventing hæmorrhage during operations involving incisions in the walls of cavities in the human body, comprising in combination two pairs of forceps, each pair of forceps comprising two pivoted members, a handle at one end of the member, a clamping jaw at the other end of the member, and a bridge member for connecting the two pairs of forceps such that they can be adjusted independently of one another and rotated with respect to one another for drawing the edges of the incision together, and can be taken apart for removing the clamping jaws from the incision, as set forth.



1,664,113. REED FOR NET-MAKING MACHINES. SAIBEI KAKUDA, Fukuyama-Shi, Japan, assignor to Saibi Mojiami Kabushiki Kaisha, Fukuyama-Shi, Japan. Filed Mar. 28, 1927, Serial No. 179,102, and in Japan Apr. 2, 1926. 1 Claim. (Cl. 96—4.)

A reed for net-making machines for interlocked netting, which consists of two plate members having respectively a series of notches in a side edge thereof and which are adapted to be positioned substantially flush and in close contact with each other at the notched side edges and to be moved intermittingly so as to shift the strands of the

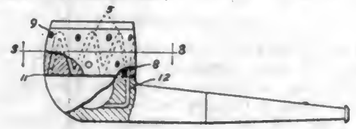


twines to the proper interlocking positions by the time of the commencement of the interlocking operation and to keep the strands confined in small spaces during the said interlocking operation.

1,664,114. SOUNDPROOFING METALLIC STRUCTURE. GEORGE L. KELLEY, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 21, 1922. Serial No. 569,964. 4 Claims. (Cl. 296—28.)

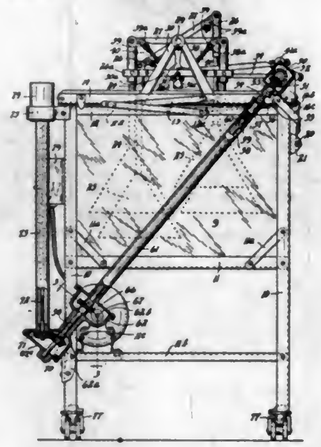
1. A vehicle body construction comprising a metallic body shell and a relatively thick inner lining therefor, said lining being applied to the shell in a viscous state and formed of such a composition that upon drying it becomes a tenacious non-resilient coating lowering the vibratory period of the body shell.

1,664,115. OVERSHOE. CLARENCE KENYON, Jr., New York, N. Y. Filed July 13, 1927. Serial No. 205,333. 4 Claims. (Cl. 36—6.)



1. An overshoe comprising an upper having lateral wings intermediate the ends thereof, said lateral wings being inwardly bent and overlapped, and inner and outer sole portions connected to the said upper, said inner and outer sole portions extending into the arch portion of the overshoe.

1,664,116. CAR TANK. PETER KORTENHOEVEN, Chicago, Ill. Filed June 11, 1927. Serial No. 198,287. 3 Claims. (Cl. 105—355.)

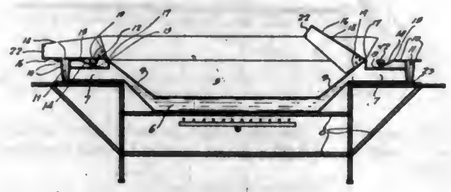


1. In combination with a car having a wooden roof and sheet metal covering, a tank, means for supporting the tank in the car beneath the roof, and a neck on said tank projecting upwardly through the roof of the car, the sheet metal covering of the roof of the car having an upwardly turned flange surrounding said neck, and the upper edge of said neck extending upwardly above said flange and bent downwardly around the outside thereof.

1,664,117. TOBACCO PIPE. EMANUEL KRATOCHVIL, Chicago, Ill. Filed Oct. 22, 1926. Serial No. 143,451. 3 Claims. (Cl. 131—12.)

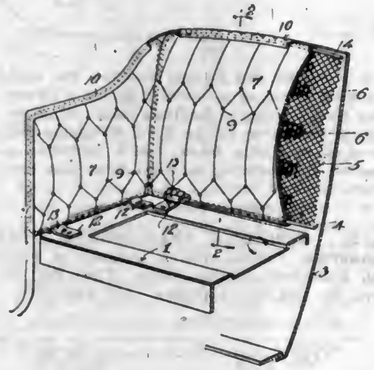
1. A tobacco pipe having the stem and bowl, a mantle outside the bowl, said mantle having an extended passage leading to the bowl and atem at its respective ends and surrounding the bowl with an intervening air space.

1,664,118. WASHING MACHINE. OLLIE L. LAFFERIOR, Minneapolis, and NELSON A. LAFFERIOR, Argyle, Minn. Filed June 1, 1925. Serial No. 34,009. 7 Claims. (Cl. 74—14.)



1. An actuating mechanism for the reciprocating elements of a washing machine comprising an operating shaft, a reciprocating member connected to said shaft, a beam movable about a stationary axis and to which said elements are connected and a yieldable connection between said reciprocating member and each end of said beam, whereby under normal resistance to said elements said beam will be moved with said reciprocating member, but under excessive resistance to said elements said yielding connection will yield and said reciprocating member will move relatively to said beam.

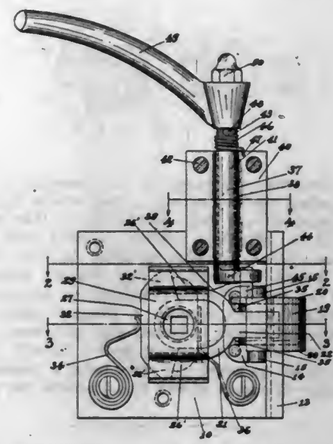
1,664,119. CUT-OFF-CONTROLLING MECHANISM. SAMUEL M. LANGSTON, Wenonah, and KARL SIEG, Brooklawn, N. J., assignors to Samuel M. Langston Co., Camden, N. J., a Corporation of New Jersey. Filed Apr. 26, 1927. Serial No. 186,772. 18 Claims. (Cl. 164—34.)



1. A cut-off controlling mechanism including a target in the path of the advancing end of the material to be cut off, and means for automatically varying the position of said target in accordance with the speed of travel of said material.

1,664,120. EAR-FORMING APPARATUS FOR POP CORN. HOWARD M. LAUBACH, Omaha, Nebr. Filed July 5, 1927. Serial No. 203,465. 8 Claims. (Cl. 107—16.)

6. In an ear-forming apparatus for pop-corn, a frame, a mixing-tank on the frame provided with steam chambers and inclined slides at its ends for moving the popcorn thereon, molds on the frame at the respective ends of the tank and a pair of apertured operating-plates adapted to be disposed with their apertures in register with said molds and to extend to and engage the slides of said tank for receiving the popcorn therefrom for delivery to said molds.

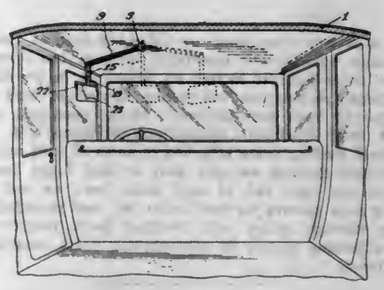


1,664,121. REMOVABLE CUSHION FOR VEHICLES. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 8, 1919. Serial No. 295,531. 28 Claims. (Cl. 155—184.)

1. The combination with a vehicle body having a seat back and side portions formed with a longitudinally extending channel seat at its upper edge, of flexible metallic cushion frame sections for said back and side portions respectively, each section including a rod bent to conform to the contour of its respective seat back or side portion, and having its upper edge removably seated in said channel seat, flexible metallic netting secured to said rod, an upholstery cushion secured to said rod and stretched over said metallic netting, springs interposed between said flexible metallic netting and said upholstery cushion and flexible metallic stampings secured to the seat of said vehicle to yieldingly maintain the lower edge of said cushion frame seated in its position with respect to said seat back or side portion.

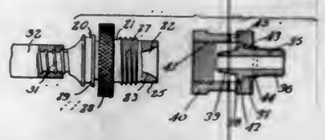
1,664,122. LATCH MECHANISM. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 18, 1922. Serial No. 561,841. 4 Claims. (Cl. 292—222.)

1. A latch mechanism comprising a base plate, a swinging latch bolt pivotally mounted thereon, a spindle rotatable about its longitudinal axis and having a horizontally disposed hooked finger engaging about a vertical projection on the latch bolt to swing the same on



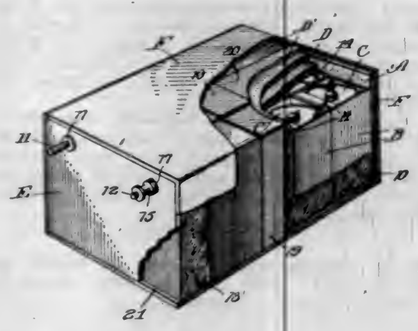
its pivot, said finger having a shoulder engaging the baseplate to limit rotation of the spindle in one direction, and means for rotating the spindle.

1,664,123. PRODUCTION OF DERIVATIVES OF ARSANILIC ACIDS. WINFORD LEE LEWIS, Evanston, Ill., assignor, by mesne assignments, to Parke, Davis & Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 14, 1924. Serial No. 699,313. 4 Claims. (Cl. 260—14.)



1. The method of forming compounds containing an arsanilic acid group with a radical containing a hydroxyl group substituted in the amino group which comprises reacting upon an arsanilic acid in aqueous caustic solution with a compound containing a reactive polyhydric alcohol residue.

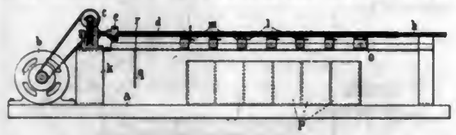
1,664,124. GLARE SHIELD. JOHN M. LORENZ, Los Angeles, Calif. Filed May 10, 1926. Serial No. 107,979. 2 Claims. (Cl. 296—97.)



1. A glare shield comprising in combination a clamping bracket, means to secure said bracket to the roof of a vehicle, a horizontal channel-shaped arm pivoted to said bracket by a vertical clamping bolt, a depending rod hinged to the free end of said channel, whereby the rod may be swung upwardly and substantially housed within said channel, a screen holder connected to the lower end of the rod, and a screen in said holder.

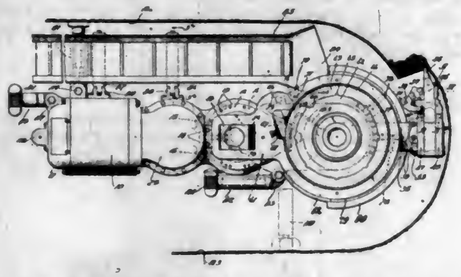
1,664,125. HOSE COUPLING. JOHN R. LOWREY, San Francisco, Calif. Filed Nov. 10, 1926. Serial No. 147,448. 2 Claims. (Cl. 285—122.)

1. A coupling comprising in combination a tubular male coupling element having a plug with a tapered exterior surface at one end, external screw threads at the other end, a cylindrical section between said ends, a guard cup or nut rotatably mounted on the cylindrical section, means interengaging the tubular element and the cup to restrain their longitudinal movement, the cup having internal threads, a tubular complementary female element having a socket, and with screw threads external of said socket, said screw threads engaging the threads of the guard cup there being a cleanout opening to allow discharge of dirt from between the plug and socket.



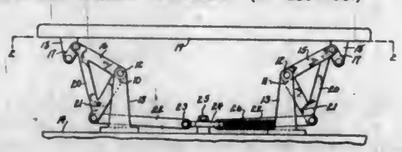
1,664,126. DRY-BATTERY CONSTRUCTION. EDWIN E. MEISEKOTHEN, Madison, Wis., assignor to French Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed Aug. 28, 1925. Serial No. 53,070. 3 Claims. (Cl. 136—108.)

1. A battery comprising: an outer box open at one end; an inner box therein insertable through the open end of the outer box and having an open side; a plurality of individual rectangular cell-cartons seated in said inner box having open ends presented to the open side of the inner box; electrical connections between said cells; terminal binding posts attached to some of said cells and projecting through an end wall of said inner box and out of the open end of said outer box; an end piece acting as a closure for said outer box and provided with holes through which said binding posts project; and wire-attaching means on said binding posts outside said end piece.



1,664,127. APPARATUS FOR INTERMITTENTLY INTRODUCING SUBSTANCES INTO SOLUTIONS AND WITHDRAWING THEM THEREFROM AND FOR ANALOGOUS PURPOSES. KEITH SINCLAIR MILLS, Beaconsfield, England. Filed Sept. 24, 1926, Serial No. 137,604, and in Great Britain Sept. 24, 1925. 10 Claims. (Cl. 95—89.)

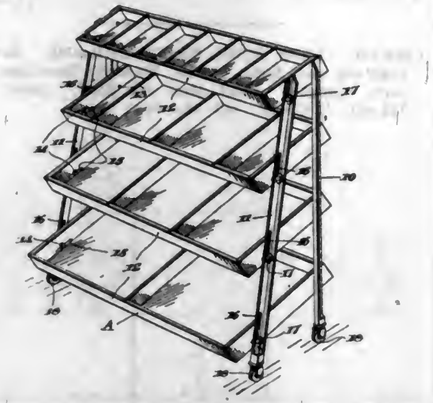
1. Apparatus for intermittently introducing articles into solutions and withdrawing them therefrom including a rotatable screw-threaded element extending along the length of the apparatus, a stationary element extending along the length of the apparatus and disposed substan-



tially parallel to the aforesaid screw-threaded element and a plurality of lifting pieces carried by said stationary element.

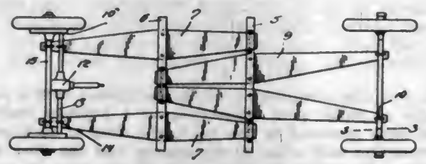
1,664,128. MINING AND LOADING MACHINE. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Oct. 24, 1921, Serial No. 509,979. Renewed Nov. 25, 1927. 70 Claims. (Cl. 262—5.)

1. In a mining and loading machine, the combination with a main frame, of a conveyer having a forward semicircular hinged frame to facilitate maintaining the receiving lip of the latter on the floor, dislodging mechanism mounted on said main frame, and a delivering conveyer in position for receiving material from said first-named conveyer.



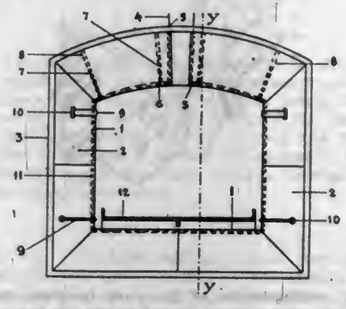
1,664,129. RESILIENT SEAT MOUNT. CHRISTIAN PALLENBERG, Clinton, Conn., assignor of one-half to Emil Pallenberg, Clinton, Conn. Filed Feb. 16, 1927. Serial No. 168,526. 5 Claims. (Cl. 155—50.)

1. In a resilient seat-mount, the combination with a seat-member and a support-member therefor, of a pair of rocking-bars, each formed with a pair of complementary supporting arms and with a coupling-arm extending substantially at a right angle with respect to the said supporting-arms, means connecting the coupling-arms of the said rocking-bars together for synchronizing the rocking movement of the latter, means for securing the said rocking-bars to one of the said members with capacity for rocking movement, and means for connecting the outer ends of each of the said pairs of supporting arms to the other of the said members.



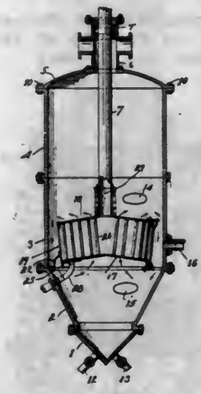
1,664,130. DISPLAY STAND. JAMES MACKENZIE RAE, Medicine Hat, Alberta, Canada. Filed Nov. 16, 1927. Serial No. 233,680. 5 Claims. (Cl. 211—130.)

5. An improved display stand comprising in combination, a plurality of interconnected standard members having a plurality of trays mounted in pairs pivotally carried by the standard members in opposed relation, brace members between the standard members, and



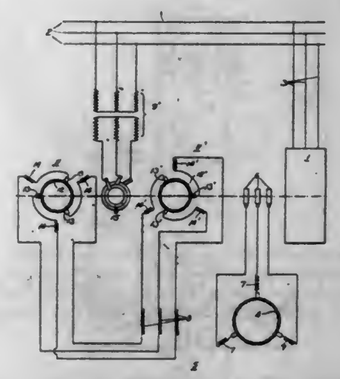
means for individually tiltably adjusting the trays for display purposes and roller means associated with the standard members for transporting the stand.

1,664,131. VEHICLE CHASSIS. GEORGE W. RAY, Forty Fort, Pa. Filed Mar. 3, 1927. Serial No. 172,411. 3 Claims. (Cl. 280—106.5.)



1. A device of the class described comprising a pair of cross bars disposed in spaced parallelism, a pair of flat-like spring members having their ends attached to one bar and their intermediate portion attached to the other bar adjacent the ends of the bars, a second pair of flat-like springs attached at their ends to the central portion of said other bar and having their intermediate portions attached to the intermediate portion of said one bar.

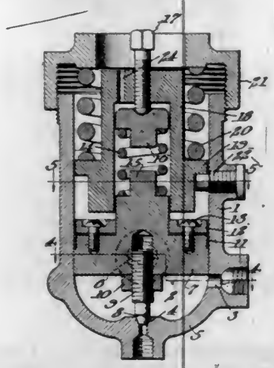
1,664,132. ELECTRIC FURNACE. IVAR RENNERFELT, Djursholm, Sweden. Filed Aug. 18, 1926, Serial No. 129,961, and in Sweden Sept. 1, 1925. 5 Claims. (Cl. 266—15.)



1. In an electric furnace a refractory, frame shaped flat body, a ribbon resistor located concentrically along the inner edge of the body, and means for securely clamping and reinforcing the body on the outside edge.

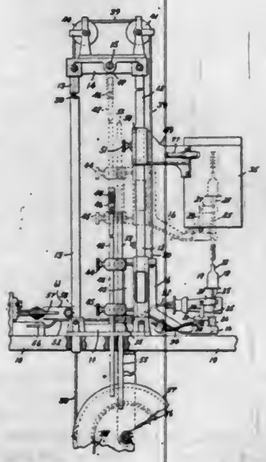
1,664,133. EVAPORATOR PROTECTOR. CARL WILLIAM SCHEDLER, Berkeley, Calif. Filed Nov. 11, 1925. Serial No. 68,255. 1 Claim. (Cl. 159—28.)

In an evaporator having a shell and a steam drum disposed therein, said steam drum comprising a steam chamber traversed by substantially vertical liquid tubes, and said shell having its liquid inlet disposed between the planes bounding the top and the bottom of said drum, a detachable plate between said drum and said liquid inlet of said plate having two upwardly extending ears, eyebolts in said ears, rods engaging said eyebolts and passing through tubes in said steam drum, an angle plate on the bottom of said detachable plate, and holes in said angle plate receiving the lower end of said rods.



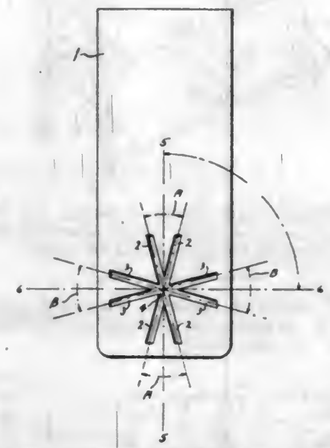
1,664,134. SPEED-CONTROL SYSTEM. LUCIEN SCHOMBOURGER and HIDDÉ K. SCHRAGE, Paris, France, assignors to General Electric Company, a Corporation of New York. Filed May 6, 1925, Serial No. 28,474, and in France July 1, 1924. 8 Claims. (Cl. 172—274.)

1. The combination of an induction motor, a regulating machine provided with an exciting winding and concatenated with said motor for controlling the speed thereof, an exciter for said exciting winding including series connected armature and field windings for controlling the excitation of the exciting winding of the regulating ma-



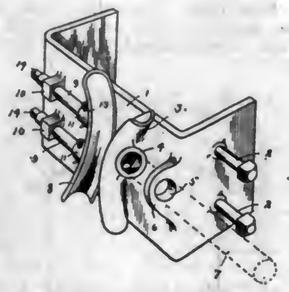
chine, said exciter armature and field windings being related to cause the production of component voltages whereby the ohmic and inductive drop in said exciting winding are neutralized.

1,664,135. CONTROL VALVE. WILLIAM SCRIMGEOUR, Washington, D. C. Filed May 15, 1926. Serial No. 109,331. 7 Claims. (Cl. 277—20.)



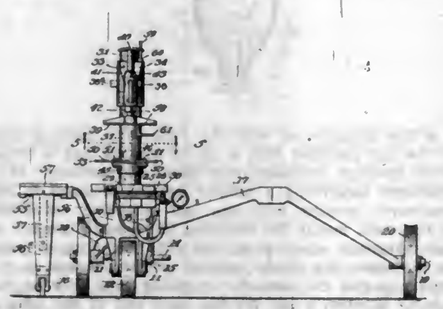
1. A combined cut-off and relief valve comprising a casing having an inlet port, an outlet port and a relief port, an outlet valve and a relief port valve, said valves being urged from their respective closing positions by the inlet fluid pressure, means providing a relatively low force opposing the opening of said outlet port and means providing a relatively large force opposing the opening of said relief port.

1,664,136. METHOD AND APPARATUS FOR TREATING FILAMENTS. GEORGE R. SHAW, South Euclid, and BERNHARD F. TELLKAMP, Cleveland Heights, Ohio, assignors to General Electric Company, a Corporation of New York. Filed May 3, 1927. Serial No. 188,550. 7 Claims. (Cl. 250—27.5.)



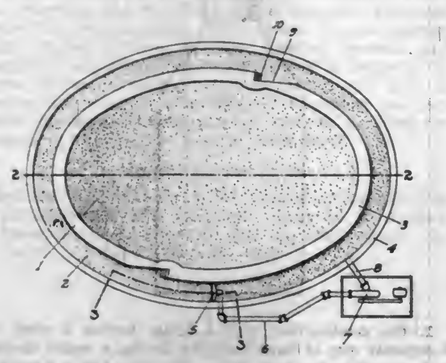
1. The method of combining a non-metal with a metallic filament which consists in exposing said filament while heated to incandescence to a gas containing said nonmetal and controlling the duration of said exposure by the increase in resistance of said filament.

1,664,137. LENS STOP OR DIAPHRAGM. EDWARD STEWART and JOHN GORDON WARREN, Hamilton, Ontario, Canada. Filed Mar. 25, 1927. Serial No. 178,451. 1 Claim. (Cl. 95—64.)



A lens stop comprising a diaphragm formed with a plurality of radial slots intersecting at a common centre, said slots arranged in two pairs, the slots of each pair intersecting each other at 30 degrees, and the lines bisecting the angles of intersection of the slots of each pair being perpendicular to each other.

1,664,138. PIPE-BENDING DEVICE. JOHN SUNDGREN, Duluth, Minn. Filed Nov. 22, 1926. Serial No. 149,809. 2 Claims. (Cl. 153—32.)

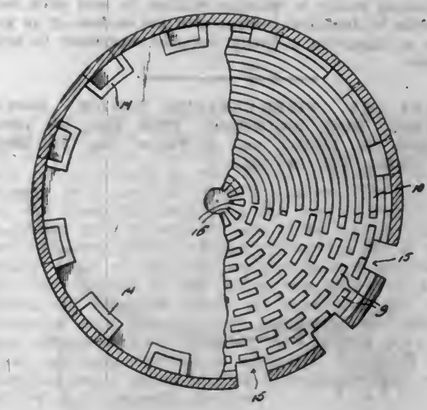


2. A bending device of the class described comprising a body portion, a fixed arcuately shaped jaw upon one face thereof and an opposite similarly shaped jaw normally spaced therefrom, and a pair of spaced adjustable supporting bolts for said latter jaw for the purpose described.

1,664,139. MOLDING MACHINE. HENRY TSCHERNING, Freeport, Ill., assignor to Arcade Manufacturing Company, Freeport, Ill., a Corporation of Illinois. Filed May 10, 1926. Serial No. 108,012. 15 Claims. (Cl. 22—43.)

1. In a molding machine, the combination of a supporting structure having wheels by which it is adapted to be supported on a floor, and squeezing means on said structure comprising relatively movable members arranged one above the other, one of said supporting wheels being centralized relative to the longitudinal axis of the lower one of said members.

1,664,140. SWIMMING CIRCLE. JESSE D. TUCKER, Sacramento, Calif., assignor to Tucker Brothers Manufacturing Company, Sacramento, Calif. Filed Nov. 3, 1926. Serial No. 145,995. 4 Claims. (Cl. 4—172.)



1. A swimming structure consisting of a continuous endless canal, means for maintaining a current of water in the canal for substantially the entire length thereof, and a recess in one of the side walls of the canal extending downwardly from the top thereof and disposed to one side of the line of flow of the current to form a relatively still water area into which a swimmer may pass when entering the canal.

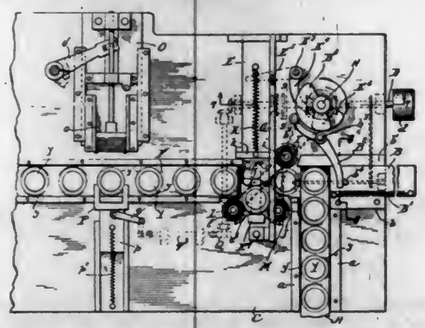
1,664,141. ROLLING MILL. JONAH HOWELL VAN CAMPEN, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Apr. 16, 1926. Serial No. 102,440. 4 Claims. (Cl. 80—39.)

4. A three-high rolling mill comprising end frames, vertically alined roll housings, in said frames, rolls having their ends mounted in said housings, and roller bearings interposed between the necks of the rolls and said housings, each bearing comprising a multiplicity of series of conical rollers, and the upper and lower housings being of reduced thickness adjacent to the middle housing.

1,664,142. POTTERY KILN. ALBERT C. WARD, Canonsburg, Pa. Filed May 4, 1927. Serial No. 188,769. 8 Claims. (Cl. 25—132.)

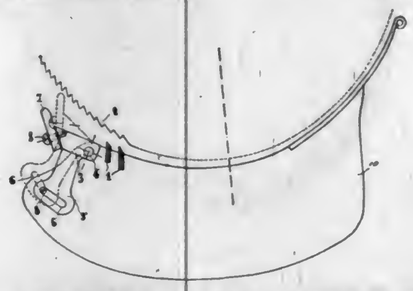
1. An apparatus of the character described comprising a kiln floor adapted to have heat applied therebeneath, supporting tiers for the door defining tortuous passages therebetween and flues interposed between the floor and the tiers.

1,664,143. DEVICE FOR MANUAL PRODUCING OF CIGAR FILLERS. PHILIPP WEBER, Vallendar-on-the-Rhine, Germany. Filed Apr. 25, 1927, Serial No. 186,508, and in Germany Sept. 12, 1925. 2 Claims. (Cl. 131—48.)



1. A device for forming cigar fillers comprising two mould shaped members, which when assembled take up the form of a cigar, a tip cap on one of said members

and a longitudinal sliding fold on the other said members, both members when assembled, with the edge of one member resting in the said fold of the other mem-



ber, forming a hollow mould for the filler, the joints between the two members lying flush with the interior surface of the mould.

1,664,144. ARTICLE-POSITIONING MEANS FOR LABELING MACHINES. CHARLES S. WEEKS, South Orange, N. J. Filed Mar. 20, 1926. Serial No. 96,270. 36 Claims. (Cl. 216—9.)

1. In an article positioning mechanism of the class described, the combination with means for moving articles in a definite path, of positively actuated article contacting means in movable relation to said path and operable by frictional contact with the surface of an article or imparting a partial rotative movement to said article.

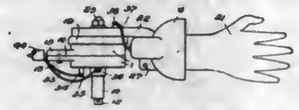
1,664,145. FIBER-CLEANING DEVICE. MORRIS WEHLI, Basel, Switzerland. Filed Aug. 18, 1926, Serial No. 130,059, and in France Aug. 24, 1925. 1 Claim. (Cl. 19—105.)

In a fiber-treating apparatus, the combination, with a toothed cylinder, of a grid; a cross-piece mounted in the front part of the grid to swing about a horizontal axis toward and from the cylinder and having a beveled front face; a depending lug rigidly connected to each end of the cross-piece to swing therewith, each lug being formed adjacent its lower end with a slot; fasteners engaged in said slots to retain said cross-piece in adjusted position with relation to said cylinder; a knife resting directly upon the beveled face of the cross-piece and adjustable edgewise toward and from the cylinder and independently of the adjustment of said cross-piece; and fastening means engaged with the knife to retain it in adjusted position.

1,664,146. TOBACCO-PIPE VENTILATOR. JOHN WILSON, Pawtucket, R. I. Filed June 14, 1926. Serial No. 115,875. 4 Claims. (Cl. 131—12.)

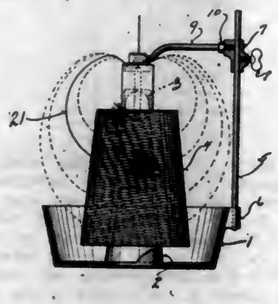
4. The combination with the stem of a smoking pipe or the like provided with a smoke passage and a transverse opening communicating with said passage, of a ventilator comprising a tubular member mounted in the transverse opening with one end extending outwardly of the stem, means for retaining the tubular member in the transverse opening of the stem including a band on the outer end of the tubular member, means on the band engaging the stem for retaining said band on the tubular member, a cap for the outer end of the tubular member removably applied to the band and having an air inlet opening, a valve seat at the inner end of the tubular member, a valve seat on the cap about said air inlet opening of the latter, and a valve in the tubular member normally engaged with the second named valve seat and movable by suction in the smoke passage to engage the other valve seat.

1,664,147. BOTTLE-SEALING DEVICE. BENJAMIN WOOD, New York, N. Y. Filed Nov. 16, 1925. Serial No. 69,280. 2 Claims. (Cl. 215—33.)



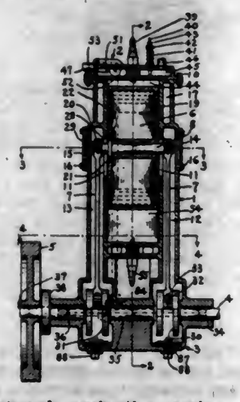
1. The combination with a bottle having a neck, of a separate cap of hard material having a space therein and secured to the neck at the top thereof by a frangible connection, a cork extending down into the neck and up into the cap, the cap being removable from the cork when detached from the neck by breaking said frangible connection, and a layer of tin foil covering the entire cap and engaging the neck below the cap, whereby the cap can be removed by twisting it about its longitudinal axis, and then the cork can be grasped by the part projecting above the neck and withdrawn by a twisting motion.

1,664,148. DIRECTION INDICATOR FOR MOTOR CARS AND OTHER VEHICLES. JOHN WILLIAM WOOD, Christchurch, New Zealand. Filed Oct. 11, 1926, Serial No. 140,921, and in New Zealand July 30, 1926. 4 Claims. (Cl. 116—46.)



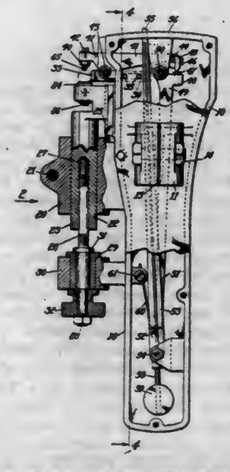
1. A direction indicator for a vehicle comprising a vertically disposed cylindrical casing mountable upon the exterior of the vehicle, a drum rotatable within said

casing, a cap enclosing the upper end of said casing and fixed to said drum to rotate therewith, a horizontal arm carrying a direction-pointing device fixed upon said cap to turn therewith, and a pair of tensional connections wound in opposite directions in peripheral grooves



around said drum and differentially tensionable by a controlling device operable by the driver for the purpose of turning said drum to cause said direction-pointing device to project forwardly or laterally in either direction.

1,664,149. YARN BALLOONER. MAX N. ALMQUEST and ANTHONY B. JABLONSKI, Milwaukee, Wis. Filed June 6, 1927. Serial No. 196,855. 5 Claims. (Cl. 242—128.)

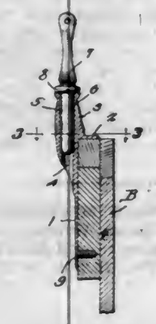


1. An unwinding device for yarn comprising means for receiving the yarn, a pair of members positioned above the yarn receiving means and of annular contour and adapted to have the yarn threaded between such members, one of said members having a centrally located discharge aperture through which the yarn is drawn, said members being adapted to depress the yarn above the yarn receiving member, whereby a looped formation of the passing yarn is maintained.

1,664,150. DOUBLE-ACTING FOUR-CYCLE INTERNAL-COMBUSTION ENGINE. CHARLES E. AUGNER, Floral Park, N. Y. Filed May 10, 1926. Serial No. 108,051. 1 Claim. (Cl. 123—63.)

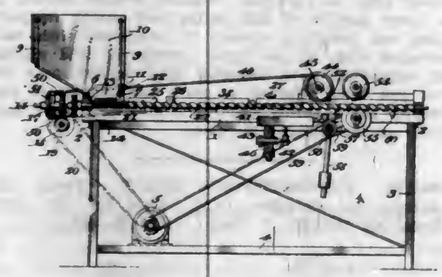
In an internal combustion engine, a water cooled cylinder having oppositely arranged closed crank shaft pockets communicating with the interior of said cylinder at the central portion thereof, a double headed centrally recessed piston having piston rings at the extreme ends, having a centrally located flanged wrist pin as an integral part of said piston provided with means for oiling the bearings and cylinder, said pin having recessed bearings on the opposite ends thereof, connecting rods detachably and oscillatively held to said wrist pin and a double crank shaft, means supplying a gaseous mixture alternately to each combustion chamber, means alternately firing said mixture, means alternately exhausting the burnt gases from said combustion chambers and oiling means directed to force oil throughout the crank case, shaft pockets and to the interior of the cylinder.

1,664,151. CALIPERING MECHANISM. JOHN BATH and STANLEY W. BATH, Worcester, Mass., assignors, by mesne assignments, to said John Bath. Filed Dec. 17, 1925. Serial No. 75,891. 4 Claims. (Cl. 33—190.)



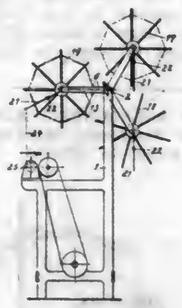
1. A calipering mechanism comprising a casing having a graduated scale mounted on the upper part thereof, an anvil slidably mounted thereon, means to adjust said anvil vertically on said casing, a movable contact element, a horizontally extending contact lever pivoted on said casing and supporting said contact element, a depending lever pivoted in said casing and having a laterally offset portion engaged by the long end of said contact lever, an upwardly extended pointer pivoted in the lower portion of said casing and having its indicating end extending upward to co-operate with said graduated scale on the upper portion of said casing, said depending lever engaging said pointer near its pivot and being effective to move said pointer in one direction, and a spring effective to yieldingly move said pointer in the opposite direction.

1,664,152. CONCRETE-FORM BRACE. PETER BROHETTE, San Francisco, Calif. Filed Jan. 19, 1927. Serial No. 162,050. 7 Claims. (Cl. 25—131.)



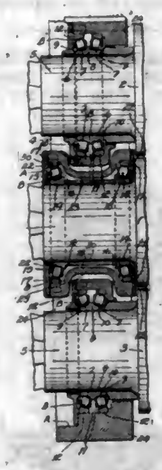
1. A concrete-form-spacer comprising a rod with its ends bent at right angles to the run of the rod and one of said ends spread laterally with reference to the run of the rod.

1,664,153. OARLOCK. ANSON BORKERT, Warsaw, Ind. Filed Mar. 11, 1927. Serial No. 174,553. 1 Claim. (Cl. 9—26.)



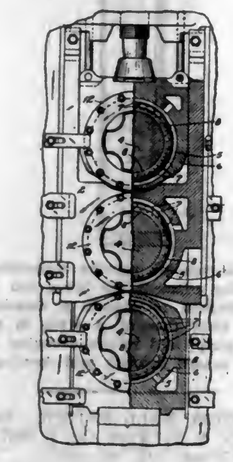
An oar lock including an attaching plate, a flange extending at right angles from the upper edge thereof, said flange and plate being adapted to bear upon the top and outer side edges respectively of the gunwale of a boat, there being openings in the flange and plate for the reception of fastening devices, a sleeve integral with the plate and flange, said sleeve extending outwardly beyond the plate and upwardly beyond the flange, there being a counterbore extending downwardly into the sleeve from its upper end, the lower end of the sleeve being beveled downwardly toward the plate and the upper end of said sleeve constituting a bearing, a bushing fitted within the counterbore, a yoke detachably bearing on the upper end of the sleeve, a cylindrical pin extending from the yoke within the bushing, a portion of the upwardly extending end of the sleeve being positioned to overlie a portion of a gunwale when seated in the angle formed by the plate and flange, thereby to reinforce the angle.

1,664,154. MACHINE FOR FINISHING GLASS TUBES, BARS, VIALS, BOTTLES, AND THE LIKE. LEON JEAN BROCHE, Vineland, N. J., assignor, by mesne assignments, to Kimble Glass Company, Vineland, N. J. Filed Mar. 23, 1926. Serial No. 96,811. 19 Claims. (Cl. 49—7.)



1. In a machine of the character described, a conveyer including two conveyer screws arranged in parallel relation and common plane, and each mounted for rotation in proper direction to move laterally an article bridging said screws and extending into the threads thereof, each screw being also provided at a like point in its length with an offset in its thread extending partially around its body in a direction perpendicular to the axis of such screw, and serving to hold the article treated temporarily against lateral movement yet permit continuing rotation of the screws.

1,664,155. SKEIN HOLDER FOR THREAD-SPOOLING MACHINES. XAVER BRÜGGER, Horgen, Zurich, Switzerland. Filed Dec. 18, 1926, Serial No. 155,715, and in Switzerland June 26, 1926. 2 Claims. (Cl. 242—85.)



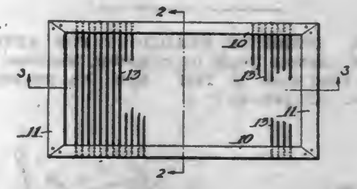
1. A skein holder for thread spooling machines comprising a horizontal shaft having equidistant longitudinal grooves, a support to which said shaft is rigidly connected, frames comprising pairs of radial arms connected to a hub and loosely mounted on said shaft by means of the hub, a reel mounted between each pair of arms, and a spring-pressed ball held in the hub so as to engage in the grooves of the shaft for holding any particular reel in operative position.

1,664,156. ROLLING MILL. TRACY V. BUCKWALTER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Jan. 11, 1926. Serial No. 80,470. 3 Claims. (Cl. 80—39.)

3. A three-high rolling mill comprising end frames, vertically alined roll housings in said frames, rolls having their end portions mounted in said housings, and roller bearings interposed between the necks of said rolls and said housings, the bearing of the middle roll comprising oppositely disposed conical rollers widely spaced apart, and the bearings of the top and bottom rolls, comprising rollers located between the planes of said sets of rollers of said middle roll, and the middle housing being recessed to accommodate the top and bottom housings.

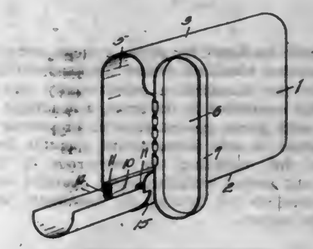
1,664,157. ROLLING MILL. TRACY V. BUCKWALTER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 22, 1926. Serial No. 96,502. 5 Claims. (Cl. 80—39.)

5. A rolling mill comprising rolls of substantially even length and with short necks, roll housings substantially equidistant from the median line of the mill, and a multiplicity of series of conical roller bearings interposed between each neck of each roll and its housing and each bearing comprising a reversely tapered cone mounted on such neck and providing two raceways, an annular series of conical rollers for each raceway and a separate bearing cup mounted in said housing for each series of rollers.



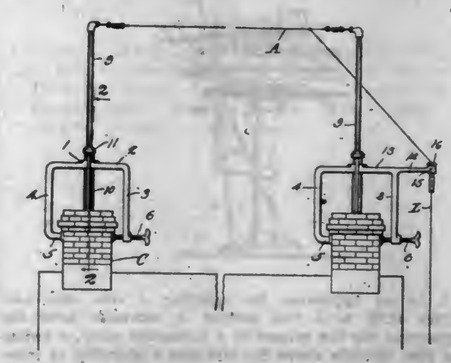
1,664,158. FASTENER FOR TIRE CHAINS. FREDERIC A. CALKINS, Waterbury, Conn. Filed June 23, 1926. Serial No. 117,972. 2 Claims. (Cl. 24—69.)

1. In a detachable fastener for connecting the end links of a tire chain, a tension link pivoted to one of said chain end links, a locking link pivoted to said tension link, said tension link having a recess for receiving the other chain end link; said locking link comprising a flat bridge section and a pair of depending side wings, said wings embracing the opposite sides of said tension member and serving to lock said other chain end link in position, said side wings when in locked position extending beyond the end of said tension member and having means to engage said first-named chain end link for holding said locking link in locked position.



1,664,159. APPARATUS FOR PRODUCING ORNAMENTAL BACKGROUND ON STONE. ELROY A. CHASE, Northfield, Vt. Filed Apr. 23, 1926. Serial No. 104,193. 3 Claims. (Cl. 41—1.)

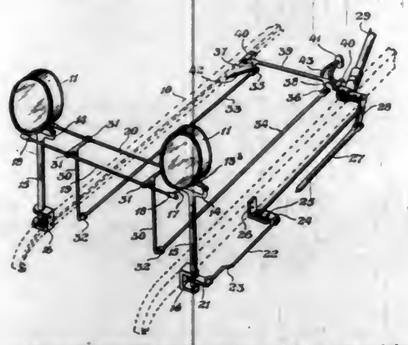
1. In a sand blasting apparatus, a sand obstructing device for producing an ornamental back ground, said device being adapted to be interposed in the path of the sand blast adjacent the surface of the work, and comprising a plurality of thin, flat, elongated, steel bars, and means to firmly support said bars substantially parallel



and with their flat side faces substantially parallel and with their flat side faces substantially perpendicular to the surface of the work.

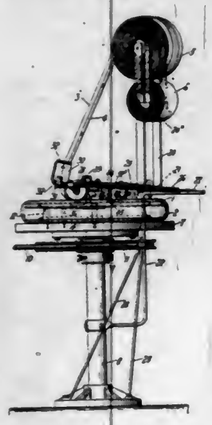
1,664,160. COMBINED TOBACCO CAN AND CIGARETTE-PAPER HOLDER. SAMUEL M. CLEMENT, Webster Groves, Mo. Filed Aug. 9, 1926. Serial No. 128,297. 4 Claims. (Cl. 206—38.)

1. In combination with a tobacco can having a cover therefor, of a U-shaped cigarette paper compartment formed wholly within and along one side of the tobacco can and separated from the tobacco compartment thereof by a partition so that the papers can be partly extracted from their compartment in U-shaped formation to receive tobacco when the can is tilted and the cover has been opened.



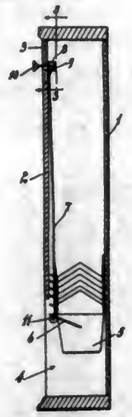
1,664,161. AERIAL SUPPORT. EDWARD H. CONSIDINE, Chicago, Ill. Filed Apr. 23, 1927. Serial No. 186,146. 2 Claims. (Cl. 248—38.)

1. An aerial support including a yoke having depending arms, cooperating means upon the arms for clamping upon structures of different sizes for holding the yoke



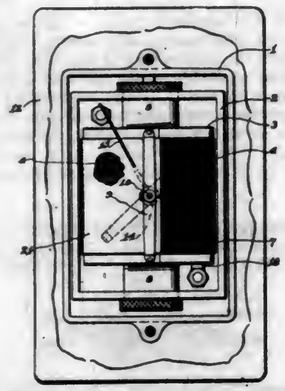
thereto, a sleeve adjustably mounted within the yoke, means carried by the sleeve for bearing downwardly on the engaged structure to hold the yoke against tilting, and a mast carried by the sleeve.

1,664,162. DIRIGIBLE HEADLIGHT FOR AUTOMOBILES. ARNOLD EDGAR DALY, Mather, Manitoba, Canada. Filed June 23, 1927. Serial No. 200,920. 2 Claims. (Cl. 240—61.)



1. A dirigible headlight for motor vehicles comprising a rotatably mounted standard, forked lamp supporting arms unitary with the standard, a substantially star-shaped plate pivotally connected to the arms, a headlight rigidly secured on said plate, spaced parallel cross-rods operatively connected to said plate, means operable from the driver's seat for operating the cross-rods to tilt the headlights, and means simultaneously operable with the steering mechanism for turning the headlights with the wheels of the vehicle.

1,664,163. TIRE-FINISHING MACHINE. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 6, 1926. Serial No. 79,702. 27 Claims. (Cl. 154—9.)



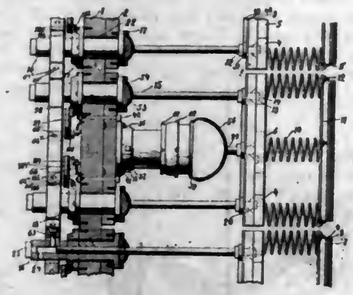
1. In an apparatus for applying a side wall and chafer strip to a tire carcass, a rotatable table for supporting the tire carcass in a horizontal plane, a swinging arm movable above the tire and a plurality of independently pivoted levers on said arm, a finishing tool carried upon each lever, and means for conducting a strip of finishing material to the tire carcass in front of said tools.

1,664,164. CARTON-VENDING DEVICE. WALDEMAR A. ENDTER, Long Beach, Calif. Filed Feb. 18, 1926. Serial No. 89,036. 2 Claims. (Cl. 312—43.)

1. A device for vending cartons comprising a cabinet having an opening adjacent the lower end thereof, said cabinet being adapted to contain a column of nested cartons having balls thereon, a strip in said cabinet, rollers on said strip, said rollers engaging the balls as the cartons are vended through said opening.

1,664,165. DIMMER WALL SWITCH. GEORGE FREEMAN, New York, N. Y. Filed Apr. 1, 1927. Serial No. 180,190. 12 Claims. (Cl. 201—48.)

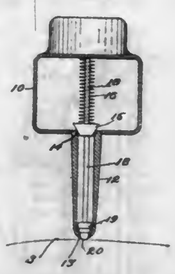
7. In a device of the class described, a resistance coil wound on a core, a housing for said core, the top and bottom of said core supported by adjusting screws, a pivoted contact arm adapted to contact with said resistance coil for making and breaking an electric circuit, the said core having an offset portion so only one end of said arm will contact with said resistance coil at one time, the opposite end being free to idle, a switch plate at the front of said housing and a pair of slots within the said switch plate for ventilating the interior of said switch.



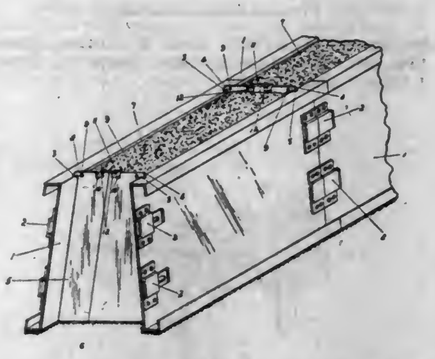
1,664,166. ADJUSTABLE WRITING IMPLEMENT. FRANK FUREDY, Brooklyn, N. Y., assignor to Bushwick National Bank. Filed July 22, 1924, Serial No. 727,460. Renewed July 16, 1927. 14 Claims. (Cl. 120—14.)

1. An adjustable pencil comprising a case, a plurality of lead stems arranged therein for longitudinal and pivotal movement, a rotary impeller in the case having helical channels, the lead stems having members cooperating with the respective channels for longitudinal stem movement, and guide channels located longitudinally in the case and having angular portions and co-operating with members of the lead stems to move them pivotally at a certain point in their longitudinal travel, the stems being moved simultaneously in opposite directions and partly rotated to selectively project and retract the different leads, by rotation of the impeller.

11. A pencil comprising a case, a lead stem mounted therein for longitudinal and pivotal movement and having a cranked portion, a lead grip mounted for limited reciprocating movement on the stem, and a clutch comprising flexible means located within the case near its lower end and adapted to cooperate with the lead grip to return the grip to normal position after it has been retracted on the stem in a lead-ejecting action.



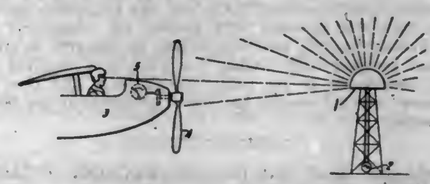
1,664,167. TORPEDO GUARD. JOHN GREENWICH, Fernwood, Idaho. Filed Sept. 27, 1920. Serial No. 413,066. 9 Claims. (Cl. 114—240.)



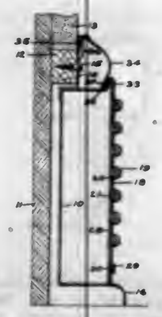
2. A shield for ships comprising a plurality of separate shields yieldingly carried by the hull, a plurality of plungers carried by the shields, cylinders associated with the hull and receiving said plungers, springs for holding the plungers in their outward position, explosive means carried by some cylinders and firing means associated with some plungers for exploding the charge.

1,664,168. SCALP-TREATING APPLIANCE. THOMAS STEWART HARRIS, Lowell, Mass., assignor to The Ayer Company, Lowell, Mass., a Corporation of Massachusetts. Filed Sept. 15, 1926. Serial No. 135,584. 5 Claims. (Cl. 132—13.)

5. In a scalp treating appliance, the combination with a reservoir and a hollow tooth communicating with said reservoir and having a discharge opening, of a valve for controlling the flow of fluid from said reservoir through said tooth, said valve having an operating stem provided with a rounded scalp-engaging member projecting through said discharge opening, and means for limiting the inward movement of said stem to an amount insufficient to permit the complete retraction of said member into said opening.

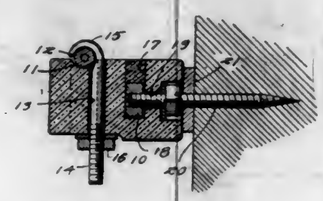


1,664,169. CURB FORM. EDWARD T. HARROLD, Binghamton, N. Y., assignor to Mark S. Hotchkiss, Johnson City, N. Y. Filed June 23, 1926. Serial No. 118,015. 3 Claims. (Cl. 25—118.)



1. A curb form comprising inwardly sloping side walls, sectional spacing plates between said walls, the edges of said plates conforming to the slope of said walls, said plates being removable by sections from between the assembled walls.

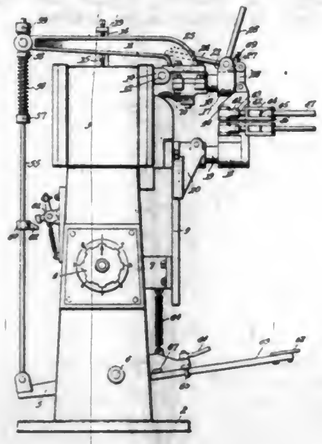
1,664,170. AEROPLANE GUIDING LIGHT. WILLIAM F. HENDRY, Ossining, N. Y., assignor to Manhattan Electrical Supply Company, Inc., a Corporation of Massachusetts. Filed Apr. 28, 1927. Serial No. 187,295. 9 Claims. (Cl. 244—2.)



1. A vehicle guiding system comprising in combination, a vehicle, a light beacon, means whereby the brilliancy of said light beacon is periodically varied at a characteristic rate, and stroboscopic means on the vehicle for determining the periodicity of said variation of brilliancy.

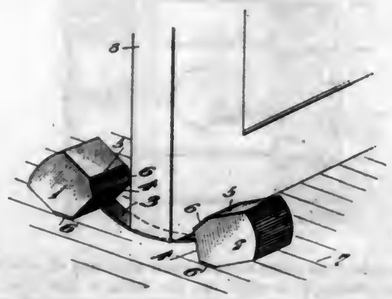
1,664,171. ELECTRICAL BASEBOARD HEATER. WILLIAM WESLEY HICKS, San Francisco, Calif. Filed Dec. 17, 1925. Serial No. 76,033. 12 Claims. (Cl. 219—34.)

1. A combined air heater and wall base comprising a hollow metallic casing adapted to extend along substantially all the wall of a room adjacent the floor thereof, and electrical heating means within said casing.



1,664,172. INSULATOR. JOHN R. HOLLER, Ellwood City, Pa. Filed July 20, 1926. Serial No. 123,712. 1 Claim. (Cl. 173—321.)

An insulator comprising a body having a transverse wire receiving groove adjacent one end, a bolt disposed transversely through the body and having a hook end for holding a wire in the groove, the body having a longitudinal bore extending inwardly from one end and a transversely directed recess communicating with the inner end of said bore, said end of the body having a recess surrounding the adjacent end of said bore, a nut in the transverse recess, and a bolt disposed in the bore and having threads engaged in the nut and projecting beyond the body and provided with threads for engagement in a wooden support, said bolt having an integral enlargement provided with wrench engaging faces disposed in the end recess of the body, whereby said bolt may be driven into the support prior to application of the body thereto.

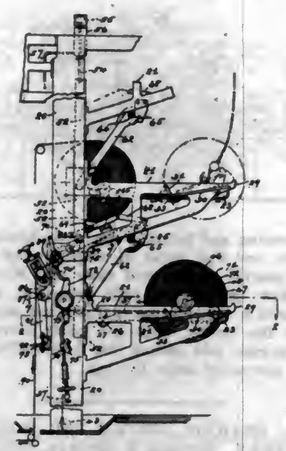


1,664,173. ELECTRIC-WELDING-MACHINE ATTACHMENT. CHARLES W. HOLSTEIN, Warren, Ohio, assignor to The Monarch-Welder Machine Company, Warren, Ohio, a Corporation of Ohio. Filed July 11, 1927. Serial No. 204,975. 8 Claims. (Cl. 219—4.)

1. An attachment for a spot welding machine of the type having vertically movable welding points mounted on horizontal conductor-carriers for converting it to a butt welding machine, comprising a die block and clamp carrier adapted to be substituted for the movable conductor-carrier, and a cooperating die block and clamp carrier

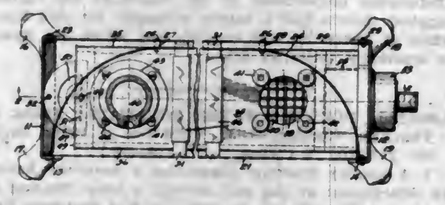
adapted to be substituted for the stationary conductor-carrier, one of said carriers having a slide upon which the corresponding die block and clamp are mounted, and means for reciprocating said die block and clamp on said slide towards and away from the other die block and clamp.

1,664,174. RETAINING DEVICE FOR DOORS. WASHINGTON I. HOOPES, Jr., Brawley, Calif. Filed Oct. 28, 1925. Serial No. 65,310. 4 Claims. (Cl. 292—344.)



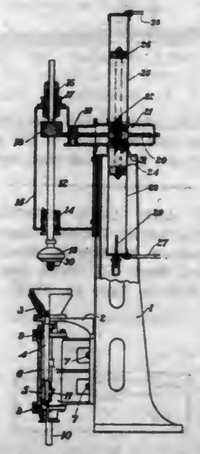
1. In a door holder, a flat resilient metallic strip of greater length than the thickness of the door, blocks having upper and lower bevelled corners adapted to contact with the floor, means for securing the ends of said strip at a point to one side of the center line of said blocks whereby the device may be reversed for use with doors varying in distance above the floor, said strip being flexed downwardly when in use by the contact of the bottom of said door therewith.

1,664,175. HEAT TREATMENT OF ALLOYS. KARL J JACOBI, Roselle, N. J., assignor to Pacific Coast Borax Company, New York, N. Y., a Corporation of Nevada. Filed June 9, 1926. Serial No. 114,807. 4 Claims. (Cl. 148—15.)



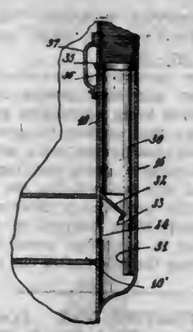
1. The method of heat treating alloy steels which comprises subjecting them to a fused bath of an alkali earth borate.

1,664,176. PAPER-WEB-CONNECTING MECHANISM FOR PRINTING PRESSES. THOMAS JOHANCEN, Linthicum Heights, and EDWARD KEHOE, Baltimore, Md. Filed June 25, 1926. Serial No. 118,487. 20 Claims. (Cl. 242—58.)



1. In a paper web mechanism for printing presses the combination with means for normally sustaining a rolled web of paper while the latter is being fed to the printing press, of means for moving the roll from the normal sustaining means while the web is unwinding therefrom to make room for the reception of a fresh roll in said normal sustaining means, a braking means for the roll when it is carried by the normal sustaining means and a second braking means for the roll and movable with the roll as it is shifted from the normal sustaining means.

1,664,177. ELECTRIC HEATER. ARTHUR J. KERCHER, Berkeley, and WILLIAM WESLEY HICKS, San Francisco, Calif. Filed Aug. 26, 1925. Serial No. 52,514. 8 Claims. (Cl. 219—34.)

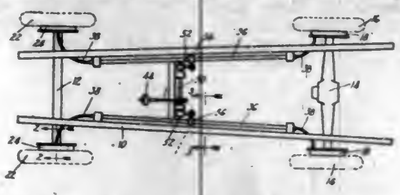


6. In an electric heater having a casing, a unit comprising a supporting element formed with downwardly extending parallel walls on two sides, a screen supported between said walls near their edges, a control switch secured to one end of said element, heating elements secured to the upper surface of said supporting element and transverse tongues on the upper surface of said supporting element for securing the unit within the casing.

1,664,178. FORMING MACHINE FOR PLASTIC MATERIALS. DONALD KEITH MACLEOD, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Feb. 12, 1925, Serial No. 8,721. Renewed Nov. 24, 1926. 7 Claims. (Cl. 25—3.)

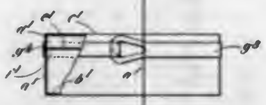
1. A forming machine for plastic material comprising a movable die, a fluid pressure device for moving said die and a stop arranged to act on said fluid-pressure device for arresting said fluid pressure device to arrest the movement of said die at a predetermined position.

1,664,179. SAFETY DEVICE FOR GAS METERS. GIORGIO MANGIARACINA, Brooklyn, N. Y. Filed June 17, 1926. Serial No. 116,525. 3 Claims. (Cl. 73—1.)



1. In a device of the class described, the combination with a gas meter having a side gas outlet opening into a gas outlet connection, of a tubular member having spaced slots therein, at the bottom thereof, and adapted to be inserted in the said outlet connection, the side portion of said tubular member between said slots being disposed inwardly and extended substantially across the passage therein, and positioned in front of the said side outlet for preventing the insertion of a wire into the said outlet.

1,664,180. BRAKE-OPERATING MECHANISM. MONTGOMERY W. MCCONKEY, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1925. Serial No. 78,554. 9 Claims. (Cl. 188—10.)

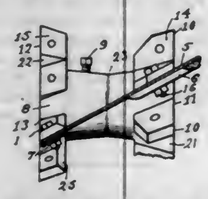


1. A vehicle having, in combination, front and rear brakes, a spring-supported chassis frame, a shaft ex-

tending longitudinally of the vehicle and supported by the chassis frame, brake-applying means for rocking the

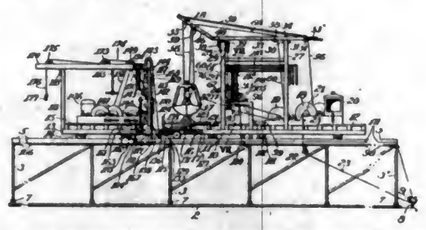
shaft about its axis, and flexible operating members connected to the front and rear ends of the shaft arranged to apply respectively the front and rear brakes.

1,664,181. TIN AND LIKE CONTAINER. DUDLEY OWEN, West Smithfield, London, England, assignor of one-half to Andrew McCormick MacTaggart, London, England. Filed Sept. 13, 1926, Serial No. 135,081, and in Great Britain June 15, 1926. 2 Claims. (Cl. 220—53.)



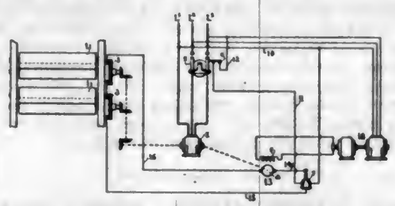
1. A container comprising a body portion with a fixed bottom, a cover with an endless flange of approximately the same perimeter as that of the body portion, and a flat tear-off strip soldered to the flange and depending below the same, the strip having an enlarged integral end portion which forms a part of and is a continuation of the strip and has a part cut therefrom to form a loop capable of being gripped by the fingers for removing the strip, the strip and loop being made of one piece of metal.

1,664,182. DENTAL POWDER. MAURICE PARISI, Corona, N. Y. Filed Mar. 12, 1925. Serial No. 15,151. 1 Claim. (Cl. 167—9.)



A tooth powder comprising non-absorbing powdered bone, bean powder, and rice powder in the ratio of 5:25:40, said mixture being adapted to exert a combined abrasive effect when first applied to teeth in a substantially dry state, said bean powder being adapted to rapidly absorb moisture forming a paste covering said powdered bone and powdered rice for reducing the abrasive power of said mixture after preliminary cleaning of said teeth and said rice powder being adapted to absorb moisture thereafter resulting in a thicker paste of less abrasive capacity for polishing the teeth after the cleaning thereof.

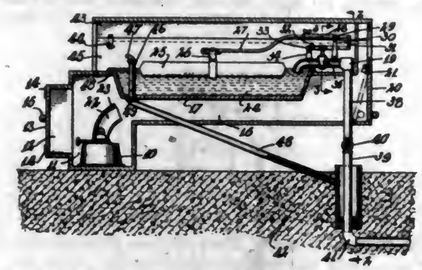
1,664,183. VENTILATING FAN. JAMES D. PARKER, Kansas City, Kans. Filed Aug. 5, 1926. Serial No. 127,433. 2 Claims. (Cl. 170—173.)



1. A fan comprising a hub of approximately cylindrical shape, a series of wings spaced apart circumferentially around each end of said hub, each of said wings on one end of said hub a companion of a wing on the opposite end of said hub, each companion pair of said wings disposed in a common spiral along the cylindrical periphery of said hub and then changing to a flat rectangular shape so that the flat rectangular portion of each companion pair of said wings lie in a common plane disposed radially from and crossing the axis of said hub near the center of the length thereof at an acute angle to the axis of said hub, and a flat blade bearing against and secured to the flat rectangular portion of each companion pair of said wings and projecting from said hub in the same general direction as the flat portion of said wings.

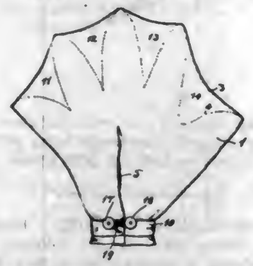
1,664,184. EXCAVATING AND CONVEYING APPARATUS. JOSEPH LE ROY POTTER, Indianapolis, Ind. Filed July 10, 1925. Serial No. 42,756. 17 Claims. (Cl. 214—86.)

1. Excavating and hoisting apparatus including a movable trestle, and two series of power means co-operating one with another to dig and clear and directly refill a trench below the trestle, each series of means being provided with a combination carrying car supported movably upon the trestle, each car being provided thereon with an engine and means for co-operating with the trestle to reversibly move the car.



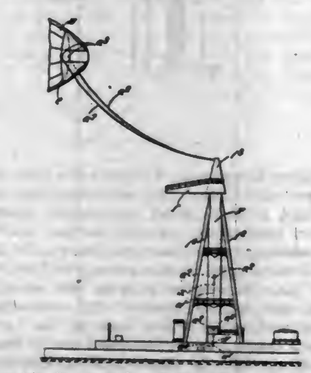
1,664,185. BRAKING SYSTEM FOR MOTOR-DRIVEN MACHINERY. THOMAS H. RODMAN, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 25, 1922. Serial No. 596,706. 3 Claims. (Cl. 188—158.)

2. In a braking system for motor driven machines operating on alternating current in combination direct current braking means to produce a braking effect approximately proportional to the square of the current supplied thereto and a supply generator for said brake which is driven by said machine and which has means to separately excite its field.



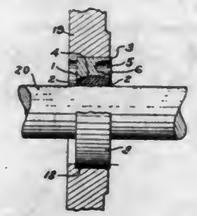
1,664,186. POULTRY WATER FOUNTAIN. FRANK R. THALKEN, Vineland, N. J. Filed Dec. 2, 1926. Serial No. 152,110. 2 Claims. (Cl. 119—73.)

1. A poultry fountain comprising a container having an enlargement at one end thereof, a lamp disposed in said enlarged portion, a partition in said container having a central rectangular opening therein, a tank comprising outwardly disposed edge portions disposed through the opening in said partition and suspended therefrom by said edge portions into the space below said partition, a supply pipe disposed through an opening in the bottom of said container and through a registering opening in said partition, a faucet on the upper end of said supply pipe having its discharge end disposed above said tank for delivering water thereto, and a door hinged to the other end of said container adapted



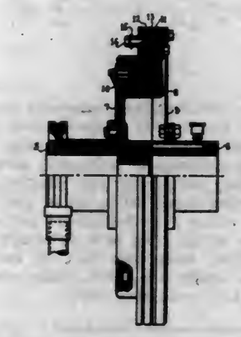
to be rotated inwardly for directing heat from said lamp upwardly in the direction of said faucet to prevent freezing thereof.

1,664,187. SWIMMING GLOVE. GEORGE VIANEBURG, New York, N. Y. Filed Dec. 19, 1924. Serial No. 756,860. 1 Claim. (Cl. 9—21.)



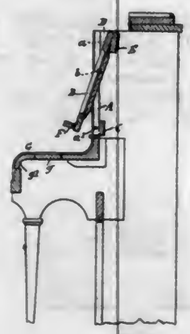
A swimming glove formed of two pieces of flexible material of equal size and similar outline, said pieces being secured together and a reinforced wrist band formed by having the material of each part folded upwardly and inwardly, prior to the joining of the parts together and securing an additional flexible member exterior of said parts and around said wrist portion, said glove having a button arranged adjacent to each end of said additional flexible reinforcing member and a cord between said buttons for drawing them toward each other in adjustable relation.

1,664,188. MOORING MAST OR MOORING GEAR FOR LIGHTER-THAN-AIR AIRCRAFT. BARNES NEVILLE WALLIS, Westminster, England, assignor to Airship Guarantee Company Limited, London, England, a British Company. Filed Jan. 4, 1926, Serial No. 79,076, and in Great Britain Jan. 12, 1925. 12 Claims. (Cl. 244—2.)



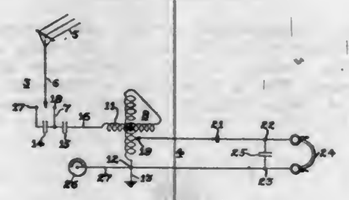
1. Apparatus for mooring lighter-than-air aircraft comprising a mooring mast, winding gear associated with said mooring mast, a pair of cables extending from opposite sides of the aircraft which is to be moored, the free ends of said cables being simultaneously wound in during the mooring operation by said winding gear so as to haul down the aircraft until it is brought into close proximity to the mooring mast.

1,664,189. SELF-ALIGNING BEARING STRUCTURE AND METHOD OF MAKING SAME. CARL CLAUS, Plainfield, N. J., assignor to Bound Brook Oil-Less Bearing Company, Boundbrook, N. J., a Corporation of New Jersey. Filed May 19, 1926. Serial No. 110,118. 2 Claims. (Cl. 308—72.)



1. In a self-aligning bearing structure, a bushing in which a shaft may be journaled, a cylindrical housing provided with a circular seat in which said bushing is mounted and an annular slot in one end thereof, the engaged portions of said bushing and the housing being rounded whereby the bushing may rock in its seat to conform to the alignment of the shaft, the said seat in the housing having one end portion thereof normally shaped in conformity with the curvature of said seat and the other end portion between the seat and the annular slot formed substantially straight to permit the insertion of said bushing in its seat and be pressed around the adjacent end of said bushing so as to finally conform that portion of the seat to said bushing.

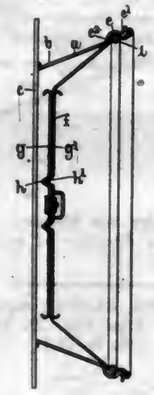
1,664,190. RELEASABLE POWER CONNECTION AND EQUIVALENT DEVICE. JOHN S. COLDWELL, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 14, 1923. Serial No. 674,635. 7 Claims. (Cl. 192—84.)



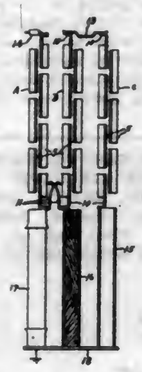
1. In a clutch or the like having a magnetic element, the combination with a friction device having a surface to be definitely located with reference to a normally concealed portion of said element, and means rigidly secured to said magnetic element to indicate the relation of said surface to said concealed portion of said element.

1,664,191. PIANOFORTE. ROBERT HENRY COLLEN, East Ham, England, assignor of one-half to John Broadwood & Sons, Limited, London, England. Filed July 10, 1926, Serial No. 121,673, and in Great Britain Nov. 17, 1925. 3 Claims. (Cl. 84—180.)

2. In an upright pianoforte, a top door, side sections forming part of said top door, a central section adapted to constitute a music desk pivotally connected to said side sections, and distance pieces secured to said side sections near their upper edges, in combination with a rail secured to said distance pieces, said central section being adapted to bear against said rail when in its inclined position for use as a music desk.



1,664,192. WIRELESS RECEIVING SET. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 11, 1922. Serial No. 574,816. 2 Claims. (Cl. 250—14.)

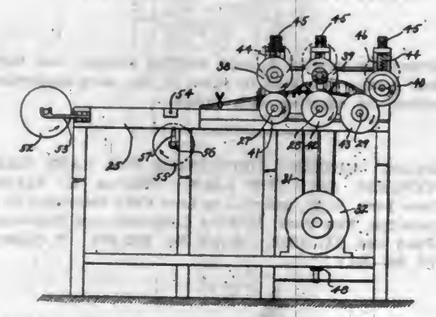


1. An oscillatory circuit having relatively large capacitive reactance to currents of predetermined frequency, a variable inductor having a relatively large reactance to currents of predetermined frequency, said inductor comprising relatively stationary and relatively movable coils, said coils being connected in series, and indicating means connected across a predetermined portion of and adapted to derive energy from said stationary coil, said predetermined portion being such that the energy losses in said indicating means are substantially equal to the energy losses in said oscillatory circuit.

1,664,193. GAS METER. ALBERT GEORGE COOKE and BENJAMIN CHARLES PHILLIPS, Hove, England. Filed Mar. 25, 1925, Serial No. 18,259, and in Great Britain Aug. 14, 1924. 2 Claims. (Cl. 73—1.)

1. A measuring chamber for dry gas meter comprising a partition, a rim soldered thereto, an annular semi-ellipse shaped recess swaged at the outer edge of said rim, a removable diaphragm mounted on said rim, a split spring ring inserted into said annular recess over said diaphragm, and said diaphragm being secured to said rim near the respective ends of said swage.

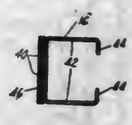
1,664,194. PROTECTIVE DEVICE. ELMER E. F. CRICHTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 5, 1924. Serial No 736,136. 7 Claims. (Cl. 175—30.)



7. A multigap arrester having electrodes spaced to form gaps between each other, the gaps and the electrodes being arranged in serial order, one section of the series of electrodes overlapping another section of the same series, the overlapping arrangement being such that comparatively distant gaps of the series are located nearer each other than intervening gaps in the series whereby sparking in one section between the electrodes causes sparking to be started across gaps in the overlapping section, each section being enclosed in a transparent quartz tube, one of said sections being shunted by an impedance element.

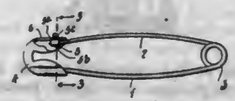
1,664,195. ELECTRIC-ARC DEVICE. MICHEL CRÉMER, Paris, France, assignor to General Electric Company, New York Corporation. Filed Mar. 16, 1926, Serial No. 95,163, and in France Aug. 29, 1925. 3 Claims. (Cl. 250—27.5.)

1. An electrode comprising an inner conductive member, an outer conductive member provided with an active surface, and an insulation member arranged to form a border about said surface.



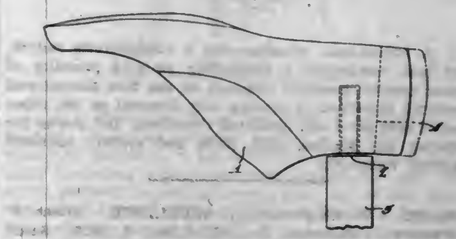
1,664,196. BEAD COVERING. CHARLES H. DESAUTELS, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 6, 1923. Serial No. 643,610. 12 Claims. (Cl. 154—9.)

9. A covering machine for triangular beads comprising a pair of pressure rolls adapted to unite the apex only of a triangular bead with a strip of covering fabric, a series of rollers adapted to turn one side of the fabric up the side of the bead, a second pair of pressure rolls adapted to press the covering fabric against the sides of the bead adjacent the apex, a second series of rollers adapted to contact with one base corner of the bead and set at progressively increasing angles to gradually turn one side of the fabric over the base of the bead, and a third pair of pressure rolls having their line of centers set at an angle to the line of centers of the preceding pair of rolls to cause the bead to be flexed with the base thereof outwardly disposed and adapted to press against the base of the bead the fabric previously turned thereover and to unite the edge of this fabric with the other side portion of the fabric.



1,664,197. BRAKE. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed May 22, 1926. Serial No. 110,854. 17 Claims. (Cl. 188—250.)

7. A brake shoe comprising two separately-formed parts, each of said parts having a cylindrical flange and a stiffening portion integral with each other, the two parts being arranged with the stiffening portions extending inwardly at opposite sides of the friction face of the shoe and with the cylindrical flanges edge to edge, the cylindrical flanges being reduced at one end of the shoe so that the stiffening portions at that end form a pair of spaced projecting arms, said arms having inwardly-tapering bearing portions in alinement with each other,

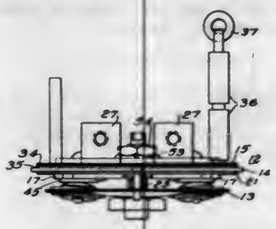


a pivot member projecting through the bearing portions, and conical parts on the pivot member seated in the tapered bearing portions.

1,664,198. SAFETY PIN. ANTON DVORAK, Shadyside, Ohio. Filed Dec. 15, 1926. Serial No. 154,982. 1 Claim. (Cl. 24—158.)

In combination, a safety pin having the front side of its guard provided with a longitudinally extending opening having its inner end laterally enlarged, a shank passing through the slot and adjustable longitudinally of the guard, a loop secured to the inner end of the shank and adapted to receive the free end of the penetrating bar of the safety pin, and a thumb piece secured to the outer end of the shank, said loop and thumb piece contacting with opposite faces of the front side of the guard, and said shank being adapted to occupy a position in the enlarged end of the slot to hold it against casual movement with respect to the guard.

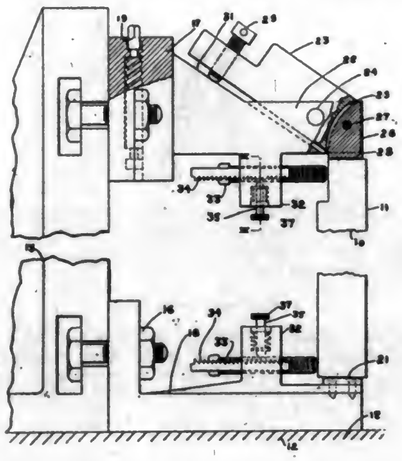
1,664,199. METHOD OF AND LAST FOR MAKING TURNED SHOES. JAMES EDWARDS, Philadelphia, Pa. Filed Sept. 23, 1925. Serial No. 58,052. 6 Claims. (Cl. 12—133.)



1. A method of making turned shoes consisting in making an upper with a lining fitting the leather; reversing the upper; temporarily securing a sole and the reversed upper to a last having space in its heel to receive the slack in the leather; stitching the upper to the sole; removing the last, and finishing the shoe on a standard last.

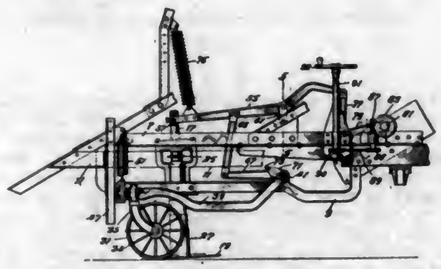
1,664,200. LIQUID-LEVEL INDICATOR. THOMAS M. EYNON, Philadelphia, Pa. Filed Mar. 11, 1925. Serial No. 14,613. 7 Claims. (Cl. 73—54.)

1. In a device of the character stated, a lower pressure sensitive diaphragm, an upper pressure sensitive diaphragm, means for retaining said diaphragms in constant relation to each other, and liquid conduits communicating with said diaphragms respectively for containing liquid columns adapted to be supported by said diaphragms for indicating the difference of pressures on said two diaphragms.



1,664,201. THERMOSTATIC SWITCH. CARL J. FAY, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 10, 1927. Serial No. 174,111. 6 Claims. (Cl. 200—122.)

1. A switch-base structure for a thermostatic switch, said base comprising a supporting plate, a plurality of spaced contact members disposed on one face thereof and insulated therefrom, a heating unit disposed on the other face of said plate and insulated therefrom, and means for securing the heating unit, plate and contact members together compactly.

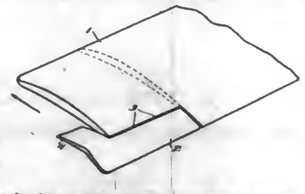


1,664,202. WORK-HOLDING APPLIANCE. JAMES F. FERNERY, Collingdale, Pa. Filed Mar. 6, 1925. Serial No. 13,632. 4 Claims. (Cl. 51—217.)

1. In a work-holding appliance, the combination of a base structure having a working surface, a plurality of independent work-supporting members, each of said work-supporting members having attaching means for rigidly engaging said working surface in any desired position relative to each other, means associated with each work-supporting member and adjustable in a direction toward or away from said working surface for establishing datum points for positioning the work, each of said work-supporting members having embodied therein a work-engaging surface adapted to receive or exert a thrust in a plane

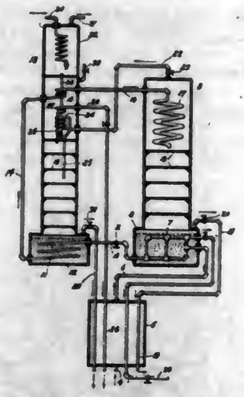
substantially parallel to said working surface, and individual means embodied in some of the work-supporting members for effecting such thrust.

1,664,203. CUTTING MECHANISM FOR CANE HARVESTERS AND THE LIKE. FRANCIS K. FLYNN, New York, N. Y., assignor to Luce Cane Harvester Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 11, 1922. Serial No. 593,671. 8 Claims. Cl. 56—53.)



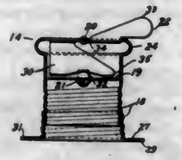
3. In a cane harvester, a frame, substantially vertical cutter shafts journaled in said frame for rotatable and longitudinal movement, cutters carried by said shafts, wheels adapted to run on the ground adjacent the side of the cutters and supported for vertical movement with reference to said frame, and connecting means between said wheels and said cutter shafts for transmitting the vertical movement of said wheels to said cutter shafts.

1,664,204. LATERAL CONTROL FOR AIRPLANES. ANTHONY H. G. FOKKER, Amsterdam, Netherlands, assignor to Atlantic Aircraft Corporation, a Corporation of New Jersey. Filed Aug. 26, 1922, Serial No. 584,595, and in Germany Mar. 22, 1921. 11 Claims. Cl. 244—29.)



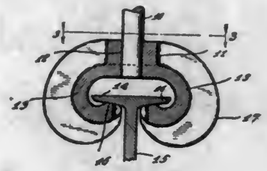
1. The method of effecting lateral balancing of airplanes having a fixed wing or lifting surface and ailerons

hinged to the opposite ends thereof which consists in counteracting the effect of the increased resistance to a depressed aileron at the same end of the wing, and



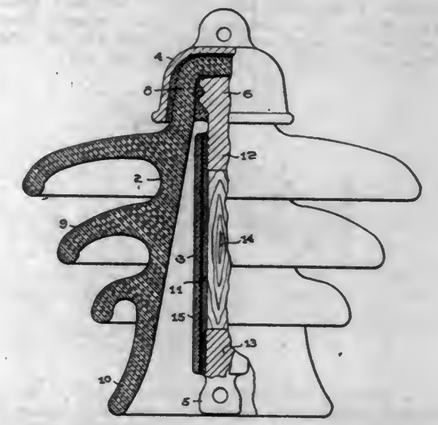
simultaneously increasing the resistance at the other end of the wing to compensate for the decrease in resistance by the raising of the aileron at such end.

1,664,205. PROCESS OF AND APPARATUS FOR ISOLATING ARGON. GORTON R. FONDA, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 19, 1924. Serial No. 700,211. 7 Claims. (Cl. 183—115.)



1. The method of deriving argon from air which consists in subjecting air to liquefying conditions, regulating said conditions to cause the liquefied portion of the air so treated to be less than the unliquefied portion, separating the liquid from the gaseous air, subjecting said liquid to a rectification process to produce liquid oxygen and a gaseous distillate of nitrogen containing most of the argon, reliquefying said distillate and rectifying the same to produce an argon concentrate.

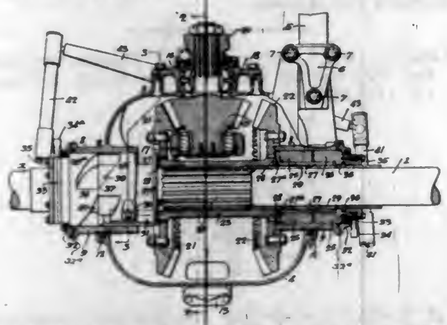
1,664,206. RANGE VENT. FRANK F. FORSHEE, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 26, 1925. Serial No. 58,822. 3 Claims. (Cl. 126—292.)



1. In a range vent, in combination, a substantially opened ended cylindrical member, a disc in said cylindrical member pivotally mounted therein, a pivot pin for said disc extending laterally of said cylindrical member, a projection on said disc extending laterally of the plane of the disc and located above said pivot pin, and an actuating lever for said disc having a portion operatively engaging one side of said projection to turn the disc in one direction and to limit the turning movement thereof in that direction.

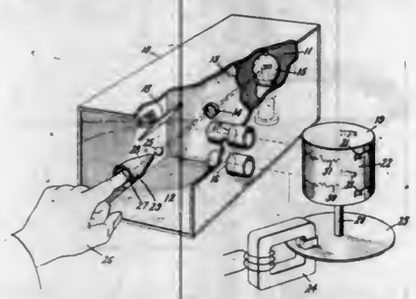
1,664,207. BOLT HEAD. HARRY G. FRANCIS, Rushville, Ind. Filed Feb. 26, 1925. Serial No. 11,641. 3 Claims. (Cl. 144—281.)

1. A bolt for co-operating with an I-beam, comprising a shank, and a unitary head on said shank, said head having two arms which project on opposite sides of the shank and curve toward each other to provide a space for receiving the base flange of an I-beam set in the plane of said shank, said arm being provided with toes which engage the base flange of said I-beam at points removed from the edges of said base flange and being free from said edges so that the edges will not be distorted, the distance across the I-beam receiving space in the vicinity of said toes being greater than the thickness of said base flange where it is engaged by said toes.



1,664,208. INSULATOR. GEORGE IRVING GILCHREST, Derry, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1922. Serial No. 588,525. 6 Claims. (Cl. 173—318.)

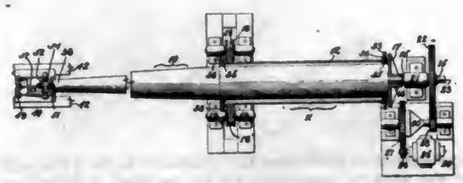
3. In combination, in an insulator, a member of refractory insulating material having a portion of substantially cup-shape, a pin structure embodying an elongated insulating tube, metal end members for said tube and a protective covering on said tube, one of said metal end members being disposed in the cup removed from the side walls thereof, and a body of cement in the space between the cup and the end member in the cup securing the pin to said refractory member.



4. In combination, in an insulator, a member of refractory insulating material having a portion of substantially cup-shape, a pin structure embodying an elongated insulating tube, metal end members for said tube and a refractory tube enclosing said tube, one of said metal end members being secured in position in the cup.

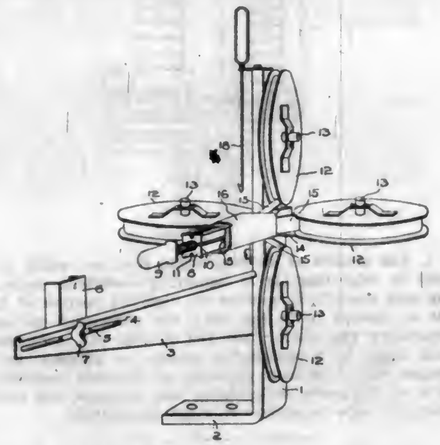
1,664,209. REVERSING MECHANISM. CHARLES O. GUERNSEY, Philadelphia, Pa. Filed May 4, 1925. Serial No. 27,908. 6 Claims. (Cl. 74—58.)

3. A reversing mechanism comprising in combination a driving shaft and a driven shaft at an angle to each other; a bevel pinion on the driving shaft; a gear unit on the driven shaft comprising a sleeve and two bevel gears carried thereby, the said unit being axially movable to bring either of the gears into mesh with the pinion and the other out of mesh; two axially movable non-rotatable rings located at the respective ends of the gear unit and adapted to determine the longitudinal position thereof, the said rings having cam faces at their outer ends; two cam rings rotatable about the axis of the driven shaft having cam faces respectively adapted to engage the cam faces of the non-rotatable rings; and a housing enclosing the said gears and having bearing engagement with the outer surfaces of the aforesaid rings independently of the driven shaft.



1,664,210. VIBRATION RECORDER. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed July 16, 1923. Serial No. 651,737. 4 Claims. (Cl. 234—1.)

1. A recording apparatus comprising a surface for receiving light beams, a light source, reflecting means intermediate said source and surface adapted to be freely movable in any direction for reflecting a light beam from said source to said surface, the movements of said beam corresponding to the movements of said reflecting means in one plane and means for projecting another light beam from said reflecting means to said surface corresponding to the movements of said reflecting means in a different plane.

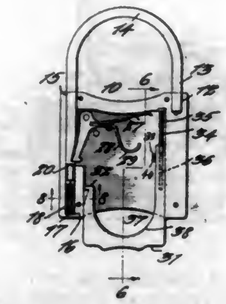


1,664,211. CAGE-MAKING MACHINERY. DAVID B. HANNA, Chicago, Ill., assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 15, 1921. Serial No. 492,210. 8 Claims. (Cl. 140—71.)

1. Cage making mechanism comprising a winding mandrel, a rotary hollow headstock with means for driving it and for centering and securing the winding mandrel in it; a longitudinally adjustable tailstock base; a tailstock arm having a center pin for engagin gendwise with the mandrel and pivoted to said base to swing rearwardly

downwardly out of the way to permit insertion or removal of the mandrel, means for securing said center pin comprising semicircular clamping members and means for normally maintaining said tailstock arm in its operative upstanding position.

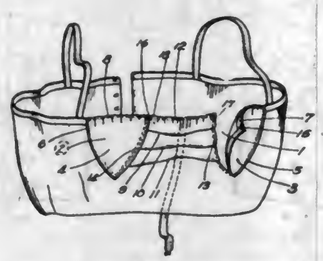
1,664,212. METHOD OF AND MACHINE FOR MAKING MAGNET-COIL CORES. EMIL E. HAWKINSON, South Bend, Ind., assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 2, 1926. Serial No. 78,829. 11 Claims. (Cl. 29—84.)



1. An assembly device comprising a standard, a plurality of supply reels mounted for rotation with respect to said standard, a mandrel detachably secured to said standard in cooperative alinement with said reels, and a stop mechanism associated with said mandrel for limiting the movement of said mandrel when disengaged from said standard.

4. A method of assembling cores and the like for magnet coils which comprises disposing a fibrous tube on a rectangular mandrel, simultaneously drawing insulating material through said tube on the respective sides of said mandrel, slipping end washers over said tube, arranging said washers in spaced relation thereon, and cutting off the tape to a predetermined length.

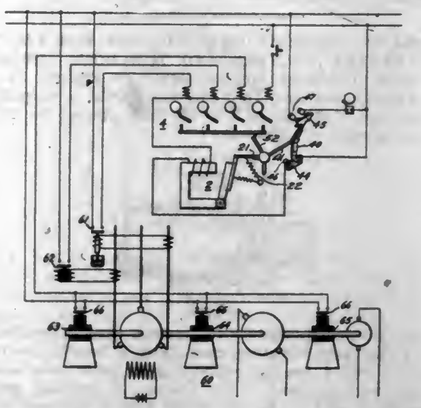
1,664,213. LOCK. HENRY A. HORSCHEN and JOHN D. WEAR, Omaha, Nebr. Filed Dec. 30, 1926. Serial No. 157,991. 4 Claims. (Cl. 194—59.)



1. A coin controlled lock consisting of a lock case, a shackle therein, a detent for holding the shackle in locked

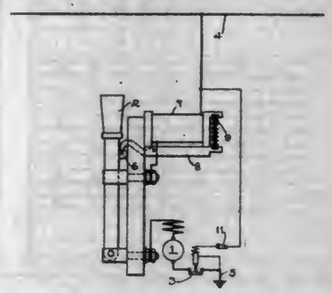
position, means associated with the detent and operative by pressure of a coin to disengage the detent from the shackle, means for exerting pressure on the coin to op-

erate the detent, and means whereby the detent engages the coin moving means and holds it against movement to retain the coin in the lock.



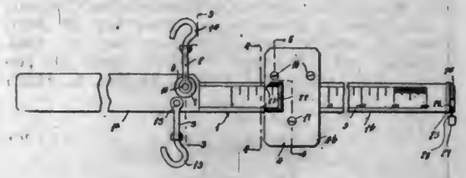
1,664,214. UNDERGARMENT CONSTRUCTION. IDA G. HUDSON, Oklahoma City, Okla. Filed Dec. 2, 1926. Serial No. 152,267. 1 Claim. (Cl. 2—31.)

In combination, the bosom covering portion of an undergarment, as described, having two substantially V-shaped sections spaced to engage the breasts of the wearer and having their apexes extending downwardly, said V-shaped sections fitting over similar shaped apertures in the garment, being fixedly secured to the garment along their outside edges, and being detachably secured to the garment along their inside edges, both adapted to be opened, thus baring the breasts of the wearer, elastic bands, tucks and gathers, along the upper edge of said V-shaped sections and along the three edges of the garment which lie between the V-shaped sections, all adapted to support the breasts of the wearer without binding.



1,664,215. ANNUNCIATOR RELAY. LLOYD F. HUNT, Los Angeles, Calif., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1923. Serial No. 633,690. 2 Claims. (Cl. 177—311.)

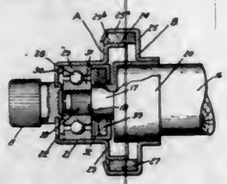
1. A combined relay and indicator comprising a switch, a main operating coil therefor, a plurality of auxiliary indicator coils, an armature for the main coil serving as a latch to maintain the switch normally in one position, a spring to move the switch to another position when the armature is actuated by the main coil, indicator elements respectively associated with the indicator coils, said elements being normally hidden from view and being severally actuated to visible position when the corresponding



indicator coil is energized, and means for resetting the armature, the switch controlled thereby and the operated indicator element.

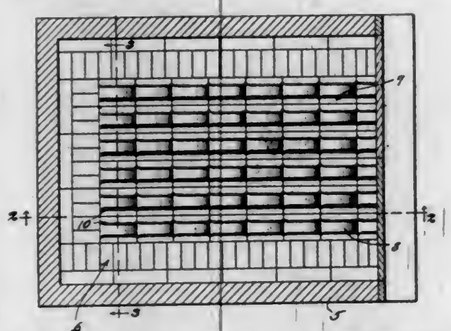
1,664,216. MOTOR-CONTROL SYSTEM. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 2, 1922. Serial No. 585,850. 4 Claims. (Cl. 175—294.)

1. The combination with a motor and a circuit interrupting switch therefor, of an additional switch for interrupting the motor circuit and means comprising a series coil for preventing the operation of said additional switch prior to the operation of the first switch.



1,664,217. SCALE. JOHN B. KELLY, Harlingen, Tex. Filed Dec. 15, 1926. Serial No. 154,979. 5 Claims. (Cl. 265—49.)

1. Scales, comprising a beam provided with an opening, inner and outer bearing races extending through the opening, antifriction elements positioned between the races, a fulcrum pin extending through the inner race, a

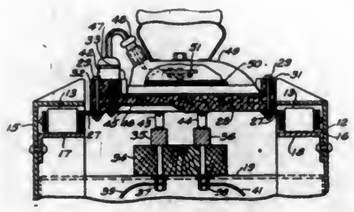


beam suspending clevis connected to the fulcrum pin, washers closing the ends of the bearing races, a balancing weight slidably mounted upon the beam, and a load suspending element pivoted to the beam.

1,664,218. BEARING CONSTRUCTION FOR VACUUM-CLEANER BRUSHES AND THE LIKE. HENRY T. LANG, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., Cleveland, Ohio, a Corporation of New York. Filed June 30, 1925. Serial No. 40,662. 3 Claims. (Cl. 308—187.)

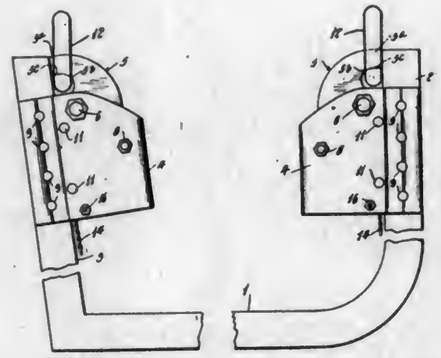
1. A bearing structure for vacuum cleaner brushes and the like, said structure comprising a housing having a closed end, a bearing comprising an inner race and an outer race mounted in the housing, a rotatable member having a stud on its end which stud is fastened to the inner race of the bearing, and packing means held in position by said housing which pack against said stud and against a surface of said rotatable member to prevent lubricant finding its way out of the bearing and foreign matter finding its way into the bearing.

1,664,219. BRICK. NELSON J. LEE, Baltimore, Md. Filed Mar. 22, 1927. Serial No. 177,324. 5 Claims. (Cl. 263—46.)



1. A furnace bottom including a plurality of rows of oblong bricks laid end to end, each brick having an enlargement formed on the upper surface thereof, the enlargements having curved upper surfaces, and the sides of the enlargements being cut away defining lateral passageways when bricks are positioned adjacent to each other in the formation of the bottom.

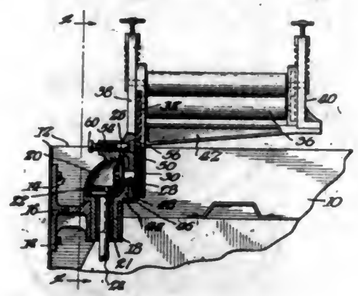
1,664,220. METHOD OF AND APPARATUS FOR TELEPHONY. SIEGMUND LOEWE, Berlin, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 26, 1921, Serial No. 495,780, and in Gemany Dec. 31, 1915. 7 Claims. (Cl. 179—124.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a microphone, a cylindrical container formed of insulating material, a pair of carbon electrodes loosely mounted within said container and carbon granules loosely held between said electrodes.

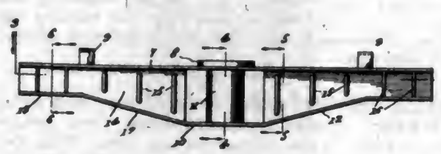
1,664,221. METHOD OF TESTING ELECTRIC HEATING DEVICES. HOWARD D. MATTHEWS and RALPH F. BISBEE, Mansfield, Ohio, assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 27, 1926. Serial No. 112,183. 5 Claims. (Cl. 73—51.)

1. The method of determining the relative temperature rises of a plurality of similar electrically-heated devices which comprises energizing said devices for a predetermined length of time while in close operative engagement with cooperating pieces of fibrous materials initially wetted in a weak solution of acid and dried, and then noting the colors of the respective pieces of fibrous materials.



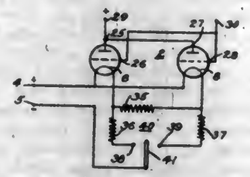
1,664,222. LIFEBOAT-RELEASING DEVICE. GEORGE W. P. OVERMAN, Norfolk, Va. Filed Jan. 21, 1926. Serial No. 82,704. 4 Claims. (Cl. 9—23.)

1. A boat releasing device comprising a bracket member, a hook pivoted to the bracket member and provided at its upper end with an outwardly directed bill and at its lower end with a shoulder and a lug located outwardly of and extending below the shoulder, and a latch pivoted between its ends to the bracket member and having a weighted lower end adapted to hold its upper end in contact with the shoulder and lug.



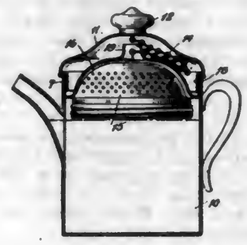
1,664,223. WASHING MACHINE WITH FOLDING WRINGER. HALSEY D. PAYNE, ALVIN W. DE CLERQUE, and SIDNEY T. SJOBERG, Chicago, Ill., assignors, by mesne assignments, to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 19, 1921. Serial No. 523,604. 8 Claims. (Cl. 68—32.)

1. In a device of the character described, a cabinet, a wringer, means pivoting the wringer at a point inside the cabinet and below its upper edge in such a manner that the wringer may be swung in an arc in a horizontal plane and in an arc lying in a plane at right angles to the body of the wringer from an elevated position where it places the wringer above the top of the cabinet to a position where the wringer is below the top of the cabinet, means for locking said



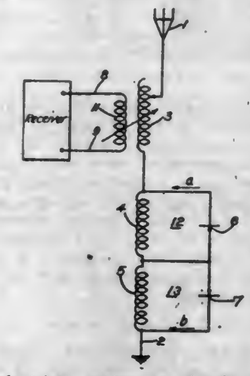
wringer in its elevated position and power driven means operating through the cabinet adapted to deliver power to the wringer rolls.

1,664,224. RAILWAY-CAR BOLSTER. CHARLES COTESWORTH PINCKNEY, Birmingham, Ala. Filed Apr. 2, 1927. Serial No. 180,486. 7 Claims. (Cl. 105—226.)



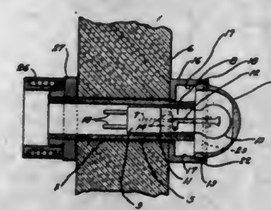
1. An electric welded railway car bolster comprising upper and lower face plates, a pipe section welded centrally to said upper and lower face plates, and corrugated webs extending on opposite sides of said pipe section and welded to the upper and lower face plates.

1,664,225. VACUUM ELECTRIC TUBE DEVICE. ERNEST YEOMAN ROBINSON, Manchester, and WALTER JOHN BROWN, Stockport, England, assignors to Metropolitan-Vickers Electrical Company Limited, a British Company. Filed Sept. 27, 1924, Serial No. 740,150, and in Great Britain Oct. 8, 1923. 4 Claims. (Cl. 250—27.)



1. In a vacuum-tube device, a plurality of cathodes, means for maintaining one of said cathodes at a temperature so high that it will render the device operative, and means for maintaining another cathode at a temperature below that required to render the device operative, said last named temperature being so high that the time required to raise said other cathode to a temperature which will render the device operative is too short to noticeably interrupt the operation of the device.

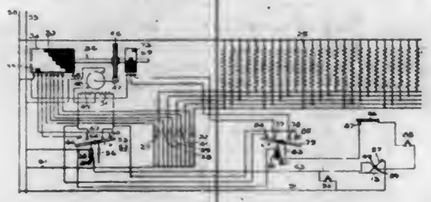
1,664,226. BREWING UTENSIL. ARTHUR E. SILVER, New York, N. Y. Filed Mar. 17, 1927. Serial No. 176,219. 7 Claims. (Cl. 53—3.)



1. A tea or coffee pot, comprising a body, a cover therefor, a foraminous receptacle, a flexible connection between the cover and foraminous receptacle, and means carried by the body and independent of the cover, with which the flexible connection is engageable to support the foraminous receptacle in an elevated position.

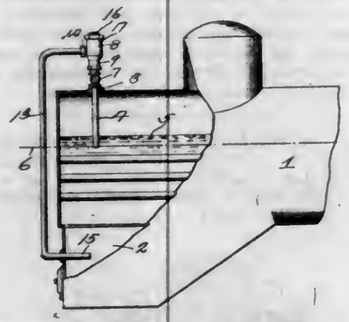
1,664,227. STATIC-REDUCING SYSTEM. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 20, 1921. Serial No. 509,166. 18 Claims. (Cl. 250—20.)

1. In an electrical system, a circuit carrying oscillatory currents, a high-impedance device included in said circuit and means for rendering said impedance device substantially non-effective for said currents, said means being effective for sustained signalling waves independent of the amplitude thereof and substantially ineffective for current impulses of brief duration.



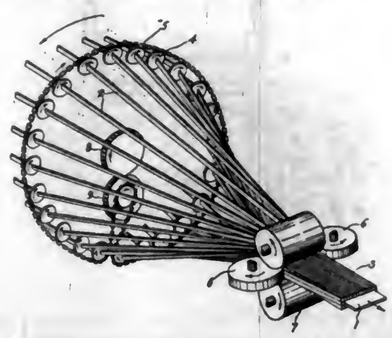
1,664,228. SWITCHBOARD LAMP. HARRY P. SPARKES, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1923. Serial No. 637,184. 3 Claims. (Cl. 177—329.)

3. A lamp for switchboard panels comprising a flexible tubular member extending through a perforation in the panel and having its ends threaded and extending



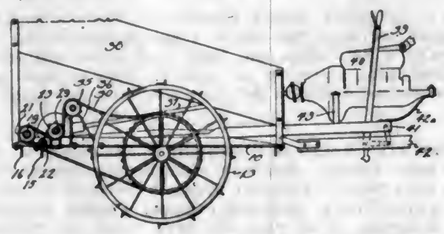
beyond the front and rear faces of the panel, a terminal socket within the front end of the tubular member for receiving a standard electric lamp and so supporting it that the filament extends beyond the end of the said member, a threaded lens socket adjustably mounted on a threaded portion of the tubular member and having means cooperating with the said threaded portion for compressing the tubular member into engagement with the terminal socket and thereby clamping the latter within the tubular member, a threaded nut on the rear end of the said member for clamping it to the panel, a substantially hemispherical lens mounted in the lens socket and enveloping the lamp and having its major portion projecting from the socket and visible from the front and sides of the panel and means for securing the lens in the lens socket.

1,664,229. DRIER-CONTROL SYSTEM. STEPHEN A. STAEGE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 23, 1925. Serial No. 45,505. 4 Claims. (Cl. 219—20.)



4. In a heating system for drying a web of material, the combination with a plurality of heating units, of a reversible contact drum effective to cause energization and deenergization of all of said heating units in step-by-step sequence, a motor for actuating said drum, a drag link normally operatively engaging said web for controlling said motor, and a thermal element, energized by said drag link in its inoperative position for causing said motor to energize and deenergize a part of said heating elements only in accordance with the temperature of said thermal elements.

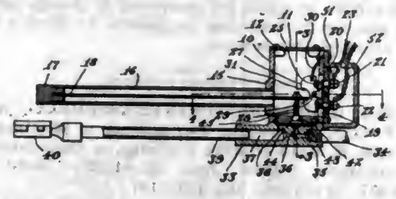
1,664,230. BOILER ATTACHMENT. JOHN H. STOCKHOLDER, New Orleans, La. Filed Mar. 23, 1926. Serial No. 96,759. 1 Claim. (Cl. 122—504.1.)



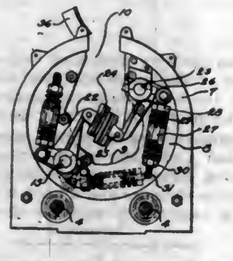
The combination with a pipe extending into a boiler to a position below the water level thereof, a fire box, said pipe having one of its ends extending into the fire box, a valve carried by said pipe adjacent the boiler, a T fitting carried by said valve and pipe and having oppositely disposed branches, a bushing threaded into one of said branches and removable through the other branch, a fusible plug carried by said bushing and a removable plug carried by the branch of the T fitting opposite the bushing-carrying branch.

1,664,231. METHOD OF AND MEANS OF PRODUCING CABLES. MAX THOMAS, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 28, 1925, Serial No. 53,047, and in Germany Oct. 6, 1924. 7 Claims. (Cl. 117—19.)

1. The method of making stranded cable which comprises passing a plurality of conductors through individual guides having openings corresponding to the cross-section of said conductors, extending the ends thereof through a plurality of pressure rolls, rotating said guides simultaneously about an axis extending centrally of the space between said rolls and rotating said guides individually oppositely to the direction of rotation about said axis.



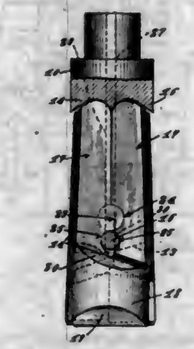
1,664,232. POWER-DRIVE ATTACHMENT FOR CORN PICKERS. KINNEY TJOSSEM, Paullina, Iowa, assignor of one-half to Swen Skaar, Paullina, Iowa. Filed Dec. 6, 1926. Serial No. 152,829. 3 Claims. (Cl. 180—53.)



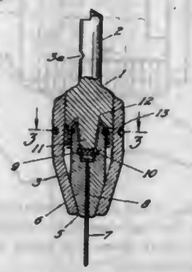
1. In combination with a corn picking vehicle having main wheels, a frame including spaced longitudinal beams supported between said wheels, a main drive sprocket on one of the main wheels, an elevator drive shaft journalled upon the frame, just above said beams, parallel to the main wheel axis and spaced from the wheels, elevator drive sprockets on said shaft, aligned with the main drive sprockets, a chain connecting said sprockets, a power drive attachment comprising an automobile power plant and transmission, mounted upon the frame, the rear axle housing of the transmission being secured transversely upon the beams, power drive sprockets secured to said axle and aligned with the elevator drive and main sprockets, and idler sprockets supported above said power drive sprockets and between them and the main wheels, the chains passing under the power drive sprockets and over the idler sprockets.

1,664,233. VALVE CONTROL APPARATUS. EUGENE T. VINCENT, Boston, Mass. Filed May 15, 1926. Serial No. 109,451. 1 Claim. (Cl. 67—116.)

In an apparatus of the kind described, the combination of a main burner, a pilot burner, a source of fuel supply for said burners, a thermostatic arrangement actuated by the influence of heat from the pilot burner and operating to shut off the flow of fuel to the pilot burner upon the extinguishment of the pilot light for the predetermined length of time and control means for a main fuel supply operable simultaneously with the operation of the pilot control means.



1,664,234. COIL-IRONING MACHINE. JAMES R. WEAVER, North Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 14, 1923. Serial No. 651,538. 9 Claims. (Cl. 173—244.)

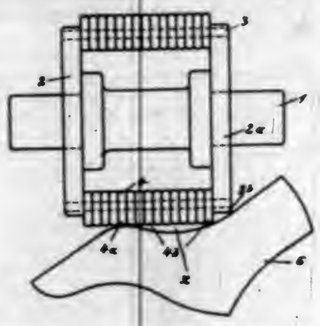


1. A coil ironing machine comprising a support, means for mounting a coil thereon, a pair of heatable pressure platens for engaging said coil pivoted at diametrically opposite points and rotatably mounted on said support, pressure means for said platens comprising a plurality of coil springs and means for adjusting the pressure on said platens independently of each other.

1,664,235. DRILL BIT. EDGAR C. WHITESITT, San Bernardino, Calif., assignor to Stickney Expansion Drill & Manufacturing Company, Coeur D'Alene, Idaho, a Corporation of Idaho. Filed May 27, 1925. Serial No. 33,303. 1 Claim. (Cl. 255—76.)

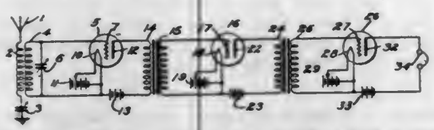
In a drill of the character described, a stock bifurcated to provide a fork having reversely beveled terminals, a cross coupling pin mounted in the fork, the stock being recessed at the inner end of the fork to provide separate seats at such end, co-acting cutter members formed with head portions engaging respectively in the seats and with outer cutting ends and lateral shoulders to be engaged by the beveled terminals of the fork, said jaws having half sockets to receive the coupling pin, and means for swingingly coupling said cutter members above the coupling pin, said stock, coupling pin and cutter members being provided with axially disposed aligning passages communicating with the space confronted by the lateral shoulders.

1,664,236. CHUCK FOR HAND TOOLS. AXEL WICKNER, Chicago, Ill. Filed Nov. 15, 1924. Serial No. 750,164. 1 Claim. (Cl. 279—56.)



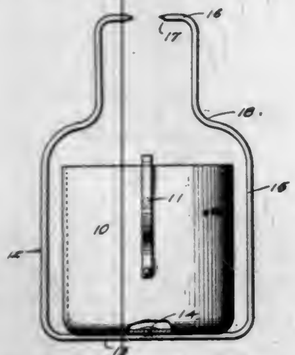
A chuck comprising a threaded body having a frusto conical extension formed integrally therewith and provided with a transversely disposed recess, a sleeve engaging the thread of the body and housing said extension, jaws disposed at opposite sides of the extension and engaging the inner surface of the sleeve, a spring located in said recess and bearing against the inner surfaces of the jaws and a band spring circumscribing the jaws around a line lying between the inner ends of the jaws and the first-mentioned spring.

1,664,237. VAPOR TOWER. HARRY ASHLEY WIER, Dallas, Tex. Filed Feb. 2, 1926. Serial No. 85,600. 4 Claims. (Cl. 196—139.)



1. In an apparatus for the purpose set forth, a vapor tower, means for directing vapor into the bottom of the tower, means in the tower for directing the vapor first in an upward direction therein, then in a downward direction, and then in a further upward direction to the top of the tower, means for subjecting the vapor in its last mentioned course, to a scrubbing and a catalytic action, means for filtering the vapor in its last mentioned course, means for subjecting the vapor to the action of a cooling agent in its last mentioned course and means for directing the purified vapor from the tower.

1,664,238. FOOTWEAR POUNDING OR BURNISHING MACHINE. AUGUST ABEL, Leipzig, Germany, assignor to Atlas-Werke Pöhler & Co., Leipzig-Stotteritz, Germany. Filed Apr. 23, 1926. Serial No. 104,241, and in Germany May 27, 1925. 9 Claims. (Cl. 12—51.)

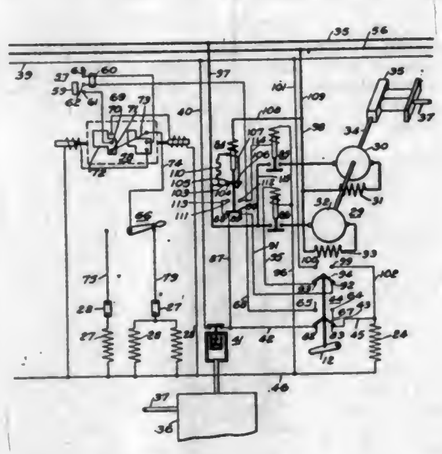


1. In a pounding drum for footwear pounding machines, a rotary carrier having loosely arranged pounding elements extending freely from the outer faces of said drum on opposite sides thereof.

1,664,239. INTERTUBE TRANSFORMER FOR VACUUM-TUBE AMPLIFIERS. MAX C. BATSEL, Wilkinsburg, Pa. Filed Mar. 5, 1921. Serial No. 449,611. 6 Claims. (Cl. 179—171.)

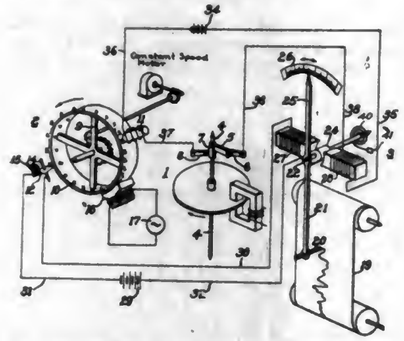
1. In combination, two vacuum tubes and a transformer, the primary of said transformer being connected to the output of the first tube and the secondary to the input of the second tube, the inductance of said primary being large relative to the output impedance of the first tube and smaller than the inductance of the secondary, the inductance of said secondary being such that, with the distributed capacity thereof and the input capacity of the second tube, it forms a circuit resonant to the average frequency of the currents for which the combination is intended.

1,664,240. FRUIT-PICKING IMPLEMENT. JOHN L. BOESE, Fond du Lac, Wis. Filed Dec. 28, 1926. Serial No. 157,578. 2 Claims. (Cl. 56—331.)



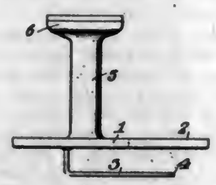
1. In combination, a rigid receptacle, a resilient U-shaped member having the bight portion thereof secured to the under surface of the bottom of the receptacle and the arms thereof extending upwardly along the sides of the receptacle in spaced relation thereto, the upper ends of the arms having inwardly directed portions the confronting faces of which are sharpened to provide cutting edges movable into coacting engagement to shear a fruit stem arranged therebetween.

1,664,241. RADIO LOUD-SPEAKER ASSEMBLY. ROGER H. BRYANT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 30, 1923. Serial No. 648,657. 4 Claims. (Cl. 179—147.)



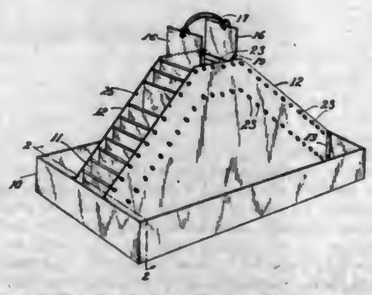
1. In a loud-speaking telephone, an electro-magnetic sounding device, a casing covering said device and having an opening at the top, a boss surrounding said opening, a connector threaded into said boss, said connector having a bore communicating with said opening, a shoulder in said bore and a shoulder on the exterior of the connector, a housing secured to the connector in engagement with said exterior shoulder and a horn detachably secured in said bore in engagement with the shoulder therein.

1,664,242. GAS-ELECTRIC POWER SYSTEM. ANDREW H. CANDEE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 19, 1927. Serial No. 169,523. 12 Claims. (Cl. 290—14.)



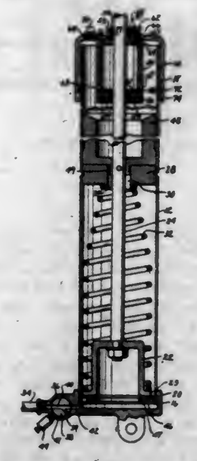
12. In a power system, in combination, a driven generator which develops a variable voltage, an auxiliary device which functions efficiently at substantially rated speed, a plurality of driving units for the auxiliary device, said units being adapted for operation at different voltages, and means for selectively connecting said driving units to the generator when the generated voltage varies a predetermined amount.

1,664,243. MAXIMUM-DEMAND METER. LEWIS WARRINGTON CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 11, 1922. Serial No. 606,103. 8 Claims. (Cl. 171—34.)



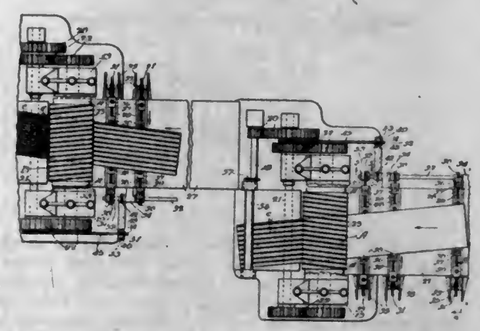
4. In combination in a measuring instrument, indicating means, and means including magnetic storing means responsive to variations in a quantity to be measured and operative to electrically transmit impulses to the indicating means in accordance with said variations at predetermined time intervals different from the occurrence thereof.

1,664,244. MILK-TOP EXTRACTOR. WILLIAM B. COTTON, San Francisco, Calif. Filed Apr. 8, 1926. Serial No. 100,698. 3 Claims. (Cl. 65—47.)



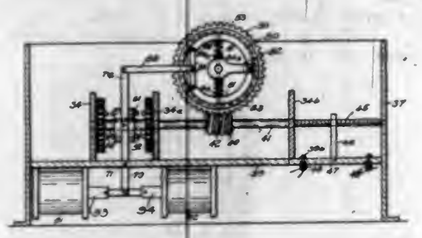
1. In a bottle opener, an elongated base, a standard rising at right angles therefrom to one side of the center thereof, an elongated handle at the extremity of the standard and extending laterally at each side with respect to the base, and a prong extending from the base on the opposite side from the standard and in line therewith, and then turned parallel to the base, said prong crossing the centerpoint of the base and terminating in a sharpened end just below the free narrow edge of the base.

1,664,245. TOOL BOX. CHARLES A. COYLE, Port Jefferson, N. Y. Filed Apr. 15, 1925. Serial No. 23,250. 7 Claims. (Cl. 206—16.)



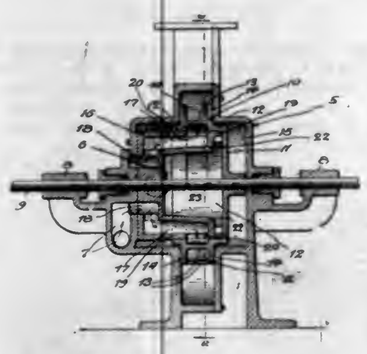
3. In a tool box a base portion in the form of a receptacle, a pair of parallel, spaced frame plates mounted within said receptacle and at right angles to its bottom, supporting plates secured by their edges to the frame plates, and detachable spacing means between said frame plates for partitioning the space therebetween into compartments for receiving tools of different sizes.

1,664,246. CHECKING MEANS FOR DOOR-OPERATING MECHANISM. WILLIAM B. CROWELL, New York, N. Y. Filed June 21, 1923. Serial No. 646,779. 3 Claims. (Cl. 16—82.)



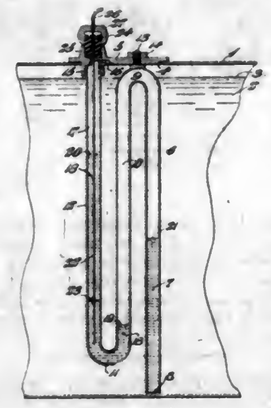
1. In a mechanism for controlling the movement of a door, a liquid containing chamber, a vertically disposed liquid holding vessel forming a confining wall for said chamber, a motion imparting member connecting said vessel to said door whereby movement of said door in one direction causes upward travel of said vessel, and means in said chamber tending to impede the last portion of the upward travel of said vessel, said means being inoperative during the initial portion of the travel of said vessel in the upward direction.

1,664,247. METHOD AND APPARATUS FOR SLITTING METAL SHEETS. JAMES H. DEAN, Ludington, Mich., assignor to Northwestern Expanded Metal Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1925. Serial No. 50,176. 14 Claims. (Cl. 164—6.6.)



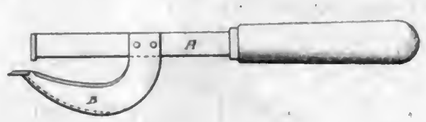
3. The method of slitting metal sheets with roller dies which consists in separately forming two series of oppositely inclined rows of slits arranged respectively in alternate panels with unslitted zones between the panels by passing each sheet successively through the dies, substantially as described.

1,664,248. THEATER-CURTAIN-RAISING DEVICE. EDWARD J. DOLAN, Jackson Heights, and PASCHAL TATORE, New York, N. Y. Filed July 31, 1926. Serial No. 126,293. 4 Claims. (Cl. 254—141.)



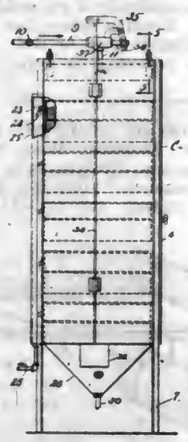
1. In a device having a rotatable drum for raising and lowering curtains, a worm gear loosely mounted upon a non-rotatable shaft and operably supporting said drum; a worm keyed to a rotatable shaft and in mesh with said gear; a pair of oppositely disposed spur gears loosely mounted upon said rotatable shaft; a clutch member splined on said shaft intermediate said spur gears; engaging teeth upon both faces of said clutch member and upon the adjacent faces of said gears; an electrically driven motor for actuating said spur gears; solenoids for alternately actuating said splined member into tooth engagement with said spur gears; automatic means operated by said curtain for shutting off the current from said motor; and adjustable means operated by the solenoids for shutting off the current to either of said solenoids.

1,664,249. FLUID-DISPLACING APPARATUS. AUGUSTUS C. DURDIN, Jr., Chicago, Ill. Filed June 16, 1927. Serial No. 199,151. 7 Claims. (Cl. 230—75.)



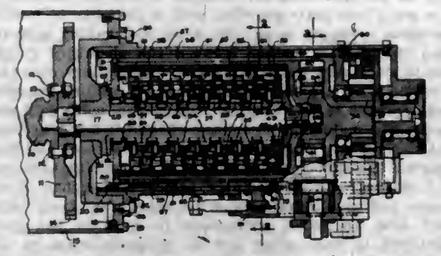
1. A fluid displacing apparatus comprising a casing having a liquid inlet passage and a fluid inlet passage therein, both terminating in circumferentially arranged outlets, said casing having also a liquid and fluid discharge passage, and an impeller rotatively mounted in said casing, said impeller embodying a plurality of blades extending from said liquid and fluid outlets to the periphery of the impeller along spiral like curves, said blades having parallel portions spaced apart to form spiral like passages therebetween leading from the liquid and fluid outlets to the periphery of the impeller, the forward inner faces of the blades being concentric with the axis of rotation of the impeller and the remainder of the inner faces of the blades, being curved back sharply at the rear ends of said concentric portions to form deep recesses following the concentric portions.

1,664,250. VARIABLE RESISTANCE INDICATOR. THOMAS M. EYNON, Philadelphia, Pa. Filed Aug. 10, 1922. Serial No. 580,987. 4 Claims. (Cl. 201—57.)



1. In a device of the character stated, a compound U-tube having an atmospheric side, composed of three parallel members of substantially the same length and of equal diameter throughout their extent and each having a liquid column therein, the pendant member of said compound U-tube having a restricted bottom liquid inlet port and the atmospheric side of said liquid column also having a port, a pendant seat for supporting said compound U-shaped tube, said liquid column supporting an insulating block carried by said seat, a resistance wire supported in said liquid column, a guide within said column for the lower end of said wire, the upper end of said wire being guided in said insulating block, said compound U-tube being arranged for suspension within a tank.

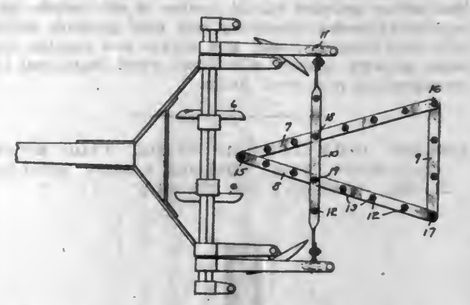
1,664,251. CAN OPENER. HERMAN GARRISON, Chicago, Ill. Filed July 19, 1927. Serial No. 206,892. 5 Claims. (Cl. 30—3.)



1. A can opener in the form of a lever of the second class, having a guiding fulcrum formed by a recess at the end of a handled stock, and a downwardly offset uppercut knife secured to said stock and extending forward past the guiding fulcrum; said knife being laterally curved in the direction of its length and provided with an additional cutting edge on its lower margin; and the tip of said knife being surmounted by a transverse plate, said plate being provided with a piercing point, and said piercing point being identical with the terminal point of the knife.

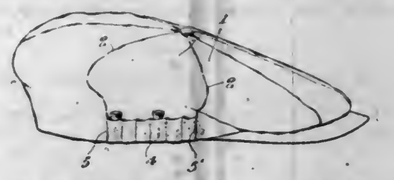
1,664,252. FILTERING DEVICE. ARTHUR P. HALL, West Newton, Mass. Filed Feb. 6, 1926. Serial No. 80,425. 3 Claims. (Cl. 210—127.)

1. In apparatus for cleansing liquids by filtration, a series of filter beds spaced one above another, a supply pipe for liquid to be cleansed leading over the topmost filter bed, and means for uniformly distributing the liquid supplied by said pipe uniformly over said topmost bed, whereby the liquid will drain through said bed and through the successive series of filter beds therebeneath, said filter beds being interchangeable so that when the top most bed has become soiled by the accumulation of sediment from the liquid it may be removed and replaced by the filter bed next therebeneath, the remaining filter beds being advanced upward correspondingly and a fresh bed occupying the bottommost position.



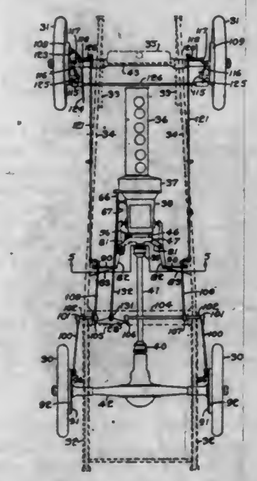
1,664,253. POWER-TRANSMISSION MECHANISM. JAMES W. HUGHES, Philadelphia, Pa., assignor to Provident Trust Company of Philadelphia, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1927. Serial No. 219,495. 22 Claims. (Cl. 74—59.)

1. In a mechanical power transmission mechanism, in combination, a primary driving member, a final variable speed driven member, a series of permanently entrained gears for interconnecting said driving and driven members and arranged in embracing relation with respect to the common axis of said members, a fixed bearing about which all of said gears rotate, and means embracing said gears for varying the speed ratio between said driving and driven members without disturbing the permanent entrainment between said gears.



1,664,254. ATTACHMENT FOR LISTER CULTIVATORS. LOUIE JOHNSON, Presho, S. Dak. Filed Apr. 26, 1927. Serial No. 186,689. 3 Claims. (Cl. 97—8.)

1. An attachment of the character described comprising an elongated substantially triangular frame, carrying a plurality of downwardly extending teeth, a cross bar spanning said tri-angular frame and eyes at the outer



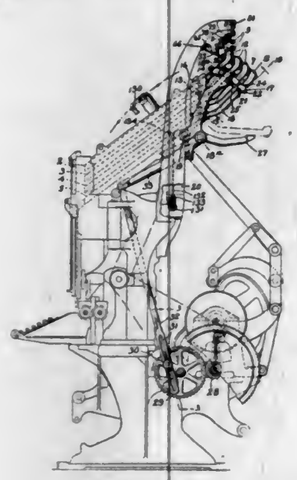
ends of said cross bar of a shape and dimension to engage the shanks of a lister cultivator, after the shovels of the latter have been removed.

1,664,255. CAP. ALBERT D. LESSER, New York, N. Y. Filed Mar. 3, 1927. Serial No. 172,245. 2 Claims. (Cl. 2—199.)

1. A cap having a strip of material having two of its edges stitched to the body of the cap and having a third edge turned under the edge of the body of the cap and secured to the sweat-band, between said sweat band and the body of the cap, said strip being fastened by rows of transverse stitching to the body of the cap to form a series of compartments.

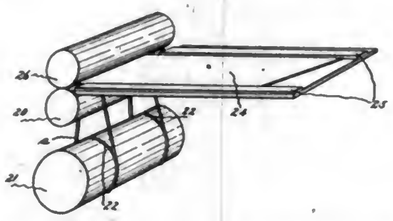
1,664,256. BRAKE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Sept. 4, 1924. Serial No. 735,851. 33 Claims. (Cl. 188—152.)

1. In a motor vehicle having front and rear wheel brakes, a plurality of links connecting each front wheel brake for operation with its corresponding rear wheel



brake, said link connection being independent of the brake connection on the opposite side of the vehicle, fluid pressure means operated by the motion of the vehicle, and mechanical means connecting said fluid pressure means with said links to apply said brakes and equalize the brake pressure between each front wheel brake and its corresponding rear wheel brake.

1,664,257. GOLF-CLUB-GRIP GUIDE. CRAIG MCCULLOUGH, Seattle, Wash. Filed Aug. 8, 1927. Serial No. 211,368. 12 Claims. (Cl. 273—81.)



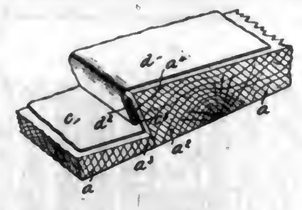
1. A grip guide for a golf club comprising a circumferentially distendable sleeve of resilient material and means to prevent longitudinal distention of such sleeve.

1,664,258. TYPOGRAPHICAL MACHINE. JAMES G. MCNAMARA, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Sept. 25, 1925. Serial No. 58,491. 37 Claims. (Cl. 199—41.)

1. In a typographical machine equipped with matrices of different forms, the combination of a plurality of matrix magazines, a single distributor bar formed with a series of matrix releasing combinations at different points in its length, adjustable means for directing the distributed matrices into one or another of the magazines, means operated independently of the matrices to effect the adjustment of said directing means, and mechanism controlled by the matrices prior to their delivery to the distributor bar for governing the adjustment of said directing means.

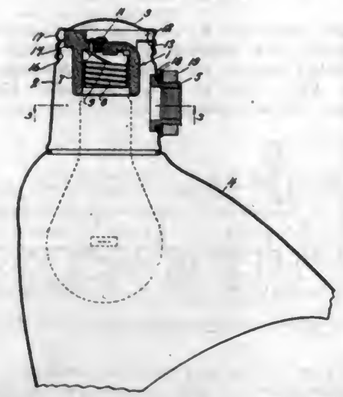
1,664,259. METHOD OF BUILDING TIRE CASINGS. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 10, 1926. Serial No. 108,083. 5 Claims. (Cl. 154—14.)

1. A method of building a tire carcass which comprises covering a pair of endless bead anchorages with a loose wrapping of fabric, supporting the covered anchorages in spaced relation, applying a layer of tire building material to the anchorages, inverting the band thus formed, and applying a second layer of material.



1,664,260. APPARATUS FOR MOLDING CORES. ERNEST C. MOORHEAD, Stamford, Conn. Filed Jan. 13, 1927. Serial No. 160,838. 8 Claims. (Cl. 22—13.)

5. In an apparatus for molding cores, the combination of a main core plate provided with a plurality of molding chambers arranged in parallel rows, and having upwardly open channels extending between the chambers in each row in alignment with each other, an auxiliary core plate provided with a plurality of secondary molding chambers and arranged to fit in surface engagement with said main plate, said main and secondary chambers being arranged to independently mold main and auxiliary cores and being adapted to register with each other to combine said main and auxiliary cores, apertured projections on one of said plates, and positioning pins on the other plate co-operating with said apertured projections to position the plates relatively to each other and to maintain them in such position.

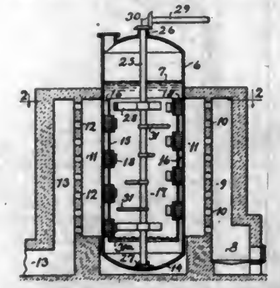


1,664,261. SURFACE OF ROOFS, WALLS, DOORS, PANELS, AND OTHER PARTS OF BUILDINGS AND STRUCTURES. GEORGE WILLIAM MULLINS and GRAHAM SQUIERS, Birmingham, England. Filed Mar. 28, 1927. Serial No. 178,919, and in Great Britain July 31, 1926. 2 Claims. (Cl. 189—85.)

1. In a weather-proof surface, the combination with a plurality of boards tapered in cross-section and fixed one above the other horizontally so that the wider edge of each board abuts against the narrow edge of an adjacent board to form a longitudinal ridge extending at right angles to the plane of the structure to which the surface is applied; of a strip for each board with the strip of one board bent at right angles to the plane of the strip to form a flange which abuts against said ridge in a plane therewith, and the strip of a next adjacent board being also bent at right angles to the plane of the strip to form a second flange engaging the first

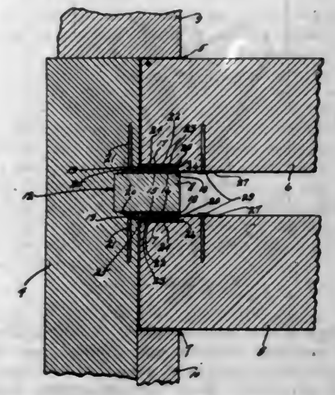
named flange also in a plane with said ridge, the remainder of the second strip being bent to extend along the upper surface of said adjacent board.

1,664,262. SOCKET AND REFLECTOR CONSTRUCTION. PERCIVAL A. POWERS, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 29, 1925. Serial No. 40,249. 1 Claim. (Cl. 240—132.)



A socket and reflector construction comprising an insulating base, wiring terminals and lamp receptacle contacts mounted therein, a casing for said base, a reflector secured to the lower end of said casing, said casing having a screw threaded portion and an open top through which said base may be inserted into said casing, said casing having an inwardly extending flange above said screw threaded portion, and said base having an outwardly extending flange above and resting on said first flange, a cap screwed on to said casing above and covering said base and serving to force the flange on the base against the flange on the casing and a nipple secured to the side of said casing having a passage for the wires leading to said wiring terminals, said terminals being located on the upper side of said base and exposed when said cap is removed.

1,664,263. CRACKING OILS. FRANZ BUENING, Pittsburgh, Pa. Filed May 26, 1919. Serial No. 299,978. 16 Claims. (Cl. 196—68.)

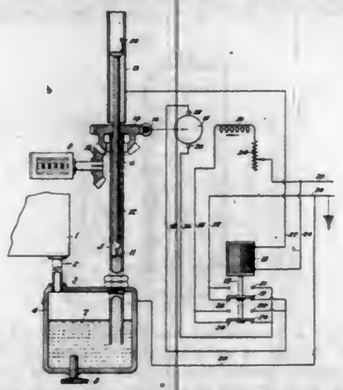


1. The method of cracking oil, which consists in subjecting an annular column of oil to a cracking heat, while effecting a rapid movement of the oil by thermo-siphonic action, and concurrently mechanically removing the carbon from the heated portions of the walls surrounding the column of oil.

9. An oil cracking apparatus comprising: a heating chamber adapted to produce a heated zone; a substantially vertical boiler disposed therein and having its extremities extended beyond the heated zone, a substantially vertical shell for the passage of the oil located within the boiler and having a passageway therethrough opening at its ends into said boiler, the space between the boiler and shell being of substantially uniform cross-

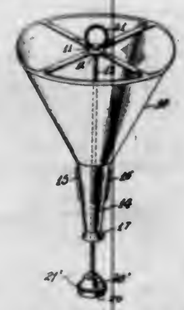
sectional area in different horizontal planes whereby the speed of the oil is substantially uniform at all points in said space, mechanical scraper elements carried by the outer wall of said shell and adapted to operate on the inner wall surface of the boiler, and means for effecting concurrent rotation of said shell and mechanical scrapers.

1,664,264. WEATHER STRIP. FRANK REESE, Minneapolis, Minn., assignor to Reese Metal Weather Strip Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Apr. 8, 1927. Serial No. 181,985. 2 Claims. (Cl. 20—69.)



1. A weather strip device comprising a frame member and a sash member, each of which is substantially S-shaped in cross section to afford a double fold comprising substantially flat, inner, intermediate and outer sections, said members being fitted the one within the other, one of the sections of each member having an extension affording an anchoring flange, the sides of one of the single folds of each member being laterally spaced to form an unobstructed gap and arranged to yield and compressible to permit lateral movement of the interlocked members between the members of the frame and sash to which they are attached, said sash member being free for longitudinal sliding movement in the frame member.

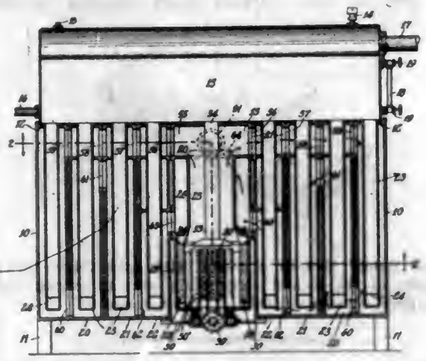
1,664,265. LIQUID GAUGE. FRANK RIEBEL, Berkeley, Calif., assignor, by mesne assignments, to Precision Tank Gauge Company, a Corporation of California. Filed July 28, 1924. Serial No. 728,620. 6 Claims. (Cl. 177—351.)



1. In combination, means for holding a column of conducting liquid of variable height, a movable member,

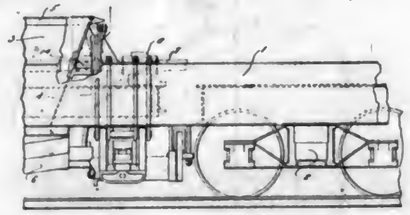
indicating means associated with said member, and means for moving the member in accordance with the variations in height of the liquid, comprising a movable contact element arranged to make and break electrical contact with the liquid, at its upper level, and means

for moving the contact element alternately toward and from the liquid in response, respectively, to the breaking of electrical contact and to the making of electrical contact between the movable contact element and the liquid.



1,664,266. FUNNEL. ARMANDO DEL RIO, Cienfuegos, Cuba. Filed July 26, 1926. Serial No. 124,827. 1 Claim. (Cl. 226—36.)

In a device of the class described, a funnel comprising a conical receiving element and a discharge spout, a valve seat on the extremity of said discharge spout comprising an outwardly flared portion, upper and lower cross members mounted in said funnel having registering openings therein, said lower cross member being positioned in close proximity to the outwardly flared portion of said discharge spout a rod disposed through said openings and slidably mounted centrally of said funnel, and a buoyant valve member mounted on said rod comprising a conical portion formed to conform with the sides of the outwardly flared portion of valve seat and a horizontal seat portion adapted to engage the lower edge of said discharge spout for supporting the weight of said funnel when the same is lifted by said rod, the conical portion of said valve member being of sufficient length to engage said lower cross member to further prevent inward movement of said valve member.

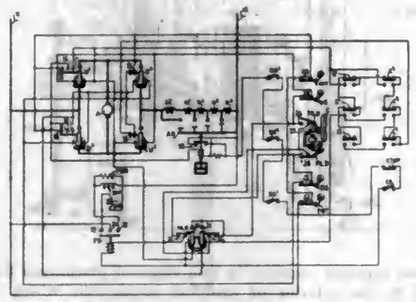


1,664,267. REFRACTORY GAS FURNACE. JOHN ROSS, St. Albans, N. Y. Filed July 2, 1927. Serial No. 203,029. 3 Claims. (Cl. 126—91.)

1. A heater having a combustion chamber, a brick lined fire box there below, a series of radiants spaced inwardly from the lining, an air inlet tube for each radiant, a mixing chamber with which the radiants communicate, a venturi to discharge air and gas into

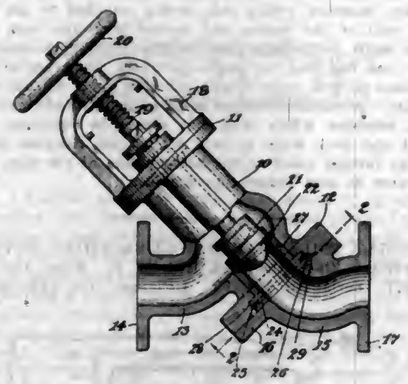
the mixing chamber, means for controlling the air passage in the venturi, and a valve controlling the inlet of fuel to said venturi.

1,664,268. DUMP CAR. EUGENE W. SCHELLENTRAGER, Cleveland, Ohio, assignor to The Atlas Car & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 7, 1927. Serial No. 173,555. 4 Claims. (Cl. 105—290.)



1. In a car of the type described, a hopper, a gate at the bottom thereof, a gate operating mechanism including a shaft extending horizontally into said hopper through a side thereof, and means for positioning said shaft in said side, said means comprising a lower bearing member supported in a portion of said side cut away to receive the same, and a bearing and closure member cooperating with said lower bearing member to form a journal for said shaft, co-operating with said cut away portion to complete and reinforce said side, and removable to allow removal of said shaft vertically.

1,664,269. CONTROLLER FOR ELECTRIC ELEVATORS. EDWIN W. SEEGER, South Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 8, 1926. Serial No. 100,747. Renewed Aug. 29, 1927. 7 Claims. (Cl. 187—29.)



3. In a controller for electric elevators of the three landing type, the combination with a car and an electric motor for driving the same, electroresponsive switches adapted when energized to complete circuit for the motor for effecting operation thereof in opposite directions selectively, push button control switches for initially completing the energizing circuits of said electroresponsive switches, auxiliary contacts on the latter adapted to provide maintaining circuits therefor, hatchway limit switches in the path of the car for interrupting said maintaining circuits when the car reaches the top or bottom landing respectively, a plurality of independently operable switches in the path of the car

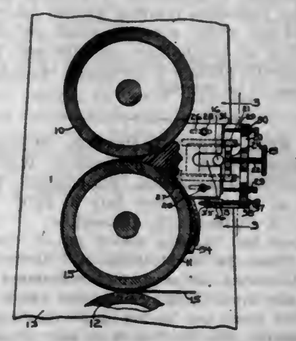
at the middle landing of the elevator, means for rendering said last mentioned switches effective for stopping the car at the middle landing, said means comprising a relay having a winding adapted to be energized upon closure of certain of said push button switches, contacts controlled by said relay, said contacts being re-

spectively adapted to provide maintaining circuits for the winding of said relay and for said electroresponsive switches selectively, and means for rendering said maintaining circuits subject to control by said middle landing switches to thereby insure interruption of said circuits upon positioning of the car at the middle landing.

1,664,270. VALVE. GEORGE F. SHEVLIN, Glens Falls, N. Y., assignor to George F. Shevlin & Son, Glens Falls, N. Y., a Partnership composed of George F. Shevlin, sr., and George F. Shevlin, jr. Filed Mar. 25, 1927. Serial No. 178,192. 2 Claims. (Cl. 251—167.)

1. In a valve, a body having a flange, a valve, means for operating the valve, and a valve seat member comprising a cylindrical portion with a flange at one end thereof in the peripheral surface of which there is a circumferentially disposed groove the flanged portion of the valve body being recessed to receive the flange of the valve seat member in order that when in position the faces of these flanges lie in the same plane, the face of the flange of the valve body being notched to provide access for a tool to the circumferential recess in the flange of the valve seat member.

1,664,271. HEAD GEAR AND METHOD OF MAKING THE SAME. JULIUS STEINBERG, New York, N. Y. Filed June 27, 1927. Serial No. 201,775. 5 Claims. (Cl. 132—49.)



1. As a new article of manufacture, a head gear comprising a knitted mesh body, a fabric band separate from said body, and means for attaching said band to one edge of said body, the opposite edge of said mesh body having a tubular passage formed therein, and an elastic thread passing through said tubular passage.

1,664,272. EXERCISING PRIZE AMUSEMENT DEVICE. ANDREW STEINBERGH, New York, N. Y. Filed Dec. 22, 1926. Serial No. 156,415. 4 Claims. (Cl. 272—57.)

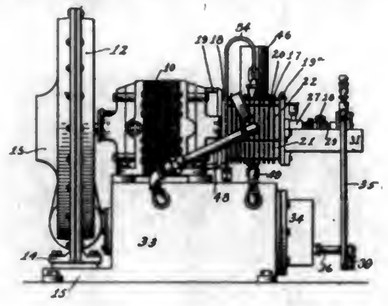
2. In an amusement device of the class described, a base comprising an inclined platform, spaced rails mounted on said inclined platform, a cannon comprising spaced traction wheels movably mounted on said rails; a depending braking shoe on said cannon extending below one of said rails at the side thereof, an adjustable braking device slidably mounted on said rails in registration with said braking shoe, and operating mechanism comprising a lever pivotally mounted on said rail and operatively connected with said braking device and extended to the lower end of said rails adapted to adjustably position said braking device relative to the braking shoe of said cannon for suitably impeding the speed of upward and downward movement thereof.

1,664,273. CALENDER GUIDE. HECTOR J. THEROUX, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 11, 1927. Serial No. 182,731. 3 Claims. (Cl. 18—2.)

1. A calender guide having a block provided with ways, means for supporting the block in adjusted position adjacent the calender rolls, a frame movable in the ways

towards and from the calender rolls, a guide piece shaped to fit between the calender rolls, means for holding the guide piece in adjusted position on the frame, a shoe shaped to genr against one of the calender rolls, means for holding the shoe in adjusted position on the frame independently of the guide piece, and means for holding the frame in adjusted position in the ways without disturbing the adjustment of the guide piece and shoe on the frame.

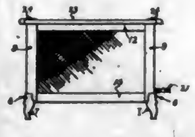
1,664,274. PENCIL. FRANK J. VIERLING, Minneapolis, Minn., assignor, by direct and mesne assignments, to Snap-Point Pencil, Inc., Minneapolis, Minn., a Corporation of Minnesota. Filed Aug. 6, 1927. Serial No. 211,235. 10 Claims. (Cl. 120—18.)



1. A pencil including a casing and a relatively longitudinally adjustable lead-feeding member, and means including a normally released device for locking the lead-feeding member to the casing, said device being arranged to be operated by a movement of the lead-feeding member produced by pressure on the lead in said member tending to force the same back into the pencil.

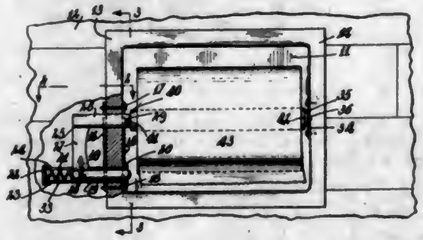
1,664,275. METHOD OF PREPARING FILTERING MATERIALS. FRIEDRICH HERMANN WEIL, Kreuznach, Germany, assignor to Seitz-Werke G. m. b. H., Kreuznach, Germany, a Corporation. Filed Feb. 24, 1927. Serial No. 170,729, and in Germany May 22, 1924. 2 Claims. (Cl. 210—204.)

1. The method of preparing a filtering material for liquids which comprises treating natural asbestos with a non-reducing gas under pressure which gas unites with the impurities of the natural asbestos and forms compounds therewith which are chemically inert with respect to the liquids to be filtered.



1,664,276. FUEL-BURNING DEVICE. WALTER W. WILLIAMS, Bloomington, Ill., assignor to Williams Oil-O-Matic Heating Corporation, Bloomington, Ill., a Corporation of Illinois. Filed July 5, 1924. Serial No. 724,298. 1 Claim. (Cl. 158—28.)

In a liquid fuel burning device, an air compressor, a liquid fuel pump, an air blast fan and electric means for operating the same, an accumulator chamber having an air intake pipe from the air compressor and a fuel intake pipe from the pump and having an air discharge pipe and a fuel discharge pipe leading from said chamber to the burner nozzle, automatic means for maintaining a constant supply of fuel and a uniform pressure of air in said chamber including a float operated valve in the fuel intake pipe and a by-pass including a pressure valve leading from the air discharge pipe to the intake of the air compressor, and means for lubricating the air compressor by the liquid fuel comprising a pipe leading from the bottom of the said chamber to the air compressor where-

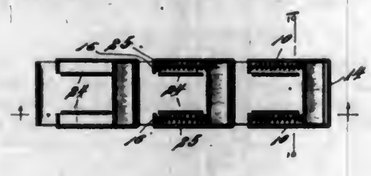


by the internal pressure in said chamber discharges liquid fuel to the interior of said air compressor which fuel after passing through the working parts of said air compressor is returned to the chamber with the air under compression through the pipe from the compressor to the chamber.

1,664,277. GAS HEATING STOVE. WALTER F. ZICK, Alhambra, Calif. Filed July 5, 1927. Serial No. 203,434. 4 Claims. (Cl. 126—92.)

1. A heating gas stove comprising an outer casing composed of sheet metal walls except the front wall, said front wall being partly of sheet metal and partly of wire netting, the back wall having a port therein; a combustion chamber within said casing attached to the bottom wall of the casing and spaced from the back and front walls, said combustion chamber having imperforate back and end and top walls with the front surface of the back portion covered with asbestos wool; a front wall of said combustion chamber being reticulated and covered with asbestos which does not close the openings, the front and back walls of said combustion chamber being spaced further apart at the bottom than at the top; and a burner in said combustion chamber.

1,664,278. TOILET-PAPER ROLL-SECURING DEVICE. STEPHEN ZIDO, Richmond Hill, N. Y. Filed Apr. 18, 1927. Serial No. 184,599. 4 Claims. (Cl. 242—55.2.)



1. In a device of the character described, the combination of a supporting structure, a slidable bolt therein mounted having an aperture in the end thereof, a push rod connected with and adapted to co-act with the said slidable bolt, a spring element bearing against the said push rod and adaped to exert a forward stress thereon, and a receiving socket adapted to co-act with the said slidable bolt to support an arbor rotatably therebetween.
